BUSRAH—34, Kashla Road, Ashar.

There are more than two million and a quarter Ford cars in service to-day.

The Ford is the lightest car for its power made—and lightness is an absolute essential for economy in maintenance and for comfort in riding. It weighs several hundred pounds less than the ordinary car of the same power and carrying capacity. It puts more tyre surface on the ground per pound of car than any other. And its lightness is also a big safety factor.

Lightness minimizes the cost of up-keep by reducing the wear and tear on the tyres—by giving more mileage per gallon of gasoline—and by lessening the strain and stress upon the car itself. Tyres for Ford cars are comparatively inexpensive, because large ones are not required—and they give maximum service because the car is lightest. Ford owners have a minimum of tyre troubles and other expenses—and that's a big factor to consider in the buying of a car.

If you have ever experienced the pleasurable difference between riding in a bullock cart and a light buggy, then you will appreciate what lightness in weight means as a factor for comfort in a motor car.

It is surprisingly low in price—and surprisingly high in value—because it is produced upon a scale so gigantic as to reduce the cost of manufacturing and distributing to a minimum.

There is one outstanding reason why the Ford car so far outsells all others.

It is the finest car value in the world.

We can offer the following Models :—

2-seater Runabout	.. Rs. 2,600	5-seater Sedan	Rs. 3,750
4 ,, Touring	.. ,, 2,750	Standard Chassis	,, 2,300
2 ,, Coupe	.. ,, 3,450	One-ton Chassis	,, 3,000

India in 1919.

The conclusion of the Armistice, which for practical purposes ended the war, was met with immense enthusiasm throughout India. Extravagant hopes were based on the cessation of hostilities, and throughout the land there was the mistaken belief that the country would soon return to normal conditions. These hopes were doomed to disappointment. The rains in 1918 were poor, and the crops were all, a matter of vital concern to a people seventy per cent. of whom depend on agriculture for their subsistence. Stocks of food grains in the country were short owing to the large exports during the war period. There was therefore a period of very high prices, and actual shortage of food, after the war ended; this necessitated intimate control over prices and supplies by Government, always difficult and irritating in practice. These economic distresses were aggravated by the rains to which some provinces, and particularly the Punjab, had been put in order to aid under a voluntary system sufficient recruits. The discontents were intensified by a strong agitation throughout the country over the passage of what is called the Rowlatt Act. A strong committee of jurists under the chairmanship of a distinguished English Judge, Sir Sidney Rowlatt, was appointed to inquire into the growth and existence of anarchical crime in India and especially in Bengal. This committee recommended that the Government of India should arm themselves with special powers to deal with such crime, to come into operation when it attained proportions dangerous to public safety. Legislation on the lines of the Committee's report was introduced in the Imperial Legislative Council and carried against the solid opposition of the unofficial members. This was the signal for the violent agitation throughout the country, which caused immense disturbance of the public mind.

Riots occurred at Calcutta and Delhi, but the most serious disturbances were at Amritsar, the sacred city of the Sikhs. The crowd came into collision with the authorities, it was red upon, and casualties were sustained. Amritsar became the scene of riot, murder and arson. The station was attacked and an English guard murdered; the buildings of the National Bank were burnt and the manager and accountant murdered; and the premises of the Alliance Bank were attacked and the manager murdered. An English missionary lady was severely beaten. The military under General Dyer took command of the situation and a proclaimed meeting being held at the Jhallianwallah Bagh it was fired upon by General Dyer's orders and between four and five hundred people were killed. The disorders at Amritsar then ceased, but widespread disturbances took place in the Punjab, telegraph wires were cut and trains interrupted and Government buildings burned. Martial law was proclaimed over a wide area and order was everywhere restored during the early part of May.

Simultaneously considerable disorders occurred in the Bombay Presidency on the

incorrect news that Mr. M. K. Gandhi, a well known Indian publicist, had been arrested, whereas he had only been prevented from entering Delhi or the Punjab. The mob burnt many Government buildings at Ahmedabad and hacked an English sergeant of police to death; it burnt the railway station of Viramgam and murdered an Indian official. Bombay city hung on the brink of a bloody riot.

Considerable feeling was aroused at the character of the measures taken to restore order in Amritsar and under martial law in the Punjab. It inspired strong opposition to the passage of the usual Indemnity Bill through the Imperial Legislative Council, and led to the appointment of a strong Commission under Lord Hunter to inquire into the origin of the disturbances and the nature of the measures taken to suppress them. This Commission began its sittings in November in public, and the evidence taken aroused a great storm of indignation. This indignation fastened on two points; the loss of life at the Jhallianwallah Bagh and the evidence in some cases of action taken under martial law not to punish or prevent but to humiliate. The Commission is still sitting.

These events overshadowed in the latter part of the year the great work being done to place India on the path to self-governing institutions. Reference was made in earlier editions of the Year Book to the visit of the Secretary of State, Mr. Montagu, to India and his joint report with the Viceroy on Indian constitutional reform. The keynote of that report is the establishment of an immediate measure of responsible government in the Provinces, through committing certain branches of the administration to Indian Ministers chosen from the Legislative Councils and the liberalisation of the Government of India. A Bill framed on the lines of this report was examined by a Joint Committee of Parliament during the summer and still further liberalised and improved was presented to both Houses of Parliament in November. It passed rapidly through both Houses, and received the Royal Assent in December, accompanied by a generous Proclamation to the Indian people and the promise of a wide amnesty for political offences. The extreme wing of Indian politics professed to regard the Act as disappointing and unsatisfactory, whilst determining to work with it; the Centre Party hailed it as a liberal and satisfactory measure, affording to India the opportunity of ultimately obtaining self-government by work within the Councils. Whilst these two points of view are the most vocal, the silent middle classes of India generally welcome the measure as liberal and statesmanlike, and as going as far in the direction of reform as is practicable with an unstructured electorate and without any diffused experience of administration amongst Indians. The new constitution is to be inaugurated by the Prince of Wales towards the close of 1920.

The History of India in Outline.

No history of India can be proportionate, and the briefest summary must suffer from the same defect. Even a wholesale acceptance as history of mythology, tradition, and folklore will not make good, though it makes picturesque, the many gaps that exist in the early history of India: and, though the labours of modern geographers and archaeologists have been amazingly fruitful, it cannot be expected that these gaps will ever be filled to any appreciable extent. Approximate accuracy in chronology and an outline of dynastic facts are all that the student can look for up to the time of Alexander, though the briefest excursion into the by-ways of history will reveal to him many alluring and mysterious fields for speculation. There are, for example, to this day castes that believe they sprang originally from the loins of a being who landed "from an impossible boat on the shores of a highly improbable sea"; and the great epic poems contain plentiful statements equally difficult of reconciliation with modern notions of history as a science. But from the Jataka stories and the Puranas, much valuable information is to be obtained, and, for the benefit of those unable to go to these and other original sources, it has been distilled by a number of writers.

The orthodox Hindu begins the political history of India more than 3,000 years before Christ, with the war waged on the banks of the Jumna between the sons of Kuru and the sons of Pandu; but the modern critic prefers to omit several of those remote centuries and to take 600 B. C., or thereabouts, as his starting point. At that time much of the country was covered with forest, but the Aryan races, who had entered India from the north, had established in parts a form of civilization far superior to that of the aboriginal savages, and to this day there survive cities, like Benares, founded by those invaders. In like manner the Dravidian invaders from an unknown land, who overran the Deccan and the Southern part of the Peninsula, crushed the aborigines, and, at a much later period, were themselves subdued by the Aryans. Of these two civilizing forces, the Aryan is the better known, and of the Aryan kingdoms the first of which there is authentic record is that of Magadha, or Bihar, on the Ganges. It was in, or near, this powerful kingdom that Jainism and Buddhism had their origin, and the fifth King of Magadha, Bimbisara by name, was the friend and patron of Gautama Buddha. The King mentioned was a contemporary of Darius, autocrat of Persia (521 to 485 B. C.) who annexed the Indus valley and formed from his conquest an Indian satrapy which paid as tribute the equivalent of about one million sterling. Detailed history, however, does not become possible until the invasion of Alexander in 326 B. C.

Alexander the Great.

That great soldier had crossed the Hindu Kush in the previous year and had captured Aornos, on the Upper Indus. In the spring of 326 he crossed the river at Ohind, received the submission of the King of Taxila, and marched against Porus who ruled the fertile country between the rivers Hydaspes (Jhelum) and

Akesines (Chenab). The Macedonian carried all before him, defeating Porus at the battle of the Hydaspes, and crossing the Chenab and Ravi. But at the River Hyphasis (Bias) his weary troops mutinied, and Alexander was forced to turn back and retire to the Jhelum where a fleet to sail down the rivers to the sea was nearly ready. The wonderful story of Alexander's march through Mektan and Persia to Babylon, and of the voyage of Nearchus up the Persian Gulf is the climax to the narrative of the invasion but is not part of the history of India. Alexander had stayed nineteen months in India and left behind him officers to carry on the Government of the kingdoms he had conquered: but his death at Babylon, in 323, destroyed the fruits of what has to be regarded as nothing but a brilliant raid, and within two years his successors were obliged to leave the Indian provinces, heavily scarred by war but not hellenized.

The leader of the revolt against Alexander's generals was a young Hindu, Chandragupta who was an illegitimate member of the Royal Family of Magadha. He dethroned the ruler of that kingdom, and became so powerful that he is said to have been able to place 600,000 troops in the field against Seleucus, to whom Babylon had passed on the death of Alexander. This was too formidable an opposition to be faced, and a treaty of peace was concluded between the Syrian and Indian monarchs which left the latter the first paramount Sovereign of India (321 B. C.) with his capital at Pataliputra, the modern Patna and Bankipore. Of Chandragupta's court and administration a very full account is preserved in the fragments that remain of the history compiled by Megasthenes, the ambassador sent to India by Seleucus. His memorable reign ended in 297 B. C. when he was succeeded by his son Bindusara, who in his turn was succeeded by Asoka (269—231 B. C.) who recorded the events of his reign in numerous inscriptions. This king, in an unusually bloody war, added to his dominions the kingdom of Kalinga (the Northern Circar) and then becoming a convert to Buddhism, resolved for the future to abstain from conquest by force of arms. The consequences of the conversion of Asoka were amazing. He was not intolerant of other religions, and did not endeavour to force his creed on his "children". But he initiated measures for the propagation of his doctrine with the result that "Buddhism, which had hitherto been a merely local sect in the valley of the Ganges, was transformed into one of the greatest religions of the world—the greatest, probably, if measured by the number of adherents. This is Asoka's claim to be remembered; this it is which makes his reign an epoch, not only in the history of India, but in that of the world." The wording of his edicts reveal him as a great king as well as a great missionary, and it is to be hoped that the excavations now being carried on in the ruins of his palace may throw yet more light on his character and times. On his death the Maurya kingdom fell to pieces. Even during his reign there had been signs of new forces at work on the borderland of India; where the inde-

pendent kingdoms of Bactria and Parthia had been formed, and subsequent to it there were frequent Greek raids into India. The Greeks in Bactria, however, could not withstand the overwhelming force of the westward migration of the Yueh-chi horde, which, in the first century A. D., also ousted the Indo-Parthian kings from Afghanistan and North-Western India.

The first of these Yueh-chi kings to annex a part of India was Kadphises II (A. D. 85—125), who had been defeated in a war with China, but crossed the Indus and consolidated his power eastward as far as Benares. His son Kanishka (whose date is much disputed) left a name which to Buddhists stands second only to that of Asoka. He greatly extended the boundaries of his empire in the North, and made Peshawar his capital. Under him the power of the Kushan clan of the Yueh-chi reached its zenith and did not begin to decay until the end of the second century, concurrently with the rise in middle India of the Andhra dynasty which constructed the Amaravati stupa, "one of the most elaborate and precious monuments of piety ever raised by man."

The Gupta Dynasty.

Early in the fourth century there arose, at Pataliputra, the Gupta dynasty which proved of great importance. Its founder was a local chief, his son Samudragupta, who ruled for some fifty years from A.D. 326, was a king of the greatest distinction. His aim of subduing all India was not indeed fulfilled but he was able to exact tribute from the kingdoms of the South and even from Ceylon, and, in addition to being a warrior, he was a patron of the arts and of Sanskrit literature. The rule of his son, Chandragupta, was equally distinguished and is commemorated in an inscription on the famous iron pillar near Delhi, as well as in the writings of the Chinese pilgrim Fa-hien who pays a great tribute to the equitable administration of the country. It was not until the middle of the fifth century that the fortunes of the Gupta dynasty began to wane—a face of the onset of the White Huns from central Asia—and by 480 the dynasty had disappeared. The following century all over India was one of great confusion, apparently marked only by the rise and fall of petty kingdoms, until a monarch arose, in A.D. 606, capable of consolidating an Empire. This was the Emperor Harsha who, from Thanasar near Ambala, conquered Northern India and extended his territory South to the Nerbudda. Imitating Asoka in many ways, this Emperor set "felt no embarrassment in paying adoration in turn to Siva, the Sun, and Buddha at a great public ceremonial." Of his times a graphic picture has been handed down in the work of the Chinese "Master of the Law," Hsien Tsiang by name. Harsha was the last native paramount sovereign of Northern India; on his death in 648 his throne was usurped by a minister, whose treacherous conduct towards an embassy from China was quickly avenged, and the kingdom so laboriously established passed into a state of internecine strife which lasted for a century and a half.

The Andhras and Rajputs.

In the meantime in Southern India the Andhras had attained to great prosperity and

carried on a considerable trade with Greece, Egypt and Rome, as well as with the East. Their domination ended in the fifth century A.D. and a number of new dynasties, of which the Pallavas were the most important, began to appear. The Pallavas made way in turn for the Chalukyas, who for two centuries remained the most important Deccan dynasty, one branch uniting with the Cholas. But the fortunes of the Southern dynasties are so involved, and in many cases so little known; that to recount them briefly is impossible. Few names of note stand out from the records except those of Vikramaditya (11th century), and a few of the later Hindu rulers who made a stand against the growing power of Islam, of the rise of which an account is given below. In fact the history of mediæval India is singularly devoid of unity. Northern India was in a state of chaos from about 650 to 950 A.D. not unlike that which prevailed in Europe of that time, and materials for the history of these centuries are very scanty. In the absence of any powerful rulers the jungle began to gain back what had been wrested from it: ancient capitals fell into ruins from which in some cases they have not even yet been disturbed, and the aborigines and various foreign tribes began to assert themselves so successfully that the Aryan element was chiefly confined to the Doab and the Eastern Punjab. It is not therefore so much for the political as for the religious and social history of this anarchical period that one must look. And the greatest event—if a slow process may be called an event—of the middle ages was the transition from tribe to caste, the final disappearance of the old four-fold division of Brahmans; Kshatriyas, Vaisyas, and Sudras, and the formation of the new division of pure and impure largely resting upon a classification of occupations. But this social change was only a part of the development of the Hindu religion into a form which would include in its embrace the many barbarians and foreigners in the country who were outside it. The great political event of the period was the rise of the Rajputs as warriors in the place of the Kshatriyas. Their origin is obscure but they appeared in the 8th century and spread, from their two original homes in Rajputana and Oudh, into the Punjab, Kashmir, and the Central Himalayas, assimilating a number of fighting clans and binding them together with a common code. At this time Kashmir was a small kingdom which exercised an influence on India wholly disproportionate to its size. The only other kingdom of importance was that of Kanauj—in the Doab and Southern Oudh—which still retained some of the power to which it had reached in the days of Harsha, and of which the renown extended to China and Arabia.

With the end of the period of anarchy, the political history of India centres round the Rajputs. One clan founded the kingdom of Gujarat, another held Malwa, another (the Chauhans) founded a kingdom of which Ajmer was the capital, and so on. Kanauj fell into the hands of the Rathors (circa 1040 A.D.) and the dynasty then founded by that branch of the Gaharwaras of Benares became one of the most famous in India. Later in the same century the Chauhans were united, and by

1163 one of them could boast that he had conquered all the country from the Vindhias to the Himalayas, including Delhi already a fortress a hundred years old. The son of this conqueror was Prithwi Raj, the champion of the Hindus against the Mahomedans. With his death in battle (1192) ends the golden age of the new civilization that had been evolved out of chaos; and of the greatness of that age there is a splendid memorial in the temples and forts of the Rajput states and in the two great philosophical systems of Sankaracharya (ninth century) and Ramanuja (twelfth century). The triumph of Hinduism had been achieved, it must be added, at the expense of Buddhism, which survived only in Magadha at the time of the Mahomedan conquest and speedily disappeared there before the new faith.

Mahomedan India.

The wave of Mahomedan invaders that eventually swept over the country first touched India, in Sind, less than a hundred years after the death of the Prophet in 632. But the first real contact was in the tenth century when a Turkish slave of a Persian ruler founded a kingdom at Ghazni, between Kabul and Kandahar. A descendant of his, Mahmud (967-1030) made repeated raids into the heart of India, capturing places so far apart as Multan, Kanauj, Gwalior, and Somnath in Kuthiawar, but permanently occupying only a part of the Punjab. Enduring Mahomedan rule was not established until the end of the twelfth century, by which time, from the little territory of Ghor, there had arisen one Mahomed Ghori capable of carving out a kingdom stretching from Peshawar to the Bay of Bengal. Prithwi Raj, the Chauhan ruler of Delhi and Ajmer, made a brave stand against, and once defeated, one of the armies of this ruler, but was himself defeated in the following year. Mahomed Ghori was murdered at Lahore (1206) and his vast kingdom, which had been governed by satraps, was split up into what were practically independent sovereignties. Of these satraps, Qutb-ud-din, the slave ruler of Delhi and Lahore, was the most famous, and is remembered by the great mosque he built near the modern Delhi. Between his rule and that of the Mughals, which began in 1526, only a few of the many Kings who governed and fought and built beautiful buildings, stand out with distinction. One of these was Ala-ud-din (1296-1316), whose many expeditions to the south much weakened the Hindu Kings, and who proved himself to be a capable administrator. Another was Firoz Shah, of the house of Tughlaq, whose administration was in many respects admirable, but which ended, on his abdication, in confusion. In the reign of his successor, Mahmud (1398-1413), the kingdom of Delhi went to pieces and India was for seven months at the mercy of the Turkish conqueror Taimur. It was the end of the fifteenth century before the kingdom, under Sikandar Lodi, began to recover. His son, Ibrahim, still further extended the kingdom that had been recreated, but was defeated by Babar, King of Kabul, at Panipat, near Delhi, in 1526, and there was then established in India the Mughal dynasty.

The Mahomedan dynasties that had ruled in capitals other than Delhi up to this date

were of comparative unimportance, though some great men appeared among them. In Gujarat, for example, Ahmad Shah, the founder of Ahmedabad, showed himself a good ruler and builder as well as a good soldier, though his grandson, Mahmud Shah Begara, was a greater ruler—acquiring fame at sea as well as on land. In the South various kings of the Bahmani dynasty made names for themselves, especially in the long wars they waged on the new Hindu kingdom that had arisen which had its capital at Vijayanagar. Of importance also was Adil Khan, a Turk, who founded (1490) the Bijapur dynasty of Adil Shahis. It was one of his successors who crushed the Vijayanagar dynasty, and built the great mosque for which Bijapur is famous.

The Mughal Empire.

As one draws near to modern times it becomes impossible to present anything like a coherent and consecutive account of the growth of India as a whole. Detached threads in the story have to be picked up one by one and followed to their ending, and although the sixteenth century saw the first European settlements in India, it will be convenient here to continue the narrative of Mahomedan India almost to the end of the Mughal Empire. How Babar gained Delhi has already been told. His son, Humayun, greatly extended his kingdom, but was eventually defeated (1540) and driven into exile by Sher Khan, an Afghan of great capabilities, whose short reign ended in 1545. The Sur dynasty thus founded by Sher Khan lasted another ten years when Humayun having snatched Kabul from one of his brothers, was strong enough to win back part of his old kingdom. When Humayun died (1556) his eldest son, Akbar, was only 13 years old and was confronted by many rivals. Nor was Akbar well served, but his career of conquest was almost uninterrupted and by 1594 the whole of India North of the Nerbudda had bowed to his authority, and he subsequently entered the Deccan and captured Ahmednagar. This great ruler, who was as remarkable for his religious tolerance as for his military prowess, died in 1605, leaving behind him a record that has been surpassed by few. His son, Jehangir, who married the Persian lady Nur Jahan, ruled until 1627, bequeathing to an admiring posterity some notable buildings—the tomb of his father at Sikandra, part of the palace at Agra, and the palace and fortress of Lahore. His son, Shahjahan, was for many years occupied with wars in the Deccan, but found time to make his court of incredible magnificence and to build the most famous and beautiful of all tombs, the Taj Mahal, as well as the fort, palace and Juma Masjid at Delhi. The quarrels of his sons led to the deposition of Shahjahan by one of them, Aurangzeb, in 1658. This Emperor's rule was one of constant intrigue and fighting in every direction, the most important of his wars being a twenty-five years' struggle against the Marathas of the Deccan who, under the leadership of Sivaji, became a very powerful faction in Indian politics. His bigoted attitude towards Hinduism made Aurangzeb all the more anxious to establish his Empire on a firm basis in the south, but he was unable to hold his many conquests, and on his death (1707) the

Empire, for which his three sons were fighting, could not be held together. Internal disorder and Maratha encroachments continued during the reigns of his successors, and in 1739 a fresh danger appeared in the person of Nadir Shah, the Persian conqueror, who carried all before him. On his withdrawal, leaving Mahomed Shah on the throne, the old intrigues recommenced and the Marathas began to make the most of the opportunity offered to them by puppet rulers at Delhi and by almost universal discord throughout what had been the Mughal Empire. There is little to add to the history of Mahomedan India. Emperors continued to reign in name at Delhi up to the middle of the 19th century, but their territory and power had long since disappeared, being swallowed up either by the Marathas or by the British.

European Settlements.

The voyage of Vasco da Gama to India in 1498 was what turned the thoughts of the Portuguese to the formation of a great Empire in the East. That idea was soon realized, for, from 1500 onwards, constant expeditions were sent to India and the first two Viceroy's in India—Almeida and Albuquerque—laid the foundations of a great Empire and of a great trade monopoly. Goa, taken in 1510, became the capital of Portuguese India and remains to this day in the hands of its captors, and the countless ruins of churches and forts on the shores of Western India, as also farther East at Malacca, testify to the zeal with which the Portuguese endeavoured to propagate their religion and to the care they took to defend their settlements. There were great soldiers and great missionaries among them—Albuquerque, da Cunha, da Castro in the former class, St. Francis Xavier in the latter. But the glory of Empire loses something of its lustre when it has to be paid for, and the constant drain of men and money from Portugal, necessitated by the attacks made on their possessions in India and Malaya, was found almost intolerable. The junction of Portugal with Spain, which lasted from 1580 to 1640, also tended to the downfall of the Eastern Empire and when Portugal became independent again, it was unequal to the task of competing in the East with the Dutch and English. The Dutch had little difficulty in wresting the greater part of their territory from the Portuguese, but the seventeenth century naval wars with England forced them to relax their hold upon the coast of India, and during the French wars between 1795 and 1811 England took all Holland's Eastern possessions, and the Dutch have left in India but few traces of their civilisation and of the once powerful East India Company of the Netherlands.

The first English attempts to reach India date from 1496 when Cabot tried to find the North-West passage, and these attempts were repeated all through the sixteenth century. The first Englishman to land in India is said to have been one Thomas Stephens (1579) who was followed by a number of merchant adventurers, but trade between the two countries really dates from 1600 when Elizabeth incorporated the East India Company which had been formed in London. Factories in India were founded only after Portuguese and Dutch opposition had been overcome, notably in the

sea fight off Swally (Suvali) in 1612. The first factory, at Surat, was for many years the most important English foothold in the East. Its establishment was followed by others, including Fort St. George, Madras, (1640) and Hughli (1651). In the history of these early years of British enterprise in India the cession of Bombay (1661) as part of the dower of Catherine of Braganza stands out as a land-mark; it also illustrates the weakness of the Portuguese at that date, since in return the King of England undertook to protect the Portuguese in India against their foes—the Marathas and the Dutch. Cromwell, by his treaty of 1654, had already obtained from the Portuguese an acknowledgment of England's right to trade in the East; and that right was now threatened, not by the Portuguese, but by Sivaji and by the general disorder prevalent in India. Accordingly, in 1686, the Company turned its attention to acquiring territorial power, and announced its intention to establish such a policy of civil and military power, and create and secure such a large revenue.....as may be the foundation of a large, well-grounded, sure English dominion in India for all time to come. Not much came of this announcement for some time, and no stand could be made in Bengal against the depredations of Aurangzeb. The foundations of Calcutta (1690) could not be laid by Job Charnock until after a humiliating peace had been concluded with that Emperor, and, owing to the difficulties in which the Company found itself in England, there was little chance of any immediate change for the better. The union of the old East India Company with the new one which had been formed in rivalry to it took place in 1708, and for some years peaceful development followed; though Bombay was always exposed by sea to attacks from the pirates, who had many strongholds within easy reach of that port, and on land to attacks from the Marathas. The latter danger was felt also in Calcutta. Internal dangers were numerous and still more to be feared. More than one mutiny took place among the troops sent out from England, and rebellions like that led by Keigwin in Bombay threatened to stifle the infant settlements. The public health was bad and the rate of mortality was at times appalling. To cope with such conditions strong men were needed, and the Company was in this respect peculiarly fortunate; the long list of its servants, from Oxenden and Aungier to Hastings and Raffles, contains many names of men who proved themselves good rulers and far-sighted statesmen, the finest Empire-builders the world has known.

Attempts to compete with the English were made of course. But the schemes of the Emperor Charles VI to secure a share of the Indian trade were not much more successful than those made by Scotland, Denmark, Sweden, and Russia. By the French, who founded Pondicherry and Chandernagore towards the end of the 17th century, much more was achieved, as will be seen from the following outline of the development of British rule.

The French Wars.

When war broke out between England and France in 1744, the French had acquired a

strong position in Southern India, which had become independent of Delhi and was divided into three large States—Hyderabad, Tanjore, and Mysore—and a number of petty states under local chieftains. In the affairs of these States Dupleix, when Governor of Pondicherry, had intervened with success, and when Madras was captured by a French squadron, under La Bourdonnais (1746) Dupleix wished to hand it over to the Nawab of Arcot—a deputy of the Nizam's who ruled in the Carnatic. The French, however, kept Madras, repelling an attack by the disappointed Nawab as well as the British attempts to recapture it. The treaty of Aix-la-Chapelle restored Madras to the English. The fighting had shown the Indian powers the value of European troops, and this was again shown in the next French war (1750-54) when Clive achieved enduring fame by his capture and subsequent defence of Arcot. This war arose from Dupleix supporting candidates for the disputed successions at Arcot and Hyderabad while the English at Madras put forward their own nominees. One of Dupleix's officers, the Marquis de Bussy, persuaded the Nizam to take into his pay the army which had established his power, and in return the Northern Circars, between Orissa and Madras, was granted to the French. This territory, however, was captured by the English in the seven years' war (1756-63). Dupleix had by then been recalled to France. Lally, who had been sent to drive the English out of India, captured Fort St. David and invested Madras. But the victory which Colonel (Sir Eyre) Coote won at Wandiwash (1760) and the surrender of Pondicherry and Gingee put an end to the French ambitions of Empire in Southern India. Pondicherry passed more than once from the one nation to the other before settling down to its present existence as a French colony in miniature.

Battle of Plassey.

While the English were fighting the third French war in the South they became involved in grave difficulties in Bengal, where Siraj-ud-Daula had acceded to power. The headquarters of the English at Calcutta were threatened by that ruler who demanded they should surrender a refugee and should cease building fortifications. They refused and he marched against them with a large army. Some of the English took to their ships and made off down the river, the rest surrendered and were cast into the jail known as the "Black Hole." From this small and stifling room 23 persons, out of 146, came out alive the next day. Clive who was at Madras, immediately sailed for Calcutta with Admiral Watson's squadron, recaptured the town (1757), and, as war with the French had been proclaimed, proceeded to take Chandernagore. The Nawab Siraj-ud-Daula then took the side of the French, and Clive, putting forward Mir Jafar as candidate for the Nawab's throne, marched out with an army consisting of 900 Europeans, 2,000 sepoy and 8 pieces of artillery against the Nawab's host of over 50,000. The result was the historic battle of Plassey (June 23) in which Clive, after hesitating on the course to be pursued, routed the Nawab. Mir Jafar was put on the throne

at Murshidabad, and the price of this honour was put at £ 2,340,000 in addition to the grant to the Company of the land round Calcutta now known as the District of the twenty-four Parganas. In the year after Plassey, Clive was appointed Governor of Bengal and in that capacity sent troops against the French in Madras and in person led a force against the Oudh army that was threatening Mir Jafar, in each case with success. From 1760 to 1765 Clive was in England. During his absence the Council at Calcutta deposed Mir Jafar and, for a price, put Mir Kasim in his place. This ruler moved his capital to Monghyr, organized an army, and began to intrigue with the Nawab Wazir of Oudh. He soon found, in a dispute over customs dues, an opportunity of quarrelling with the English and the first shots fired by his followers were the signal for a general rising in Bengal. About 200 Englishmen and a number of sepoys were massacred, but his trained regiments were defeated at Gheria and Oodeynullah, and Mir Kasim sought protection from the Nawab of Oudh. But in 1764, after quelling a sepoy mutiny in his own camp by blowing 24 ringleaders from the guns, Major (Sir Hector) Munro defeated the joint forces of Shah Alam, the Mughal Emperor, and the Nawab of Oudh in the battle of Buxar. In 1765 Clive (now Baron Clive of Plassey) returned as Governor. "Two landmarks stand out in his policy. First, he sought the substance, although not the name, of territorial power, under the fiction of a grant from the Mughal Emperor. Second, he desired to purify the Company's service, by prohibiting illicit gains, and by guaranteeing a reasonable pay from honest sources. In neither respect were his plans carried out by his immediate successors. But our efforts towards a sound administration date from this second Governorship of Clive, as our military supremacy dates from his victory at Plassey." Before Clive left India, in 1767, he had readjusted the divisions of Northern India and had set up a system of Government in Bengal by which the English received the revenues and maintained the army while the criminal jurisdiction was vested in the Nawab. The performance of his second task, the purification of the Company's service, was hotly opposed but carried out. He died in 1774 by his own hand, the House of Commons having in the previous year censured him, though admitting that he did render "great and meritorious services to his country."

Warren Hastings.

The dual system of government that Clive had set up proved a failure and Warren Hastings was appointed Governor, in 1772, to carry out the reforms settled by the Court of Directors which were to give them the entire care and administration of the revenues. Thus Hastings had to undertake the administrative organization of India, and, in spite of the factious attitude of Philip Francis, with whom he fought a duel and of other members of his Council, he reorganized the civil service, reformed the system of revenue collection, greatly improved the financial position of the Company and created courts of justice and some semblance of a police force. From 1772 to 1774 he was Governor of Bengal, and from 1774 to 1777

he was the first Governor-General, nominated under an Act of Parliament passed in the previous year. His financial reforms, and the forced contributions he enacted from the rebellious Chet Singh and the Begam of Oudh, were interpreted in England as acts of oppression and formed, together with his action in the trial of Nuncomar for forgery, the basis of his seven years' trial before the House of Lords which ended in a verdict of not guilty on all the charges. But there is much more for which his administration is justly famous. The recovery of the Marathas from their defeat at Panipat was the cardinal factor that influenced his policy towards the native states. One frontier was closed against Maratha invasion by the loan of a British brigade to the Nawab Wazir of Oudh, for his war against the Rohillas, who were intriguing with the Marathas. In Western India he found himself committed to the two Maratha wars (1775-82) owing to the ambition of the Bombay Government to place its own nominee on the throne of the Peshwa at Poona, and the Bengal troops that he sent over made amends, by the conquest of Gujrat and the capture of Gwalior, for the disgrace of Wadgaon where the Marathas overpowered a Bombay army. In the South—where interference from Madras had already led (1769) to what is known as the first Mysore war, a disastrous campaign against Hyder Ali and the Nizam—he found the Madras Government again in conflict with those two potentates. The Nizam he won over by diplomacy, but against Hyder Ali he had to despatch a Bengal army under Sir Eyre Coote. Hyder Ali died in 1782 and two years later a treaty was made with his son Tipu. It was in these acts of intervention in distant provinces that Hastings showed to best advantage as a great and courageous man, cautious, but swift in action when required. He was succeeded, after an interregnum, by Lord Cornwallis (1786-93) who built on the foundations of civil administration laid by Hastings, by entrusting criminal jurisdiction to Europeans and establishing an Appellate Court of Criminal Judicature at Calcutta. In the Civil Service he separated the functions of the District Collector and Judge and organized the "writers" and "merchants" of the Company into an administrative Civil Service. This system was subsequently extended to Madras and Bombay. Lord Cornwallis is better known for his introduction, on orders from England, of the Permanent Settlement in Bengal. (See article on Land Revenue). A third Mysore war was waged during his tenure of office which ended in the submission of Tipu Sultan. Sir John Shore (Lord Teignmouth), an experienced Civil Servant, succeeded Lord Cornwallis, and, in 1798, was followed by Lord Wellesley, the friend of Pitt, whose projects were to change the map of India.

Lord Wellesley's Policy.

The French in general, and "the Corsican" in particular, were the enemy most to be dreaded for a few years before Lord Wellesley took up his duties in India, and he formed the scheme of definitively ending French schemes in Asia by placing himself at the head of a great Indian confederacy. He started by obtaining from the Nawab of Oudh the cession of

large tracts of territory in lieu of payments overdue as subsidies for British troops, he then won over the Nizam to the British side, and, after exposing the intrigues of Tipu Sultan with the French, embarked on the fourth Mysore war which ended (1799) in the fall of Seringapatam and the gallant death of Tipu. Part of Mysore, the Carnatic, and Tanjore roughly constituting the Madras Presidency of to-day then passed to British rule. The five Maratha powers—the Peshwa of Poona; the Gaekwar of Baroda, Sindhia of Gwalior, Holkar of Indore and the Raja of Nagpur—had still to be brought into the British net. The Peshwa, after being defeated by Holkar, fled to British territory and signed the Treaty of Bassein which led to the third Maratha war (1802-04) as it was regarded by Sindhia and the Raja of Nagpur at a betrayal of Maratha independence. In this the most successful of British campaigns in India; Sir Arthur Wellesley (the Duke of Wellington) and General (Lord) Lake carries all before them, the one by his victories of Assaye and Argaum and the other at Aligad, and Laswari. Later operations, such as Colonel Monson's retreat through Central India were less fortunate. The great acquisitions of territory made under Lord Wellesley proved so expensive that the Court of Directors, becoming impatient, sent out Lord Cornwallis a second time to make peace at any price. He, however, died soon after his arrival in India, and Sir George Barlow carried on the government (1805-7) until the arrival of a stronger ruler, Lord Minto. He managed to keep the peace in India for six years, and to add to British dominions by the conquest of Java and Mauritius. His foreign policy was marked by another new departure, inasmuch as he opened relations with the Punjab, Persia, and Afghanistan, and concluded a treaty with Ranjit Singh, at Lahore, which made that Sikh ruler the loyal ally of the British for life.

The successor of Lord Minto was Lord Moira; who found himself obliged almost at once to declare war on the Gurkhas of Nepal, who had been encroaching on British territory. After initial reverses, the English, under General Ochterlony, were successful and the Treaty of Sagauli (1816) was drawn up which defines British relations with Nepal to the present day. For this success Lord Moira was made Marquis of Hastings. In the same year he made preparations for the last Maratha war (1817-18) which was made necessary by the lawless conduct of the Pindaris, gangs of Pathan or Rohilla origin, whose chief patrons were the rulers of Native States. The large number of 120,000 that he collected for this purpose destroyed the Pindaris, annexed the dominions of the rebellious Peshwa of Poona, protected the Rajput States, made Sindhia enter upon a new treaty, and compelled Holkar to give up part of his territory. Thus Lord Hastings established the British power more firmly than ever, and when he resigned, in 1823, all the Native States outside the Punjab had become parts of the political system and British interests were permanently secured from the Persian Gulf to Singapore. Lord Amherst followed Lord Hastings, and his five years' rule (1823-28) are memorable for the first Burmese war and the capture of Bharatpur. The former opera-

tion was undertaken owing to the insolent demands and raids of the Burmese, and resulted in the Burmese ceding Assam, Aracan, and the coast of Martaban and their claims to the lower provinces. The capture of Lharatpur by Lord Combermere (1826) wiped out the repulse which General Lake had received there twenty years earlier. A disputed succession on this occasion led to the British intervention.

Social Reform.

A former Governor of Madras, Lord William Bentinck, was the next Governor-General. His epitaph by Macaulay, says: "He abolished cruel rites; he effaced humiliating distinctions; he gave liberty to the expression of public opinion; his constant study was to elevate the intellectual and moral character of the nations committed to his charge."

Some of his financial reforms, forced on him from England, and his widening of the gates by which educated Indians could enter the service of the Company, were most unpopular at the time, but were eclipsed by the acts he took for the abolition of *Sati*, or widow-burning, and the suppression—with the help of Captain Sleeman—of the professional hereditary assassins known as *Thajs*. In 1832 he annexed Cachar, and, two years later, Coorg. The incompetence of the ruler of Mysore forced him to take that State also under British administration—where it remained until 1881. His rule was marked in other ways by the despatch of the first steamship that made the passage from Bombay to Suez, and by his settlement of the long educational controversy in favour of the advocates of instruction in English and the vernaculars. Lord William Bentinck left India (1835) with his programme of reforms unfinished. The new Charter Act of 1833 had brought to a close the commercial business of the Company and emphasized their position as rulers of an Indian Empire in trust for the Crown. By it the whole administration, as well the legislation of the country, was placed in the hands of the Governor-General in Council, and authority was given to create a Presidency of Agra. Before his retirement Bentinck assumed the statutory title of Governor-General of India (1834), thus marking the progress of consolidation since Warren Hastings in 1774 became the first Governor-General of Fort William. Sir Charles Metcalfe, being senior member of Council, succeeded Lord William Bentinck, and during his short tenure of office carried into execution his predecessor's measures for giving entire liberty to the press.

Afghan Wars.

With the appointment of Lord Auckland as Governor-General (1836-42) there began a new era of war and conquest. Before leaving London he announced that he looked with exultation to the prospect of "promoting education and knowledge, and of extending the blessings of good Government and happiness to millions in India;" but his administration was almost exclusively comprised in a fatal expedition to Afghanistan, which dragged in its train the annexation of Sind, the Sikh wars, and the inclusion of Baluchistan in the protectorate of India. The first Afghan war was undertaken partly to counter the Russian advance

in Central Asia and partly to place on the throne at Kabul the dethroned ruler Shah Shuja in place of Dost Mahomed. The latter object was easily attained (1839) and for two years Afghanistan remained in the military occupation of the British. In 1841 Sir Alexander Burnes was assassinated in Kabul and Sir William Macnaghten suffered the same fate in an interview with the son of Dost Mahomed. The British Commander in Kabul, Gen. Elphinstone, was old and feeble, and after two months' delay he led his army of 4,500 and 12,000 camp followers back towards India in the depth of winter. Between Kabul and Jallalabad the whole force perished, either at the hands of the Afghans or from cold, and Dr. Brydon was the only survivor who reached the latter city. Lord Ellenborough succeeded Lord Auckland and was persuaded to send an army of retribution to relieve Jallalabad. One force under Gen. Pollock relieved Jallalabad and marched on Kabul, while Gen. Nott, advancing from Kandahar, captured Ghazni and joined Pollock at Kabul (1842). The bazaar at Kabul was blown up, the prisoners rescued, and the army returned to India leaving Dost Mahomed to take undisputed possession of his throne. The drama ended with a bombastic proclamation from Lord Ellenborough and the parade through the Punjab of the (spurious) gates of Somnath taken from the tomb of Mahmud of Ghazni.

Sikh Wars.

Lord Ellenborough's other wars the conquest of Sind by Sir Charles Napier and the suppression of an outbreak in Gwalior—were followed by his recall, and the appointment of Sir Henry (1st Lord) Hardinge to be Governor-General. A soldier Governor-General was not unacceptable, for it was felt that a trial of strength was imminent between the British and the remaining Hindu power in India, the Sikhs. Ranjit Singh, the founder of the Sikh Kingdom, had died in 1839, loyal to the end to the treaty he had made with Metcalfe thirty years earlier. He left no son capable of ruling, and the *khalsa*, or central council of the Sikh army, was burning to measure its strength with the British sepoys. The intrigues of two men, Lal Singh and Fej Singh, to obtain the supreme power led to their crossing the Sutlej and invading British territory. Sir Hugh Gough, the Commander-in-Chief, and the Governor-General hurried to the frontier, and within three weeks four pitched battles were fought—at Mudki, Ferozeshah, Aliwal and Sohraon. The Sikhs were driven across the Sutlej and Lahore surrendered to the British, but the province was not annexed. By the terms of peace the infant Dhuleep Singh was recognized as Rajah; Major Henry Lawrence was appointed Resident, to assist the Sikh Council of Regency, at Lahore; the Jullundur Doab was added to British territory; the Sikh army was limited; and a British force was sent to garrison the Punjab on behalf of the child Rajah. Lord Hardinge returned to England (1848) and was succeeded by Lord Dalhousie, the greatest of Indian proconsuls.

Dalhousie had only been in India a few months when the second Sikh war broke out. In the attack on the Sikh position at Chillianwala the British lost 2,400 officers and men

besides four guns and the colours of three regiments; but before reinforcements could arrive from England, bringing Sir Charles Napier as Commander-in-Chief, Lord Gough had restored his reputation by the victory of Gujrat which absolutely destroyed the Sikh army. As a consequence the Punjab was annexed and became a British province (1849), its pacification being so well carried out, under the two Lawrences that on the outbreak of the Mutiny eight years later it remained not only quiet but loyal. In 1852 Lord Dalhousie had again to embark on war, this time in Burma, owing to the ill-treatment of British merchants in Rangoon. The lower valley of the Irawaddy was occupied from Rangoon to Prome and annexed, under the name of Pegu, to those provinces that had been acquired in the first Burmese war. British territories were enlarged in many other directions during Lord Dalhousie's tenure of office. His "doctrine of lapse" by which British rule was substituted for Indian in States where continued misrule on the failure of a dynasty made this change possible, came into practice in the cases of Satara, Jhansi, and Nagpur (which last-named State became the Central Provinces) where the rulers died without leaving male heirs. Oudh was annexed on account of its misrule. Dalhousie left many other marks on India. He reformed the administration from top to bottom, founded the Public Works Department, initiated the railways, telegraphs and postal system, and completed the great Ganges canal. He also detached the Government of Bengal from the charge of the Governor-General, and summoned representatives of the local Governments to the deliberations of the Government of India. Finally, in education he laid down the lines of a department of public instruction and initiated more practical measures than those devised by his predecessors. It was his misfortune that the mutiny, which so swiftly followed his resignation, was by many critics in England attributed to his passion for change.

The Sepoy Mutiny.

Dalhousie was succeeded by Lord Canning in 1856, and in the following year the sepoys of the Bengal army mutinied and all the valley of the Ganges from Delhi to Patna rose in rebellion. The causes of this convulsion are difficult to estimate, but are probably to be found in the unrest which followed the progress of English civilisation; in the spreading of false rumours that the whole of India was to be subdued; in the confidence the sepoy troops had acquired in themselves under British leadership; and in the ambition of the educated classes to take a greater share in the government of the country. Added to this, there was in the deposed King of Delhi, Bahadur Shah, a centre of growing disaffection. Finally there was the story—not devoid of truth—that the cartridges for the new Enfield rifle were greased with fat that rendered them unclean for both Hindus and Mahomedans. And when the mutiny did break out it found the Army without many of its best officers who were employed in civil work, and the British troops reduced, in spite of Lord Dalhousie's warnings, below the number he considered essential for safety. On May 10

the sepoys at Meerut rose in mutiny, cut down a few Europeans, and, unchecked by the large European garrison, went off to Delhi where next morning the Mahomedans rose. From that centre the mutiny spread through the North-Western Provinces and Oudh into Lower Bengal. Risings in the Punjab were put down by Sir John Lawrence and his subordinates, who armed the Sikhs, and with their help reduced the sepoys, and Lawrence was subsequently able to send a strong body of Sikhs to aid in the siege of Delhi. The native armies of Madras and Bombay remained for the most part true to their colours. In Central India, the contingents of some of the great chieftains joined the rebels, but Hyderabad was kept loyal by the influence of its minister, Sir Salar Jung.

The interest of the war centres round Delhi, Cawnpore and Lucknow, though in other places massacres and fighting occurred. The siege of Delhi began on June 8 when Sir Henry Barnard occupied the Ridge outside the town. Barnard died of cholera early in July, and Thomas Reed, who took his place, was obliged through illness to hand over the command to Archdale Wilson. In August Nicholson arrived with a reinforcement from the Punjab. In the meantime the rebel force in Delhi was constantly added to by the arrival of new bodies of mutineers; attacks were frequent and the losses heavy: cholera and sunstroke carried off many victims on the Ridge: and when the final assault was made in September the Delhi army could only parade 4,720 infantry, of whom 1,960 were Europeans. The arrival of siege guns made it possible to advance the batteries on September 8, and by the 13th a breach was made. On the following day three columns were led to the assault, a fourth being held in reserve. Over the ruins of the Kashmir Gate, blown in by Horne and Salkeld, Col. Campbell led his men and Nicholson formed up his troops within the walls. By nightfall the British, with a loss of nearly 1,200 killed and wounded, had only secured a foothold in the city. Six days' street fighting followed and Delhi was won; but the gallant Nicholson was killed at the head of a storming party. Bahadur Shah was taken prisoner, and his two sons were shot by Captain Hudson.

Massacre at Cawnpore.

At Cawnpore the sepoys mutinied on June 27 and found in Nana Sahib, the heir of the last Peshwa, a willing leader in spite of his former professions of loyalty. There a European force of 240 with six guns had to protect 870 non-combatants, and held out for 22 days, surrendering only on the guarantee of the Nana that they should have a safe conduct as far as Allahabad. They were embarking on the boats on the Ganges when fire was opened on them, the men being shot or hacked to pieces before the eyes of their wives and children and the women being mutilated and murdered in Cawnpore to which place they were taken back. Their bodies were thrown down a well just before Havelock, having defeated the Nana's forces, arrived to the relief. In Lucknow a small garrison held out in the Residency from July 2 to September 25 against tremendous odds and enduring the most fearful hardships. The relieving force, under Havelock and Outram, was itself invested, and the garrison was

not finally delivered until Sir Colin Campbell arrived in November. Fighting continued for 18 months in Oudh, which Sir Colin Campbell finally reduced, and in Central India, where Sir Hugh Rose waged a brilliant campaign against the disinherited Rani of Jhansi—who died at the head of her troops—and Tantia Topi.

Transfer to the Crown.

With the end of the mutiny there began a new era in India, strikingly marked at the outset by the Act for the Better Government of India (1858) which transferred the entire administration from the Company to the Crown. By that Act India was to be governed by, and in the name of, the Sovereign through a Secretary of State, assisted by a Council of fifteen members. At the same time the Governor-General received the title of Viceroy. The European troops of the Company, numbering about 24,000 officers and men were—greatly resenting the transfer—amalgamated with the Royal service, and the Indian Navy was abolished. On November 1, 1858, the Viceroy announced in Durbar at Allahabad that Queen Victoria had assumed the government of India, and proclaimed a policy of justice and religious toleration. A principle already enunciated in the Charter Act of 1833 was reinforced, and all, of every race or creed, were to be admitted as far as possible to those offices in the Queen's service for which they might be qualified. The aim of the Government was to be the benefit of all her subjects in India—"In their prosperity will be our strength, in their contentment our security, and in their gratitude our best reward." Peace was proclaimed in July 1859, and in the cold weather Lord Canning went on tour in the northern provinces, to receive the homage of loyal chiefs and to assure them that the "policy of lapse" was at an end. A number of other important reforms marked the closing years of Canning's Viceroyalty. The India Councils Act (1861) augmented the Governor-General's Council, and the Councils of Madras and Bombay by adding non-official members, European and Indian, for legislative purposes only. By another Act of the same year High Courts of Judicature were constituted. To deal with the increased debt of India, Mr. James Wilson was sent from England to be Financial Member of Council, and to him are due the customs system, income tax, license duty, and State paper currency. The cares of office had broken down the Viceroy's health. Lady Canning died in 1862 and this hastened his departure for England where he died in June of that year. His successor, Lord Elgin, lived only a few months after his arrival in India, and was succeeded by Sir John (afterwards Lord) Lawrence, the "saviour of the Punjab."

Sir John Lawrence.

The chief task that fell to Sir John Lawrence was that of reorganising the Indian military system, and of reconstructing the Indian army. The latter task was carried out on the principle that in the Bengal army the proportion of Europeans to Indians in the infantry and cavalry should be one to two, and in the Madras and Bombay armies one to three: the artillery was to be almost wholly European. The re-organisation was carried out in spite of

financial difficulties and the saddling of Indian revenues with the cost of a war in Abyssinia with which India had no direct concern; but operations in Bhutan were all the drain made on the army in India while the re-organising process was being carried on. Two severe famines—in Orissa (1866) and Bundelkhand and Upper Hindustan (1868-9)—occurred, while Sir John Lawrence was Viceroy, and he laid down the principle for the first time in Indian history, that the officers of the Government would be held personally responsible for taking every possible means to avert death by starvation. He also created the Irrigation Department under Col. (Sir Richard) Strachey. Two commercial crises of the time have to be noted. One seriously threatened the tea industry in Bengal. The other was the consequence of the wild gambling in shares of every description that took place in Bombay during the years of prosperity for the Indian cotton industry caused by the American Civil War. The "Share Mania," however, did no permanent harm to the trade of Bombay, but was, on the other hand, largely responsible for the series of splendid buildings begun in that city during the Governorship of Sir Bartle Frere. Sir John Lawrence retired in 1869, having passed through every grade of the service, from an Assistant Magistracy to the Viceroyalty. Lord Mayo, who succeeded him, created an Agricultural Department and introduced the system of Provincial Finance, thus fostering the impulse to local self-government. He also laid the foundation for the reform of the salt duties, thereby enabling his successors to abolish the inter-provincial customs lines. Unhappily his vast schemes for the development of the country by extending communications of every kind were not carried out to the full by him, for he was murdered in the convict settlement of the Andaman Islands, in 1872. Lord Northbrook (Viceroy 1872-6) had to exercise his abilities chiefly in the province of finance. A severe famine which threatened Lower Bengal in 1874 was successfully warded off by the organization of State relief and the importation of rice from Burma. The following year was notable for the deposition of the Gaikwar of Baroda for misgovernment, and for the tour through India of the Prince of Wales (the late King Edward VII). The visit of the Duke of Edinburgh to India when Lord Mayo was Viceroy had given great pleasure to those with whom he had come in touch, and had established a kind of personal link between India and the Crown. The Prince of Wales' tour aroused unprecedented enthusiasm for and loyalty to the British Raj, and further encouragement was given to the growth of this spirit when, in a durbar of great magnificence held on January 1st, 1877, on the famous Ridge at Delhi, Queen Victoria was proclaimed Empress of India. The Viceroy of that time, Lord Lytton, had, however, to deal with a situation of unusual difficulty. Two successive years of drought produced, in 1877-78, the worst famine India had known. The most strenuous exertions were made to mitigate its effects, and eight crores of rupees were spent in importing grain; but the loss of life was estimated at 5½ millions. At this time also Afghan affairs once more became prominent.

Second Afghan War.

The Amir, Sher Ali, was found to be intriguing with Russia and that fact, coupled with his repulse of a British mission led to the second Afghan War. The British forces advanced by three routes—the Khyber, the Kurram, and the Bolan—and gained all the important vantage points of Eastern Afghanistan. Sher Ali fled and a treaty was made with his son Yakub Khan, which was promptly broken by the murder of Sir Louis Cavagnari, who had been sent as English envoy to Kabul. Further operations were thus necessary, and Sir F. (now Lord) Roberts advanced on the capital and defeated the Afghans at Charasia. A rising of the tribes followed, in spite of Sir D. Stewart's victory at Ahmed Kheyl and his advance from Kabul to Kandahar. A pretender, Sirdar Ayub Khan, from Herat prevented the establishment of peace, defeated Gen. Burrows' brigade at Maiwand, and invested Kandahar. He was routed in turn by Sir F. Roberts who made a brilliant march from Kabul to Kandahar. After the British withdrawal fighting continued between Ayub Khan and Abdur Rahman, but the latter was left undisputed Amir of Afghanistan until his death in 1901.

In the meantime Lord Lytton had resigned (1880) and Lord Ripon was appointed Viceroy by the new Liberal Government. Lord Ripon's administration is memorable for the freedom given to the Press by the repeal of the Vernacular Press Act, for his scheme of local self-government which developed municipal institutions, and for the attempt to extend the jurisdiction of the criminal courts in the Districts over European British subjects, independently of the race or nationality of the presiding judge. This attempt, which created a feeling among Europeans in India of great hostility to the Viceroy, ended in a compromise in 1884. Other reforms were the re-establishment of the Department of Revenue and Agriculture, the appointment of an Education Commission with a view to the spread of popular instruction on a broader basis, and the abolition by the Finance Minister (Sir Evelyn Baring, now Lord Cromer) of a number of customs duties. Lord Dufferin, who succeeded Lord Ripon in 1884, had to give his attention more to external than internal affairs: one of his first acts was to hold a durbar at Rawalpindi for the reception of the Amir of Afghanistan which resulted in the strengthening of British relations with that ruler. In 1885 a third Burmese war became necessary owing to the truculent attitude of King Thibaw and his intrigues with foreign Powers. The expedition, under General Prendergast, occupied Mandalay without difficulty and King Thibaw was exiled to Ratnagiri, where he died on 16th December 1916. His dominions of Upper Burma were annexed to British India on the 1st of January, 1886.

The Russian Menace.

Of greater importance at the time were the measures taken to meet a possible, and as it then appeared a probable, attack on India by Russia. These preparations, which cost over two million sterling, were hurried on because of a collision which occurred between Russian and Afghan troops at Penjdeh, during the delimitation of the Afghan frontier

towards Central Asia, and which seemed likely to lead to a declaration of war by Great Britain. War was averted, but the Penjdeh incident had called attention to a menace that was to be felt for nearly a generation more; it had also served to elicit from the Princes of India an unanimous offer of troops and money in case of need. That offer bore fruit under the next Viceroy, Lord Lansdowne, when the present system of Imperial Service Troops was organised. Under Lord Lansdowne's rule also the defences of the North-Western Frontier were strengthened, on the advice of Sir Frederick (now Earl) Roberts, who was then Commander-in-Chief in India. Another form of precautionary measure against the continued aggression of Russia was taken by raising the annual subsidy paid by the Indian Government to the Amir from eight to twelve lakhs.

On the North-Eastern Frontier there occurred (1891) in the small State of Manipur a revolution against the Raja that necessitated an inquiry on the spot by Mr. Quinton, the Chief Commissioner of Assam. Mr. Quinton, the commander of his escort, and others, were treacherously murdered in a conference and the escort ignominiously retreated. This disgrace to British arms led to several attacks on frontier outposts which were brilliantly defeated. Manipur was occupied by British troops and the government of the State was reorganised under a Political Agent. Lord Lansdowne's term of office was distinguished by several other events, such as the passing of the Parliamentary Act (Lord Cross's Act, 1892), which increased the size of the Legislative Councils as well as the number of non-officials in them: legislation aimed at social and domestic reform among the Hindus: and the closing of the Indian Mints to the free coinage of silver (1893). In Burma great progress was made, under Sir Alexander Mackenzie, as Chief Commissioner: comparative order was established, and large schemes for the construction of railways, roads, and irrigation works were put in hand. (The Province was made a Lieutenant-Governorship in 1897).

Frontier Campaigns.

Lord Elgin, who succeeded Lord Lansdowne in 1894, was confronted at the outset with a deficit of Rs. 2½ crores, due to the fall in exchange. (In 1895 the rupee fell as low as 1s. 1d.) To meet this the old five per cent. import duties were reimposed on a number of commodities, but not on cotton goods: and within the year the duty was extended to piece-goods, but not to yarn. The reorganisation of the Army, which involved the abolition of the old system of Presidency Armies, had hardly been carried out when a number of risings occurred along the North-West Frontier. In 1895 the British Agent in Chitral—which had come under British influence two years previously when Sir H. M. Durand had demarcated the southern and eastern boundaries of Afghanistan—was besieged and had to be rescued by an expeditionary force. Two years later the Wazirs, Swatis, and Mohmands attacked the British positions in Malakand, and the Afridis closed the Khyber Pass. Peace was only established after a prolonged campaign (the Tirah campaign) in which 40,000 troops were employed, and over 1,000 officers

and men had been lost. This was in itself a heavy burden on the finances of India, which was increased by the serious and widespread famine of 1896-97 and by the appearance in India of bubonic plague. The methods taken to prevent the spread of that disease led, in Bombay, to rioting, and elsewhere to the appearance in the vernacular press of seditious articles which made it necessary to make more stringent the law dealing with such writings.

Lord Curzon's Viceroyalty.

With famine and plague Lord Curzon also, who succeeded Lord Elgin in 1899, had to deal. In 1901 the cycle of bad harvests came to an end; but plague increased, and in 1904 deaths from it were returned at over one million. Of the many problems to which Lord Curzon directed his attention, only a few can be mentioned here: some indeed claim that his greatest work in India was not to be found in any one department but was in fact the general gearing up of the administration which he achieved by his unceasing energy and personal example of strenuous work. He had at once to turn his attention to the North-West Frontier. The British garrisons beyond our boundary were gradually withdrawn and replaced by tribal levies, and British forces were concentrated in British territory behind them as a support. An attempt was made to check the arms traffic and work on strategic railways was pushed forward. The fact that in seven years he only spent a quarter of a million upon repressive measures and only found it necessary to institute one blockade (against the Mabsud Waziris) is the justification of this policy of compromise between the Lawrence and Forward schools of thought. In 1901 the trans-Indus districts of the Punjab were separated from that Province, and together with the political charges of the Malakand, the Khyber, Kurram, Tochi, and Wana were formed into the new North-West Frontier Province, under a Chief Commissioner directly responsible to the Government of India. That year also witnessed the death of Abdur Rahman, the Amir of Afghanistan, and the establishment of an understanding with his successor Habibullah. In 1904 the attitude of the Dalai Lama of Tibet being pro-Russian and anti-British, it became necessary to send an expedition to Lhasa under Colonel (Sir Francis) Younghusband. The Dalai Lama abdicated and a treaty was concluded with his successor.

Lord Curzon as Viceroy.

In his first year of office Lord Curzon passed the Act which, in accordance with the recommendations of the Fowler Commission, practically fixed the value of the rupee at 1s. 4d., and in 1900 a Gold Reserve fund was created. The educational reforms that marked this Viceroyalty are dealt with elsewhere: chief among them was the Act of 1904 reorganising the governing bodies of Indian Universities. Under the head of agrarian reform must be mentioned the Punjab Land Alienation Act, designed to free the cultivators of the soil from the clutches of money-lenders, and the institution of Agricultural banks. The efficiency of the Army was increased (Lord Kitchener was Commander-in-Chief) by the re-arrangement

of the Indian Army, the strengthening of the artillery, and the reorganisation of the transport service. In his relations with the Feudatory Chiefs, Lord Curzon emphasized their position as partners in administration, and he founded the Imperial Cadet Corps to give a military education to the sons of ruling and aristocratic families. In 1902 the British Government obtained from the Nizam a perpetual lease of the Assigned Districts of Berar in return for an annual payment of 25 lakhs. The accession of King Edward VII was proclaimed in a splendid Durbar on January 1, 1903. In 1904 Lord Curzon returned to England for a few months but was re-appointed to a second term of office, Lord Amthill, Governor of Madras, having acted as Viceroy during his absence. The chief act of this second term was the partition of Bengal and the creation of a new Province of Eastern Bengal and Assam—a reform, designed to remove the systematic neglect of the trans-Gangetic areas of Bengal, which evoked bitter and prolonged criticism. In 1905 Lord Curzon resigned, being unable to accept the proposals of Lord Kitchener for the re-adjustment of relations between the Army headquarters and the Military Department of the Government, and being unable to obtain the support of the Home Government. Lord Curzon was succeeded by Lord Minto, the grandson of a former Governor-General. It was a stormy heritage to which Lord Minto succeeded, for the unrest which had long been noticed developed in one direction into open sedition. The occasion of the outburst in Bengal was the partition of that province. The causes of the flood of seditious writings and speeches, of the many attempts at assassination, and of the boycott of British goods are less easily definable. The mainspring of the unrest was “a deep-rooted antagonism to all the principles upon which Western society, especially in a democratic country like England, has been built up.”

Outside Bengal attempts to quell the disaffection by the ordinary law were fairly successful. But scarcely any province was free from disorder of some kind and, though recourse was had to the deportation of persons without reason assigned under an Act of 1818, special Acts had to be passed to meet the situation, viz:—an Explosives Act, a Prevention of Seditious Meetings Act, and a Criminal Law Amendment Act which provides for a magisterial inquiry in private and a trial before three judges of the High Court without a jury. Concurrently with these legislative measures steps were taken to extend representative institutions. In 1907 a Hindu and a Mahomedan were appointed to the Secretary of State's Council, and in 1909 a Hindu was appointed for the first time to the Viceroy's Council. The Indian Councils Act of 1909 carried this policy farther by reconstituting the legislative councils and conferring upon them wider powers of discussion. The executive councils of Madras and Bombay were enlarged by the addition of an Indian member.

As regards foreign policy, Lord Minto's Viceroyalty was distinguished by the conclusion (1907) between Great Britain and Russia of an agreement on questions likely to disturb

the friendly relations of the two countries in Asia generally, and in Persia, Afghanistan and Tibet in particular. Two expeditions had to be undertaken on the North-West frontier, against the Zakka Khels and the Mohmands; and ships of the East Indies Squadron were frequently engaged off Maskat and in the Persian Gulf in operations designed to check the traffic in arms through Persia and Mekran to the frontier of India.

Visit of the King and Queen.

Sir Charles (Lord) Hardinge was appointed to succeed Lord Minto in 1910. His first year in India was marked by the visit to India of the King Emperor and the Queen, who arrived at Bombay on December 2, 1911. From there they proceeded to Delhi where, in the most magnificent durbar ever held in India, the coronation was proclaimed and various boons, including an annual grant of 50 lakhs for popular education, were announced. At the same ceremony His Majesty announced the transfer of the capital of India from Calcutta to Delhi; the reunion of the two Bengals under a Governor-in-Council; the formation of a new Lieutenant Governorship for Behar, Chota Nagpur and Orissa and the restoration of Assam to the charge of a Chief Commissioner.

In August, 1913, the demolition of a lavatory attached to a mosque in Cawnpore was made the occasion of an agitation among Indian Mahomedans and a riot in Cawnpore led to heavy loss of life. Of those present at the riot, 106 were put on trial but subsequently released by the Viceroy before the case reached the Sessions, and His Excellency was able to settle the mosque difficulty by a compromise that was acceptable to the local and other Mahomedans.

Still more serious trouble occurred in September, 1914, when a riot at Budge-Budge among a number of Sikh emigrants returned from Canada gave a foretaste of the revolutionary plans entertained by those men. The sequel, revealed in two conspiracy trials at Lahore, showed that the "Ghadr" conspiracy was widespread and had been consistently encouraged by Germany. That plot, however, had little influence on the general attitude of India to the war with Germany, and it was not the least of Lord Hardinge's services that he encouraged India to play a magnificent part in the war. To anticipate events in some degree, it may here be stated that India was at no time included in the theatre of war except when the Emden bombarded Madras, though shipping off Bombay was seriously affected by mines laid by the enemy.

Lord Chelmsford as Viceroy.

Lord Hardinge, whose great services had been rewarded with the Knighthood of the Garter, left India in 1916 and was succeeded by Lord Chelmsford, whose tenure of office was destined to be one of the most eventful in the modern history of India. The part played by India in the war was developed in every possible way. Not only was the Indian Army increased but the resources of the country were developed with the help of the Munitions Board and India assumed responsibility for 100 millions of the

war debt. The share of India in the Imperial burden of the war was emphasised in another and very significant way by her representation in the Imperial War Cabinet in London by His Highness the Maharaja of Bikaner and Sir S. P. (Lord) Sinha. On the Frontier, where there had been numerous though comparatively slight disturbances in 1914-15, a punitive expedition had to be undertaken against the Mahsuds.

In 1917 Mr. Montagu, who had succeeded Mr. Chamberlain as Secretary of State, carried out the latter's intention of visiting India. The visit took place at a time when the movement in favour of Home Rule for India had attained to the highest pitch yet witnessed and at a time when, as was shown by the increase of Indian representation on the Council of India and by the grant of commissions in the Army to Indians, the Government was anxious to meet the wishes of the people so far as it could without departing from its policy of avoiding controversial political issues during the war. The result of the visit was shown in the following year when a report was issued containing what is known as the joint scheme of reform evolved by the Secretary of State and the Viceroy. This scheme (of which details are given elsewhere in this volume) aimed at carrying into effect the announcement made in Parliament on August 20, 1917, that "the policy of His Majesty's Government, with which the Government of India are in complete accord, is that of the increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire." Shortly after this report there was issued a report by the Special Committee of Inquiry, over which Mr. Justice Rowlatt presided, into seditious crime in India. That report and the legislation which followed in consequence of it, together with the announcement of the proposed reform scheme, led to a renewal of political discussion and agitation which had to a great extent been in abeyance during the early years of the war.

Early in 1919 prolonged strikes in Bombay and elsewhere showed that India, though comparatively little affected by the economic results of the war, was confronted by industrial and economic problems which were none the less grave. The gravity of those problems was increased by the ravages of influenza which is supposed to have caused 6,000,000 deaths during the winter months of 1917-18. Disturbances broke out in April as a sequel to the passive resistance movement against the Rowlatt Act (the Satyagraha Movement) which produced a situation to which there has been no parallel since the Mutiny. For a detailed course of events the reader will refer to the calendar of events at the end of this book. It is sufficient here to state that in Ahmedabad, Viramgam, Delhi, Lahore, Amritsar, Gujranwalla and other places the crowd, by attacking life and property and by train wrecking and tearing up railway lines and telegraph wires, provoked a situation which could only be met by the proclamation of martial law and the enforcement of military measures for the protection of law

abiding subjects and for the suppression of disorder.

Exaggerated reports of those riots and of the effect of the Rowlatt Act may be presumed to have had some influence on the Amir of Afghanistan when he declared war and invaded British territory. Amir Habibulah Khan, who had been loyal to his treaty obligations throughout the war, was murdered in February and, after a brief occupation of the throne by his brother Nasrulla Khan, his son Amanulla had been declared Amir. The causes of the war and the terms of peace are described in full elsewhere in this volume. One effect of the peace was to give Afghanistan freedom in its external relations. A sequel to this war was the renewal of trouble along a great part of the North Western frontier where the tribesmen, who had at first appeared to be impressed by the British successes, took the offensive against our advance posts especially in southern Waziristan.

During the year political feeling ran high and opportunity was taken to foster a bond of union between Hindus and Mahomedans in connection with an agitation by the latter in favour of safeguarding the Khilafat and maintaining the temporal power of Turkey in its integrity. The publication of numerous despatches dealing with the Reform Scheme and the hearing of evidence by a Parliamentary Committee dealing with the subject helped to concentrate attention on the progress of the Scheme. India was represented at the Peace Conference by the Maharaja of Bikaner and by Lord Sinha, the first Indian peer and the first Indian Under Secretary.

The King's proclamation.

The Government of India Bill was passed in December and on the 24th of that month there was issued a proclamation by His Majesty the King-Emperor (of which the full text is given elsewhere in this book) in which he invited his subjects in India to consider the past and join him in his hopes for the future. In the course of the proclamation His Majesty said:— "I rely on the leaders of the people, the Ministers of the future, to face responsibility and endure misrepresentation, to sacrifice much for the common interest of the State, remembering that true patriotism transcends party and communal boundaries; and, while retaining the confidence of the Legislatures, to co-operate with My Officers for the common good in sinking unessential differences and in maintaining the essential standards of a just and generous Government. Equally do I rely upon My Officers to respect their new colleagues and to work with them in harmony and kindness; to assist the people and their representatives in an orderly advance towards free institutions; and to find in these new tasks a fresh opportunity to fulfil as in the past their highest purpose of faithful service to My people."

The proclamation went on to direct the Viceroy to exercise in the King's name "clemency to political offenders in the fullest measure which in his judgment is compatible with the public safety", and announced that the Prince of Wales would in the winter of 1919-20 inaugurate on the King's behalf the new Chamber of Princes and the new constitutions in British India.

The Government of India.

The impulse which drove the British to India was not conquest but trade. The Government of India represents the slow evolution from conditions established to meet trading requirements. On September 24, 1599, a few years before the deaths of Queen Elizabeth and Akbar, the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorporation. The Government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company on the East and West Coast of India, and in Bengal, were administered at each of the principal settlements of Madras (Fort St. George), Bombay and Calcutta (Fort William), by a President or Governor and a Council consisting of the senior servants of the Company. The three "Presidencies" were independent of each other and subordinate only to the Directors in England.

Territorial Responsibility Assumed.

The collapse of Government in India consequent on the decay of Moghul power and the intrigues of the French on the East Coast forced the officers of the Company to assume territorial responsibility in spite of their own desires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power in India. In these changed circumstances the system of government by mutually independent and unwieldy councils of the merchants at the Presidency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773, a Governor-General and four councillors were appointed to administer the Presidency of Fort William (Bengal), and the supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the previous consent of the Governor-General of Bengal in Council, except in cases of imminent necessity. Pitt's Act of 1784, which established the Board of Control in England, vested the administration of each of the three Presidencies in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General-in-Council was somewhat extended, as it was again by the Charter Act of 1793. Under the Charter Act of 1833 the Company was compelled to close its commercial business, and it became a political and administrative body holding its territories in trust for the Crown. The same Act vested the direction of the entire civil and military administration and sole power of legislation in the Governor-General-in-Council, and defined more clearly the nature and extent of the control to be extended over the subordinate governments. After the Mutiny, there was passed, in 1858, an Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in India, but the Governor-General, as representing the Crown, became known as the Viceroy.

The Governor-General is the sole representative of the Crown in India; he is assisted by a Council, composed of high officials, each of whom is responsible for a special department of the administration.

Functions of Government.

The functions of the Government of India are perhaps the most extensive of any great administration in the world. It claims a share in the produce of the land and in the Punjab and Bombay it has restricted the alienation of land from agriculturists to non-agriculturists. It undertakes the management of landed estates where the proprietor is disqualified. In times of famine it undertakes relief work and other remedial measures on a great scale. It manages a vast forest property and is the principal manufacturer of salt and opium. It owns the bulk of the railways of the country, and directly manages a considerable portion of them; it has constructed and maintains most of the important irrigation works; it owns and manages the post and telegraph systems; it has the monopoly of the Note issue, and it alone can set the mints in motion. It lends money to municipalities, rural boards, and agriculturists and occasionally to owners of historic estates. It controls the sale of liquor and intoxicating drugs and has direct responsibilities in respect to police, education; medical and sanitary operations and ordinary public works of the most intimate character. The Government has also close relations with the Native States which collectively cover more than one-third of the whole area of India and comprise more than one-fifth of its population. The distribution of these great functions between the Government of India and the provincial administrations fluctuates; broadly speaking it may be said that the tendency of the day is to confine the Government of India to control and the Local Governments to administration.

Division of Responsibility.

The Government of India retains in its own hands all matters relating to foreign relations, defence, general taxation, currency, debt, tariffs, posts, telegraphs and railways. The ordinary internal administration—the assessment and collection of revenue, education, medical and sanitary arrangements, and irrigation, buildings and roads, fall within the purview of the Local Governments. In all these matters the Government of India exercises a general and constant control. It prescribes lines of general policy, and tests their application from the annual administration reports of the Local Authorities. It directly administers certain Imperial departments, such as Railways, Post Office, Telegraphs, the Survey of India and Geology; it employs a number of inspecting officers for those departments primarily left to Local Governments, including Agriculture, Irrigation, Forests, Medical and Archaeology. It receives, and when necessary modifies, the annual budgets of Local Governments; and every new appointment of importance, and every large addition even to minor establishments has to

receive its specific sanction. There also exists a wide field of appeal to the Government of India from officials or private individuals who may feel themselves aggrieved by the action of Local Governments; and outside the Presidencies of Madras, Bombay and Bengal, the approval of the Governor-General is necessary to the appointment of some of the most important officers of the provincial administration. The supervision of the principal Native States rests directly with the Governor-General in Council, but Local Governments have also responsibilities in this direction, where important States have historical association with them, and in the case of minor States.

Personnel of the Government.

The Governor-General and the "ordinary" members of his Council are appointed by the Crown. No limit of time is specified for their tenure of office, but custom has fixed it at five years. There are six "ordinary" members of Council, three of whom must, at the time of their appointment, have been at least ten years in the service of the Crown in India; one of the three remaining members must be a Barrister, the qualifications of the fifth and sixth are not prescribed by statute. The Indian civilians hold respectively the portfolios of Land Revenue and Agriculture, the Home, the Finance and the Education Departments. The Law Member has charge of the Legislative Department, and a member with English official experience has charge of the Commerce and Industry Department. The Viceroy acts as his own member in charge of Foreign affairs. Railways are administered by a Board of three members, whose chairman has the status of a Secretary, and are under the general control of the Commerce and Industry Department. The Commander-in-Chief may also be and in practice always is, an "extraordinary" member of the Council. He holds charge of the Army Department. The Governors of Madras, Bombay and Bengal become "extraordinary" members if the Council meets within their Presidencies. The Council may assemble at any place in India which the Governor-General appoints; in practice it meets only in Delhi and Simla.

Business Procedure.

In regard to his own Department each Member of Council is largely in the position of a Minister of State, and has the final

voice in ordinary departmental matters. But any question of special importance, and any matter in which it is proposed to over-rule the views of a Local Government, must ordinarily be referred to the Viceroy. Any matter originating in one department which also affects another must be referred to the latter, and in the event of the Departments not being able to agree, the case is referred to the Viceroy. The Members of Council meet periodically as a Cabinet—ordinarily once a week—to discuss questions which the Viceroy desires to put before them, or which a member who has been over-ruled by the Viceroy has asked to be referred to Council. If there is a difference of opinion in the Council the decision of the majority ordinarily prevails, but the Viceroy can over-rule a majority if he considers that the matter is of such grave importance as to justify such a step. Each departmental office is in the subordinate charge of a Secretary, whose position corresponds very much to that of a permanent Under-Secretary of State in the United Kingdom, but with these differences—that the Secretary is present at Council meetings; that he attends on the Viceroy, usually once a week, and discusses with him all matters of importance arising in his Department; that he has the right of bringing to the Viceroy's special notice any case in which he considers that the Viceroy's concurrence should be obtained to action proposed by the Departmental Member of Council; and that his tenure of office is usually limited to three years. The Secretaries have under them Deputy, Under and Assistant Secretaries, together with the ordinary clerical establishments. The Secretaries and Under-Secretaries are usually members of the Indian Civil Service. The Government of India has no Civil Service of its own as distinct from that of the Provincial Governments, and officers serving under the Government of India are borrowed from the Provinces.

The proposals of the Viceroy, Lord Chelmsford, and the Secretary of State for India, Mr. Montagu, for the constitutional development of India in the direction of responsible government are embodied in a separate section together with the report of the Parliamentary Joint Committee on the Government of India Bill, the text of that measure and the Royal Proclamation relating to it.

The description of the constitution and functions of the Government of India here, and of the Provincial Governments which follows, is based on the existing conditions. The

changes made by the Reform Scheme, which will not come into operation until 1921, are described in a separate section.

Government of India.

VICEROY AND GOVERNOR-GENERAL OF INDIA,

His Excellency the Right Hon. BARON CHELMSFORD, P.C., G.M.S.I., G.C.M.G., G.M.I.E., G.C.B.E.,
assumed charge of office, 5th April, 1916.

PERSONAL STAFF OF THE GOVERNOR-GENERAL.

Private Secretary, J. L. Maffey, C.I.E., I.C.S.

Military Secretary, Lieut.-Col. R. Verney, The Rifle Brigade.

Comptroller of the Household, Major J. Mackenzie, C.I.E., 35th Sikhs.

Asst. Private Secretary, H. R. Lynch-Blosse, I.C.S.

Aides-de-Camp, Captain J.A. Denny, Grenadier Guards; Major R.D. Alexander, 1/3rd Gurkha Rifles; Lt. C.M.G. Gordon-Ives; Lt.-Hon. D. E. F. O. Brien; Mohamad Akbar Ali Khan, Risaldar-Major, Sardar Bahadur, 7th Haryana Lancers.

Honorary Aides-de-Camp, Lieut.-Col. Pugh, 3rd Calcutta Light Horse; Lieut.-Col. A. M. Clark, 2-36th B. N. Rly. Battalion; Lieut.-Col. G. H. Evans, 3rd Rangoon P. D. Garrison Artillery; Commodore Lumsden, C.V.O., C.I.E., R.N.; Lieut.-Col. H. H. G. Mitchell, O.B.E., 2nd Madras Garrison Artillery;

Lieut.-Col. W. T. Wright, 3rd Punjab Rifles; Lieut.-Col. E. A. Constable, 1st Calcutta Port Defence Gar. Artillery; Lieut.-Col. L. A. Grimston, 6th Assam, V.L.H.; Lieut.-Col. Gavin-Jones, 7th U.P. Horse; Major Llewellyn, 1st Bihar Light Horse; Lieut.-Col. P. R. Cadell, C.I.E., V.D. 15th Bombay Battalion; Rana Jodha Jung Bahadur, 3rd Brahmins; Hon. Captain Raja Sir Hari Singh; Colonel Ganpat Rao Raghunath Rajwade and Hon. Major Nawabzada Haji Hafiz Obeidullah Khan of Bhopal.

Risaldar Major Sardar Bahadur Wali Muhammad; Risaldar Major Abdul Aziz; Subadar Major Sardar Bahadur Madhi Singh Rana; Risaldar Major Sardar Bahadur Abdul Karim Khan; Subadar Major Mit Singh; Karm Singh, Risaldar Major Bahadur; and Risaldar Major Sardar Bahadur Mahi-uddin Khan.

Surgeon, Lieut.-Col. H. Austen-Smith, M.B., I.M.S.

Commandant of Body Guard, Capt. A. Brooke 18th Lancers.

Ordinary Members—

COUNCIL.

Sir G. S. Barnes, K.C.B. Took his seat, 6th April, 1916.

Sir William Henry Hoare Vincent. Took his seat, 21st April, 1917.

W. M. Hailey, C.S.I., C.I.E., (*Finance*).

Sir C. H. A. Hill, K.O.S.I., C.I.E. Took his seat, 5th July, 1915.

Khan Bahadur Mian Muhammad Shaif, C.I.E. Took his seat 28th July, 1919.

Sir G. R. Lowndes, K.C.S.I. Took his seat, 20th December, 1915 (*Law*).

Extraordinary Member—

H. E. Gen. Sir Charles Carmichael Monro, G.C.M.G., K.C.B., Commander-in-Chief in India.

SECRETARIAT.

REVENUE AND AGRICULTURE DEPARTMENT.

Secretary, R. A. Mant.

Under-Secretary, G. C. Plowden, I.C.S.

Wheat Commissioner for India, C. W. Jacob, I. C. S.

Registrar, W. A. Threlfall.

Superintendents, A. B. E. Thomson, C. H. Martin, H. H. Lincoln and T. McDonnell.

FINANCE DEPARTMENT.

Ordinary Branch.

Secretary, M. M. Gubbay, C.S.I.

Deputy Secretary, H. K. Briscoe, I.C.S.

Under Secretary, E. N. Blandy, I.C.S.

Assistant Secretary, A. V. V. Aiyar, B.A.

Registrar, E. W. Baker, I.S.O.

Superintendents, G. W. C. Bradey, G. J. Piper, C. N. Chakrabarty, V. K. Menon, W. M. Mather, Shah Muhammad and A. R. Rebello.

Comptroller and Auditor-General, M. F. Gauntlett, C.B.E., C.I.E., I.C.S.

Controller of Currency, E. M. H. Cooke, C.I.E.

Deputy Controller of Currency, C. W. C. Carson.

Military Finance Branch.

Financial Adviser, Hon. Sir G. B. H. Fell C.S.I., C.I.E., I.C.S.

Military Accountant-General and ex-officio Deputy Financial Adviser, Col. B. W. Marlow, C.S.I., C.I.E., I.A., B. N. Mitra, O.B.E., C.I.E. (*Officiating*).

Deputy Financial Adviser, Lt.-Col. E. B. Peacock, I.A.

Additional Deputy Financial Adviser, W. D. Gray, O.B.E.

Assistant Financial Adviser, H. S. Cumber.

Registrar, W. C. Gleeson.

Superintendents, G. E. Hodges, G. M. Turner, A. W. Schönemann and F. J. Woolmer.

FOREIGN DEPARTMENT.

Political Secretary, Sir J. B. Wood, K.C.I.E.

Foreign Secretary, H. R. C. Dobbs, C.S.I., C.I.E.

Deputy Secretary (Foreign), A. N. L. Cater.

Deputy Secretary (Political), Major G. D. Ogilvie.

Under Secretary, K. S. Fitze.

Assistant Secretary, Major W. G. Neale.

Attache, Khan Bahadur Ghulam Murtaza Khan.

Registrar, T. G. B. Waugh.

Offg. Inspector-General, Imperial Service Troops, Brigadier-General A. W. Pennington, M.V.O.

Superintendents, D. A. Clarke, E. Betram Higgs, C. O., H. Teeling, F. P. Buckner, J. W. S. Inglis, C. W. Kirkpatrick, R. C. Albert, F. S. Hasley and K. D. Fink.

HOME DEPARTMENT.

Secretary, Hon. Sir James du Boulay, K.C.I.E., C.S.I. on deputation. Sir W. S. Morris (*sub pro-tem.*)

Deputy Secretary, H. D. Craik, I.C.S.

Under Secretary, A. Macleod, I.C.S.

Registrar, G. F. Winn.

Superintendents, A. S. Lawrence, H. C. Marsden, P. K. Basu, Bijay Krishna Banerji, Raman Mohan Ganguli, U. C. Stuart, and Rai Abinas Chandra Koar Bahadur, I.S.O.

EDUCATION DEPARTMENT.

Secretary, H. Sharp, C.S.I., C.I.E.

Educational Commissioner with the Government of India, H. Sharp, C.S.I., C.I.E.

Assistant Secretary, J. M. Mitra, Rai Bahadur.

Superintendents, L. M. Roy, G. E. Jackson, A. H. Bartlett, and P. N. Sen.

Registrar, Rai Sahib M. N. Chakrabarti.

Curator, Bureau of Education, G. R. Kaye, F.R.A.S.

LEGISLATIVE DEPARTMENT.

Secretary, A. P. Muddiman, C.I.E.; *Officiating Secretary*, H. Moncrieff Smith.

Legal Asst., S. C. Gupta.

Registrar, C. H. F. Pereira.

Superintendents, A. L. Banerji, D. D. Baird and E. H. Brandon.

ARMY DEPARTMENT.

Secretary, Major-General A. H. Bingley.

Deputy Secretary, *sub. pro tem.*, Lt.-Col. A. H. O. Spence.

Assist. Secretaries, Major G. D. Ogilvie, Major A. W. Chitty and A. A. Whelan.

Registrar, Mr. R. Tharle Hughes.

Superintendents, W. C. Debenham, A. B. Kunning, P. P. Hypher, Rai Sahib S. C. Biswas and J. C. R. Leslie.

PUBLIC WORKS DEPARTMENT.

Secretary, The Hon. F. C. Rose.

Deputy Secretary, A. J. R. Hope.

Under Secretary, D. G. Harris.

Assistant Secretary, W. G. Dollman.

Superintendents, W. I. Tilden, H. M. Marchant, L. Bloemink and W. R. Chambers.

Inspr.-Genl. of Irrign., T. R. J. Ward, C.I.E., M.V.O.

Consg. Achtl., J. Begg, F.R.I.B.A.

Elect. Adviser, J. W. Meares, F.R.A.S., M.I.C.E., M.I.E.E.

COMMERCE AND INDUSTRY DEPARTMENT

Secretary, A. H. Ley, C.I.E., I.C.S.

Deputy Secretary, G. L. Corbett, I.C.S.

Under Secretaries, C. G. Freke, I.C.S. and E. C. Anson, I.C.S.

Actuary, H. G. W. Meikle.

Registrar, E. P. Jones.

Superintendents, B. B. Banarji, S. M. Banarji, C. H. Baldrey, Fateh Din, D. O'Sullivan and K. D. Banerji. *Officiating*, A. K. Sarkar.

RAILWAY BOARD.

President, The Hon. Sir Arthur R. Anderson, K.C.I.E., O.B.E. *Members*, F. W. Hanson, C.I.E. and F. D. Couchman, M.I.C.E.

Secretary, R. McLean.

Chief Engineer, F. G. Royal-Dawson.

POST OFFICE & TELEGRAPH DEPT.

Director-General of Posts & Telegraphs, Hon. Mr. G. R. Clarke, O.B.E.

NORTHERN INDIA SALT REVENUE.

Commissioner, J. F. Connolly, I.C.S. (J. C. Ferguson, Actg.)

INDO-EUROPEAN TELEGRAPH DEPARTMENT.

Persian Gulf and Persian Sections.

Directors, E. E. Gunter; H. W. Smith, C.I.E.; W. King-Wood, C.I.E. (*Offg.*), Commander of Cable Steamer "Patrick Stewart," F. W. Townsend.

SURVEY DEPARTMENT.

Surveyor-General of India, Col. C. H. D. Ryder, C.I.E., D.S.O.

GEOLOGICAL SURVEY.

Director, H. H. Hayden, C.I.E., B.A., F.G.S.
 Superintendents, E. Vredenburg, B.Sc., F.G.S.;
 L. L. Fermor, D.Sc., F.G.S.; E. H. Pascoe, M.A.,
 D.Sc., F.G.S.
 Chemist, W. A. K. Christie, B.Sc., Ph.D.

BOTANICAL SURVEY.

Director, Lt.-Col. A. T. Gage, M.B. I.M.S.; *Economic Botanist*, H. G. Carter, M.B.A.B.; *Economic Botanist*, Madras, F. R. Parnell; *Economic Botanist*, Bombay, W. Burns, B.Sc.; *Economic Botanist*, United Provinces, H. M. Leake, M.A., F.L.S.

ARCHÆOLOGICAL SURVEY.

Director-General of Archæology, Sir J. H. Marshall, M.A., C.I.E.; (on leave); D. B. Spooner (officiating); Superintendent, Western Circle, D. R. Bhandarkar, M.A.; Superintendent, Southern Circle, A. H. Longhurst; Superintendent, Eastern Circle, Daya Ram Sahni; Superintendent, Northern Circle, J. A. Page; Superintendent, Burma, Taw Sein Ko, C.I.E., I.S.O.; Superintendent, Frontier Circle, Khan Saheb Mian Wasi-ud-din.

MISCELLANEOUS APPOINTMENTS.

(i) Created an Earl	June 1911
(j) During tenure of office, the Viceroy is Grand Master and First and Principal Knight of the two Indian Orders (G.M.S.I., and G.M.I.E.). On quitting office, he becomes G.C.S.I. and G.C.I.E.; with the date of his assumption of the Viceroyalty.	

The Imperial Legislative Council.

The constitution of the Executive Council of the Government of India has been sketched; or the purposes of legislation, and to bring the administration into close touch with public opinion, the Executive Council is expanded by additional members into a great legislative assembly. The first step was taken in 1861, when the Indian Councils Act provided that, for the better exercise of the power of making laws and regulations vested in the Governor-General-in-Council, he should nominate "Additional" members for the purposes of legislation only. The additional members were appointed for two years and joined the Council when it met for legislative purposes. The maximum number of members fixed by the Act was twelve, of whom not less than one half were to be non-officials (holding no office under the Government) and in practice most of the non-officials were natives of India. Similar legislative councils were constituted in some of the provinces, but the growth of these bodies will be considered when we come to deal with the provincial administrations.

The Act of 1892.

In 1892 important additions were made both to the constitution and the powers of the Legislative Council. The number of Additional members was raised to sixteen, and the representative principle was introduced. Whilst the method of appointment was, as before, nomination by the Governor-General, a certain number of nominations were made on the recommendation of specified persons, bodies and associations and in practice these recommendations were never refused. Of the sixteen Additional members, six were usually officials and ten non-officials. Four of the non-officials were nominated on the recommendation of the non-official members of the provincial Legislative Councils, the fifth was recommended by the Calcutta Chamber of Commerce, and the remaining five were chosen by the Governor-General, either with a special view to the legislative business to be transacted, or to secure the due representation of all classes. The Council was also empowered to discuss the budget and to ask questions on matters of public interest.

Morley-Minto Reforms.

The Imperial Legislative Council took its present shape under what is commonly called the Morley-Minto reform scheme of 1909, and was embodied in the Indian Councils Act of that year. Two principles run through this scheme (1) to secure the fair representation of all the varied interests in the country and (2) to give the Council a real influence in determining the character of the administration. The Imperial Legislative Council now consists of sixty Additional members, of whom thirty-five are nominated by the Governor-General and twenty-five are elected by specified electorates. Of the nominated members not more than twenty-eight may be officials, and three others who must not be officials must be nominated by the Muhamedans of the Punjab, the landholders of the Punjab, and the Indian commercial community respectively. The remaining four seats are at the Governor-

General's disposal to secure experts on special subjects or representatives of minor interests. Of the twenty-five elected members, eleven are selected by the non-official members of the provincial Legislative Councils, two by each of the four largest provinces and one by each of the three other provinces. A twelfth is elected by the District and Local Boards of the Central Provinces, as that administration has no legislative council. Six members are elected by electorates of landowners in six provinces, five by the Muhamedan community in each of the five provinces, and two by the Chambers of Commerce in Calcutta and Bombay. The Governor-General-in-Council has the exceptional power of excluding a candidate whose reputation and antecedents are such that his election would be contrary to the public interest. An oath, or affirmation of loyalty to the Crown is required of every member before he takes his seat. Members hold office for three years, and each triennium there is a general election for the Council.

Powers of the Council.

The additions to the non-legislative powers of the Council by the Act of 1909 were also substantial. The Council can exercise a material influence on the Budget. The Finance Member first presents the preliminary estimates with an explanatory memorandum. On a subsequent day he makes such further explanations as he thinks necessary. Members can thereupon move resolutions regarding any proposed alteration in taxation, any proposed loan, or any additional grant to Local Governments. When these resolutions are voted upon, the estimates are taken by groups, and resolutions may be moved on any heads of revenue or expenditure. Certain heads, as for instance, Customs and the Army, are excluded from discussion. The Finance Member takes these discussions into consideration, and then presents his final budget. He describes the changes made, and why any resolutions that have been passed have not been accepted. A general discussion of the budget then takes place, but no resolution may be moved, or vote taken. Government is not bound to act upon the resolution of the Council. This power is never likely to be used, because the Government has an official majority on that body. This official majority was specially prescribed by the Secretary of State, because as Parliament is, in the last resort, responsible for the good government of India, the British Government, through its mouthpiece, the Secretary of State, must have the means of imposing its will on the Government of India.

Apart from the Budget debates, members of Council now have the right to initiate the discussion of any question of public interest at any sitting of the Council by moving a resolution. The right of interpellation has also been expanded by the power of asking supplementary questions in order to elucidate a reply given to an original question. The President of the Council may disallow any question which, in his view, cannot be answered consistently with the public interests.

Control over Legislation.

The legislative powers of the Imperial Legislative Council are still regulated by the Act of 1861. Certain Acts of Parliament under which the Government of India is constituted cannot be touched and no law can be made affecting the authority of Parliament or allegiance to the Crown. With these exceptions the legislative powers of the Governor-General-in-Council over the whole of the British India are unrestricted. Measures affecting the public debt, or the revenues of India, the religion of any of His Majesty's subjects, the discipline or maintenance of the military or naval forces, and the relations of the Government with foreign states cannot be introduced by any member without the previous sanction of the Governor-General. Every Act requires the

Governor-General's assent. The assent of the Crown is not necessary to the validity of an Act, but the Crown can disallow any Act that has been passed.

Apart from these legislative powers the Governor-General-in-Council is authorised to make, without calling in the Additional Members, regulations having the force of law for the less advanced parts of the country, where a system of administration simpler than that in force elsewhere is desirable. In cases of emergency the Governor-General can, on his own authority and without reference to his Council, make Ordinances which have the force of law for six months.

All Members of the Imperial and Provincial Legislative Councils are entitled to the prefix "Hon'ble Mr." during their term of office.

exclusive of the Lieutenant-Governor	{ Non-officials (elected and nominated) ..	31
or Chief Commissioner (1) as aforesaid)	{ Vacancies	3
	Total ..	60

(For work of Imperial Legislative Council, Session 1915-16, q. v.)

The Home Government.

The Home Government of India has represented for sixty years the gradual evolution of the governing board of the old East India Company. The affairs of the company were originally managed by the Court of Directors and the General Court of Proprietors. In 1784 Parliament established a Board of Control, with full power and authority to control and direct all operations and concerns relating to the civil and military government, and revenues of India. By degrees the number of the Board was reduced and its powers were exercised by the President, the lineal precursor of the Secretary of State for India. With modifications this system lasted until 1858, when the Mutiny, followed by the assumption of the Government of India by the Crown, demanded a complete change. Under the Act of 1858 (now merged in the consolidating measure passed in 1915) and amended the following year the Secretary of State is the constitutional adviser of the Crown on all matters relating to India. He inherits generally all the powers and duties which were formerly vested either in the Board of Control, or in the Company, the Directors and the Secret Committee in respect of the Government and revenues of India. He has the power of giving orders to every officer in India, including the Governor-General, and is in charge of all business relating to India which is transacted in the United Kingdom.

Secretary of State's Powers.

Of these wide powers and duties many rest on his personal responsibility; others can be performed only in consultation with his Council, and for some of these the concurrence of a majority of the members of his Council is required. The Secretary of State may act without consulting the Council in all matters where he is not expressly required by statute to act as "Secretary of State in Council." Appointments by the Crown are made on his advice. Every official communication proposed to be sent to India must be laid before Council, unless it falls under either of two reserved classes. One of these is "Secret communications" dealing chiefly with war and peace, relations with foreign Powers and Native States. The others are those which he may deem "urgent." No matter for which the concurrence of a majority of Council is necessary can be treated as either "secret" or "urgent." In ordinary business, for which the concurrence of a majority of Council is not required, the Secretary of State is not bound to follow the advice of the Council. These provisions reserve to the Secretary of State a wide discretionary power of interference with the Government of India which is exercised in accordance with the temperament of the Secretary of State for the time being. But in all matters of finance, the authority is that of the Secretary of State and the Council and is freely exercised.

The Council.

The Council of India consists of such number of members, not being less than ten or more than fourteen, as the Secretary of

State may from time to time determine. The members hold office for seven years, and this term may, for special reasons of public advantage, which must be laid before Parliament, be extended for five years more. Nine members must be persons who have served or resided in India for at least ten years, and who have not left India more than five years before their appointment. The object aimed at in the constitution of the Council is to give the Secretary of State, who has little knowledge of the details of the Indian administration, the help of a body of experts. In 1907, in connection with the policy of constitutional reform, two Indians, one Hindu and the other a Mahomedan, were appointed to vacancies in the Council. Ten years later Mr. Chamberlain raised the number to three—two Hindus and a Mahomedan. On the formation of the new Coalition Government in January 1918 Sir S. P. Sinha was raised to the peerage and appointed Under Secretary of State, being the first Indian to become a member of the Home Ministry.

The India Office.

Associated with the Secretary of State and the India Council is a secretariat known as the India Office, housed at Whitehall. Appointments to the establishment are made by the Secretary of State in Council, but "junior situations" must be filled in accordance with the general regulations governing admission to the Home Civil Service.

The whole cost of the India Office has been borne by the revenues of India, though the Home Government makes certain grants and remissions in lieu of a direct contribution amounting to £50,000 a year. The total net cost including pensions is about £250,000 per annum.

All these arrangements were in process of revision, when this Year Book was in preparation. The Government of India Bill, as introduced, provided that the salary of the Secretary of State should be placed in the Home Estimates, and gave power for the same change to be made, if thought fit, with regard to all or any part of the other expenses of the India Office establishment. This part of the Bill was confessedly a skeleton only, and the report of Lord Crewe's Committee, with dissentient minutes, gave material for the Joint Parliamentary Committee under Lord Selborne's chairmanship to embody far-reaching proposals in the Bill as reported to Parliament.

Secretary of State.

The Right Hon. Edwin S. Montagu, M.P.

Under-Secretaries of State.

Sir William Duke, G.C.I.E.

The Right Hon. Lord Sinha, K.C.

Assistant Under-Secretaries of State.

Sir Malcolm Seton.

Sir Arthur Hirtzel, K.C.B.

Council.

Sir Charles Arnold White.
 Sir Murray Hammick, K.C.S.I., C.I.E.
 Sir Charles S. Bayley, G.C.I.E., K.C.S.I., I.S.O.
 William Didsbury Sheppard, C.I.E.
 Sir Marshall Frederick Reid, C.I.E.
 General Sir E. G. Barrow, G.C.B., G.C.S.I.
 Sir James Bennett Brunyate, K.C.S.I., C.I.E.
 Sahibzada Aftab Ahmed Khan.
 Sir Chettur Sankaran Nair, K.C.I.E.
 Bhupendranath Basu.
 Frederick Craufurd Goodenough.
 Sir George O. Roos-Keppel, G.C.I.E., K.C.S.I.
Clerk of the Council, Sir Malcolm Seton.
Deputy Clerk of the Council, E. J. Turner, C.B.E.
Private Secretary to the Secretary of State, S. K. Brown.
Assistant Private Secretaries, A. L. R. Parsons, and Miss Freeth.
Political A.-D.-C. to the Secretary of State, Lieut.-Col. Sir J. R. Dunlop Smith, K.C.S.I., K.C.V.O., C.I.E.
Private Secretary to Sir T. W. Holderness, R. H. A. Carter.
Private Secretary to Lord Sinha, R. H. A. Carter.

Correspondence Departments.

SECRETARIES.

Financial, W. Robinson, C.B.E. and F. H. Lucas, C.V.O., C.B.
Judicial and Public, Sir Malcolm C. C. Seton, K.C.B.
Military, Lieut.-General Sir Herbert V. Cox, K.C.B., K.C.M.G., C.S.I.
Political and Secret, J. E. Shuckburgh, C.B.
Public Works, Hermann A. Haines.
Revenue and Statistics, L. J. Kershaw, C.S.I., C.I.E.
Director-in-Chief of the Indo-European Telegraph, Public Works Department, R. C. Barker, C.I.E.

ACCOUNTANT-GENERAL'S DEPARTMENT:—

Accountant-General, R. G. Jaquet, C.I.E., also *Director of Funds and Official Agent to Administrators-General in India*.
Deputy, W. S. Durrant.

STORE-DEPARTMENT—INDIA OFFICE BRANCH:—

Director-General, George H. Collier, C.I.E.
Deputy Director, R. R. Howlett.

INDIA STORE DEPOT, *Belvedere Road, Lambeth*, S. E. *Superintendent*, Lt.-Col. S. S. W. Paddon, C.I.E.

REGISTRY AND RECORD DEPARTMENT.—*Registrar and Superintendent of Records*, W. Foster, C.I.E.
Auditor, H. A. Cooper.

Miscellaneous Appointments.

Government Director of Railway Companies, G. Deuchars.
Librarian, Fredk. W. Thomas, M.A., P.H.D.
Educational Adviser for Indian Students, T. W. Arnold, C.I.E., LITT. D., M.A.
Local Adviser to Indian Students in London, N. C. Sen (21, Cromwell Rd., S.W. 7).
President of Medical Board for the Examination of Officers of the Indian Services and Adviser to the Secretary of State on Medical matters, Surg.-Gen. Sir R. H. Charles G.C.V.O., M.D.,

I.M.S. (retd.), F.R.C.S.I.; *Members of the Medical Board*, Lt.-Col. J. Anderson, C.I.E., I.M.S. (retd.) and Lt.-Col. C. T. Hudson, C.M.G., I.M.S.
Legal Adviser and Solicitor to Secretary of State, Sir Edward Chamier.
Inspector of Military Equipment and Clothing, Major-Gen. Sir John Steevens, K.C.B., K.C.M.G.
Surveyor and Clerk of the Works, T. H. Winny, A.R.I.B.A.
Ordinance Consulting Officer, Col. M.S.C. Campbell, C.I.E., R.A.
Consulting Engineers, Messrs. Rendel, Palmer and Tritton.
Stockbroker, Horace Hubert Scott.

Secretaries of State for India.

	Assumed charge.
Lord Stanley, P.C. (a)	1858
Sir Charles Wood, Bart. (b)	1859
Earl de Grey and Ripon, P.C. (c)	1866
Viscount Cranborne (d)	1866
Sir Stafford Northcote, Bart. (e)	1867
The Duke of Argyll, K.T., P.C.	1868
The Marquis of Salisbury, P.C. (2nd time)	1874
Gathorne Hardy, P.C., created Viscount Cranbrook, 14 May, 1878 (f)	1878
The Marquis of Hartington, P.C. (g)	1880
The Earl of Kimberly, P.C.	1882
Lord Randolph Churchill, P.C.	1885
The Earl of Kimberley, K.G., P.C. (2nd time)	1886
Sir Richard Assheton Cross, G.C.B., P.C., created Viscount Cross, 19 Aug., 1886	1886
The Earl of Kimberley, K.G., P.C. (3rd time)	1892
H. H. Fowler (h)	1894
Lord George F. Hamilton, P.C.	1895

The Provincial Governments.

British India is divided into eight large provinces and six lesser charges, each of which is termed a Local Government. The eight major provinces are the Presidencies of Madras, Bombay, and Bengal; the Lieutenant-Governorships of the United Provinces, The Punjab, Burma, and Behar; and the Chief Commissionership of the Central Provinces. The minor provinces are Assam, the North-West Frontier Province, Baluchistan, Coorg, Ajmere Merwara and the Andaman Islands. The original division of British authority in India was between the Presidencies of Bengal, Madras and Bombay. Bengal afterwards developed into and was separated from the Government of India and then was gradually divided into provinces as the tide of conquest brought under administration areas too large to be controlled by a single authority. The status and area of these provinces have been varied from time to time to meet the changed conditions of the day. The most recent of these changes was the separation of the North-West Frontier from the Punjab in 1901; the division of Bengal into two provinces in 1905; and the final adjustment made in accordance with His Majesty the King's announcement at the Durbar of 1911, whereby the newly-created province of Eastern Bengal and Assam disappeared, and Bengal was re-divided into the Presidency of Bengal, the Lieutenant-Governorship of Behar and Orissa, and the Chief Commissionership of Assam, whilst the headquarters of the Government of India were moved from Calcutta to Delhi, and the City of Delhi, with an *enclave* of territory surrounding it, was taken under the direct administration of the Government of India. All Local Governments alike are under the superintendence and control of the Governor-General in Council. They must obey orders received from him, and they must communicate to him their own proceedings. But each Local Government is the Executive head of the administration within the province. By custom, all appointments to Local Governments are for a term of five years.

The Three Classes.

The three Presidencies occupy a superior position. The Civil administration of each is vested in a Governor-in-Council, appointed by the Crown, and usually drawn from English public life. On certain matters they correspond directly with the Secretary of State, a privilege not possessed by other provincial Governments. The Governors are assisted by a Council composed of three members, two members of the Civil Service and, under the Indian Councils Act of 1909, a fourth member who is usually an Indian. Like the Governor-General they are addressed as Your Excellency, and they are escorted by a body-guard. The maximum salaries as fixed by Act of Parliament are Rs. 1,20,000 for a Governor and Rs. 64,000 for a member of Council.

Lieutenant-Governors are appointed by the Governor-General subject to the approbation of the Crown. They must have served for at least ten years in India. Under the Indian Councils Act power was taken to create executive councils in the Lieutenant-Governorships and this has been applied to Behar where the Lieutenant-Governor is assisted by a Coun-

cil consisting of two members of the Civil Service and one Indian. Lieutenant-Governors are addressed as Your Honour. Their maximum salary, Rs. 1,00,000, is fixed by Act of Parliament.

Chief Commissioners stand upon a lower footing, being delegates of the Governor-General-in-Council. In theory, a Chief Commissioner administers his province on behalf of the Governor-General-in-Council, who may resume or modify the powers that he has himself conferred. In practice, the powers entrusted to Chief Commissioner of the Central Provinces are as wide as those exercised by a Lieutenant-Governor. The salary of a Chief Commissioner is Rs. 50,000 but in the case of the Central Provinces this was raised to Rs. 62,000 in consideration of the addition of Berar to his Government.

Provincial Councils.

The changes made in the constitution and non-legislative functions of the Legislative Councils of Madras and Bombay by the Act of 1909 more than doubled the number of members, election by specially constituted electorates was introduced, and powers were given to members to debate and move resolutions on the provincial financial statements, to move resolutions on matters of general public interest, and to ask supplementary questions. A description of the system in Bombay will show how the scheme works. The Bombay Legislative Council is composed of four *ex-officio* members (the three members of the Executive Council and the Advocate-General) and 44 additional members. Of the additional members the Governor nominates twenty-three (of whom not more than fourteen may be officials) and 21 are elected. The Government is thus without a majority of officials in the Council. Of the elected members, eight are elected by groups of municipalities and the District Boards, four by Mahomedan electorates, and three by electorates of the land-holding classes. The Bombay University, the Bombay Municipal Corporation, the Bombay Chamber of Commerce, the Karachi Chamber of Commerce, and the Mill-owner's Association, and the Indian Commercial Community, each elect one member. The regulations for the formation of electorates, and as to the qualifications and disqualifications of candidates and voters, are similar to those made in the case of the Supreme Council.

The rules for the discussion of the annual financial statement are similar to those applicable to the Supreme Council. The Financial Statement is presented and considered as a whole and then in detail, and resolutions may be moved. The Government is not bound by any resolutions which the Council may pass. Matters of general public interest under the control of Local Governments may be made the subject of resolutions. Laws passed by these Legislative Councils require the sanction of the Governor-General and may be disallowed by the Crown.

In constitution, in functions, and in the system of special electorates, the Legislative Councils in the Lieutenant-Governorships resemble in all the essential particulars the Legislative Council of Bombay.

The Secretariat.

Each Local Government works through a Secretariat, which is divided into various departments, each under a Secretary. In addition to the Secretaries, there are special departmental heads such as the Inspectors General of Police, Jails, and Registration; the Director of Public Instruction, the Inspector-General of Civil Hospitals or Surgeon-General, the Sanitary Commissioner and the Superintendent of the Civil Veterinary Department. There are also Chief Engineers for Public Works and Irrigation, who are likewise Secretaries to Government. In nearly all the Provinces except Bombay, the revenue departments are administered, under Government, by a Board of Revenue.

The District Officer.

The administrative system is based on the repeated sub-division of territory, each administrative area being in the responsible charge of an officer who is subordinate to the officer next in rank above him. The most important of these units is the District, and India embraces more than 250 Districts, with an average area of 4,430 square miles and an average population of 931,000. In Madras there is no local officer above the head of the District; elsewhere a Commissioner has the supervision of a Division comprising from four to six Districts. The head of a District is styled either the Collector and District Magistrate or the Deputy Commissioner. He is the representative of the Government and embodies the power of the State. He is concerned in the first place with the land and the land revenue. He has also charge of the local administration of the excise, income tax, stamp duty and other sources of revenue. As a Magistrate of the first class, he can imprison for two years and fine up to a thousand rupees. In practice he does not try many criminal cases, although he supervises the work of the other Magistrates in the District.

In addition to these two main departments, the Collector is interested in all matters pertaining to the welfare of the people. In some branches of the administration his functions are, in consequence of the formation of special departments, such as those of Public Works, Forests, Jails, Sanitation, and Education less direct than was formerly the case. But even in matters dealt with by separate departments, his active co-operation and direction in counsel are needed. The Municipal Government of all considerable towns is vested in Municipalities but it is the duty of the Collector to guide and control their working. He is usually the Chairman of the District Board which, with the aid of subsidiary boards, maintains roads, schools and dispensaries, and carries out sanitary improvements in rural areas.

Other Officers.

Other important district officers are the Superintendent of Police, who is responsible for the discipline and working of the police force, and the Civil Surgeon, who (except in Bombay) is the head of the medical and sanitary administration. The local organisation of Government Public Works, Forests, Education and other special departments varies in different parts of the country. Each District has its own law officer, styled the Government Pleader.

The Districts are split up into sub-divisions, under Junior Officers of the Indian Civil Ser-

vice or members of the Provincial Service called Deputy Collectors. In Madras, Bombay and the United Provinces there are smaller sub-district units called taluks or tahsils, administered by tahsildars (Bombay Mamlatdars), with naib tahsildars or mahalkarris. The tahsildar is assisted by subordinate officers, styled revenue inspectors or kanungos and the village officers. The most important of the latter are the headman who collects the revenue, the karnam, karkun or patwari who keeps the village accounts, and the chaukidar or village watchman.

Trend of Provincial Government.

The relations of the Provincial administrations with the Government of India form the subject of incessant discussion. On the one side there are the strong centralisers who would focus all authority in the Government of India; on the other those stout advocates of provincial autonomy who would make the Local Governments virtually independent of the Government of India. The trend of Indian policy since the departure of Lord Curzon has been steadily in the direction of increasing the authority of the Provincial Governments and the control and interference of the Government of India has been materially reduced, especially in financial matters. There was a marked development of this policy adumbrated in the despatch of the Government of India which submitted to the Secretary of State the proposal to remove the headquarters of the Government of India from Calcutta to Delhi. This paragraph thus indicated the ideas of the supreme authorities; although the extreme interpretation placed upon it by some Indian publicists had to be repudiated, it remains the most authoritative exposition of the trend of Indian policy.

The maintenance of British rule in India depends on the ultimate supremacy of the Governor-General in Council, and the Indian Councils Act of 1909, itself bears testimony to the impossibility of allowing matters of vital concern to be decided by a majority of non-official votes in the Imperial Legislative Council. Nevertheless it is certain that, in the course of time, the just demands of Indians for a larger share in the government of the country will have to be satisfied, and the question will be how this devolution of power can be conceded without impairing the supreme authority of the Governor-General in Council. The only possible solution of the difficulty would appear to be gradually to give the Provinces a larger measure of self-Government, until at last India would consist of a number of administrations, autonomous in all provincial affairs, with the Government of India, above them all, and possessing power to interfere in case of misgovernment, but ordinarily restricting their functions to matters of Imperial concern. In order that this consummation may be attained, it is essential that the supreme Government should not be associated with any particular Provincial Government. The removal of the Government of India from Calcutta is, therefore, a measure which will, in our opinion, materially facilitate the growth of Local Self-Government on sound and safe lines. It is generally recognised that the capital of a great central Government should be separate and independent, and effect has been given to this principle in the United States, Canada and Australia."

Administrative Divisions.

Provinces.	No. of Districts.	Area in Square miles.	Population (1911).

The Bombay Presidency.

The Bombay Presidency stretches along the west coast of India, from Sind in the North to Kanara in the South. It embraces, with its territories and Aden, an area of 186,923 square miles and a population of 27,084,317. Of this total 65,761 square miles are in Native States, with a population of 7,411,675. Geographically included in the Presidency but under the Government of India is the first class Native State of Baroda, with an area of 8,182 square miles and a population of 2,032,798. The outlying post of Aden is under the jurisdiction of the Bombay Government: it has an area of 10 square miles and a population of 46,165.

The Presidency embraces a wide diversity of soil, climate and people. In the Presidency Proper are the rich plains of Gujarat, watered by the Nerbudda and the Tapi, whose fertility is so marked that it has long been known as the Garden of India. South of Bombay City the province is divided into two sections by the Western Ghats, a range of hills running parallel to the coast. Above Ghats are the Deccan Districts, with a poor soil and an arid climate, and below these come the Karnatic districts. On the sea side of the Ghats is the Konkan, a rice-growing tract, intercepted by creeks which make communication difficult. Then in the far north is Sind, totally different from the Presidency Proper, a land of wide and monotonous desert except where irrigation from the Indus has brought abounding fertility.

The People.

The population varies as markedly as soil and climate. In Sind Mahomedans predominate. Gujarat has remained true to Hinduism although long under the dominion of powerful Mahomedan kings. Here there is an amplitude of caste divisions, and a people, who although softened by prosperity, are amongst the keenest trading races in the world. The Deccan peasant has been seasoned by adversity; the saying goes that the Deccan expects a famine one year in every three, and gets it; the population is much more homogeneous than in Gujarat, and thirty per cent. are Mahrattas. The Karnatic is the land of the Lingayets, a Hindu reforming sect of the twelfth century, and in the Konkan there is a large proportion of Christians. Four main languages are spoken, Sindi, Gujarati, Marathi and Kanarese, with Urdu a rough *lingua franca* where English has not penetrated. The main castes and tribes number five hundred.

Industries.

The principal industry is agriculture, which supports sixty-four per cent. of the population. In Sind the soils are wholly alluvial, and under the influence of irrigation produce yearly increasing crops of wheat and cotton. In Gujarat they are of two classes, the black cotton soil, which yields the famous Broach cottons, the finest in India, and alluvial, which under careful cultivation in Ahmedabad and Kaira makes splendid garden land. The dominant soil characteristic of the Deccan is black soil, which produces cotton, wheat, gram and millet, and in certain tracts rich crops of sugar cane. The Konkan is a rice land, grown under the abundant rains of the submontane regions, and in the south the Dharwar cotton vies with Broach as the best in India. There

are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by well irrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailing rainfall in the Ghats, is gradually being completed, and this will ultimately make the Deccan immune to serious drought. More than any other part of India the Presidency has been scourged by famine and plague during the past twenty years. The evils have not been unmixed, for tribulation has made the people more self-reliant, and the rise in the values of all produce, synchronising with a certain development of industry, has induced a considerable rise in the standard of living. The land is held on what is known as the ryotwari tenure, that is to say, each cultivator holds his land direct from Government under a moderate assessment, and as long as he pays this assessment he cannot be dispossessed.

Manufactures.

Whilst agriculture is the principal industry, others have no inconsiderable place. The mineral wealth of the Presidency is small, and is confined to building stone, salt extracted from the sea, and a little manganese. But the handicrafts are widely distributed. The handloom weavers produce bright-coloured saris, and to a diminishing extent the exquisite kincobs of Ahmedabad and Surat. Bombay silver ware has a place of its own, as well as the brass work of Poona and Nasik. But the tendency is to submerge the indigenous handicrafts beneath industry organised on modern lines. Bombay is the great centre in India of the textile trade. This is chiefly found in the headquarter city, Bombay, where the industry embraces 29,33,775 spindles and 57,921 looms and employs 1,25,713 hands and consumes 39,71,849 cwts. of cotton. This industry is now flourishing, and is steadily rising in efficiency. In lieu of producing immense quantities of low grade yarn and cloth, chiefly for the China market, the Bombay mills now turn out printed and bleached goods of a quality which improves every year, and the principal market is at home. Whilst the industry centres in Bombay City, there are important offshoots at Ahmedabad, Broach and Sholapur. In Ahmedabad there are 10,48,847 spindles and 20,943 looms; in Sholapur 2,44,164 spindles and 3,982 looms; and in the Presidency 47,14,754 spindles and 91,518 looms. Great impetus has been given to Bombay industries by the provision of electric power generated fifty miles away on the Ghats, and the year 1919 witnessed a phenomenal flotation of new industrial companies of almost every description.

The situation of Bombay on the western sea-board, in touch at once with the principal markets of India and the markets of the west, has given Bombay an immense sea-borne trade. The older ports, Surat, Broach, Cambay and Mandvie, were famous in the ancient days, and their bold and hardy mariners carried Indian commerce to the Persian Gulf and the coasts of Africa. But the opening of the Suez Canal and the increasing size of ocean steamers have tended to concentrate it in modern ports with deep water anchor-

ages, and the sea-borne trade of the Presidency is now concentrated at Bombay and Karachi, although attempts are being made to develop Mormugao, in Portuguese territory, into an outlet for the trade of the Southern Mahratta Country. The foreign trade for the port of Bombay for the year 1917-18 was as follows:— Imports Rs. 5681,36,044; Exports (Indian produce) Rs. 7614,36,629, (foreign merchandise) Rs. 658,75,719.

Administration.

The Presidency is administered by a Governor-in-Council. The Governor is appointed by the Crown, and is usually drawn from the ranks of those who have made their mark in English public life. He is assisted by a Council of three members, two of whom are drawn from the Indian Civil Service, and the third in practice is an Indian. Each Member takes special charge of certain departments, and cases where differences of opinion occur, or of special importance, are decided "in Council." All papers relating to public service business reach Government through the Secretariat, divided into five main departments each under a Secretary (a) Revenue and Financial; (b) Political, Judicial, and Special; (c) General, Educational, Marine and Ecclesiastical; (d) Ordinary Public Works; (e) Irrigation. The senior of the three Civilian Secretaries is entitled the Chief Secretary. The Government frequently moves. It is in Bombay from November to the end of March; at Mahabaleswar from April to June; in Poona from June to September; and at Mahabaleswar from October to November; but the Secretariat is always in Bombay. Under the Governor-in-Council the Presidency is administered by four Commissioners. The Commissioner in Sind has considerable independent powers. In the Presidency Proper there are Commissioners for the Northern Division, with headquarters at Ahmedabad; the Central Division at Poona; and the Southern Division at Belgaum. Each district is under a Collector, usually a Covenanted Civilian, who has under him one or more Civilians as Assistant Collectors, and one or more Deputy Collectors. A collectorate contains on an average from eight to ten talukas, each consisting of from one to two hundred villages whose whole revenues belong to the State. The village officers are the patel, who is the head of the village both for revenue and police purpose; the talati or kulkarni, clerk and accountant; the messenger and the watchman. Over each Taluka or group of village is the mamlatdar, who is also a subordinate magistrate. The charge of the Assistant Deputy Collector contains three or four talukas. The Collector and Magistrate is over the whole District. The Commissioners exercise general control over the Districts in their Divisions. The control of the Government over the Native States of the Presidency is exercised through Political Agents.

Justice.

The administration of justice is entrusted to the High Court sitting in Bombay, and comprising a Chief Justice, who is a barrister, and six puisne judges, either Civilians, Barristers, or Indian lawyers. In Sind the Court of the Judicial Commissioner (three

judges, one of whom must be a barrister) is the highest court of civil and criminal appeal. Of the lower civil courts the court of the first instance is that of the Subordinate Judge recruited from the ranks of the local lawyers. The Court of first appeal is that of the District or Assistant Judge, or of a first class subordinate judge with special powers. District and Assistant Judges are Indian Civilians, or members of the Provincial Service. In cases exceeding Rs. 5,000 in value an appeal from the decision of the Subordinate or Assistant Judge and from the decision of the District Judge in all original suits lies to the High Court. District and Assistant Judges exercise criminal jurisdiction throughout the Presidency, but original criminal work is chiefly disposed of by the Executive District Officers. Capital sentences are subject to confirmation by the High Court. In some of the principal cities Special Magistrates exercise summary jurisdiction (Bombay has four Presidency Magistrates, as well as Honorary Magistrates exercising the functions of English Justices of the Peace) and a Court of Small Causes, corresponding to the English Country Courts.

Local Government.

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a District or a Taluka, and the latter over a city or town. These bodies are composed of members either nominated by Government or elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvements. Their funds are derived from cesses on the land revenue, the toll and ferry funds. The tendency of recent years has been to increase the elective and reduce the nominated element, to allow these bodies to elect their own chairmen, whilst large grants have been made from the general revenues for water supply and drainage.

Finance.

The finance of the provincial governments is marked by definite steps toward provincial financial autonomy. Up to 1870 there was one common purse for all India. Since then progressive steps have been taken to increase the independence of local Governments. Broadly, certain heads of revenue are divided with the Imperial Government, whilst certain growing heads of revenue, varying in each province, are allotted to the local Government. Thus in Bombay the land revenue, stamp revenue and revenue from assessed taxes are divided with the Government of India. All other local sources of revenue go intact to the local Government. The provincial Budget for 1919-20 shows an opening balance of Rs. 461 lakhs, revenue Rs. 1,038 lakhs, expenditure Rs. 1,036 lakhs.

Public Works.

The Public Works Department is under the control of two Chief Engineers who act as Secretaries to the Government; one for General Works and the other for Irrigation.

Under them are Superintending Engineers in charge of divisions and Executive Engineers in charge of districts, with the Consulting Architect. The chief irrigation works are in Sind and consist of a chain of canals fed by the annual inundations from the Indus and one perennial canal the Jamrao. In the Presidency proper the principal protective works are the Nera Canal, Gokak Canal, Mutha Canal and the Godavari Canal Scheme. In addition there is under construction a chain of protective irrigation works, originating in reservoirs in the Ghat regions. The Godavari canals were completed during the year 1917-18, the Pravara canals are approaching completion and the works in connection with the Hira Right Bank canal are making good progress. The capital invested in the irrigation works in the Deccan and Gujarat added up to the end of 1917-18 to Rs. 64

Police.

The Police Force is divided into three categories: District Police, Railway Police and the Bombay City Police. The District Police are under the Inspector-General who is either a member of the Gazetted Force or a Covenanted Civilian. Under him are the Deputy Inspector-Generals for Sind and the Northern and Southern Ranges of the Presidency proper, for Railways and for Criminal Investigation. District Superintendents of Police have charge of each District with a regular cadre comprising Assistant Superintendents, Sub-Inspectors, Chief Constables and Constables. The Bombay City Police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Training School at Nasik prepares young gazetted officers and the rank and file for their duties. The cost of the Police is 100 lakhs.

Education.

Education is imparted partly through direct Government agency, partly through the medium of grants-in-aid. Government maintain Arts Colleges at Bombay, Poona and Gujarat; the Grant Medical College, the Poona College of Science, the Agricultural College, Veterinary College, School of Art, Law School and a College of Commerce. A Science College in Bombay is now in course of construction. Also in Bombay City, and the headquarters of each district, a model secondary school. The other secondary schools are in private hands; the majority of the primary schools are maintained by District and Local Boards with a grant-in-aid. The Bombay Municipality is responsible for primary education in Bombay City. There are now in the Presidency 9 Arts Colleges, 4,758 Scholars; 165 boys' High Schools (attendance 53,420); 38 girls' High Schools (attendance 5,578); 438 boys' middle schools (attendance 32,787); 46 girls' middle schools (attendance 4,121); 14,396 primary schools attended by 734,308 boys and 110,030 girls. Total expenditure in British districts in 1917-18 on public instruction was Rs. 164 lakhs and in Native States was Rs. 24 lakhs.

The Educational Department is administered by a Director, with an Inspector in each Division and a Deputy Inspector with Assistants

in each district. Higher education is controlled by the Bombay University (established in 1857) consisting of the Chancellor (the Governor of the Presidency), the Vice-Chancellor (appointed by Government for two years), and 110 Fellows of whom 10 are *ex-officio*; 10 elected by the Graduates, 10 by the Faculties, and 80 are nominated by the Chancellor.

The principal educational institutions are:—

Government Arts Colleges—

- Elphinstone College, Bombay, Principal, Mr. Coverton.
- Deccan College, Poona, Principal, Mr. F. W. Bain.
- Gujarat College, Ahmedabad, Principal, the Rev. W. G. Robertson.
- Dharwar College, Principal, Mr. H. G. Rawlinson.

Private Arts Colleges—

- St. Xaviers, Bombay (Society of Jesus), Principal, Rev. Father Blatter.
- Wilson College, Bombay (Scottish Mission), Principal, Rev. Dr. Mackichan.
- Ferguson College, Poona (Deccan Educational Society), Principal, the Hon'ble Mr. R. P. Paranjpe.
- Baroda College, Baroda (Baroda State), Principal, Mr. Masani.
- Samaldas College, Bhavnagar (Bhavnagar State), Principal, Mr. Unwalla.
- Bahauddinbhai College, Junagadh State, Principal, Mr. Scott.

Special Colleges—

- Grant Medical College, Bombay (Government), Principal, Lt.-Col. Street, I.M.S.
- College of Science, Poona (Government), Principal, Dr. Allen.
- Agricultural College, Poona (Government), Principal, Dr. Harold Mann.
- Chiefs' College, Rajkot, Principal, Mr. Mayne.
- College of Science, Ahmedabad.
- Law School, Bombay, Principal, Mirza Ali Akbar Khan.
- College of Commerce, Bombay, Principal, Mr. P. Anstey.
- Veterinary College, Bombay, Mr. K. Hewlett.
- Bombay Bacteriological Laboratory, Director, Lt.-Col. Glen Liston, C.I.E., I.M.S.
- Sir J. J. School of Art, Bombay (Government), Principal, Mr. W. E. G. Solomon.
- Victoria Technical Institute, Bombay, Principal, Mr. T. Dawson.

Medical.

The Medical Department is in charge of the Surgeon-General and Sanitation of the Sanitary Commissioner, both members of the Indian Medical Service. Civil Surgeons stationed at each district headquarters are responsible for the medical work of the district, whilst sanitation is entrusted to one of the Deputy Sanitary Commissioners. Three large hospitals are maintained by the Government in Bombay, and well-equipped hospitals exist in all important up-country stations. Over four million persons including 67,000 in-patients are treated annually. The Presidency contains 7 Lunatic Asylums and 16 institutions for the treatment of Lepers. Vaccination is

carried out by a staff under the direction of the Sanitary Commissioner. Sanitary work has received an immense stimulus from the large grants made by the Government of India out of the opium surpluses. The Budget is 22·9 lakhs.

Governor and President in Council.

His Excellency The Right Hon'ble Sir George Ambrose Lloyd, G.C.I.E., D.S.O. Took his seat 17th December 1918.

Personal Staff.

Private Secy.—William Patrick Cowie, I.C.S.

Mily. Secretary—Lt.-Col. J. G. Greig, C.I.E.

Surgeon.—Capt. W. Ross Stewart, I.M.S.

Aide-de-Camp—Capt. A. K. Mac Ewan.

Honorary Aides-de-Camp.—Lt.-Col. P. R. Cadell; Commander R.C.R. Price; Meherban Sir Parshramrao Ramchandrarao alias Bhau Saheb Patwardhan, K.C.I.E., Chief of Jamkhandi; Meherban Abdul Majid Khan Diler Jang Bahadur, Nawab of Savanur; Thakor Saheb Bahadur Sinhji Man Sinhji of Palitana; Kumar Shri Shivasinhji of Jamnagar; Sheikh Abdul Khaliq of Mangrol; and Capt. J. Nethersole.

Indian Aide-de-Camp—Subadar Major Balkrishna, Rao Bahadur, 110th Mahrattas.

Members of Council.

Sir George Carmichael, K.C.S.I., I.C.S.

Mr. G. S. Curtis, C.S.I., I.C.S.

Sir Ibrahim Rahimtoola, Kt., C.I.E.

Additional Members of Council Elected.

Mr. D. V. Belvi, B.A.; LL.B. Elected by the Municipalities of the Southern Division.

Mr. G. M. Bhurgri, Bar-at-Law. Elected by the Jaghirdars and Zamindars of Sind.

Mr. Sidhanath Dhondeo Garud.

Sardar Syed Ali El Edroos. Elected by the Muhammadan Community of the Northern Division.

Mr. Chunilal V. Mehta, M.A., LL.B.

Shaikh G. H. Hidayatallah, LL.B. Elected by the District Local Boards of the Sind Division.

Sardar Shrinivas Coopcoswami Mudaliar.

Mr. F. Clayton.

Mr. G. K. Parekh, B.A.; LL.B. Elected by the Municipalities of the Northern Division.

Raosaheb Harilal Desaihbhai Desai.

Mr. Raghunath Purushottam Paranjpye.

Mr. Abdul Kadir *alias* Fakir Mohd. *valad* Ibrahim Khan Pathan.

Sardar Dulabawa Raisingji, Thakor of Kerwada. Elected by the Sardars of Gujarat.

Mr. Manmohandas Ramji Hora. Elected by the Indian Commercial Community.

Mr. R. H. Brooke.

Sir Dinshaw Maneckjee Petit, Bart.

Mr. Harchandrai Vishindas, B.A., LL.B.

Mr. Sheriff Devji Kanji.

Mr. Pandurang Anant Desai.

Sardar Gulam Jilani Abdul Razak.

Mr. Shridhar Balkrishna Upasani.

Nominated.

The Advocate-General (*ex-officio*).

Mr. Frederick St. John Gebbie.

Major General W. E. Jennings, I.M.S.

Mr. Salebhai Karimji Barodawala.

Mr. P. J. Mead, I.C.S.

Mr. J. G. Covernton.

Dr. Cajetan Fernandes.

Dewan Bahadur Kashinath Ramchandra Godbole.

Mr. Muhammad Haji Bhai.

Mr. B. S. Kamat.

Mr. J. D. Jenkins.

Mr. J. L. Rieu, I.C.S.

Mr. Lawrence Robertson, C.S.I., I.C.S.

Mr. Lalubhai Samaldas Mehta, C.I.E.

Rao Bahadur V. S. Naik.

Khan Bahadur Pir Bakhsh *valad* Mian Muhammad.

Mr. E. L. Sale, I.C.S.

Mr. Phiroze C. Sethna, O.B.E.

Rao Bahadur G. K. Sathe.

Mr. Purushotamdas Thakurdas, C.I.E.

Mr. A. H. A. Simcox, I.C.S.

Rao Bahadur Tekchand Udhavdas.

SECRETARIES TO GOVERNMENT.

Political, Special and Judicial.—James Crerar, C.I.E., I.C.S.

Dy. Secretary, Judicial and Political Departments, A. Montgomerie, I.C.S.

Revenue, Financial and Separate.—The Hon'ble Mr. Percy James Mead, B.A., I.C.S.

General, Educational, Marine and Ecclesiastical.—George Arthur Thomas, B.A., I.C.S.

Legal Department and Remembrancer of Legal Affairs.—George Douglas French, B.A., I.C.S.

Public Works Department.—Frederick St. John Gebbie (Ag.) and R. J. Kent *Acting Joint Secretary*).

MISCELLANEOUS APPOINTMENTS (S. C.)

Advocate-General, The Hon. Sir. T.J. Strangman.

Inspector-General of Police, L. Robertson, C.S.I., I.C.S.

Director of Public Instruction, The Hon. Mr. J. G. Covernton, C.I.E.

Surgeon-General, The Hon. Major-General W. E. Jennings, M.D., I.M.S.

Oriental Translator, Muhammad Kadir Shaikh, *Talukdari Settlement Officer,* R. G. Gordon, I.C.S.

Settlement Commissioner and Director of Land Records, F. G. H. Anderson.
Director of Agriculture and Co-operative Societies, G. F. Keatinge, C.I.E.
Registrar of Co-operative Societies, Otto Rothfeld.
Municipal Commissioner, Bombay, P. W. Monie.
Sheriff, The Hon. Mr. Purshottamdas Thakurdass, C.I.E.
Vice-Chancellor, Bombay University, Sir Chimanlal H. Setalvad.
Registrar, Bombay University, Fardunji Dastur.
Commissioner of Police, Bombay, F. C. Griffith, O.B.E.
Sanitary Commissioner, Lieut.-Col. William O'Sullivan Murphy, M.B., I.M.S.
Accountant-General (Acting), C. W. C. Carson.
Inspector-General of Prisons, Lt.-Col. J. Jackson, I.M.S.
Postmaster-General, Henry Norton Hutchinson, O.B.E., I.C.S.
Commissioner of Customs, Salt, Opium and Excise, E. L. Sale.
Collector of Customs, Bombay, G. S. Hardy, I.C.S.

GOVERNORS OF BOMBAY.

Sir Abraham Shipman 1662
 Died on the island of Anjediva in Oct. 1664
 Humfrey Cooke 1665
 Sir Gervase Lucas 1666
 Died, 21st May, 1667.
 Captain Henry Garey (*Officiating*) .. 1667
 Sir George Oxenden 1668
 Died in Surat, 14th July, 1669.
 Gerald Aungier 1669
 Died in Surat, 30th June, 1677.
 Thomas Rolt 1677
 Sir John Child, Bart. 1681
 Bartholomew Harris 1690
 Died in Surat, 10th May, 1694.
 Daniel Annesley (*Officiating*) 1694
 Sir John Gayer 1694
 Sir Nicholas Waite 1704
 William Aislabie 1708
 Stephen Strutt (*Officiating*) 1715
 Charles Boone 1715
 William Phipps 1722
 Robert Cowan 1729
 Dismissed.
 John Horne 1734
 Stephen Law 1739
 John Geekie (*Officiating*) 1742
 William Wake 1742
 Richard Bouchier 1750
 Charles Crommelin 1760
 Thomas Hodges 1767
 Died, 23rd February, 1771.
 William Hornby 1771
 Rawson Hart Boddam 1784
 Rawson Hart Boddam 1785
 Andrew Ramsay (*Officiating*) 1788

Major-General William Medows 1788
 Major-General Sir Robert Abercromby, K.C.B. (a). 1790
 George Dick (*Officiating*) 1792
 John Griffith (*Officiating*) 1795
 Jonathan Duncan 1795
 Died, 11th August, 1811.
 George Brown (*Officiating*) 1811
 Sir Evan Nepean, Bart. 1812
 The Hon. Mountstuart Elphinstone .. 1819
 Major-General Sir John Malcolm, G.C.B. 1827
 Lieut.-General Sir Thomas Sidney Beckwith, K.C.B. 1830
 Died, 15th January, 1831.
 John Romer (*Officiating*) 1831
 The Earl of Clare 1831
 Sir Robert Grant, G.C.H. 1835
 Died, 9th July, 1838.
 James Farish (*Officiating*) 1838
 Sir J. Rivett-Carnac, Bart. 1839
 Sir William Hay Macnaghten, Bart. (b)
 George William Anderson (*Officiating*) .. 1841
 Sir George Arthur, Bart., K.C.H. 1842
 Lestock Robert Reid (*Officiating*) 1846
 George Russell Clerk 1847
 Viscount Falkland 1848
 Lord Elphinstone, G.C.H., P.C. 1853
 Sir George Russel Clerk, K.C.B. (2nd time) 1860
 Sir Henry Bartle Edward Frere, K.C.B. 1862
 The Right Hon. William Robert Seymour Vesey FitzGerald.
 Sir Philip Edmond Wodehouse, K.C.B. .. 1872
 Sir Richard Temple, Bart., K.C.S.I. .. 1877
 Lionel Robert Ashburner, C.S.I. (*Acting*).. 1880
 The Right Hon. Sir James Fergusson, Bart., K.C.M.G. 1880
 James Braithwaite Peile, C.S.I. (*Acting*).. 1885
 Baron Reay 1885
 Baron Harris 1890
 Herbert Mills Birdwood, C.S.I. (*Acting*) .. 1895
 Baron Sandhurst 1895
 Baron Northcote, C.B. 1900
 Sir James Monteath, K.C.S.I. (*Acting*) .. 1903
 Baron Lamington, G.C.M.G., G.C.I.E. .. 1903
 J. W. P. Muir-Mackenzie, C.S.I. (*Acting*). 1907
 Sir George Sydenham Clarke, G.C.M.G.; G.C.I.E. (c). 1907
 Baron Willingdon, G.C.I.E. 1913
 Sir George Ambrose Lloyd 1918
 (a) Proceeded to Madras on duty in Aug., 1793, and then joined the Council of the Governor-General as Commander-in-Chief in India on the 28th Oct., 1793.
 (b) Was appointed Governor of Bombay by the Honourable the Court of Directors on the 4th Aug., 1841, but, before he could take charge of his appointment, he was assassinated in Cabul on the 23rd Dec., 1841.
 (c) Afterwards (by creation) Baron Sydenham

The Madras Presidency.

The Madras Presidency, officially the Presidency of Fort St. George, together with the Native States, occupies the whole southern portion of the peninsula, and, excluding the Native States, has an area of 141,075 square miles. It has on the east, on the Bay of Bengal, a coast-line of about 1,200 miles; on the west, on the Indian Ocean, a coast-line of about 450 miles. In all this extent of coast, however, there is not a single natural harbour of any importance; the ports, with the exception of Madras, which has an artificial harbour, are merely open roadsteads. A plateau, varying in height above sea-level from about 1,000 to about 3,000 ft., and stretching northwards from the Nilgiri Hills, occupies the central area of the Presidency; on either side are the Eastern and the Western Ghats, which meet in the Nilgiris. The height of the western mountain-chain has an important effect on the rainfall. Where the chain is high, the intercepted rain-clouds give a heavy fall, which may amount to 150 inches, on the seaward side, but comparatively little rain falls on the landward side of the range. Where the chain is low, rain-clouds are not checked in their westward course. In the central tableland and on the east coast the rainfall is small and the heat in summer excessive. The rivers, which flow from west to east, in their earlier course drain rather than irrigate the country; but the deltas of the Godavari, Kistna and Cauvery are productive of fair crops even in time of drought and are the only portions of the east coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

Population.

The population of the Presidency in 1911 was 41,402,000 and that of the Native States was 4,813,000. Hindus account for 89 per cent., Mahomedans for 6, Christians for 3, and Animists for 2. The vast majority of the population is of Dravidian race, and the principal Dravidian languages, Tamil and Telugu, are spoken by 15 and 14 million persons, respectively. Of every 1,000 people, 407 speak Tamil, 377 speak Telugu, 74 Malayalam, 37 Canarese and 23 Hindustani. It is remarkable that of the 41 millions of population all but quarter of a million belong to it by birth.

Agriculture.

About 68 per cent. of the population is occupied in agriculture, nearly 49 per cent. having a direct interest as landowners or tenants. The total cropped area of 1918-19 was 36 million acres against a normal area of 39 million acres. The shortage in the area cultivated was due to the unfavourable season created by the failure of the monsoons and also to the prevalence of influenza. There was consequently a reduction in the total yield of the chief food crops as well as industrial crops. The area under cotton cultivation, however, increased considerably on account of the high prices that the commodity secured in the market. Sugar-cane cultivation was also on the increase for a similar reason. Of the principal food crops, rice was cultivated in 10·4 million

acres as against 11·4 in a normal year, *cholam* or great millet in 5·1 million acres as against 5·2, *kambu* or spiked millet in 3 million acres as against 3·5 million acres, *ragi* or millet in 2·4 million acres as against 2·5. Of the industrial crops, groundnut was cultivated in a million acres as against 1·5 million acres in a normal year and cotton in 3·1 million acres as against 2·3. The acreage under tea, and coffee was less than 50,000 in each case and here also there was a tendency for increased output. Irrigation is unnecessary on the West Coast but on the east nearly one-third of the cultivated area has ordinarily to be irrigated. Irrigation works include 28,896 tanks, 6,164 river channels, 6,114 spring channels, 1,391 anicuts, nearly 400,000 ayacut wells, and 225,000 supplemental wells. The application of machinery to irrigation on a small scale is making considerable progress. The harvest-prices of the principal food grains were dearer than in the previous year. The stocks of grain were generally insufficient owing to the general failure of the crop. The two important export crops of Madras are cotton and ground-nut. Prior to the war nearly 40,000 tons of cotton were exported to foreign countries and 10,000 tons to other parts of India, the proportion in 1919 being 6,000 tons to foreign countries and 50,000 tons to other parts of India. Wages show a tendency to increase rapidly, owing to the great scarcity of labour.

A special feature of the agricultural activities of the Presidency is a large industry which the planting community have built up contributing substantially to the great economic development of the country during the past half a century. They have organised themselves as a registered body under the style and title of "The United Planters' Association of Southern India" on which are represented the coffee, tea and rubber and a few other minor planting produce; while safeguarding their own industry they have been able to do a great deal in adding to the wealth and resources of the country generally. So important a place do they occupy in the body-politic, that the Government have given them special representation on the Madras Legislative Council, besides passing special legislation for the control of their labour. The Government have also appointed a Deputy Director of Agriculture for the planting districts, besides one or two expert officers working in their area. H. E. Lord Willingdon is now in charge of the Agricultural and Industrial portfolio and measures are being organised for scientific development of these two departments including forest industries, on a commercial scale.

Industries.

Comparative poverty in readily exploitable mineral wealth and the difficulty of coal supply prohibit very large industrial development in the Presidency, but excellent work, both in reviving decadent industries and testing new ones, has been done under Government auspices. The only indigenous art employing a considerable number of workers is weaving.

There is no system of regular registration in vogue, and the figures given can be regarded only as approximate, but returns show a total of 1,231 factories driven by engines of an aggregate H. P. of 33,417. Of these factories 179 are concerned with cotton.

Trade.

The total value of sea borne trade of the Madras Presidency in 1917-18 was nearly 5,564 lakhs showing an increase of Rs. 732 lakhs or 15 per cent. as compared with that of the previous year. Foreign trade continued to feel the effects of the war during the first seven months of the year. With the cessation of hostilities and the partial relaxation of restrictions, trade, especially exports began to show considerable improvement. The volume of the export trade would have been greater had it not been for the unfavourable agricultural conditions, which limited the supply of raw produce available for export and for the restrictions imposed on the exports of food grains in consequence of shortage of supply in this Presidency brought about by the failure of the South-West and the lateness of the North-Eastern monsoons. A higher range of prices also contributed to the higher value of trade. The trade of the United Kingdom with Madras increased in exports while it declined under imports; the increase under the former being Rs. 751·53 lakhs or 64 per cent. and the reduction under the latter Rs. 59 lakhs or 8 per cent. The trade with the British Empire as a whole representing 85 per cent. of the aggregate trade of the Presidency, expanded by Rs. 704·13 lakhs or 30 per cent. The trade with the continent of Europe, which prior to the outbreak of the war, accounted for 28 per cent. of the total foreign trade, gradually declined to 2 per cent. during the year. Though imports from Japan and other Asiatic ports showed a slight increase, the aggregate trade with them showed a decline by Rs. 17·17 lakhs or 6 per cent. The United States' export trade improved by 34·24 lakhs but her imports dropped by Rs. 10·88. The chief Port, Madras, accounted for 48 per cent. of the total trade of the Presidency which is an advance by 6 per cent. over that of the previous year.

Education.

During the year 1918-19 the total number of public institutions rose from 32,517 to 32,879 and their strength on their rolls from 1,579,750 to 1,583,100. The percentage of male scholars to male population was 6·6 and the corresponding percentage for female scholars was 1·7. The percentage of the number of scholars, male and female, to the total population was 4·1. The total expenditure for the year rose from Rs. 226·5 lakhs to Rs. 248 lakhs. The proportions which the public funds and private funds bear to the total expenditure are 53 and 47 per cent. respectively. Elementary and secondary education had the largest share in contributing to the increase in expenditure. On the 31st March, 1919, there were: first-grade colleges for men 13, second-grade colleges for men 18, second-grade colleges for women 3, oriental colleges 11, law college 1, engineering college 1, training colleges 3, veterinary college 1, forest college 1, agricul-

tural college 1, secondary schools 418, elementary schools 29,938, special schools 292 with 1,583,087 pupils in all. There were also 4,003 private institutions imparting instructions to 109,864 pupils. The number of Indian women who were reading in the arts college was 208 and there were 40 secondary schools exclusively for Indian girls and the total number of institutions for females was 2,322 and their strength was 168,088. The Department is in charge of a Director of Public Instruction assisted by an officer of the Indian Educational Service as his deputy and two officers of the Provincial Educational Service and the Director is also the Commissioner for Government Examinations.

Government.

The Madras Presidency is governed on a system generally similar to that obtaining in Bombay and Bengal. At the head is the Governor usually selected from the ranks of British public men or of ex-Governors of Colonies; with the Governor is associated an Executive Council of three members, two of whom must have served for ten years under the Crown in India, while the third, of whom official experience is not required, is in practice, but not of necessity, an Indian. Madras administration differs, however, in some important respects from that of other major Provinces. There is no intermediate local authority between the Collector of the District and the authorities at headquarters, the Commissioner being unknown in Madras. Part of the power which would be reserved elsewhere for the Commissioner is given to the Collector, whose status is rather higher in Madras than elsewhere, and part is exercised by the Board of Revenue. Each member of the Board of Revenue is in fact a Commissioner for specific subjects throughout the Presidency. This conduces to administration by specialists and to the maintenance of equal progress in specific matters in every part of the Presidency, but it leaves the Government without an official who can judge of the general administration of large parts of the country. For these and other reasons the Decentralisation Commission recommended that a system of Commissionerships be introduced in Madras.

Finance.

According to the revised estimates for 1918-19, the Presidency's financial position was as follows in lakhs of rupees:—Opening balance, Rs. 201·08; receipts, Rs. 857·77; expenditure, Rs. 855·16; closing balance being Rs. 203·19.

Governor and President-in-Council.

His Excellency Baron Willingdon of Ratton, G.C.S.I., G.C.I.E., G.B.E. Took his seat, 10th April, 1919.

Personal Staff.

Private Secy., Mr. A. C. Duff, I.C.S.
Military Secy., Major K. O. Goldie, O.B.E.
Surgeon, Major D. P. Johnstone, R.A.M.C.
Aide-de-Camp, Capt. N. S. deBrath.
Aide-de-Camp, Capt. Donald Powell.
Extra Aide-de-Camp, Lt. H. R. Brand.

Extra Aide-de-Camp, Capt. G. Heseltine.

Commandant, H. E. the Governor's Body Guard,
Capt. Ogilvie.

Hony. Indian Aide-de-Camp, Hony. Capt. V.
S. Alexander.

Members of Council.

Divan Bahadur Sir P. Rajagopala Achariyar,
K.C.S.I.

Lionel Davidson, C.S.I., I.C.S. (On leave.)

A. R. Knapp, I. C. S. (Temporary).

C. G. Todhunter, I.C.S.

Official Additional Members.

The following is the latest list of the official
additional members of the Madras Legislative
Council:—

A. Y. G. Campbell, C.I.E.

S. Cox.

Major-General Sir Thomas Munro, Bart., K.C.B.	1820	(b) Afterwards (by creation) Baron Carmichael of Skirling.	

The Bengal Presidency.

The Presidency of Bengal, as constituted on the 1st April 1912, comprises the Burdwan and Presidency divisions and the district of Darjeeling, which were formerly administered by the Lieutenant-Governor of Bengal; and the Rajshahi, Dacca and Chittagong divisions which by the partition of the old Province had been placed under the administration of the Lieutenant-Governor of Eastern Bengal and Assam. The area of the Presidency is 84,092 square miles, and it possesses a population of 46,305,642 persons; included within this area are the two Native States of Cooch Behar and Hill Tippera, which are under the general supervision of the Government of Bengal. The area of the British territory is 78,699 square miles. Bengal comprises the lower valleys and deltas of the Ganges and Brahmaputra, and in the main consists of a great alluvial plain intersected in its southern portion by innumerable waterways. In the north are the Himalayan mountain and sub-montane tracts of Darjeeling and Jaipauri, and on the south-east the hills in Hill Tippera and Chittagong, while on the west the Chota Nagpur plateau is continued by an undulating tract running through the western portions of Midnapur, Bankura, Burdwan and Birbhum. The general range of the country however is very low, and a great fertile plain extends southward from Jalpaiguri to the forests and swamps known as the Sunderbans, which lie between the area of cultivation and the Bay of Bengal.

The People.

Of the inhabitants of the Presidency 24,237,238 or 52·4 per cent. are Mahomedans and 20,945,379 Hindus. These two major religions embrace all, but 2·4 per cent. of the population. Christians, Buddhists, and Animists combined number a little over 1,100,000.

Bengali is spoken by ninety-two per cent. of the population of the Presidency and Hindi and Urdu by four per cent. The Oriya-speaking people number nearly 300,000 and Naipali is the tongue of 89,000 persons principally residents in the Darjeeling and Jalpaiguri districts. The great majority of the speakers of the Munda languages are Santals in West and North Bengal.

Industries.

According to the returns of the Census of 1911 nearly 35½ million or three-fourths of the population derive their support from pasture and agriculture, and of these nearly 30 millions are cultivators, and nearly 3½ millions farm servants and field labourers. The area under jute in 1919 is estimated at 2,458,955 acres against 2,219,212 in 1918. The weather on account of drought in March was unfavourable for sowing of the low land crop, but latterly the unusually favourable weather produced about an average crop. Bengal is the most important rice-producing area in Northern India, and it is computed that about 85 per cent. of the cultivated area of the Presidency is devoted to its production. Other crops include barley, wheat, pulses and oil-seeds, the area devoted to the last named being 1,523,400 acres. Sugar is produced both from the sugar-cane and

from the date-palm, and tobacco is grown for local consumption in nearly every district of Bengal. The area under tea in 1918-19 was 169,100 acres. There were 305 plantations employing a daily average of 105,365 permanent and 27,443 temporary hands.

Manufacture and Trade.

The main industries in this part of India in addition to the agricultural industry are the jute mill industry, the tea industry (largely an Assam industry) and Coal mining. The Jute Mills in and around Calcutta constitute the principal manufacturing industry of the Presidency. During the first half of 1918 Bengal jute mills worked full time but from 9th November, five days week working was introduced, which continued till the 9th of December when working time was further reduced to four days. From the third week of January 1919, however, they resumed five days working in a week. There were 72 mills belonging to 48 companies (including three private concerns) at work throughout the year with 38,951 looms and 815,479 spindles. The average number of persons employed daily was 2,66,664. There were no difficulties as regards the supply of labour. The total profits (after deduction of interest on debentures but subject to allowances for depreciation) made by 43 Jute Mill Companies in Bengal (owning 68 Mills) at the close of the year 1918 were about Rs. 16 crores. The corresponding figures for 1914, 1915, 1916 and 1917 were Rs. 1,23, Rs. 6,99, 9,23 and 6,46 lakhs respectively. The value of the exports of Raw Jute by sea from Calcutta during 1918-19 increased by 5,60 lakhs to Rs. 11,84 lakhs. The quantity exported also was more than in the preceding year by 104,606 tons. The Jute cess benefited the Calcutta Improvement Trust to the extent of Rs. 8·08 lakhs, while Rs. 7·4 lakhs were collected in the preceding year. The exports of raw and manufactured Jute represented 63 per cent. of Calcutta's exports during 1918-19 and jute manufactures were, it may be noted, India's premier export in that year. Other principal industries are cotton twist and yarn, silk yarn and cloth, handmade cloth, sugar, molasses and paper. Fourteen cotton mills were at work during 1918-19 employing daily on an average 11,000 persons. The silk weaving industry continues to decline. There was only one silk mill working during 1918 which employed 94 hands. The manufacture of tea is carried on an extensive scale in Darjeeling and Jalpaiguri. The capital employed by joint stock companies in the industry in India amounts to about Rs. 34 crores and the daily average labour force to 783,000. In 1918 the number of coal mines under the scope of the Indian Mines Act worked in Bengal was 290. The total output for Bengal was 5,302,000 tons against 4,632,000 tons raised in 1917, while the output of all the mines in Bengal, Bihar and Orissa, and Assam amounted to 19,277,000 tons. The capital of joint stock coal companies only in the industry employed in these provinces is approximately Rs. 731 lakhs. The

laily average of persons employed in the coal mines in Bengal was 46,149 and in Bengal, Bihar and Orissa, and Assam 168,083. Three paper mills produced paper valued at Rs. 82 lakhs in 1918.

In 1918-19 the foreign seaborne trade of Bengal (excluding treasure but including Government stores) amounted to Rs. 179 crores of which Rs. 72 crores represented imports and Rs. 107 crores exports. Of the total foreign and coasting trade of Bengal, 96 per cent. was the share of Calcutta. The six chief exports from Bengal are in order of importance; jute (raw and manufactures), tea, hides and skins (raw), grain, pulse and flour, seeds and opium and the six leading imports are cotton goods, metals, sugar, machinery and mill-work, salt, and oils.

Administration.

The present form of Government dates from the 1st of April 1912, when the administrative changes announced by the King-Emperor at Delhi in December 1911 came into operation. A Governor was then substituted for a Lieutenant-Governor, who had previously been at the head of the Province, and Lord Carmichael of Kirkcubright assumed charge of the office. He was succeeded by the Earl of Ronaldshay in March 1917. The Governor is assisted by an Executive Council, two of whom are at present members of the Indian Civil Service and the third an Indian. The Civil Secretariat consists of the Chief Secretary, who is in charge of the Political and Appointment Department, the Judicial Secretary, the Revenue Secretary, the Financial Secretary, who also deals with Commercial questions, the General Secretary who deals with questions of Local Self-Government and Education and the Legislative Secretary, four Under-Secretaries and one Assistant Secretary. The Government divides its time between Calcutta, Darjeeling and Dacca.

Bengal is administered by five Commissioners under the Governor in Council, the divisions being those of the Presidency, Burdwan, Rajshahi, Dacca and Chittagong. The unit of administration is the District Magistrate and Collector. As Collector he supervises the gathering of the revenue and is the head of all the Departments connected with it, while as District Magistrate he is responsible for the administration of Criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner. Commissioners are the channels of communication between the local officers and the Government. In certain revenue matters they are, in their own right, subject to the Board of Revenue in Calcutta; in other matters they are under the direct control of Government.

Justice.

The administration of justice is entrusted to the High Court of Calcutta which consists of the Chief Justice who is a barrister and 14 puisne judges including one additional judge who are barristers, civilians or vakils. Below the High Court are the District and Additional Judges, the Small Cause Court and Subordinate Judges and the Munsifs. Of these officers the District and Additional Judges and

a certain number of subordinate judges are also endowed with the power of a Criminal Court while the remainder have jurisdiction in Civil matters only. Criminal justice is administered by the High Court, the Courts of Session and the courts of the various classes of magistrates. On its appellate side the High Court disposes of appeals from the order of a Court of Session, and it also confirms, modifies or annuls sentences of death passed by Sessions Courts. Calcutta has four Presidency Magistrates, two Municipal Magistrates and also a number of Honorary Magistrates and it possesses a Court of Small Causes with judges including one additional judge who dispose of cases of the class that are usually heard in County Courts in England.

Local Self-Government.

By Bengal Act III of 1884 which regulates municipal bodies in the interior and its subsequent amendments the powers of Commissioners of municipalities have been increased, and the elective franchise has been extended. Municipal expenditure now comprises a large number of objects, including veterinary institutions and the training and employment of Health Officers and Sanitary Inspectors and female medical practitioners. The Commissioners also have large powers in regard to the water-supply and the regulation of buildings. In Calcutta Act (III) of 1899 created three co-ordinate municipal authorities, the Corporation, the General Committee, and the Chairman. The total number of Commissioners is fifty, of whom 25 are elected, and the remainder appointed by Government and by commercial bodies. In order to improve the insanitary and congested areas of the city, the Calcutta Improvement Trust has been created with extensive powers. In the mofussil, District and Local Boards exercise considerable powers, with regard to Public Works, Education and Medical relief and Union Committees have been formed which deal for the most part with the control of village roads, sanitation and water-supply.

Bengal Act V of 1911 introduces a new system of self-government by the creation of village authorities vested with the power and duties necessary for the management of communal village affairs and entrusted with powers of self-taxation. The new village authority, to be called the Union Board, will replace the existing Chankidari *panchayats* and the Union Committee and will deal with the village police, village roads, water supply, sanitation, primary school and dispensaries. The Act also empowers Government to create out of the members of the Union Board Village Benches and Courts for the trial of petty criminal and civil cases arising within the union.

Finance.

As in other Provinces, the revenue is divided between the Local Government and the Government of India. The Budget for 1918-19 showed an opening balance of Rs. 3.70 crores, estimated revenue amounted to Rs. 7.30 crores and expenditure aggregated Rs. 7.77 crores. Of the closing balance of Rs. 3.23 lakhs, Rs. 2.7 lakhs was earmarked for various objects.

Public Works.

The Public Works Department is under the charge of a Chief Engineer who is also the Secretary to Government in the P. W. and Railway Departments and the Irrigation Department is under the charge of second Chief Engineer who is as well the Secretary to Government in the Irrigation and Marine Departments.

The P. W. D. deals with questions regarding the construction of public buildings and roads and the carrying out of miscellaneous public improvements.

The Railway Department deals with questions regarding acquisition of lands required by the several Railways and alignment of main lines of Railways and Tramway projects.

The Irrigation Department deals with matters connected with the numerous embankments and drainage works as well as the waterways that intersect the Presidency.

The Marine Department deals with all questions connected with the Bengal Pilot Service, merchant shipping, boiler commission, smoke nuisance and the importation, possession, &c., of petroleum and the importation of explosives.

Police.

The Bengal Police force comprises the Military Police, the District Police, the Railway Police, and the River Police. The Bengal Police are under the control of the Inspector-General of Police, the present Inspector-General being a member of the Imperial Police Service. Under him are Deputy Inspectors-General, for the Dacca Range, the Rajshahi range, the Presidency range, the Burdwan range and the Bakarganj range and also two Deputy Inspectors-General, one in charge of the C. I. D., and the other in charge of the Intelligence Branch of the C. I. D. Each district is in charge of a Superintendent, and some of the more important districts have an Additional Superintendent. The Railway Police is divided into three distinct charges each under a Superintendent. The River Police is also under a Superintendent. The cadre comprises Assistant Superintendents, Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, head constables and constables. There is also a Village Police, composed of daffadars and chowkidars, who receive a monthly salary which is collected from the villages by the Panchayat. In the Madaripur Sub-Division however the daffadars who are whole-time servants are paid partly by Government and partly by the Panchayat. The Calcutta City police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Commissioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, European Sergeants, head constables and constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. There is a training college and school at Sardah, in the district of Rajshahi where newly appointed gazetted officers, Sub-Inspectors and constables of the Bengal police learn their duties. There are two other schools at Dacca and Berhampore for the training of constables. The annual cost of the Police is over Rs. 130 lakhs.

Medical.

The head of the Medical Department is the

Surgeon General with the Government of Bengal, and Sanitation is in charge of the Sanitary Commissioner, the former appointment is always held by a member of the Indian Medical Service, while the latter post is also ordinarily held by a member of that service. There is also a Sanitary Engineer for the Presidency. In the districts the Civil Surgeon are responsible for medical work. There are 22 hospitals in Calcutta, 10 of which are supported by the Government and 439,806 persons are treated at these institutions during 1913, of whom 34,703 were in-patients. In the mofussil districts there are 738 hospitals and dispensaries; the number of patients treated in them during 1913 was 63,68,171 including 72,028 in-patients.

Education.

In the Presidency of Bengal education is imparted partly through Government agency and partly through private bodies, assisted to some extent by Government grants-in-aid. Government maintains three Arts Colleges in Calcutta (of which one is a college for women and one the Sanskrit College), one at Hughli, one at Krishnagar, one at Dacca, one at Rajshahi and one at Chittagong. It also maintains two training colleges, one at Calcutta and one at Dacca, for teachers who teach in secondary schools through the medium of English and 5 normal schools, one in each division, for the training of teachers in secondary schools through the medium of the vernacular; also an engineering college at Sibpur and an engineering school at Dacca, a medical college, a veterinary college, a school of art and a commercial school in Calcutta and a weaving school at Serampore. It also provides at the headquarters of all districts, except Burdwan and Midnapore, and also at certain other mofussil centres, High English schools for the education of boys, while to some Government Arts Colleges high schools are attached. In Calcutta there are Government four high schools for boys, two of which are attached to Presidency College and one to the Sanskrit College. There is another school at Hastings House, Alipur, which is a residential institution. Government high schools for girls exist only in the headquarters stations of Calcutta, Dacca, Mymensingh and Chittagong. The other secondary schools, with the exception of a few middle schools managed either by Government or by municipal and district boards, are under private control. The administration of primary education in all areas, which are not under municipalities, rests with the district boards, grants being given from provincial revenues to the boards, which contribute only slightly from their own funds. Only in backward localities are such schools either entirely managed, or directly aided, by Government. Apart from the institutions referred to above 112 institutions called Guru Training Schools are maintained by the Departments for the training of vernacular teachers. For the education of Mohomedans, there are senior madrasas at Calcutta, Dacca, Chittagong and Hughli, and on junior madrasas at Rajshahi which are managed by Government. There are also certain Government institutions for technical and industrial education. A large proportion of education

work of every grade is under the control of various missionary bodies, which are assisted by Government grants-in-aid.

The municipalities are required to expend a certain proportion of their ordinary income on education. They are mainly responsible for primary education within their jurisdiction, but schools in these areas are eligible also for grants from Government. These bodies maintain a second grade Arts College and a high school at Midnapore, a high school at Burdwan, a high school at Santipur and a high school at Chittagong.

There were on 31st Mar. '19 in the Presidency:--
 Arts Colleges 36 Secondary Schools 2,813
 Law " 9 Primary Schools 44,925
 Medical Colleges 2 Special " 1,432
 Engineering College 1 Private Institutions 2,478
 Training Colleges 4
 Veterinary College 1
 with 19,31,535 pupils in all.

The Department is administered by a Director of Public Instruction, assisted by an Assistant Director and an Assistant Director for Muhammadan Education and a special officer in connection with Technical and Industrial Education. Each division is in charge of a Divisional Inspector assisted by a certain number of Additional and Assistant Inspectors according to the requirements of the several divisions. Similarly the administrative charge of the primary education of each district is in the hands of a Deputy Inspector assisted by Additional Deputy and Sub-Inspectors of Schools, the latter class officers being in some instances helped by officers of humbler status called Assistant Sub-Inspectors and Inspecting Pandits and Maulvis. Higher education is controlled by the University (Calcutta) established in 1857, administered by the Chancellor (the Governor-General and Viceroy of India), the Rector (the Governor of Bengal), the Vice-Chancellor (appointed by the Government of India, usually for two years at a time), and 110 Fellows, of whom 10 are ex-officio, 10 are elected by registered Graduates, 10 by the Faculties and the remainder 80 are nominated by the Chancellor. The University maintains a Law College, called the University Law College, Calcutta. The University is mainly an examining body, but it has now made itself responsible for the actual teaching of students, for which purpose it employs an agency which is quite distinct from the staffs of the affiliated colleges.

The following University Professorships have been founded:—(1) Prasanna Kumar Tagore Law Professorship, (2) Minto Professorship of Economics, (3) George V. Professorship of Mental and Moral Science, (4) Hardinge Professorship of Higher Mathematics, (5) Carmichael Professorship of Ancient Indian History and Culture, (6) Palit Professorships of Chemistry and Physics, (7) Sir Rash Behary Ghose Professorship of Applied Mathematics, Physics, Chemistry and Botany, (8) Two Professorships of English and (9) University Professorship of Comparative Philology.

The principal educational institutions are:—

GOVERNMENT ARTS COLLEGES.

Presidency College, Calcutta, Principal, W. C. Wordsworth on leave Mr. J. R. Barrow, officiating.

Dacca College, Principal, F. C. Turner.
 Rajshahi College, Principal, Rai K. K. Banerji Bahadur on deputation to the Calcutta University—Dr. P. Veigy, Offg.

Chittagong College, Principal, J. R. Barrow, on deputation. Babu Purnachandra Kundu, officiating.

Sanskrit College, Principal, Dr. S. C. Acharya.
 Hughli College, Principal, J. M. Bottomley.
 Krishnagar College, Principal, R. N. Gilchrist.
 Bethune College, Calcutta, Principal, Miss M. Wright.

PRIVATE ARTS COLLEGES.

Aided.

Scottish Churches College, Calcutta, Principal, Rev. J. Watt.
 St. Xavier's College, Calcutta, Rector, Rev. Father Fallon, S. T.
 Jagannath College, Dacca, Principal, Rai L. M. Chatterji Bahadur.
 Brajamohan College, Barisal, Principal, N. L. Mookherjee.
 Anandamohan College, Mymensingh, Principal, Dr. J. Ghosh.
 Victoria College, Comilla, Principal, Satyendra Nath Basu.
 Wesleyan College, Bankura, Principal, Rev. A. E. Brown.
 Victoria College, Narail, Principal, Gopalchandra Maitra.
 Hindu Academy, Daulatpur, Principal, Kamakhya Charan Nag.
 Serampore College, Principal, The Rev. Dr. George Howells.
 St. Paul's Cathedral Mission College, Calcutta Principal, The Rev. W. E. S. Holland.
 Edward College, Pabna, Principal, R. Bose.
 Diocesan College, Calcutta, Lady Principal, Sister Mary Victoria, C.J.S.B.

Unaided.

City College, Calcutta, Principal, Heramba Chandra Maitra.
 Ripon College, Calcutta, Principal, Babu Janaki Nath Bhattacharjee.
 Bangabasi College, Calcutta, Principal, G. C. Bose.
 Vidyasagar College, Calcutta, Principal, Saradaranjan Roy.
 Central College, Calcutta, Principal, Khudiram Bose.
 Krishna Chandra College, Hetampur, Principal, Dhurumdas Dutt.
 Burdwan Raj College, Principal, Umacharan Bandopadhyaya.
 Uttarpara College, Principal, Jogendra Nath Mitra.
 Krishnath College, Berhampore, Principal, S. Banerji (offg.)
 Loreto House, Calcutta, Lady Principal, The Rev. Mother Mary Borgia, I.B.V.M.
 Carmichael College, Raigpur, Principal, Rev. Dr. C. H. Watkins.
 Rajendra College, Faridpur.
 Bagerhat College, Khulna.
 South Suburban College, Bhowanipur.

MUNICIPAL.

Midnapore College, Principal, Jogendra Nath Hazra.

COLLEGES FOR PROFESSIONAL TRAINING.

Engineering—Government.

Civil Engineering College, Sibpur, Principal B. Heaton.

Teaching—Government.

David Hare Training College, Principal, W. E. Griffith (on deputation), Babu Chinta Haran Chakravarti (offg.)
Babu Rakhal Raj Biswas in charge.
Dacca Training College, Principal, E. E. Biss (on deputation). Mr. H. A. Stark (offg.)

Unaided.

L. M. S. Training College, Bhowanipore (Calcutta), Rev. A. Sims.

Training Department attached to Loreto House, Calcutta.

Aided.

Diocesan College, Calcutta, Lady Principal, Sister Mary Victoria, C.I.L.B.

Medicine—Government.

Medical College, Calcutta, Principal, Lt.-Col. J. T. Calvert.

Law.

University Law College, Calcutta, Principal, Dr. Satis Chandra Bagchi.

The Law Department, attached to the Dacca College, Vice-Principal, Naresh Chandra Sen Gupta.

The Law Department, attached to the Ripon College, Calcutta, Principal, Jankinath Bhat-tacharji.

There are also Pleaderships classes attached to the Government Colleges at Dacca, Rajshahi, Hoogly, Chittagong and Krishnagar and in the unaided college at Berhampore, the Ripon College and the Metropolitan Institution, Calcutta, and the Municipal College at Midnapore.

Administration.**GOVERNOR AND PRESIDENT IN COUNCIL.**

His Excellency The Rt. Hon. Lawrence John Lumley Dundas, Earl of Ronaldshay, G.C.I.E. Took his seat, 27th March 1917.

PERSONAL STAFF.

Private Secretary, H. R. Wilkinson, I.C.S.
Military Secretary, Major Henry George Vaux.
Surgeon, Major J. D. Sandes, I.M.S.
Aides-de-Camp, Capt. R. W. Hyde, Lt. Capt. E. A. Haskett Smith.

Honorary Aides-Camp, Lt.-Col. R. Glen, V.D.; Lt.-Col. R. S. Hawkins, V.D.; Commander Duncan Frederick Vines, R. I. M.; Lt.-Col. D. A. Tyrie, V.D., Col. C. H. Shepherd.

Extra Aide-de-Camp, Lt. C. B. Lyon.

Indian Aide-de-Camp, Risaldar Major Hira Singh Bahadur, Raisaldar Faiz Mahamad Khan, Bahadur.

Commander of Body Guard, Major K. Robertson.

MEMBERS OF COUNCIL.

Sir Henry Wheeler, K.C.I.E., C.S.I., I.C.S. Took his seat on 9th April 1917.

The office of Lieutenant-Governor of Bengal was abolished on April 1st, 1912, when Bengal was raised to a Governorship.

GOVERNORS OF THE PRESIDENCY OF FORT WILLIAM IN BENGAL.

The Rt. Hon. Baron Carmichael of Skirling, G.C.I.E., K.C.M.G.	1912
The Rt. Hon. Earl of Ronaldshay, G.C.I.E.	1917

The United Provinces.

The United Provinces of Agra and Oudh lie in practically the centre of Upper India. They are bounded on the north by Tibet, on the north-east by Nepal, on the south and south-east by Bengal, on the south by two of the Chota Nagpur States of the Central India Agency and the Saugor District of the Central Provinces, and on the west by the States of Gwalior, Dholpur, Bharatpur, Sirmor, and Jubbal, and by the Punjab. Their total area amounts to 107,267 square miles, to which may be added the area of the two Native States of Tehri and Rampur, both of which lie within the United Provinces, 5,079 square miles and the newly-created independent State of Benares with an area of 865 miles, giving a total of 112,346 square miles. The total population is 48,014,080, out of which Tehri and Rampur account for 832,036.

The Provinces, originally termed the North-Western Provinces and so amalgamated in 1877, receiving their present designation in 1902, include four distinct tracts of country: portions of the Himalayas, the sub-Himalayan tracts (the Kumaon), the great Gangetic plain and portions of the hill systems of Central India (Bundelkhand). The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though better populated. The soil of the Gangetic plain, however, possesses an extreme fertility and here the density of population rises from 512 persons per square mile in the west, to 549 in the centre and 718 in the east, which gives the Provinces as a whole a greater population pressure on the soil than any other Provinces in India. In the south there are low rocky hills, broken spurs of the Vindhyan mountains, covered with stunted trees and jungle, and in the North the lower slopes of the Himalayas, clothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until is reached the line of the eternal snows, but the greater part of the provinces consists of level plain, teeming with highly-cultivated fields and watered by four rivers—the Ganges, Jumna, Gogra and the Gumti.

The People.

The population is mainly Hindu; 85 per cent. ranking as such whilst Mahomedans number 14 per cent., the total of all other religions being less than 0·6 per cent. composed of Christians (Europeans and Indians), Jains, Aryas and Sikhs; the Aryas are the followers of the Arya Samaj sect, which obtains widely in the Punjab and has extended its influence to the United Provinces. The three main physical types are Dravidian, Aryan and Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Mirzapur and Bundelkhand, whilst the high-caste Aryans frequent the western Districts of the Province. Most of the people, however, show mixed Arya-Dravidian origin. Three languages are spoken by the great majority of the people in the plains—Western Hindi, Eastern Hindi and Behari; Urdu, or Hindustani is a

dialect of Western Hindi, though it contains a large admixture of Persian and Arabic words, which makes it a *lingua franca*.

Industries.

The principal industry is agriculture, which supports no less than 71·7 of the population. The soils of the Provinces fall into three groups; the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium; the chief characteristic soil of the Central Indian alluvium is the black soil, with a lighter variant, though here also there are light loams and gravel. The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand, clay and loam, the loam being, naturally, the most productive. The soil generally yields excellent crops of rice, millet, maize, linseed, cotton, wheat, sugarcane, pulses, barley and poppy, rice being grown mostly in low-lying, heavy clays. The greater part of the Provinces is highly cultivated, the rainfall varies from 50 to 60 inches in the Hills, to 40 inches in the Benares and Gorakhpur Divisions, whilst the Agra Division receives about 25 to 30 inches annually only. Drought seriously affected Bundelkhand and the Agra Division, in the past, but improved drainage, and irrigation (a protective system of irrigation works exists and is being extended) have enabled a complete recovery to be made and the agricultural prosperity of the Provinces is now high, though it varies with the rainfall. The great scourge has been, and is, that of plague, which hampers the agriculturist severely, and in the Terai, malaria still exacts a large toll. Land is held mostly on the ryotwari tenure in Bundelkhand and Kumaon, on zamindari tenure in Agra and taluqdari tenure in Oudh. The principal land owners in Oudh are the Taluqdars, some of whom own very large estates. The area held in taluqdari tenure amounts to 51 per cent. of the total area in Oudh.

Manufactures.

The Provinces are not rich in minerals. Coal exists in Southern Mirzapur, iron and copper are found in the Himalayan Districts, and there were mines of importance there formerly, but increased difficulty of working them as veins became exhausted resulted in the closure of most of them. Gold is found in minute quantities by washing in some of the rivers in the Hills. Limestone is found in the Himalayas and stone is largely quarried in the Mirzapur District. Cotton is ginned and spun throughout the provinces, as a home industry, and weaving, by means of hand-loom, is carried on in most districts. In 1901 nearly a million persons were dependent on weaving, 140,000 on spinning and 136,000 on cleaning, pressing, and ginning, but during the last decade these industries have been on the decrease. The largest industry is in Azamgarh district, where there are 130,000 looms. Silk spinning is confined almost entirely to the district of Benares, where the famous *Kinkob* brocade is made. Em-

broidery is manufactured in Lucknow, where the noted *chikan* work of silk on cotton or muslin, is produced, and in Benares, where gold and silver work on velvet silk, crepe and sarsenet obtains. The glass industry is important in some districts, Benares and Moradabad are noted for their lacquered brass work, porcelain is manufactured at Ghazipur, and other industries are those of paper-making (Lucknow) dyeing, leather-work and brewworks. The chief centre of European and Indian industry is Cawnpore, which, situated in most advantageous position on the Ganges, possesses tanneries, cotton, woollen, jute and other mills, which have a large and ever increasing output (the woollen mill is the largest in India). There are cotton factories at Aligarh (famous for its locks), Meerut and Bareilly; Mirzapur (which produces also excellent carpets), Hardoi and Hathras have cotton mills. Excellent furniture is made at Bareilly, at Allahabad there are stone works, at Rosa there is a very large English distillery, with patent still, and the provinces can claim six breweries, with an out-turn of over a million gallons.

The largest trade centres are Cawnpore, Allahabad, Mirzapur, Benares, Lucknow, Meerut; Aligarh, Hathras, Muttra, Agra, Farukhabad, Moradabad, Chandausi, Bareilly, Saharanpur, Muzafarnagar, Ghaziabad, Khurja, Gorakhpur, Ghazipur, Pilibhit and Shahjahanpur.

Administration.

The Provinces are administered by a Lieutenant-Governor, who is generally chosen from among the members of the Indian Civil Service who have served in the Province. The medium for the transaction of public business is the Secretariat, the Staff of which consists of five Secretaries and five Under-Secretaries. The Chief Secretary is in charge of the Revenue, Appointment, General Administration, Political and Forest Departments; another Secretary attends to the Medical, Judicial, Police, Educational and Sanitation Departments; whilst a third looks to the local Self-Government, Financial, Municipal, Miscellaneous and Separate Revenue Departments. The other two Secretaries belong to the Public Works Department, and are also Chief Engineers, one of whom deals with Irrigation, and the other with Roads and Buildings. Government spends the cold weather, October to April, in Lucknow and Allahabad, mostly in Lucknow, the Secretariat moves between these two places. The Lieutenant-Governor and the Secretariat spend the hot weather in Naini Tal, but during the monsoon the Lieutenant-Governor tours the plains, as he does also in the cold weather. The Board of Revenue is the highest court of appeal in revenue and rent cases, and it has important executive duties, being the chief revenue authority in the Provinces. There are forty-eight British districts, thirty-six in Agra and twelve in Oudh, average area 2,000 square miles and average population a million. Each District is in charge of a District Officer, termed a Collector and Magistrate in Agra and a Deputy Commissioner and Magistrate in Oudh and Kumaon, who is an Indian Civilian. The Districts are grouped together in Divisions under a Commissioner. There are nine Divisions, having an average area of nearly 12,000 square miles and a population of from 5 to 6 millions.

The Districts are sub-divided into *tahsils*, of which there are 217, with an average area of 500 square miles and a population of 220,000. Each *Tahsil* is in charge of a *Tahsildar*, who is responsible for the collection of revenue, and also exercises judicial powers. *Tahsils* are divided into *parganas* which are units of importance in the settlement of land revenue. Subordinate to the *Tahsildars* are *kanungos*, of whom there are, on an average, three to a *tahsil*. These officials supervise the work of the *patwaris*, or village accountants, check their papers and form a link direct between the villagers and Government. For judicial purposes (revenue and criminal), the District Officer assigns a subdivision, consisting of one or more *tahsils*, as the case may be to each of his subordinates, who may be covenanted civilians, (Joint and Assistant Magistrates and Collectors) or members of the Provincial Service (Deputy Collectors and Magistrates). The Commissioner of the Bareilly and Kumaon Divisions are Political Agents for the Native States of Rampur and Tehri respectively and the Commissioner of Benares is the Political Agent for Benares State.

Justice.

Justice is administered by the High Court in the Province of Agra, and the Court of the Judicial Commissioner, in Oudh, which are the final appellate authorities in both criminal and civil cases. The former, which consists of a Chief Justice and five puisne Judges, two of whom are Indians, sits at Allahabad, and the latter, represented by a Judicial Commissioner and two Additional Commissioners, one of whom is an Indian, sits always in Lucknow. There are twenty-seven District and Additional District Judges, (Indian Civilians) twenty-one in Agra and six in Oudh, who have both original and appellate jurisdiction in civil and criminal cases, and occasional appellate jurisdiction in rent cases, but District Officers and their assistants, including *Tahsildars*, preside in both criminal and rent and revenue courts, and dispose of a good deal of the work. In Kumaon, the Commissioner is a High Court Judge in Civil cases, and a District Judge in Criminal cases. In the larger Cantonments, the Cantonment Magistrates have limited powers as Judges of a Small Cause Court. There are also Subordinate Judges, Judges of Small Cause Courts and Munsifs, who dispose of a large number of small civil suits, being specially empowered, in some cases, to decide suits up to Rs. 2,000, but generally they take cases up to Rs. 1,000, whilst Subordinate Judges hear cases up to Rs. 5,000. Appeals from Munsifs and Subordinate Judges go to the District Judges. Small Cause Court Judges try suits to the value of Rs. 500. There are also Honorary Munsifs, limited to Rs. 200 suits, and village Munsifs, whose jurisdiction is fixed at Rs. 20.

Local Government.

Local Government is exercised by means of District and Municipal Boards, the former levying local rates on land-owners; the latter deriving its revenue from octroi and other forms of taxation. The aim is to abolish octroi, because it interferes with through trade. Eighty-five Municipalities possess the privilege of electing their own members and all the principal Boards now have

non-official Chairman, with an Executive Officer who is directly responsible to the Board in all matters. Local self-government has been given a wider extension by the Municipalities Act, passed in 1916, under which the responsibilities of the boards and their chairmen have been largely increased. They deal with questions of sanitation, communication, lighting, town improvement, roads, water supply, drainage and education. Grants are made to Boards by Governments in some cases for special purposes from general revenues. Small towns, termed Act XX towns, also enjoy some measure of local self-government and it is under consideration to extend the principle here too.

Finance.

The Financial history of the Province has not been a happy one, inadequate settlements, *i.e.*, contracts between the Government of India and the local Government, and the severe famine in 1896 having caused Provincial bankruptcy, which for a long time necessitated rigid economy in order to accumulate reserves which could be spent on productive works. Recently liberal Imperial assignments have been made by the Government of India and the financial prospects are accordingly much brighter, though the war is naturally hampering progress. The local government gets 3-8 only of the land revenue. The Provincial Budget for 1919-20 shows an opening balance of 254 lakhs, revenue 1,376 lakhs, and expenditure 1,159 lakhs, and a closing balance of 206 lakhs.

Public Works.

The Public Works Department is divided into the Roads and Buildings branch and the Irrigation branch, each of which is administered by a Chief Engineer, who is also a Secretary to Government. The Provinces are divided into three circles and ten divisions for the administration of roads and buildings, and into four circles and twenty divisions for irrigation purposes. Each circle is in charge of a Superintending Engineer, and each division is in charge of an Executive Engineer. The whole of the irrigation works constructed or maintained by Government are in charge of the Department, nearly all metalled roads, and also bridges on second-class roads, and generally, all works costing more than Rs. 1,000, except in Municipalities. The most important irrigation works within the last twenty years have been the construction of the Betwa Canal, the Fatehpur branch of the Lower Ganges Canal, the Mat branch of the main Ganges Canal, improvements in the Rohilkhand and Terai Canals and extensive drainage operations in the Doab districts of the Meerut and Agra division. Important irrigation extension works are now being considered. The budget for irrigation and other public works for the present year is 175 lakhs.

Police.

The Police Force is divided into District and Railway Police and is administered by an Inspector-General, with five Deputies, one of whom is in charge of Railways, and two Assistants, forty-nine District Superintendents, two Railway Superintendents; and thirty As-

sistant Superintendents. There is a Police Training School at Moradabad. There is a local C. I. D. forming a separate detective department, under a Deputy Inspector-General, with an assistant. There is an armed police, specially recruited, and armed with the Martini Rifle. The present cost of the force is 133 lakhs. The administration of the Jail department is in charge of an Inspector-General of Prisons, who is a member of the Indian Medical Service.

Education.

Education is in part wholly State-maintained; and partly by means of grants-in-aid. There is a State University at Allahabad, a Government Sanskrit College at Benares, whilst Arabic and Persian are taught in special classes at the Muir College, Allahabad, which also has a special science side, which of late has been greatly extended, and there is a Government Engineering College at Roorkee (Thomason College). There are aided Colleges in Lucknow (Canning College), (Reid Christian College), and (Isabella Thoburn College), Agra (St. John's, Aligarh (the Mahomedan Oriental College), Gorakpur, Cawnpore and Meerut, and an unaided College at Benares, the Central Hindu College. In Lucknow there is the Martiniere school, an entirely independent institution, for European and Anglo-Indian children, and there is a Girls' Martiniere connected with it, whilst in the Hill-Stations, Naini-Tal and Mussoorie, there are many excellent private scholastic institutions for European boys and girls, which are attended by students from all over India. Government maintain Training Colleges, for teachers in Lucknow and Allahabad, an Art Crafts and an Industrial School in Lucknow, and an Agricultural College at Cawnpore. Public Schools are almost entirely maintained by the District and Municipal Boards and primary education is almost entirely in their hands. Primary and female education are in a very backward condition, though there was in 1915-16 an increase in pupils under both heads. Technical education is being pushed forward. The total number of schools of all kinds decreased by 170 to 17,631, but that of scholars rose from 832,454 to 841,334. The number of secondary public schools (high schools and middle schools, English and vernacular) for Indian boys rose from 594 to 611, while the number of scholars fell from 102,042 to 97,048. The decrease was wholly in vernacular schools. Students receiving collegiate education rose from 7,121 to 7,487: of these 5,443 were learning English, 3,369 a classical language and 280 a vernacular. The amount budgeted for education this year is 74 lakhs.

Higher education is controlled by the Allahabad University (constd. in 1887) which consists of a Chancellor, Vice-Chancellor and seventy-five ordinary and four *ex-officio* Fellows, of whom some are elected by the Senate or by registered graduates and the Faculties, and the remainder nominated by the Lieutenant-Governor, in his capacity of Chancellor. The Faculties are those of Art, Science, Law and Medicine, and the University possesses an important Law School. It is proposed to establish a Mahomedan University at Aligarh and a Hindu University has been inaugurated at Benares.

The principal educational institutions are:—

The Mahomedan Anglo-Oriental College, Aligarh—Principal, J. H. Towle.

The Central Hindu College, Benares—Principal, P. B. Adhikari, offg.

St. John's College, Agra—Principal, Rev. A. W. Davies.

Muir College, Allahabad—Principal, S. G. Jennings.

Queen's College, Benares—Principal, P. S. Burrell.

Canning College, Lucknow—Principal, M. B. Cameron.

Agra College—Principal, T. Cuthbertson Jones.

Reid Christian College, Lucknow—Principal, Rev. T. C. Badley.

Meerut College—Principal, William Jesse.

Woodstock College, Mussoorie—Principal, Rev. H. M. Andrews.

Bareilly College—Principal, J. H. Alderson.

Christian College, Allahabad—Principal, Rev. C. A. R. Janvier.

Christ Church College, Cawnpore—Principal, Rev. M. S. Douglas.

Isabella Thoburn College, Lucknow—Principal, Miss Robinson.

Thomason College, Roorkee—Principal, Mr. W. G. Wood, C.S.I.

King George's Medical College, Lucknow—Offg. Principal, Major J. W. D. Megaw, I.M.S.

Medical.

The Medical Department is in charge of an Inspector-General of Civil Hospitals. A Civil Surgeon is in charge and is responsible for the medical work of each district, and in a few of the larger stations he has an assistant. In two stations (Ranikhet and Almora) Medical Officers in military employ hold collateral civil charge. There are eighty-three Assistant Surgeons in charge of important dispensaries and a large number of Indian hospital assistants. Lady doctors and female hospital assistants visit *purda nashin* women in their own homes and much good work is done in this manner.

The best equipped hospitals, for Indian patients are the Thomason Hospital at Agra, King George's Hospital and the Balrampur Hospital at Lucknow. The Ramsay Hospital for Europeans at Naini Tal is a first class institution and there are also the Lady Dufferin Hospitals. King George's Medical College is one of the best equipped in the country, with a staff of highly efficient professors, and the hospital is the first in the Provinces. There is an X-Ray Institute at Dehra Dun, where valuable research work has been carried out and the Pasteur Institute at Kasauli take cases from all parts of India, and there are sanatoria for British soldiers in the Hills.

Administration.

Lieutenant-Governor, The Hon. Sir Spencer Harcourt Butler, K.C.S.I., C.I.E. Appointed 15th February 1918.

Sir J. J. D. La Touche, K.C.S.I. 1901

(*a*) Afterwards (by creation) Baron MacDonnell.

LIEUTENANT-GOVERNORS OF THE UNITED
PROVINCES OF AGRA AND OUDH.

Sir J. J. D. La Touche, K.C.S.I. 1902

Sir J. P. Hewett, K.C.S.I., C.I.E. 1907

L. A. S. Porter, C.S.I. (*Officiating*).. .. 1912

Sir J. S. Meston, K.C.S.I. 1912

Sir Harcourt Butler, K.C.S.I., C.I.E. .. 1918

The Punjab.

The Punjab; or land of the five rivers, is so called from the five rivers by which it is enclosed, namely, the Jhelum, Chenab, Ravi, Beas and Sutlej. Together with the North-West Frontier Province and the Native State of Jammu and Kashmir which lie to the north, the Punjab occupies the extreme north-western corner of the Indian Empire, and with the exception of the above-mentioned province comprises all of British India north of Sind and Rajputana and west of the river Jumna. Previous to October 1912, the Punjab with its feudatories embraced an area of 136,330 square miles and a population at the Census of 1911 of 24,187,750 (inclusive of 28,587 trans-frontier Baluchis) that is to say, about one-hirteenth of the area and population of the Indian Empire. But the formation of a separate province of Delhi reduced the area and population of the Punjab by about 450 square miles and 380,000 souls respectively. Of the total area of the Punjab, 36,551 square miles are in Native States (34 in number) with a population of 4,212,794, and 2,506 square miles are tribal territory on the western border of Dera Ghazi Khan district with a population of 28,587.

Physical Features.

The greater part of the Punjab consists of one vast alluvial plain, stretching from the Jumna in the east to the Suleman Range in the west. The north-east is occupied by a section of the Himalayas and the Salt Range forms its north-western angle. A few small spurs of the Aravalli mountain system traverse the extreme south-east and terminate in the Ridge at Delhi. The Punjab may be divided into five natural divisions. The Himalayan tract includes an area of 22,000 square miles, with a scanty population living scattered in tiny mountain hamlets. The Salt Range tract includes the districts of Attock, Rawalpindi and Jhelum and part of Shahpur district. Its physical configuration is broken and confused and the mountainous tracts of Murree and Kahuta approximate closely in characteristics to the Himalayan tract. Except in the hills, the rainfall leaves little margin for protection against distress in unfavourable seasons and irrigation is almost unknown. Skirting the base of the hills and including the low range of the Siwaliks, runs the narrow sub-montane tract. This tract, secure in an ample rainfall, and traversed by streams from the hills, comprises some of the most fertile and thickly populated portions of the province. Its population of over four millions is almost wholly agricultural and pastoral but it includes one large town in Sialkot. Of the plains of the Punjab, the eastern portion covers an area of some 36,000 square miles with a population of 10½ millions. East of Lahore, the rainfall is everywhere so far sufficient that cultivation is possible without irrigation in fairly favourable seasons, but over the greater part of the area the margin is so slight that, except where irrigation is employed, any material reduction in the rainfall involves distress, if not actual famine. Within the eastern plains lie the large cities of Lahore and Amritsar, and the population in comparison with the western Punjab

is largely urban. The western plains cover an area of 59,000 square miles, with a population of a little over six millions. The rainfall in this area, heaviest in the north and east and decreasing towards the west and south, is everywhere so scanty that cultivation is only possible with the aid of artificial irrigation or upon the low-lying river-banks left moist by the retreating floods. In this very circumstance, these tracts find their scarcity against famine, for there cultivation is almost independent of rain, a failure of which means nothing worse than a scarcity of grass. So little rain is sufficient, and absolute drought occurs so seldom that the crops may be said never to fail from this cause. The western plains embrace the great colony areas on the Lower Chenab and Lower Jhelum Canals which now challenge the title of the eastern plains as the most fertile, wealthy and populous portions of the province. Multan and Lyallpur are the largest towns in the western area. Owing to its geographical position, its scanty rainfall and cloudless skies, and perhaps to its wide expanse of untilled plains, the climate of the Punjab presents greater extremes of both heat and cold than any other portion of India. The summer, from April to September, is scorchingly hot, and in the winter, sharp frosts are common. But the bright sun and invigorating air make the climate of the Punjab in the cold weather almost ideal.

The People.

Of the population roughly one half is Mahomedan, three-eighths Hindu and one-eighth Sikh. Socially the landed classes stand high and of these the Jats, numbering nearly five millions, are the most important. Roughly speaking, one half the Jats are Mahomedan, one-third Sikh and one-sixth Hindu. In distribution they are ubiquitous and are equally divided over the five divisions of the province. Next in importance come the Rajputs, who number over a million and a half. The majority of them are Mahomedans by religion, about a fourth are Hindus and a very few Sikhs. They are widely distributed over the province. Both Jats and Rajputs of the Punjab provide many of the best recruits for the Indian Army. In fact all the agricultural classes of the Punjab, except in the south-western districts, made a magnificent response to the appeal for recruits in the great war and the province's contribution of upwards of 400,000 men to the main power of the Empire speaks for itself. The Gujars are an important agricultural and pastoral tribe, chiefly found in the eastern half of the province and in the extreme north-west. In organisation they closely resemble the Jats and are often absorbed into that tribe. There are many minor agricultural tribes, priestly and religious castes (Brahmans, Sayads and Kureshis), most of whom are landholders, the trading castes of the Hindus (Khatris, Aroras and Banias) and trading castes of the Mahomedans (Khojas, Parachas and Khakhas), and the numerous artisan and menial castes. There are also vagrant and criminal tribes, and foreign elements in the population are represented by the Baluchis of Dera Ghazi Khan and neighbouring

districts in the west, who number about half a million and maintain their tribal system, and the Pathans of the Attock and Mianwali districts. Pathans are also found scattered all over the province engaged in horse-dealing, labour and trade. A small Tibetan element is found in the Himalayan districts.

Languages.

The main language of the province is Punjabi, which is spoken by more than half the population. Western Punjabi may be classed as a separate language, sometimes called Lahndi, and is spoken in the north and west. The next most important languages are Western Hindi, which includes Hindustani, Urdu (the polished language of the towns) and other Hindi; Western Pahari, which is spoken in the hill tracts; and Rajasthani, the language of Rajputana. Baluchi, Pushto, Sindhi and Tibeto-Burman languages are used by small proportions of the population.

Agriculture.

Agriculture is the staple industry of the province, affording the main means of subsistence to 56 per cent. of the population. It is essentially a country of peasant proprietors. About one-sixth of the total area in British districts is Government property, the remaining five-sixths belonging to private owners. But a large part of the Government land is so situated that it cannot be brought under cultivation without extensive irrigation. Thus the Lower Chenab Canal irrigates nearly 1,900,000 acres of what was formerly waste land and the Lower Jhelum Canal, 390,000 acres, and the Lower Bari Doab Canal, when the colonisation scheme is completed, will add 1,200,000 acres to this total. Large areas in the hills and elsewhere which are unsuited to cultivation are preserved as forest lands, the total extent of which is about 8,700 square miles. Of the crops grown, wheat is the most important and the development of irrigation has led to a great expansion of the wheat area, which now occupies in an average year over 8½ millions of acres. The average annual outturn of wheat is 3,000,000 tons, valued at present prices at approximately £20,000,000. Next in importance to wheat is gram, the average annual produce of which is a million tons valued at £5,000,000. Other important staples are barley, rice, millets, maize, oilseeds (rape, toria and sesamum), cotton and sugarcane. Cotton is grown generally throughout the province but the ravages of boll-worm have affected the popularity of the crop. The cotton grown is of the short stapled variety, known as 'Bengals'. The country being preponderantly agricultural, a considerable proportion of the wealth of the people lies in its live-stock. The latest cattle census gives the following figures:—cattle, nearly 8,000,000 head; buffaloes, about 850,000; bovine young stock, 3,800,000; sheep, 4,500,000, goats, 4,250,000. Large profits are derived from the cattle and dairy trades and wool is a staple product in the south-west in Kulu and Kangra and throughout the plains generally. The production of hides and skins is also an important industry.

Industries.

The mineral wealth of the Punjab is small, rock salt, saltpetre, and limestone for road-

building being the most important products. There are some small coal mines in the Jhelum district, with an output of about 50,000 tons a year, and gold-washing is carried on in most of the rivers, not without remunerative results. Iron and copper ores are plentiful but difficulties of carriage and the absence of fuel have hitherto prevented smelting on a large scale. The Punjab is not a large manufacturing country, the total number of factories being only 184, the majority of which are devoted to cotton ginning, cleaning and pressing. Cotton weaving as a domestic industry is carried on by means of hand looms in nearly every village. The Salvation Army has shown considerable enterprise in improving the hand-weaving industry. Blankets and woollen rugs are also produced in considerable quantities and the carpets of Amritsar are famous. Silk-weaving is also carried on and the workers in gold, silver, brass, copper and earthenware are fairly numerous and ivory carving is carried on at Amritsar and Patiala. The trade of the province is steadily expanding, the total internal trade being valued at 65½ crores of rupees. The external trade with Afghanistan, Ladakh and Tibet is valued at 34 lakhs.

Administration.

The administrative functions of Government are performed by a Lieutenant-Governor, appointed by the Governor-General with the approval of the Crown. The Lieutenant-Governor in practice is always a member of the Indian Civil Service though military members of the Punjab Commission are eligible for the position. The Punjab Commission, the body which is responsible for the Civil administration of the province, is recruited from the Indian Civil Service and the Provincial Civil Service. Up to the date of the separation of the North-West Frontier Province from the Punjab, one-fourth of the cadre was drawn from the Indian Army. The business of Government is carried on through the usual Secretariat which consists of three Secretaries, designated (1) Chief, (2) Revenue and (3) Financial Secretaries, and three Under-Secretaries. There is also at present an Additional Secretary. In the Public Works Department, there are also three Secretaries (Chief Engineers), one in the Buildings and Roads Branch and two in the Irrigation Branch. The heads of the Police and Educational Departments are also Under-Secretaries to Government. The Government spends the winter in Lahore and the summer (from the middle of May to the middle of October) in Simla. The Lieutenant-Governor has no Executive Council, but is assisted in legislative business by a Legislative Council of 28 members, of whom 11 are elected and 17 nominated by the Lieutenant-Governor. Of the nominated members, not more than 11 may be officials, in addition there may be two nominated expert members. Under the Lieutenant-Governor, the province is administered by five Commissioners (for Ambala, Jullundur, Lahore, Rawalpindi and Multan) who exercise general control over the Deputy Commissioners—29 in number—each of whom is in charge of a district. A district on an average contains four tahsils, each consisting of about 300 villages. The Deputy Commissioner is usually a Covenanted Civilian

or military member of the Punjab Commission, although five Deputy Commissioners are "listed" for Provincial Civil Servants. The Deputy Commissioner has under him one or more Assistant Commissioners (Covenanted Civilians) and one or more Extra Assistant Commissioners (Provincial Civilians). In some cases, one or more tahsils form a sub-division under the charge of a sub-divisional officer who has wide powers. The tahsil is in charge of a Tahsildar, in some cases assisted by one or more Naib Tahsildars. The village is under a Lambardar or headman and in most districts the villages are grouped into zails, each under a zaildar. The lambardars and zaildars are "village officers" and not Government-servants. The district Land Records and Excise staff, though organised for special departmental purposes, is available for general administrative work. The Native States of the province are arranged for the purposes of supervision into five groups, each under the charge of a Political Agent. Except in the case of the Sikh Phulkian States (Patiala, Jhind and Nabha) and the Bahawalpur Agency, the Political Agent is either the neighbouring Commissioner or Deputy Commissioner. The principal heads of Department in the province are the two Financial Commissioners (who are the highest Court of Revenue jurisdiction, and heads of the departments of Land and Separate Revenue and of Agriculture and the Court of Wards), the three Chief Engineers, the Inspector-General of Police, the Director of Public Instruction, the Inspector-General of Prisons, the Inspector-General of Civil Hospitals, the Sanitary Commissioner, the Conservator of Forests, the Director of Agriculture and Industries, the Inspector-General of Registration, the Registrar of Co-operative Credit Societies and Joint Stock Companies and the Legal Remembrancer. The Accountant-General, the Postmaster-General, the Director of Telegraph Engineering, and the Agent, North-Western Railway, represent Imperial Departments under the Government of India.

Justice.

The administration of justice is entrusted to a High Court, which is the final appellate authority in civil and criminal cases, and has powers of original criminal jurisdiction in cases where European British subjects are charged with serious offences and original civil jurisdiction in special cases. The Court sits at Lahore and is composed of a Chief Justice and six puisne judges (either Civilians or barristers), and an eighth additional judge. The Conversion of the old Chief Court into a High Court which had first been mooted as long ago as 1886 and was sanctioned by the Secretary of State in 1916, could not take effect until the war was over and was finally brought into force on April 1, 1919. Subordinate to the High Court are the District and Sessions Judge (22 in number) each of whom exercises civil and criminal jurisdiction in a civil and sessions division comprising one or more districts. They hear most of the first appeals in Civil suits and try sessions cases and hear criminal appeals from the district and first class magistrates. One or two divisions have an additional judge and in many districts a Subordinate Judge exercising unlimited civil jurisdiction, is ap-

pointed to assist the District Judge but the majority of civil suits are tried in the first instance by Munsifs whose jurisdiction is limited to suits not exceeding Rs. 1,000 in value. The assistants to Deputy Commissioners are always invested with the powers of a Munsif, but the former practice of investing Tahsildars with Munsif's powers is being gradually discontinued. At Lahore, Amritsar and Simla there are Courts of Small Causes. The Deputy Commissioner is the District Magistrate and controls the subordinate Criminal Courts of the District. All the assistants of the Deputy Commissioner as well as the District and Subordinate Judges, but not the Munsifs, are invested with magisterial powers. Tahsildars usually exercise the powers of a second class magistrate and Naib Tahsildars those of the third class, and considerable assistance is obtained from Honorary Magistrates who sit either singly or as a bench. In districts in which the Frontier Crimes Regulation is in force the Deputy Commissioner on the finding of a Council of Elder (Jirga) may pass sentence up to four years imprisonment. In all cases capital sentences require the confirmation of the Chief Court. Special Revenue Courts to decide all suits regarding tenant right, rents and cognate matters in which civil courts have no jurisdiction have been established under the Punjab Tenancy Act. The Financial Commissioners are the final court of appeal in revenue cases.

Local Government.

Local control over certain branches of the administration is secured by the constitution of district boards exercising authority over a district and of municipalities exercising authority over a city or town. A few districts have local boards which exercise authority over a tahsil. These bodies are composed of members either nominated by Government or elected by the people and they are empowered to spend the funds at their disposal on schools and dispensaries, vaccination, sanitation, roads and rest houses and general improvements. The funds of district boards are derived mainly from a cess on the land revenue of the district supplemented by grants from Provincial Funds, and those of municipalities from octroi, local taxation and Government grants. In the smaller towns which are known as "notified areas", a simpler form of government than the municipal system is in force. Where the elective principle is in force as regards both district boards and municipalities, the public shows very little interest in the elections, except in a few cases where sectarian feeling runs high.

Finance.

Under the present system of decentralisation in finance, the Imperial Government delegates to the Punjab Government the control of expenditure on the ordinary administrative services together with the whole or a certain proportion of certain heads of revenue sufficient to meet those charges. Of the various heads of revenue post office, telegraphs, railways, opium and salt are entirely Imperial. Land revenue, stamps, excise, income-tax and major irrigation works are divided between the Imperial and Provincial Govern-

ments in the proportion of one half to each. Minor irrigation works and some minor heads are divided in varying proportions while the revenue from forests, registration, courts of law, jails, police and education are wholly provincial as well as the income of district boards and municipalities. The Budget for 1919-20 shows an opening balance of Rs. 2,23,35,100, a total revenue of Rs. 5,88,50,000, and a total expenditure of Rs. 6,02,28,000 leaving a closing balance of Rs. 2,09,57,000.

Public Works.

As was stated in the section on "Administration" the Public Works Department is divided into two branches, one for Buildings and Roads and the other for Irrigation. In the former branch, under the Chief Engineer, the province is divided into three circles under Superintending Engineers and 11 divisions under Executive Engineers. The primary object of this branch is the construction and maintenance of Imperial and Provincial works, but it also assists municipalities and district boards. The Irrigation branch is under two Chief Engineers, one of whom is also Chief Engineer of Irrigation Works in the North-West Frontier Province. Under them are nine Superintending Engineers in charge of circles and 39 Executive Engineers in charge of divisions. In addition to the work of construction and maintenance Irrigation Officers are responsible for the assessment of water rates leviable on irrigated areas and in several districts where the land revenue demand is assessed on the fluctuating principle, for the formulation of this demand on irrigated crops as well.

Irrigation.

The canal system of the Punjab is admittedly one of the greatest achievements of British rule in India. Not including the enormous Triple Canal project recently completed, the total irrigated area in British districts and Native States amounts to 8,269,233 acres. The Beas is the only one of the great rivers of the province from which no canal takes off. The Indus provides supplies for two large series of inundation canals, one on either bank. Taking off from the Jhelum is the Lower Jhelum perennial canal, with 150 miles of main channel and 1,000 miles of distributaries and lower down the river is a large series of inundation canals. The Lower Chenab perennial canal takes off from the Chenab and comprises 427 miles of main channel and branches and 2,278 miles of branches, while below the junction of the Chenab and Ravi rivers is a series of inundation canals on both banks. The Ravi provides supplies for the Upper Bari Doab Canal, which has 370 miles of main line and branches and 1,571 miles of distributaries. Some small inundation canals and the Sidhani system with a length of 200 miles also take off from the Ravi. The Sirhind Canal, which has a main line and branches of 538 miles and distributaries amounting to 3,703 miles, takes off from the Sutlej, and there are two systems of inundation canals deriving their supplies from the Upper and Lower Sutlej respectively in addition to the Grey Canals maintained on the co-operative system in the Ferozepore district and a vast

series of inundation canals in Bahawalpur State. The Western Jumna Canal, which takes off from the right bank of the Jumna, has a main line and branches of 377 miles and distributaries of 1,764 miles. The Triple Canal project is intended to carry surplus water from the Jhelum and the Chenab to supplement the scanty supplies in the lower reaches of the Ravi and incidentally to afford irrigation to the tracts through which the supply channels pass. The three canals included in the scheme are known as the Upper Jhelum, Upper Chenab and Lower Bari Doab Canals. Of these the Upper Chenab was opened in April 1912 and the Lower Bari Doab in April 1913 and the Upper Jhelum in December 1915. The most interesting feature of this great work is the level crossing at Balloki, 40 miles from Lahore, where the Upper Chenab canal supply is passed across the Ravi into the Lower Bari Doab Canal. The revised estimate of the cost of the whole scheme is £6½ millions. The scheme is expected to serve an area of 1,370,000 acres annually.

Police.

The Police force is divided into District and Railway Police. The combined force is under the control of the Inspector-General, who is a member of the gazetted force and has under him three Deputy Inspectors-General, and a fourth Deputy Inspector-General in charge of Criminal Investigation, the Police Training School and Finger Print Bureau at Phillaur. The Railway Police are divided into two districts, Northern and Southern, under an Assistant Inspector-General. The District Police are controlled by Superintendents, each of whom is in charge of a district, and has under him one or more Assistant Superintendents. The district is divided into circles under charge of Inspectors, and again into thanas in charge of a Sub-Inspector. The staff of a thana consists on an average of one Sub-Inspector, two head constables and 10 constables. A service of Provincial Police officers has also been established consisting of 18 Deputy Superintendents, who are employed as assistants to the Superintendents. The total police force of the province exclusive of gazetted officers, consists of 980 officers and about 20,000 men, practically half of whom are armed with revolvers and bored out rifles. The village police or chaukidars are under the control of the Deputy Commissioner of each district not of the Police Superintendent. The cost of the Police Force is 62½ lakhs.

Education.

Although the Punjab is usually considered rather a backward province, education has made great strides especially in the last ten years. Government maintain the Government College at Lahore, the Central Training College at Lahore, a Training Class for European teachers at Sanawar (Simla Hills), normal schools at the headquarters of each division, and High Schools at the headquarters of each district, and the Lawrence Military Asylum at Sanawar for European children. Two more Government Colleges, at Ambala and Multan are in contemplation. There are in the province nine arts colleges (one of them Oriental). 6 professional colleges

or males and 1 for females; 130 High schools for boys and 18 for girls; 241 middle schools for boys and 43 for girls; 6,492 Primary Schools for boys and 855 for girls; 54 schools for special instruction for boys and 2 for girls. The number of pupils attending schools of all classes, both male and female, is 63,154. The nine arts colleges are:—The Government, Oriental, Forman Christian, Dayanand, Islamia and Dayal Singh Colleges at Lahore; Khalsa, Amritsar; Murray, Sialote; Gordon, Rawalpindi. Professional education is represented by the Law, Medical and Veterinary Colleges at Lahore, the Agricultural College at Lyallpur, the Clerical and Commercial School at Amritsar, the Engineering School at Rasul, the Mayo School of Art and the Railway Technical School, both at Lahore. There are eight Industrial Schools in the Province maintained by Municipalities or District Boards and others maintained by Missionary bodies, the Arya Samaj, etc., which receive grants-in-aid. The education of the domiciled community is provided for by a number of secondary boarding schools in hill stations and of primary schools in the plains. The aristocracy of the province is provided for by the Aitchison Chiefs' College for boys and the Queen Mary's College for girls, both at Lahore.

The Education Department is administered by the Director of Public Instruction, who has under him an Inspector of Schools in each civil division an Assistant Director, with two or more assistants, a District Inspector, with assistants, in each district, two Inspectresses of girls' schools and an Inspector of European schools. Higher education is controlled by the Punjab University (incorporated in 1882) which has the Lieutenant-Governor as *ex-officio* Chancellor, a Vice-Chancellor appointed by Government and a Senate. In addition to the nine arts colleges already mentioned in the Law and Medical Colleges at Lahore, St. Stephen's College, Delhi, and the Hindu College, Delhi, and six other colleges in Kashmir, Patiala, Bahawalpur, Kapurthala and the North-West Frontier Province are affiliated to the Punjab University.

Medical.

The Medical Department is controlled by the Inspector-General of Civil Hospitals (a member of the Indian Medical Service) who also supervises the departments of the Chief Plague Medical Officer and the Chief Malaria Medical Officer. Sanitation is controlled by the Sanitary Commissioner (also a member of the Indian Medical Service) who has under him two Deputy Sanitary Commissioners and is advised by the Sanitary Board, with the Sanitary Engineer as Technical Adviser. Medical work in the districts is in charge of the Civil Surgeons, of whom fourteen before the War were members of the Indian Medical Service and others Military Assistant Surgeons and uncovenanted Medical Officers, chiefly Civil Assistant Surgeons. The Mayo Hospital at Lahore and special railway, canal and police hospitals are maintained by Government, but the ordinary hospitals and dispensaries in the districts are maintained by municipal or district funds. Certain private institutions such as

the Walker Hospital at Simla and many mission dispensaries receive grants-in-aid. The Mayo Hospital at Lahore has been greatly extended and improved as a memorial to King Edward VII, and was formally opened by Lord Hardinge in December 1915. The total number of patients treated at all hospitals and dispensaries in the year is over four and a half millions, including nearly 75,000 in-patients. A temporary department to combat plague has been organised under the Chief Medical Plague Officer. In the districts the Civil Surgeons are generally in charge of the operations against plague, but additional officers are employed from time to time. There is only one lunatic asylum in the Province at Lahore, but there are ten leper asylums. The Pasteur Institute at Kasauli performs the functions of a provincial laboratory for the Punjab. Vaccination is supervised by the Sanitary Commissioner, but is more particularly the concern of the Deputy Sanitary Commissioner, who has under him a special staff. Civil Surgeons also have a local staff of vaccinators under them.

Administration.

Lieutenant-Governor, Sir Edward Maclagan,
K.C.I.E., C.S.I., I.C.S.

PERSONAL STAFF.

Private Secretary, Lieut.-Col. E. C. Bayley,
C.I.E., O.B.E., I.A.

Honorary Aides-de-Camp, Lieut. Col. W. T. Wright, Subedar-Major Feroz Khan Bahadu. and Subedar Sainbir Gurung, Bahadur, I.O.M.

LEGISLATIVE COUNCIL.

President, The Lieutenant-Governor.

MEMBERS.

Burma.

The Province of Burma lies between Assam on the North-West and China on the North-East, and between the Bay of Bengal on the West and South-West and Siam on the South-East. Its area, including the district of Putao constituted in February 1914, is approximately 270,000 square miles, of which 172,000 are under direct British Administration, 31,000 belong to independent and 67,000 to semi-independent Native States. The main geographical feature of the country is the series of rivers and hills running fan-like from North to South with fertile valleys in between, widening and flattening out as they approach the Delta. Differences of elevation and rainfall produce great variations in climate. The coastal tracts of Arakan and Tenassein have a rainfall of about 200 inches, the Delta less than half that amount. The hot season is short and the monsoon breaks early. The maximum shade temperature is about 96°, the minimum about 60°. North of the Delta the rainfall decreases rapidly to 30 inches in the central dry zone which lies in a "rain shadow" and has a climate resembling that of Bihar. The maximum temperature is twenty degrees higher than in the wet zone, but this is compensated by a bracing cold season. To the north and east of the dry zone lie the Kachin hills and the Shan plateau. The average elevation of this tableland is 3,000 feet with peaks rising to 9,000. Consequently it enjoys a temperate climate with a rainfall of about 70 inches on the average. Its area is over 50,000 square miles. There is no other region of similar area in the Indian Empire so well adapted for European colonization. The magnificent rivers, the number of hilly ranges (Yomas) and the abundance of forests, all combine to make the scenery of Burma exceedingly varied and picturesque.

The People.

The total population of Burma at the census of 1911 was 12,115,217. Of this total, 7,642,204 are Burmans, 996,420 Shans, 919,641 Karens, 239,953 Kachins, 306,486 Chins, 344,123 Arakanese and 320,629 Talaings. There is also a large alien population of 108,877 Chinese and about 600,000 Indians, while the European population is 24,355.

The Burmans, who form the bulk of the population, belong to the Tibetan group and their language to the Tibeto-Chinese family. They are essentially an agricultural people, 80 per cent. of the agriculture of the country being in their hands. The Burmese, and most of the hill tribes also, profess Buddhism, but Animism, or the worship of nature spirits, is almost universal. The interest taken by the Burmese in the course of the war, their response to the call for recruits and their generous contributions to war loans and charitable funds seem to show that their apathy towards the government of the country is giving way to an intelligent loyalty to British rule. But attempts are being made by the Indian Reform party to exploit this newly awakened interest in politics. In appearance the Burman is usually somewhat short and thick set with Mongolian features. His dress is most distinctive and

exceedingly comfortable. It consists of a silk handkerchief bound round his forehead, a loose jacket on his body and a long skirt or loongi tied round his waist, reaching to his ankles. The Burman women, perhaps the most pleasing type of womanhood in the East, lead a free and open life, playing a large part in the household economy and in petty trading. Their dress is somewhat similar to the man's minus the silk kerchief on the head, and the loongi is tucked in at the side instead of being tied in front. A well dressed and well groomed Burmese lady would, for grace and neatness, challenge comparison with any woman in the world.

Communications.

The Irrawaddy, and to a less extent the Chindwin, afford great natural thoroughfares to the country. At all seasons of the year these rivers, especially the Irrawaddy, are full of sailing and steam craft. In the Delta the net-work of waterways is indeed practically the only means of communication. The Irrawaddy Flotilla Company, with a fine fleet of mail, cargo and ferry boats, gives the Irrawaddy and the Delta rivers and creeks a splendid river service.

The Burma Railways Company has a length of 1,600 miles open line. The principal lines are from Rangoon to Mandalay; from Sagaing to Myitkyina, the most northern point in the system; the Rangoon-Prome line; and the Pegu-Martaban line, which serves Moulmein on the further bank of the Salween River. An important branch line runs from Thazi on the main line across the Meiktila and Myingyan Districts to Myingyan Town on the Irrawaddy. Another branch goes from Sagaing on the Irrawaddy to Alon on the Chindwin. A small branch on the Sagaing-Myitkyina line runs from Naba to Katha on the Irrawaddy. A branch on the right bank of the Irrawaddy runs from Bassein to Kyangin. A ferry at Henzada connects this branch with another branch running from Letpadan on the Prome line to the left bank of the Irrawaddy at Tharawaw. An important line, the Southern Shan States Railway, is open as far as Aungban, 7 miles beyond Kalaw, the future hill-station of the province, and 70 miles from Thazi, the junction with the Rangoon-Mandalay main line. The new line will end thirty miles further east at Yawngnwe, the principal town in the rich valley of the Nam Pilu. The Northern Shan States railway runs from Myohaung Junction, 3 miles south of Mandalay, to Lashio.

The length of metalled roads is nearly 2,000 miles and of unmetalled roads nearly 11,000. The number of roads is for a rich province like Burma quite inadequate. One of the most urgent needs of the Province is a very generous extension of roads both metalled and unmetalled. The newly-constituted Committee on Roads and Communications will no doubt effect rapid improvement when funds become available. The imperial grant of 50 lakhs spread over four or five years went a very little way towards making good deficiencies, and the proposal to provide funds by means of a tax on rice exports was not approved.

A revision of the Provincial settlement is urgently required. No arrangement can be satisfactory which does not recognize the claim of Burma, as a new and undeveloped country, to separate treatment. She is taxed far more highly than any other province and her surplus should be used to a far greater extent than hitherto for capital expenditure on development, and not swept into the Imperial coffers.

Industry.

Agriculture is the chief industry of the province and supports nearly three-fourths of the population. The nett total cropped area is $14\frac{1}{2}$ million acres of which more than half a million acres are cropped twice. Irrigation works supply water to $1\frac{1}{4}$ million acres. The main crop is paddy, of which some seven million tons are produced, and two and three quarter million tons of rice are available for export. In 1915-16 the actual exports were lower than in any of the previous nine years except 1911-12, and the price realized six crores of rupees below the figure for 1913-14. In 1918-19, thanks to extensive buying for Europe on account of the Royal Commission on Wheat Supplies the total export was just less than $2\frac{1}{2}$ million tons of rice valued at over 24 crores. This was an increase of 400,000 tons over the figures of the previous year and nearly 300,000 tons over the average of the previous four years. The value was $5\frac{1}{2}$ crores more than in the previous year and $3\frac{1}{2}$ crores more than the average of the previous four years. India took 845,000 tons valued at 8½ lakhs. India took nearly half the export. Rice forms 54 per cent. of the total exports. Over 9,000 tons of cotton are produced, 101,000 tons of groundnuts, and 80,000 tons of sesamum Maize (35,000 tons) and white beans 140,000 tons are the other chief crops.

Forests play an important part in the industrial life of the Province. The forest reserves cover nearly 30,000 square miles, while unclassified forests are estimated at about 110,000 square miles. Government extracts some 90,000 tons of teak annually, private firms, of whom the Bombay Burma Trading Corporation and Steel Brothers are the chief, extract over 276,000 tons. Other timber extracted by licensees amounts to nearly 400,000 tons and firewood 700,000 tons. The gross revenue from forests is 127 lakhs of rupees, the net revenue 74 lakhs.

The war has given a great impetus to the exploitation of the mineral resources of the country and there has been a rapid increase in the number of mines. Wolfram and tin mines in Tenasserim have especially developed. Government has aided their development by the appointment of special officers, the importation of labour and the construction of roads. In 1918 wolfram was extracted to the amount of 4,442 tons valued at over a crore of rupees. Burma is the chief source of the world's supply of this important mineral. In the same year 100 tons of block tin and 732 tons of tin ore were produced. The value was nearly eighteen lakhs. Silver, lead and zinc are extracted by the Burma Mines Company at Badwin in the Northern Shan States. Copper in small quantities is also found there. The returns for 1918

show that lead worth $67\frac{1}{2}$ lakhs and silver worth 44½ lakhs were obtained. No zinc has been won since 1916. There are small deposits of Molybdenite in Tavoy and Mergui and of platinum in Myitkyina. Antimony is found in large quantities in Amherst district in an area at present too difficult of access for profitable working. The output of precious stones from the ruby mines had declined since the war began, but the stones won in 1918 were worth over six lakhs. Gold dredging in the Myitkyina District has proved unprofitable and the company has been wound up. From the mines in the Hukong valley jade and amber worth nearly four lakhs were won. Next in importance for war purposes to wolfram and far exceeding it in commercial value is petroleum. The oldest and largest oil field in the province is at Yenangyaung in Magwe district where the Burma Oil Company has its chief wells. But borings in other districts have shown that the oil-bearing strata extend over the whole of the dry zone, and the output from the smaller fields in Myingyan, Pakokku and Minbu districts is now considerable, while the wells sunk in Thayetmyo and Prome districts are also showing satisfactory returns. The output in 1918 was 275 million gallons worth Rs. 162 lakhs. Two-thirds of the total production comes from the Yenangyaung field, whence it is carried 300 miles in pipes to the oil refineries at Syrian on the Rangoon river. The revenue from minerals for the year was Rs. 419 lakhs.

The area under rubber is 60,000 acres. The plantations are young and as the trees come into bearing production increases rapidly. The exports of rubber in 1918 reached 1,852 tons worth Rs. 47 lakhs. But the planting of new ground is not on a scale to meet the demands for rubber, and Government has endeavoured by free grants of suitable land to stimulate planting. On this as on other industries of Burma the mischievous activities of the company promoter during the great "boom" cast a blight from which it is only just recovering. The bulk of the rubber is grown in Tenasserim division, but there are large plantations near Rangoon and in the wet zone of Upper Burma near Myitkyina.

Manufactures.

There are 536 factories, over three-fifths of which are engaged in milling rice and over one-fifth are sawmills. The remainder are chiefly cotton ginning mills, oil mills for the extraction of oil from groundnuts, and oil refineries connected with the petroleum industry. The average daily number of operatives is under 70,000. At the Census of 1911, 469,743 or only 6·6 of the total population were engaged outside agriculture and production.

As is the case in other parts of the Indian Empire, the imported and factory-made article is rapidly ousting the home-made and indigenous. But at Amarapura in the Mandalay District a revival has taken place, of hand silk-weaving. Burmese wood-carving is still famous and many artists in silver still remain, the finish of whose work is sometimes very fine. Bassein and Mandalay parasols are well known and much

admired in Burma. But perhaps the most famous of all hand-made and indigenous industries is the lacquer work of Pagan with its delicate patterns in black, green and yellow traced on a ground-work of red lacquer over bamboo. A new art is the making of bronze figures. The artists have gone back to nature for their models, breaking away from the conventionalized forms into which their silver work had crystallized, and the new figures display a vigour and life that make them by far the finest examples of art the province can produce.

Trade.

The total value of the foreign trade in 1918-19 was 3,565 lakhs, an increase of 15 per cent, compared with the previous year but 424 lakhs below the returns for the best year before the war. Imports amounted to 1,059 lakhs or 7 per cent. more than in the previous year. Rangoon, the only port with facilities for distribution, took 85.74 per cent. of the foreign trade and 93.43 of the Indian trade. Indian trade rose from 2,340 lakhs in 1917-18 to 3,354 lakhs in 1918-19. The net customs duty was 191½ lakhs or 15½ lakhs more than in 1917-18. The shortage of shipping and the enormous cost of freight continued to hamper trade. Articles of export required for war purposes, such as wolfram, rubber and cotton, with hides, timber, tobacco and oil, shew the chief increases. The exports of rice and paddy to foreign countries totalled 1,642,067 tons, or 8 per cent. more than in 1917-18, but still 14 per cent. below the returns for the best year before the war. Increase of prices accounts for a considerable part of the increase of total trade, but after allowances have been made for the inflation of prices it is clear that there was a great recovery during the year.

The most important item of merchandise imported into Rangoon is manufactured cotton, which accounts for 27 per cent. of the total import trade. These imports are valued at Rs. 266 lakhs. In 1918-19 the United Kingdom took 36.8 per cent. and the rest of the British Empire 26.7 per cent. of the total foreign trade of the province. Japan stands next with 17 per cent., nearly four times as much as her nearest competitor, the United States. Of the import trade alone Japan takes 23 per cent., United Kingdom 43.8 per cent., British Dominions 16 per cent., the whole of Europe 2 per cent. Japan has nearly doubled her total trade in the twelve months and imports alone from Japan are two and a quarter times as much as the average of the three years ending March 1917.

Administration.

In 1897 the Province, which had formerly been administered by a Chief Commissioner, was raised to a Lieutenant-Governorship. The head of the Province is therefore now the Lieutenant-Governor. He has a Council of seventeen members, one of whom is elected by the Burma Chamber of Commerce, one by the Rangoon Trades Association and the remaining fifteen are nominated by the Lieutenant-Governor. Not more than seven members may be official; the rest must be non-officials, and at least four

must be selected from the Burmese population, one from the Indian and one from the Chinese community.

Burma is divided administratively into Upper Burma (including the Shan States and Chin Hills) and Lower Burma. The Shan States are administered by the Chiefs of the States, subject to the supervision of the Superintendents in the case of the Northern and Southern Shan States, and to the supervision of the Commissioners of the adjoining Divisions in the case of the other States. The Civil, Criminal and Revenue administration is vested in the Chief of the State, subject to the restrictions contained in the sanad. The law administered is the customary law of the State.

The Chin Hills are administered by a Superintendent.

Under the Lieutenant-Governor are eight Commissioners of divisions, four in Upper and four in Lower Burma. Commissioners in Upper Burma and the Commissioner of the Arakan Division are ex-officio Sessions Judges, but the other three Commissioners have been relieved of all judicial work.

Under the Commissioners are 40 Deputy Commissioners in charge of districts including the Police officers in charge of the Hill Districts of Arakan and the Salween District, who exercise the powers of a Deputy Commissioner. Deputy Commissioners are also District Magistrates, Collectors, and Registrars, except in Rangoon, where there is both a District Magistrate and a Collector. Subordinate to the Deputy Commissioner are Assistant Commissioners, Extra Assistant Commissioners and township officers, called Myooks. In the villages are the village headmen, Thugyis, assisted in Lower Burma by the Seeingaungs (rural policemen in charge of ten houses). The revenue administration is controlled by a Financial Commissioner assisted by two Secretaries. Subordinate Departments are in charge of a Commissioner of Settlements and Land Records, a Director of Agriculture, a Superintendent of the Civil Veterinary Department and a Registrar of Co-operative Credit Societies.

Justice.

The administration of Civil and Criminal Justice is under the control of the Chief Court of Lower Burma with five judges, and of the Judicial Commissioner, Upper Burma, with an Assistant Judicial Commissioner. There are seven Divisional and eight District Judges. There are also separate Provincial and Subordinate Judicial Services. Divisional Judges are also Sessions Judges. The Chief Court at Rangoon is the highest Civil Court of appeal and the highest court of Criminal appeal and revision in Lower Burma. It is also the High Court for the whole of Burma (including the Shan States) where European British subjects are concerned. It is the principal Civil and Criminal Court of original jurisdiction for Rangoon Town and hears appeals from all sentences of Courts and magistrates exercising jurisdiction in Rangoon Town.

In Criminal and Civil matters the Judicial Commissioner of Upper Burma exercises the power of a High Court for appeal, reference and revision, except in respect of criminal cases in which European British subjects are concerned.

All village headmen have limited magisterial powers and a considerable number are also invested with civil jurisdiction to a limited extent.

In pursuance of the policy of decentralization steps were taken in 1917 to restore to the village headmen the power and influence which they possessed in Burmese times before the centralizing tendencies of British rule made them practically subordinate officers of the administration.

Municipalities.

The Rangoon Municipality is the most important, with an income of Rs. 46·31 lakhs and an expenditure of Rs. 36·81 lakhs. The Chairman is a member of the Indian Civil Service of Deputy Commissioner's rank. The members of the Committee are elected by wards.

There are 44 minor Municipalities, of which the most important are those at Mandalay and Moulmein. The average incidence of Municipal taxation is Rs. 2·3·5 per head, but in Rangoon it reaches Rs. 12.

Local Funds.

No Local Boards or District Boards exist in Burma. But in Lower Burma there are District Cess Funds, derived mostly from a 10 per cent. cess on collections of ordinary local revenue and from collections from markets, ferries, slaughter houses, etc. The total receipts exceed Rs. 38 lakhs.

In Upper Burma there are District Funds. They are derived from market, ferry and license fees and occasional grants from Provincial revenues. The total revenue exceeds Rs. 12 lakhs.

There are 7 Cantonment Funds, 22 Town Funds and, excluding the Rangoon Port Trust, 6 Port Funds.

Finance.

In Burma, as in other Provinces, the finances are based on a "Provincial Settlement," which came into force on the 1st April 1907. The Government of India retains in the first place the entire profits of the commercial departments, such as Posts and Telegraphs, and in the second place, all the revenue where the 'locale' is no guide to its true incidence, such as the net receipts from Customs, Salt and Opium. But as the income from these sources is inadequate for the purpose of meeting the cost of the Imperial Services, special arrangements are made as with other Provinces for the division of the remaining sources of revenue between Imperial and Provincial Funds.

In 1910-1911, as a result of the Report of the Decentralisation Committee, modifications were introduced into the Settlement. Briefly, the Local Government retains 5-8ths of the net Land Revenue instead of a half, and the whole of the net forest revenue. Stamps, Excise and

Income tax receipts are divided equally between Imperial and Provincial revenues. The unfairness of the Provincial settlement is disguised by the inclusion, under the head of Land revenue, of capitation taxes amounting to nearly a crore of rupees. This is a tax peculiar to Burma and should be entirely provincial. The injustice of the existing arrangement is redressed by contributions from Imperial revenues, which enable the Local Government to remain solvent (see below). But it is a very unsatisfactory form of finance that robs a province of what are rightly its own revenues and remedies the injustice by means of doles.

The following figures show the gross revenue and expenditure for 1917-18 :—

	Receipts. Rs.	Expenditure. Rs.
Imperial	.. 1449·52 lakhs	53·18 lakhs
Provincial	.. 555·59 "	578·27 "
District Funds	51·17 "	58·24 "
Municipalities	. 98·79 "	95·44 "
Other Funds	84·73 "	83·30 "

The Imperial Government makes a fixed annual assignment to the Burma Government. Under the settlement of 1911 this assignment was fixed at Rs. 12·90 lakhs. The total contributions from Imperial Funds during the year 1917-18 amounted to Rs. 46·93 lakhs. From April 1st, 1915, onwards the Government of India has allotted an additional recurring grant of Rs. 15·11 lakhs to the province, and has further guaranteed to the province a minimum aggregate of revenue advancing by Rs. 8 lakhs annually until 1923-24. No payments under this guarantee are to be made till after the war but it will have retrospective effect from the year 1911-12. The new financial arrangements proposed in the Montagu-Chelmsford scheme will no doubt upset all these agreements.

Public Works.

This Department is administered by two Chief Engineers who are also Secretaries to Government in the Public Works Department. There are eight Superintending Engineers (including one for Irrigation and a Sanitary Engineer), 83 Executive Engineers and Assistant Engineers. A Consulting Architect is attached to Head Quarters.

There are four Major Irrigation Works—Mandalay, Shwebo and Mon Canals and the Ye-U canal in the Shwebo District. These irrigate nearly 400,000 acres. Minor irrigation works maintained by the department supply water to another 400,000 acres, and a large area is supplied with water from minor works maintained by the villagers themselves. The area in lower Burma protected from floods and thrown open to cultivation by means of embankments is nearly 800,000 acres.

Police.

The Police Force is divided into Civil, Military and Rangoon Town Police. The first two are under the control of the Inspector-General of Police, the latter is under the orders of the Commissioner of Police, Rangoon, an officer of the rank of Deputy Inspector-General.

There are four other Deputy Inspectors-General, one each for the Eastern and Western Range, one for the Railway and Criminal Investigation Department and one for the Military Police.

The sanctioned strength of the Civil Police Force at the end of 1917 was 1,369 officers, and 14,425 men, but the numbers were 74 officers and 864 men short of the sanctioned strength. The strength of the Military Police on the 1st January 1918 was 16,409 officers and men. The Rangoon Town Police stand at 106 officers and 1,246 men but at the end of 1917 the force was 3 officers and 105 men short.

A special feature of Burma is the Military Police. Its officers are deputed from the Indian Army. The rank and file are recruited from natives of India with a few Kachins, Karens and Shans. The experiment of recruiting Burmese on a small scale has been successful. The organisation is military, the force being divided into battalions. The object of the force is to supplement the regular troops in Burma. Their duties, apart from their military work is to provide escorts for specie, prisoners, etc., and guards for Treasuries, Jails and Courts. During the year 1917 the Military Police furnished 4,644 volunteers who were drafted into Indian regiments on active service, making 9,858 since war began.

Education.

At the head is the Director of Public Instruction with a Deputy Director. There are 6 Inspectors of Schools belonging to the Imperial and 3 belonging to the Provincial Service, and 7 Assistant Inspectors and one Assistant Inspectress belonging to the Provincial Service. The Rangoon College is staffed by a Principal and ten Professors drawn from the Imperial Service with three from the Provincial Service. Outside the Education Department is the Educational Syndicate, which holds certain examinations and serves as an advisory body on educational questions referred to it by Government. Vernacular education is controlled by Divisional Boards assisted by District Advisory Committees. A scheme of the constitution of District Boards is nearing completion.

Pending the establishment of the Burma University at the end of the war, the Rangoon College and the Baptist College are affiliated to the Calcutta University. Under Government there are—

An Arts College, Law School, Reformatory School, School of Engineering, Medical School, Veterinary Training School, Apprentice School, High School for Europeans, High School at Taunggyi for the sons of Shan Chiefs, 5 Normal Schools, 21 Anglo-Vernacular High Schools, and 16 Anglo-Vernacular Middle Schools.

Aided Schools, managed chiefly by Christian Missions, include 31 European Schools, 7 Normal Schools and 142 Anglo-Vernacular Schools. The number of schools managed by Buddhist Societies is steadily increasing.

A remarkable feature of education in Burma is the system of elementary education evolved, generations ago, by the genius of the people. Nearly every village has a monastery (hpoongyi.

kyaung); every monastery is a village school and every Burman boy must, in accordance with his religion, attend that school, shaving his head and for the time wearing the yellow robe. At the hpoongyi-kyaungs the boys are taught reading and writing and an elementary native system of arithmetic. The result is that there are very few boys in Burma who are not able to read and write and the literacy of Burman men is 412 per mille.

Of 8,447 Vernacular Schools registered under the grant in aid rules and subject to regular inspection about one-third are Monastic Schools.

Another feature of education in Burma is the excellent work of the American Baptist Mission, which has established schools in most of the important towns in Burma, as well as a College in Rangoon.

Medical.

The control of the Medical Department is vested in an Inspector-General of Civil Hospitals. Under him are 41 Civil Surgeons. There is also a Sanitary Commissioner, two Deputy Sanitary Commissioners, an Inspector-General of Prisons, three whole time Superintendents of Prisons, a Chemical Examiner and Bacteriologist and a Superintendent of the Lunatic Asylum.

A Civil Surgeon is in charge of each District, while at the summer Head Quarters of Maymyo there is a special Civil Surgeon.

The total number of Hospitals and Dispensaries was 274 at the end of March 1917. The Rangoon General Hospital is perhaps the finest in the East.

The Pasteur Institute was opened in Rangoon in July 1915. The Director is a senior member of the Indian Medical Service.

The total number of patients treated in 1916 was nearly 2 millions.

The expenditure on hospitals and dispensaries in 1917 was 20·09 lakhs.

Administration.

Lieutenant-Governor, Sir Reginald Craddock, K.C.S.I.

Private Secretary, G. C. Tew, I.C.S.

Aide-de-Camp, Captain F. T. Drake-Brockman.
Honorary Aides-de-Camp, Lt.-Col. A. W. H. Lee and Capt. E. J. C. Horden.

Indian Aides-de-Camp, Hony. Capt. Muzaffar Khan, *Sardar Bahadur*; Subadar Sao Tang; Naib Commandant Sarran Singh, *Sardar Bahadur*.

LEGISLATIVE COUNCIL OF THE LIEUTENANT-GOVERNOR.

Officials.

Charles M. Webb, I.C.S.

C. H. Wollaston.

Harry Tonkinson, I.C.S.

Gavin Scott, I.C.S.

Frederick Lewisohn, I.C.S.

John Guy Rutledge, M.A.

Non-Officials.

Dr. Nasarwanji Nowroji Parakh.
 Lim Chin Tsong.
 Sir Sao Mawng, C.I.E.
 Abdul Karim Abdul Shakur Jamal, C.I.E.
 Francis Foster Goodlife.
 Maung Po Tha.
 Dr. San Crombie Po, M.D.
 E. J. Holberton, O.B.E.
 Maung May Oung.
 J. E. Du Bern.
 Maung Nyun.

SECRETARIAT.

Chief Secretary, C. M. Webb, M.A., I.C.S.
Revenue Secretary, F. Lewisohn, M.A., I.C.S.
Secretary, P.W.D., C. H. Wollaston.
Officiating Joint Secretary, P. W. D., H. E. W. Martindell.
Offg. Financial Commissioner, R. E. V. Arbuthnot, I.C.S.
Senior Registrar, K. M. Basu.

Miscellaneous Appointments.

Settlement Commissioner and Director of Land Records, R. E. V. Arbuthnot.
Director of Agriculture, D. F. Chalmers.
Consulting Architect, T. O. Foster, F.R.I.B.A.
Superintendent and Political Officer, Southern Shan States, G. C. B. Stirling.
Superintendent and Political Officer, Northern Shan States, H. A. Thornton.
Director of Public Instruction, J. M. S. Hunter, M.A.
Inspector-General of Police, Lt.-Col. H. Des Voeux.

Chief Conservator of Forests, C. G. Rogers.
Inspector-General of Civil Hospitals, Col. Percy Charles Hutchison Strickland.
Sanitary Commissioner, Lt. Col. C. E. Williams.
Inspector-General of Prisons, Major H. H. G. Knapp.
Commissioner of Excise, Lieut.-Colonel T. L. Ormiston.
Accountant-General, Upendralal Majumdar, M.A.
Postmaster-General, G. W. Talbot.

Chief Commissioners of Burma.

Sir Reginald Craddock, K.C.S.I.	1917

Bihar and Orissa.

Bihar and Orissa lies between 19°-02' and 27°-30' N. latitude and between 82°-31' and 88°-26' E. longitude and includes the three provinces of Bihar, Orissa and Chota Nagpur, and is bounded on the north by Nepal and the Darjeeling district of Bengal; on the east by Bengal and the Bay of Bengal; on the south by the Bay of Bengal and Madras; and on the west by the United Provinces of Agra and Oudh and the Central Provinces.

The area of the British territories which constitute the Lieutenant-Governorship of Bihar and Orissa is 83,181 square miles inclusive of the area of large rivers. In addition to the districts which are directly under British rule, there are two groups of petty States which lie to the south and south-west of the Province and which under the names of the Tributary and Feudatory States of Orissa and the Political States of Chota Nagpur are governed each by its own Chief under the superintendence and with the advice of the Commissioner of the nearest British Administrative division assisted, in the case of the Orissa States, by a Political Agent. The area of these territories is 28,648 square miles and as it is usual to include them when speaking of Bihar and Orissa the area of the whole Province may be stated at 111,829 square miles. Two of the provinces of the Lieutenant-Governorship of Bihar and Orissa, *viz.*, Bihar and Orissa, consist of great river valleys, the third, Chota Nagpur, is a mountainous region which separates them from the Central Indian Plateau. Orissa embraces the rich deltas of the Mahanadi and the neighbouring rivers and is bounded by the Bay of Bengal on the south-east and walled in on the north-west by the hilly country of the Tributary States. Bihar lies on the north of the Province and comprises the valley of the Ganges from the spot where it issues from the territories of the Lieutenant-Governor of the United Provinces of Agra and Oudh till it enters Bengal near Rajmahal. Between Bihar and Orissa lies Chota Nagpur. Following the main geographical lines there are five Civil Divisions with head-quarters at Patna, Muzaffarpur (for Tirhut), Bhagalpur, Cuttack (for Orissa) and Ranchi (for Chota Nagpur).

The People.

The temporary head-quarters of Government are at Ranchi in Chota Nagpur, while the permanent Capital at Patna is nearing completion, the High Court, Government House and the Secretariat being already occupied. Various residences for the officials and quarters for the ministerial officers remain to be built. The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Bankipore is known as "Patna", the old town being called Patna City." The Province has at present no hill station. Enquiries are being made and records taken at Netarhat, an extensive plateau elevation 3,700 feet, 90 miles over west of Ranchi, where climatic conditions closely resemble Pachmarhi.

The Province has a population of 38,435,293 persons which is very little less than that of France and rather more than that of the Bombay Presidency. The province is almost entirely rural, no fewer than 966 per mille of the population living in villages. Even so with 344 persons per square mile, Bihar and Orissa is more thickly populated than Germany. There are only three towns which can be classed as cities, namely, Patna, Gaya and Bhagalpur. During the last thirty years the population of Patna, the capital designate, has been steadily diminishing. Hindus form an overwhelming majority of the population. Though the Muhammadans form less than one-tenth of the total population they constitute more than one-fifth of urban population of the province. Animists account for 7 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas, the latter district being a continuation of the plateau in a north-easterly direction.

Industries.*

The principal industry is agriculture, Bihar, more especially North Bihar, being the "Garden of India." Rice is the staple crop but the spring crops, wheat, barley, and the like are of considerable importance. It is estimated that the normal area cultivated with rice is 15,615,100 acres or 48 per cent. of the cropped area of the Province. Wheat is grown on 1,121,800 million acres, barley on 1,411,800 acres, maize or Indian-corn on 1,634,600 acres, the latter being an autumn crop. Oilseeds are an important crop, the cultivation having been stimulated by the demand for them in Europe. It is estimated that 1,932,300 acres of land are annually cropped with oil-seeds in the Province. There is irrigation in Shahabad, Gaya, Champaran and Muzaffarpur districts in Bihar and in Balasore and Cuttack in Orissa. The Indigo industry had before the war been steadily on the decline, the total area sown having decreased from 342,000 acres in 1896 to 109,600 acres in 1911. The principal cause of this was the discovery of the possibilities of manufacturing synthetic or chemically prepared indigo on a commercial scale, a process chiefly carried out in Germany. Owing, however, to the stoppage of supplies from Germany the value of natural indigo has risen enormously and the area under cultivation has also risen from 38,500 to 86,700 acres and the total yield has increased from 8,181 factory maunds to 15,318. In the district of Purnea and in Orissa, and parts of the Tirhut Division jute is grown, but the acreage varies according to the price of jute. In 1917-18 it was 223,300 acres. The last serious famine was in 1895-96. In any year in which monsoon currents from either the Bay of Bengal or the Arabian Sea are unduly late in their arrival or cease abruptly before the middle of September the agricultural situation is very grave. It may be said that for Bihar the most important rainfall is that known as the *hata*, due towards the end of September or up to middle of October. Rain at this time not only

* The figures given in this paragraph relate to British territory only.

contributes materially to an increased outturn of the rice crop, but also provides the moisture necessary for starting the spring or *rabi* crops.

Manufactures.

Opium was formerly, with indigo, the chief manufactured product of Bihar, but in consequence of the agreement with the Chinese Government the Patna Factory has been closed. At Monghyr the Peninsular Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively. There are two important iron works in the Singhbhum District. Messrs. Tata & Co.'s Iron and Steel Works at Sakchi and the Bengal Iron and Steel Company at Dhulia. The Cape Copper Co. are also opening up copper mines at the Rakha Hills in the same district. The amount of Copper Ore extracted in 1917-18 was 20,108 tons. But by far the most important of the mineral industries in the province is that concerned in the raising of coal. The coalfields in the Manbhum District have undergone an extraordinary development in the past twenty years. There are now 444 coal mines in this Province with an output of nearly 12 millions tons. The war has demonstrated the great value of the mica mines in Hazaribagh and Gaya which are now entirely controlled by Government and the output from which has considerably increased under the management of an officer deputed from the Geological Department.

Administration.

The Province is administered by a Lieutenant-Governor in Council. The Lieutenant-Governor is appointed by the Crown and is a senior member of the Indian Civil Service. He is assisted by a Council of three members, two of whom are drawn from the Indian Civil Service, while the third, in practice, is an Indian. Each member takes charge of certain departments and in the event of any difference of opinion regarding inter-departmental references the matter is decided in Council. In practice all important cases are submitted through the member concerned to the Lieutenant-Governor.

Finance.

The Province of Bihar and Orissa was formed with five divisions, detached from the old province of Bengal with effect from the 1st April 1912. The old arrangements made with the Government of Bengal regarding the financial administration of the Province therefore ceased to apply from that date. A fresh arrangement has, however, been made, with the approval of the Secretary of State. As the method adopted was in some measure tentative and provisional, a temporary settlement for a period of three years only has been effected. Owing to the war it has been found necessary to continue the provisional settlement for the present. Under the terms of this settlement the whole of the receipts under the heads of Interest, Forest, Registration, Courts of Law, Jails, Police, Ports and Pilotage, Education, Medical and superannuation receipts have been made over entirely to the local Government together with their corresponding charges. In addition to

these, it receives three-fourths of the receipts from excise, the whole of the Land Revenue collected from Government Estates, one-half of the receipts under all other sub-heads excepting recoveries from zamindars and raiyats on account of survey and settlement in Bihar and other similar special surveys and the whole of the receipts under Scientific and other Minor Departments.

The only expanding items of revenue are Excise and Stamps. The Provincial Budget for 1918-19 shows an opening balance of Rs. 1,39,13,000. Receipts Rs. 3,47,97,000, Expenditure Rs. 3,67,16,000, Closing Balance Rs. 1,19,94,000. The reduction in the balance is primarily due to the construction of the new capital at Patna.

Public Works.

The Public Works Department in the Province of Bihar and Orissa consists of two branches, *viz.*:—(1) Roads and Buildings, and (2) Irrigation and Marine, which also deals with railways. Each branch has a Chief Engineer, who is also Secretary to the Local Government with an Engineer Officer as Under Secretary under him. There is also a non-professional Assistant Secretary, a Consulting Architect and a Sanitary Engineer, who works under a Sanitary Board. The electrical work of the Province is carried out by an Electrical Inspector and a staff of subordinates.

Justice.

The administration of justice is controlled by the High Court of Judicature recently established at Patna. In the administration of civil justice below the High Court are the District Judges as Courts of Appeal, the Subordinate Judges and the Munsiffs. The jurisdiction of a District Judge or Subordinate Judge extends to all original suits cognizable by the Civil Courts. It does not, however, include the powers of a Small Cause Court, unless these be specially conferred. The ordinary jurisdiction of a Munsif extends to all suits in which the amount or value of the subject matter in dispute does not exceed Rs. 1,000 though the limit may be extended to Rs. 2,000. On the criminal side the Sessions Judge hears appeals from Magistrates exercising first class powers while the District Magistrate is the appellate authority for Magistrates exercising second and third class powers. The District Magistrate can also be, though in point of fact he very rarely is, a court of first instance. It is usual in most districts for a Joint Magistrate or a Deputy Magistrate to receive complaints and police reports, cases of difficulty or importance being referred to the District Magistrate who is responsible for the peace of the district. In the non-regulation districts the Deputy Commissioner and his subordinates exercise civil powers and hear rent suits.

Local Self-Government.

Bengal Act III of 1884, which regulates the constitution, powers and proceedings of Municipal bodies in this Province has been amended by the Bengal Acts IV of 1894 and II of 1896. By these enactments the elective franchise has been further extended, and now provides for the establishment and maintenance of veterinary institutions and the training of the requi-

site staff, the improvement of breeds of cattle, the training and employment of female medical practitioners, the promotion of physical culture, and the establishment and maintenance of free libraries.

The total number of Municipalities at present in existence is 55. The ratepayers of 49 Municipalities have been granted the privilege of electing two-thirds of the number of Commissioners fixed in each case, whilst in 34 cases the Commissioners are authorised to elect their own Chairman. In the remaining towns Government has reserved to itself the power of appointing the Commissioners or Chairman, as the case may be, owing either to the backwardness of the place or to the necessity for holding the balance against contending interests or strong party feeling. It is only in 4 towns, however, that Government exercises complete control in the appointment of both Commissioners and Chairmen.

The total receipts of Municipalities including grants from the Local Government and the opening balance totalled Rs. 47½ lakhs in 1917-18, and the expenditure was Rs. 37 lakhs.

Apart from Municipalities, each district with the exception of the Santal Parganas, Angul and Singhbhum has a District Board constituted under Bengal Act III of 1885. Municipal areas are excluded in accordance with the provisions of section 1. Local Boards have been formed in all of these districts where there are sub-divisions, except Ranchi. There are at present 18 District Boards, 45 Local Boards, and 23 Union Committees in the Province.

In accordance with the provisions of section 7 of the Act, a District Board is to consist of not less than 9 members. Local Boards are entitled to elect such proportion (as a rule one-half) of the whole of the District Board as the Lieutenant-Governor may direct. In districts where there are no Local Boards, the whole of the members are appointed by Government. The Chairman of the District Board is appointed by Government; he is in practice always the Magistrate of the district.

Land Tenures.

Estates in the Province of Bihar and Orissa are of three kinds, namely, those permanently settled from 1793 which are to be found in the Patna, Tirhut and Bhagalpur divisions, those temporarily settled as in Chota Nagpur and parts of Orissa, and estates held direct by Government as proprietor or managed by the Court of Wards. The passing of the Bengal Tenancy Act (VIII of 1885) safeguarded the rights of the cultivators under the Permanent Settlement Act. Further, the Settlement Department under the supervision of the Director of Land Records makes periodical survey and settlement operations in the various districts, both permanently and temporarily settled. In the former, the rights of the undertenants are recorded and attested, while in the latter there is the re-settlement of rents. In the re-settlement proceedings, rents are fixed not only for the landlords but also for all the tenants. A settlement can be ordered by Government on application made by raiyats.

The tenures of Orissa are somewhat different Under the zamindars, that is, the proprietors who took settlement from Government and pay revenue to Government direct, is a class of subordinate proprietors or proprietary tenure holders, who were originally village headmen, dealing more or less direct with the revenue authorities. They have a variety of names, such as *mukadam*, *padhan*, *maurusi*, *sarbarakar*, *pursethi*, *khariddar* and *shikmi* zamindar. These sub-proprietors or proprietary tenure holders pay their revenue through the zamindars of the estates within which their lands lie. In Chota Nagpur, Orissa and the Santal Parganas, the rights of village headmen have been recognised. The headman collects the rents and is responsible for them minus a deduction as remuneration for his trouble.

Both Orissa and Chota Nagpur have their own Tenancy Acts.

Police.

The Departments of Police, Prisons and Registration are each under the general direction of Government, supervised and inspected by an Inspector-General with a staff of assistants. The Commissioner of Excise and Salt is also Inspector-General of Registration.

Under the Inspector-General of Police are three Deputy Inspectors-General and 27 Superintendents. There are also 27 Assistant Superintendents of Police and 15 Deputy Superintendents. The force is divided into the District Police, the Railway Police and the Military Police. A Criminal Investigation Department has also been formed for the collection and distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigations of crime of this class and other serious cases in which its assistance may be invoked. There are two companies of Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties.

Education.

The total expenditure on Public Instruction in 1917-18 was Rs. 80,89,656 of which direct expenditure amounted to Rs. 60,07,652 and indirect to Rs. 20,82,004. Of the direct expenditure Rs. 4,47,923 was spent on colleges, Rs. 18,17,455 on secondary schools, Rs. 29,42,923 on primary schools and Rs. 7,99,351 on training and other special schools. Of the indirect expenditure about nine lakhs were spent on buildings, furniture and apparatus six lakhs on direction and inspection, more than a lakh on scholarships, about two lakhs on University and more than three lakhs on miscellaneous charges. In British territory alone there were 29,472 institutions attended by 852,324 scholars representing 16.4 per cent. of the total population of school-going age. The number of male pupils was 737,783 or 29.2 per cent. of the male population of school-going age and of the female pupils 110,335 or 4.2 per cent. of the female population of school-going age.

A University has recently been established at Patna.

There are 7 Arts Colleges with 2,811 students and one Training College for 32 students, which with the Patna College, the Ravenshaw College at Cuttack and the Greer Bhumihar Brahman College at Muzaffarpur is maintained by Government. The College at Bhagalpur, the Bihar National College at Bankipore and the Dublin University Mission College at Hazaribagh are aided by Government.

Medical.

The Medical Department is under the control of the Inspector-General of Civil Hospitals who is a Member of the Indian Medical Service. Under him there are 20 Civil Surgeons who are responsible for the medical work of the districts at the head-quarters of which they are stationed. 57 Dispensaries are maintained by Government in addition to 330 Dispensaries maintained by Local bodies, Railways, private persons, etc. 3,463,145 patients including 50,625 in-patients in public dispensaries were treated.

The total income of the medical institutions amounted to Rs. 16,69,916. A large asylum for Europeans has been opened at Ranchi which receives patients from Northern India. A similar institution is under construction for the Indians. At present these are treated at Patna.

Administration.

Lieutenant-Governor, Sir Edward Gait, K.C.S.I., C.I.E. Assumed charge of office, 19th November 1915.

PERSONAL STAFF.

Private Secretary, William Surridge Hitchcock.

Aide-de-Camp, Lt. E. D. T. Rowley.

Honorary Aides-de-Camp, Hon. Capt. Sardar Bahadur Hira Singh, Subadar Major Sita Ram Singh, Major A. T. Peppe and Major J. A. M. Wilson.

EXECUTIVE COUNCIL.

Havilland Le Mesurier, C.S.I., C.I.E., I.C.S.

Rai Bahadur Krishna Sahay.

Walter Maude, C.S.I.

LEGISLATIVE COUNCIL.

President, The Lieutenant-Governor.

Ex-Officio.

SECRETARIAT.

Chief Secretary to Government, Political, Appointment, and Educational Departments, H. McPherson.

Secretary to Government, Financial and Municipal Departments, J. D. Sifton (*on leave*).
B. A. Collins (*officiating*).

Secretary to Government, Revenue Department,
J. A. Hubback.

Secretary to Government (P. W. D.), Irrigation Branch, F. Clayton.

Buildings and Roads Branch, E. G. Stanley (*on leave*).
W. S. Bremner (*officiating*).

BOARD OF REVENUE.

Member, E. H. C. Walsh.

MISCELLANEOUS APPOINTMENTS.

Director of Public Instruction, The Hon. Mr. H. Sharp, M.A., C.I.E.

Inspector-General of Police, R. T. Dundas.
Conservator of Forests, H. H. Hains (*on leave*).
Frederick Trafford (*offg.*).

Inspector-General of Civil Hospitals, Col. G. J. H. Bell.

Sanitary Commissioner, Major William Charles Ross.

Inspector-General of Prisons, Lt.-Col. Bawa Jiwan Singh, C.I.E., I.M.S.

Accountant-General, V. C. Scott O'Connor.
Director of Agriculture, G. Milne.

The Central Provinces and Berar.

The Central Provinces and Berar compose a great triangle of country midway between Bombay and Bengal. Their area is 130,991 miles, of which 82,000 are British territory proper and the remainder held by Feudatory Chiefs. The population (1911) is 13,916,308 under British administration and 2,117,002 in the Feudatory States. Various parts of the Central Provinces passed under British control at different times in the wars and tumult in the first half of the 19th century and the several parts were amalgamated after the Mutiny, in 1861, into the Chief Commissionership of the Central Provinces. Berar was, in 1853, assigned to the East India Company as part of a financial arrangement with the Nizam and was transferred to the Central Provinces in 1903, as the result of a fresh agreement with the Nizam.

The Country.

The Central Provinces may roughly be divided into three tracts of upland, with two intervening ones of plain country. In the north-west, the Vindhyan plateau is broken country, covered with poor and stunted forest. Below its precipitous southern slopes stretches the rich wheat growing country of the Nerbudda valley. Then comes the high Satpura plateau, characterised by forest-covered hills and deep water-cut ravines. Its hills decline into the Nagpur plain, whose broad stretches of shallow black cotton soil make it one of the more important cotton tracts of India and the wealthiest part of the C. P. The Eastern half of the plain lies in the valley of the Wainganga and is mainly a rice growing country. Its numerous irrigation tanks have given it the name of the "lake country" of Nagpur. Further east is the far-reaching rice country of Chattisgarh, in the Mahanadi basin. The south-east of the C. P. is again mountainous, containing 24,000 square miles of forest and precipitous ravines, and mostly inhabited by jungle tribes. The Feudatory States of Bastar and Kankar lie in this region. Berar lies to the south-west of the C. P. and its chief characteristic is its rich black cotton-soil plains.

The People.

The population of the province is a comparatively new community. Before the advent of the Aryans, the whole of it was peopled by the Gonds and these aboriginal inhabitants fared better from the Aryans than their like in most parts of India because of the rugged nature of their home. But successive waves of immigration flowed into the province from all sides. The early inhabitants were driven into the inaccessible forests and hills, where they now instituted a large portion of the tribes in those parts, who form a quarter of the whole population of the C. P. The Gonds are still found in large numbers in all parts of the province, but they are partially concentrated in the south-east. The main divisions of the new comers are indicated by the language divisions of the province. Hindi, brought in by the Hindustani-speaking peoples of the North, prevails in the North and East; Marathi in

Berar and the west and centre of the C. P. Hindi is spoken by 56 per cent. of the population and is the *lingua franca*. Marathi by 31 per cent. and in Berar, and Gondi by 7 per cent. The effects of invasion are curiously illustrated in Berar, where numbers of Moslems have Hindu names, being descendants of former Hindu officials who on the Mahomedan invasion adopted Islam rather than lose their positions. The recent census shows that a gradual Brahmanising of the aboriginal tribes is going on. The tribes are not regarded as impure by the Hindus and the process of absorption is more or less civilising.

Industries.

When Sir Richard Temple became first Chief Commissioner of the C. P. the province was land-locked. The only road was that leading in from Jubbulpore to Nagpur. The British administration has made roads in all directions, the two trunk railways between Bombay and Calcutta run across the province and in the last few years a great impetus has been given to the construction of subsidiary lines. These developments have caused a steady growth of trade and have aroused vigorous progress in every department of life. The prime industry is, of course, agriculture, which is assisted by one of the most admirable agricultural departments in India and is now receiving additional strength by a phenomenal growth of the co-operative credit movement. The land tenure is chiefly on the zemindari, or great landlord system, ranging, with numerous variations, from the great Feudatory chiefships, which are on this basis, to holdings of small dimensions. A system of land legislation has gradually been built up to protect the individual cultivator. Berar is settled on the Bombay ryotwari system. Thirty-eight per cent. or about 44,000 square miles of the C. P. is forest: in Berar the forest area is 3,941 square miles. The rugged nature of the greater part of the country makes forest conservation difficult and costly. Excluding forest and wastes, 57 per cent. of the total land is occupied for cultivation; in the most advanced districts the proportion is 80 per cent.; and in Berar the figure is also high. The cultivated area is extending continuously except for the temporary checks caused by bad seasons. Rice is the most important crop of the C. P., covering a quarter of the cropped area. Wheat comes next, with 15½ per cent., then pulses and cereals used for food and oil seeds, with 11 per cent. and cotton with 7 per cent. In Berar cotton occupies nearly 40 per cent. of the cropped area, jowar covers an equal extent, then wheat and oil seeds. In agriculture more than half the working population is female.

Commerce and Manufactures.

Industrial life is only in its earliest development except in one or two centres, where the introduction of modern enterprise along the railway routes has laid the foundations for great future developments of the natural wealth of the province. Nagpur is the chief centre of

a busy cotton spinning industry. The Empress Mills, owned by Parsi manufacturers, were opened there in 1877 and the general prosperity of the cotton trade has led to the addition of many mills here and in other parts of the province. The total output of spun yarn now amounts to approximately 50 million yards a year.

The largest numbers engaged in any of the modern industrial concerns are employed in manganese mining. Then follow coal mining, the Jubulpore marble quarries and allied works, the limestone quarries, and the mines for pottery clay, soapstone, &c.

The total number of factories of all kinds legally so described was 431 in 1918, the latest period for which returns are available and the number of people employed in them 48,993. The same economic influences which are operative in every progressive country during its transition stage are at work in the C. P. and Berar, gradually sapping the strength of the old village industries, as communications improve, and concentrating industries in the towns. While the village industries are fading away, a large development of trade has taken place. The last pre-war reports showed an increase in volume by one-third in eight years. In 1914 for the first time, statistics for the Berar factories were incorporated with those of the C. P.

Administration.

The administration of the Central Provinces and Berar is conducted by a Chief Commissioner, who is the controlling revenue and executive authority and is appointed by the Governor-General-in-Council. He is assisted by three secretaries, two under-secretaries and two assistant secretaries. Simultaneously with the jubilee of the foundation of the Province in 1913 a Legislative Council was constituted. It consists of 24 members, excluding the Chief Commissioner, 7 being elected by Municipalities, District Councils and Landholders in the C. P. and 17 nominated by the Chief Commissioner, of whom not more than 10 may be officials and 3 shall be non-officials chosen respectively by the municipalities, District Boards and Landholders of Berar. The Chief Commissioner may nominate an additional member, official or non-official, who has special knowledge of a subject on which legislation is pending. The C. P. are divided for administrative purposes into four divisions, and Berar constitutes another division. Each of these is controlled by a Commissioner. Berar is divided into four districts, three other divisions into five districts each and one into three, and these are controlled by Deputy-Commissioners, immediately subordinate to the Commissioners. The principal heads of Provincial departments are the Commissioner of Settlements and Director of Land Records, the Inspector-General of Civil Hospitals and Sanitary Commissioner, the Inspector-General of Police, the Inspector-General of Prisons, the Director of Public Instruction, the Commissioner of Excise, the Inspector-General of Registration, Assessed taxes, &c., and the Director of Agriculture, the Registrar, Co operative Societies, and Director of Industries. The Deputy-Commissioners of districts are the chief revenue authorities and District Magistrates, and they exercise the usual powers

and functions of a district officer. The district forests are managed by a forest officer, usually a member of the Imperial Forest Service, over whom the Deputy-Commissioner has certain powers of supervision, particularly in matters affecting the welfare of the people. Each District has a Civil Surgeon, who is generally also Superintendent of the District Jail and whose work is also in various respects supervised by the Deputy-Commissioner. The Deputy-Commissioner is also marriage registrar and manages the estates of his district which are under the Court of Wards. In his revenue and criminal work the Deputy-Commissioner is assisted by (a) one or more Assistant Commissioners, or members of the Indian Civil Service; (b) one or more Extra-Assistant Commissioners, or members of the Provincial Civil Service, usually natives of India, but including a few Europeans and Anglo-Indians and (c) by tahsildars and naibtahsildars, or members of the Subordinate service, who are nearly always natives of India. The district is divided for administrative purposes into tahsils, the average area of which is 1,500 square miles. In each village a lam-bardar, or representative of the proprietary body, is executive headman.

Justice.

The Court of the Judicial Commissioner is the highest court of appeal in Civil cases, and also the highest Court of criminal appeal and revision for the Central Provinces and Berar except in reference to proceedings against European British subjects and persons jointly charged with European British subjects: in such cases the High Court of the N. W. P. and the High Court of the Bombay have jurisdiction over different parts of the Provinces.

The Court sits at Nagpur and consists of a Judicial Commissioner (who is appointed by the Governor-General in Council) and 3 Additional Judicial Commissioners of whom one at least must be an advocate of the Court or a Barrister or pleader of not less than 10 years' standing.

Subordinate to the Judicial Commissioner's Court are the District and Sessions Judges (11 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of Sub-Judges and Munsiffs.

Local Government.

Municipal administration was first introduced under the Punjab Municipal Acts and the Municipality of Nagpur dates from 1864. Several revising Acts extend its scope. Viewed generally, municipal self-government is considered to have taken root successfully. The general basis of the scheme is the Local Board for each tahsil and the District Council for each district. In Berar these bodies are called Local Boards and District Boards. The larger towns have municipalities.

A certain proportion of the Local Board members are village headmen, elected by their own class, others are elected representatives of the mercantile and trading classes and a third proportion, not exceeding $\frac{1}{3}$ of the whole, are nominated by Government. The constitution of the District Councils is similar.

The District Councils in the C. P. have no power of taxation and Local Boards derive their funds in allotments from the District Councils. The District Boards in Berar have been lately invested with power to impose a special education cess.

The officers of the District Councils are frequently non-officials, but it is generally found convenient that the Tahsildar and Naib Tahsildar should be Chairman and Secretary of the Local Boards.

Rural education and sanitation are among the primary objects to which these bodies direct their attention and expenditure on famine relief is in the first instance a charge upon the District Council funds.

Finance.

The main sources of Government income in the province has always been the land revenue, but under Mahratta rule many petty imposts were added in all branches of trade and industry and life in general. Thus there was a special tax on the marriage of Banias and a tax of a fourth of the proceeds of the sale of houses. The scheme of Provincial finance was introduced in 1871-72. Special settlements under this system have been necessitated in view of the special circumstances of the province and the recurrence of famine, which a few years ago caused a severe economic strain upon the province. The wave of prosperity which has spread over the country in the past 14 years, since the end of the previous period, has more than trebled the funds available for the administration, compared with what they were before the several years of scarcity, and the progress of the administration and of expenditure has increased correspondingly, without any increase of taxation under provincial heads.

Public Works.

The Public Works Department is controlled by two Chief Engineers, who are also Secretaries to the Chief Commissioner. There are three Superintending Engineers for roads and buildings and three for irrigation. In 1892 a separate division of the Public Works Department was formed for the construction of roads and buildings in the Feudatory States but it has since been abolished. The expansion of the department and its work has been one of the most remarkable features of the administration in the past decade and a half, largely owing to the demands of a progressive age in regard to communications and new buildings. The Irrigation Branch of the P. W. D. represents a completely new departure. It was formerly the accepted view that the irregular surface of the country would make irrigation canals impossible and that the S. W. monsoon was so regular that it would pay better to relieve famine than to prevent it. Both conclusions have been reversed. Picked officers investigated projects for irrigation when the Irrigation Commission was appointed (1901) and canal and storage works have since been advanced with vigour. The Tandula, Wainganga and Mahanadi canal projects are amongst the more important schemes.

Police.

The police force was constituted in its present basis on the formation of the Provinces, the whole of which, including the Cantonments and

the Municipalities, is under one force. The strength is equal to one man per 10 square miles of area. The superior officers comprise an Inspector-General, whose jurisdiction extends over Berar, three Deputy Inspectors-General, for assistance in the administrative control and supervision of the Police force, including the Criminal Investigation Department, and the usual cadre of District Superintendents of Police, Assistant and Deputy Superintendents and subordinate officers. On railways special Railway Police are employed under the control of two Superintendents of Railway Police with headquarters at Raipur and Hosangabad. A Special Reserve of 600 men is distributed over the headquarters of seven districts, for use in dealing with armed disturbers of the peace in whatever quarter they may appear. The men in this reserve are regularly drilled and are armed with rifles. There is a small force of Mounted Police. The Central Provinces has no rural police as the term is understood in other parts of India. The village watch-man is the subordinate of the village headman and not a police official and it is considered very desirable to maintain his position in this respect.

Education.

The educational department was constituted in 1862 and the scheme then drawn up has remained the basis of the system of public education to the present day. The leading principles are that the department should content itself with the direct management of colleges and higher secondary schools, the training of teachers and inspection in work in rural areas. The maintenance of rural schools should as far as possible be left to the local authorities, every encouragement should be given to private philanthropy and no Government schools should be founded where there existed a sufficient number of institutions capable, with the assistance of the State, of supplying the local demand for instruction. At the head of the Department is the Director of Public Instruction, who has a staff of Assistant Director of Public Instruction, six Inspectors and two Inspectresses for girls schools. All these appointments are included in the Indian Educational Service, except two Inspectors who are in the Provincial Educational Service. An Agency Inspector supervises the schools of the Feudatory States. The province has five colleges: the Robertson and Training Colleges at Jubbulpore, and the Morris and Hislop Colleges and the Victoria College of Science at Nagpur. Sanction has also been accorded to the establishment of a Government College at Amraoti, the buildings of which are under construction. The Agricultural Department maintains an Agricultural College at Nagpur. The Colleges are affiliated to Allahabad University, but a demand has arisen for a local University.

After much preliminary discussion, a committee was appointed in July, 1914, to frame a scheme "which shall provide for a University of the teaching type at Nagpur, or in its immediate neighbourhood, and for the affiliation to this central institution of colleges situated in other places in the C. P. and Berar." The committee in their report, issued in 1915, proposed a University presenting some of the

features of an affiliating University but possessed of functions and endowed with responsibilities which transcend the scope of those universities in India which conform to that type. "For (says the report) it will not only be an examining but a teaching university, and its teaching activities will not be limited to the provision of courses of instruction for postgraduate degrees, but will embrace several departments of study in the lower courses. The main difference, however, between the university which we propose and existing universities will lie in the closer relations of the former with its constituent colleges. According to our scheme, the University will exercise an effective control over the teaching and discipline of all the institutions which come within its jurisdiction. For it is only by exercising control over its component parts that the Universities can maintain a high standard of moral and intellectual endeavour, and create traditions which will make themselves felt in the development of the Provinces as a whole."

The committee said: "The University which we propose will possess powers which will entitle it to a high place in the administrative machinery of the Provinces. But administrative autonomy involves a certain measure of financial independence, and we have made proposals accordingly. It is true that the University will be mainly dependent on the Government for financial support. Apart from fees, the University at first at any rate will have no resources of its own. But we confess to a desire to see it vested with financial control over the grant which it receives from Government as well as over its other receipts. If we may be permitted to employ a simile, the Government should regard the University as a business concern, of which it is a shareholder with a seat on the Board of Directors rather than as a servant to whom it makes certain payments, the disposal of which must be checked frequently and in detail.

"We recommend that the administration of the University be vested in a Chancellor, Vice-Chancellor, Senate and Syndicate. The Chief Commissioner of the Province will be the Chancellor. The Vice-Chancellor will be an honorary officer nominated by the Chancellor. The Senate will be the supreme authority, subject to the general control of the Government. It will be a body of 75 members, consisting partly of representatives of Government and of the general public, partly of elected representatives of the graduates and partly of teachers of the University and the constituent colleges, the latter being nominated by the Chancellor. The Syndicate will be the executive of the University, and will consist of the Vice-Chancellor, the Director of Public Instruction, a member of the Senate nominated by the Chancellor, four Principals of colleges, the Deans of the Faculties, and three members elected by the Senate from among their own number, of whom not more than one shall be a member of the teaching staff. The Chancellor's nominee on the Syndicate should be a person possessed of general administrative experience. In both these bodies the members of the teaching staff will predominate.

"After careful consideration, we have arrived at the conclusion that a university possessing

the wide administrative and educational powers which we propose must be governed by a body in which professional and expert opinion will predominate. This we think we have secured by giving the members of the teaching staff a predominant voice in the councils of the University.

"We recommend that the University shall contain, at its inception, Faculties of Arts, Law and Science, and a department for the training of teachers subordinate to the Faculty of Arts. We have considered the question of establishing a Faculty of Agriculture. But in view of the necessity which the Government Department of Agriculture feels of pursuing a tentative policy for some years to come with regard to agricultural education, we feel that it would be inadvisable at the present juncture to suggest that the University should make provision for instruction in this branch knowledge. As to the Medical and Engineering Schools, they are designed to meet certain special needs, and do not aim at providing courses of a university standard. It will be many years before the demand for higher courses will justify the establishment of Faculties in Medicine and Engineering."

Until recent years, the demand for education, primary or secondary, was satisfied by a few institutions in the larger towns, while in the whole of the rural districts primary education had to be pressed on an apathetic and even obstructive agricultural population. The new spirit of progress in recent years has quickened the public pulse and the efforts of Government to effect improved facilities have responded accordingly. Special grants from the Government of India budget surpluses in recent years have largely been devoted to assisting the District Councils to overtake their arrears of primary school building. District Councils in general have allowed their zeal for education to carry them into programmes of development beyond their means.

Medical.

The medical and sanitary services of the province are respectively controlled by an Inspector-General of Civil Hospitals and a Sanitary Commissioner. The medical department has progressed along comparatively stereotyped lines. A striking advance has been made in recent years with urban sanitation. The principal medical institutions are the Mayo Memorial Hospital at Nagpur, opened in 1874, with accommodation for 84 in-patients; the Victoria Hospital at Jabulpore, opened in 1886 and accommodating 95 in-patients; the Lady Dufferin Hospital at Nagpur and the Lady Elgin Hospital at Jabulpore, these last two being for women and containing together accommodation for 71 in-patients. The province has one lunatic asylum at Nagpur. Vaccination is compulsory in some Municipal towns to which the Vaccination Act has been extended. The administration in 1913 sanctioned the opening of peripatetic dispensaries in unhealthy areas.

Administration.

Chief Commissioner, Sir Frank George Sly, K.C.S.I., I.C.S., (appointed, Dec. 1919).
Personal Assistant, Capt. P. H. Champion.

Chief Secretary, The Hon'ble Mr. F. S. A. Slocock, C.I.E., I.C.S.

Second Secretary, The Hon'ble Mr. H. C. Gowan, I.C.S.

Third Secretary, The Hon'ble Mr. J. F. Dyer, I.C.S.

Legal Secretary, The Hon'ble Mr. D. G. Mitchell, I.C.S.

Under Secretaries, Mr. G. V. Bewoor, I.C.S., and Mr. C. K. Seaman.

Registrar, C. E. Higher, (on special duty); R. W. Hart, Offg.

Secretary, Public Works Department (Irrigation Branch), Lieut.-Col. S. G. Rivett-Carnac, R. E.; (*Roads and Buildings*) Col. J. P. Blakeway, C. M. G., R. E.

Financial Commissioner, The Hon'ble Mr. H. A. Crump, C.S.I., I.C.S. (On combined leave.)

BERAR.

Commissioner, The Hon'ble Mr. B. P. Standen, C. I. E., I. C. S.

Members of Council.

NOMINATED MEMBERS.

The Hon'ble Mr. H. A. Crump, I.C.S.
 " " F. S. A. Slocock, I.C.S.
 " " F. C. Turner, I.C.S.
 " " D. G. Mitchell, I.C.S.
 " " K. S. Jatar, U.C.S.
 " Col. J. P. Blakeway, R. E.
 " Lieut.-Col. C. H. Bensley, I.M.S.
 " Mr. James Ferguson Dyer, I.C.S.
 Mr. Arthur Innes Mayhew,
 " Hyde Clarendon Gowan.
 " George Paris Dick.

NON-OFFICIALS.

The Hon'ble Mr. Niaz-ud-din Khan.
 " " Sorabji Bezonji Mehta.
 " Rai Bahadur Sir Bipin Krishna Bose, Kt., C.I.E.
 " Rao Bahadur Madho Rao Ganesh Deshpande.

ELECTED MEMBERS.

The Hon'ble Mr. Moreshwar Rao Dixit, B.A., Bar.-at-Law.
 " Rao Bahadur Narayan Rao Kelkar.
 " Mr. Pyare Lal Misra.
 " " Manoharpant Krishnarao Golwalkar.
 " Rai Sahib Govind Lal Purohit.
 " Rai Sahib Cullianji Murarji Thacker, Bar.-at-Law.
 " Mr. Beohar Raghbir Singh.
 " Shripad Balvant Tambe.
 " Rao Sahib Ramchandra Vishnu Mahajani.
 " Mr. Yeshwant Govind Deshpande.

MISCELLANEOUS APPOINTMENTS.

Director of Public Instruction, Mr. A. I. Mayhew.
Inspector-General of Police—Vacant.
Chief Conservator of Forests, Mr. B. B. Osmaston.
Inspector-General of Prisons, Sub. pro tem., Lt.-Col. C. H. Bensley.

Inspector-General of Civil Hospitals, and Sanitary Commissioner, The Hon'ble Col. C. R. M. Green, M. D., I. M. S. (On leave); Lt.-Col. C. H. Bensley, I. M. S. (Offg.).

Commissioner of Excise, Mr. A. E. Nelson, I.C.S.
Comptroller (Financial Dept.) R. Waterfield.

Postmaster-General, Mr. H. S. H. Pilkington, C. I. E., M.V.O.

Director of Agriculture and Industries, Officiating, David Clouston.

Registrar of Co-operative Credit Societies, Mr. A. E. Mathias, I.C.S.

CHIEF COMMISSIONERS.

Colonel E. K. Elliot	1861
Lieut.-Colonel J. K. Spence (<i>Officiating</i>)	1862
R. Temple (<i>Officiating</i>)	1862
Colonel E. K. Elliot	1863
J. S. Campbell (<i>Officiating</i>)	1864
R. Temple	1864

North-West Frontier Province.

The North-West Frontier Province, as its name denotes, is situated on the north-west frontier of the Indian Empire. It is in form an irregular strip of country lying north by east and south by west and may generally be described as the tract of country, north of Baluchistan, lying between the Indus and the Durand boundary line with Afghanistan. To the north it extends to the mountains of the Hindu Kush. From this range a long broken line of mountains runs almost due south, dividing the province from Afghanistan, until the Sulaiman Range eventually closes the south of the Province from Baluchistan. The greatest length of the province is 403 miles, its greatest breadth 279 miles and its total area about 39,000 square miles. The territory falls into three main geographical divisions: the Cis-Indus district of Hazara; the narrow strip between the Indus and the Hills, containing the Districts of Peshawar, Kohat, Banu and Dera Ismail Khan, and the rugged mountainous regions on the north and west between those districts and the border line of Afghanistan. Hazara and the four districts in the second division contain 13,418 square miles. The mountain regions, north and west, are occupied by tribes subject only to the political control of the Chief Commissioner in his capacity as Agent to the Governor-General. The area of this tract is roughly 25,500 square miles and in it are situated, from north to south, the political agencies severally known as the Malakand, Khyber, Kurram, Tochi and Wana Agencies. Each of the Deputy Commissioners of the five administered districts is responsible for the management of political relations with certain tribes or sections of the tribes across the frontier. A few hundred miles of the trans-border Territory are internally administered by the Political Agents, but the bulk of the trans-border population is free from any internal interference, so long as offences are not committed and so long as the tribes observe the conditions on which allowances are paid to many of them.

The area of the Province is a little more than half that of Bombay (excluding Sind and Aden) and amounts to more than three-fifths of the size of England without Wales. The density of population throughout the Province equals 98 persons to a square mile, but in the more favoured portions the pressure of population is much greater. In the Hazara District there are 207 persons to a square mile and in the trans-Indus plains tract the number is 152. The key to the history of the people of the N.-W. F. P. lies in the recognition of the fact that the valley of Peshawar was always more closely connected politically with Eastern Iran than with India, though in pre-Mahomedan times its population was mainly Indian by race. Early history finds the Iranians dominating the whole Indus valley. Then came the Greek invasion under Alexander the Great, in B.C. 327, then the invasions of the Sakas, and of the White Huns, and later, the two great waves of Muhammadan invasion. Last came the Sikh invasion, beginning in 1818. The Frontier Territory was annexed by the British in 1849 and placed under the control of the Punjab Government. Frequent

warfare occurred with the border tribes, but since the conclusion of peace with the Afridis in 1898, the whole border has been undisturbed except for the expedition against the Zakka Khel Afridis in 1908 and the recent blockade Mohmand of 1916-17 and Waziristan Expedition of 1917.

The division of the Frontier Province from the Punjab was frequently discussed, with the double object of securing closer and more immediate control and supervision of the Frontier by the Supreme Government and of making such alterations in the personnel and duties of frontier officials as would tend to the establishment of improved relations between the local British representatives and the independent tribesmen. The province was eventually removed from the control of the Punjab administration in 1901. To it was added the political charge of Dir, Swat and Chitral, the Political Agent of which had never been subordinate to the Punjab. The new Province was constituted under a Chief Commissioner and Agent to the Governor-General, with headquarters at Peshawar, in direct communication with the Government of India in the Foreign Department. In political questions there is no intermediary between the Chief Commissioner and the local officer; an arrangement designed to secure both prompt disposal of references and the utilisation of the expert knowledge of frontier conditions for which the head of the administration is selected.

The People.

The total population of the N.-W.F.P. (1911) is 3,819,027, made up as follows:—

Hazara	603,028
Trans-Indus Districts	1,593,905
Trans-Border Area	1,622,094

This last figure is estimated. There are only 625.6 females per 1,000 males in the towns and 900 females per 1,000 males in rural areas. This disproportion of the sexes cannot at present be explained in the N.-W.F.P. any more than in other parts of Northern India, where it also appears. The discrepancy is greater here than in any other Province of India. There is no ground for believing that the neglect of girls in infancy has any effect in causing the phenomenon. On the other hand, the female population has to face many trials which are unknown to men. The evils of unskilled mid-wifery and early marriage are among them. Both the birth and death-rates of the Province are abnormally low. The birth rate in the administered districts, according to the last available official reports, is 35.1 and the death-rate 33.3. There were 122.5 male births for every 100 females. It is recognised that in this matter, and in regard to population generally, the registration of females may be defective, inasmuch as the Pathan, for whatever reasons, regards the birth of a daughter as a misfortune, the less said about which the better. The population is naturally increasing, but emigration reduces the net result.

The dominant language of the Province is Pashtu and the population contains several lingual strata. The most important sections of the population, both numerically and by social position; are the Pathans, They own

a very large proportion of the land in the administered districts and are the ruling race, of the tribal area to the west. There is a long list of Pathan, Baluch, Rajput and other tribal divisions. Gurkhas have recently settled in the Province. The Mahomedan tribes constitute almost the whole population, Hindus amounting to only 5 per cent. of the total and Sikhs to a few thousands. The occupational cleavage of the population confuses ethnical divisions.

Under the North-West Frontier Province Law and Justice Regulation of 1901, custom governs all questions regarding successions, betrothal, marriage, divorce, the separate property of women, dower, wills, gifts, partitions, family relations such as adoption and guardianship, and religious usages and institutions, provided that the custom be not contrary to justice, equity or good conscience. In these matters the Mahomedan or Hindu law is applied only in the absence of special custom.

Climate, Flora and Fauna.

The climatic conditions of the N.-W.F.P., which is mainly the mountainous region, but includes the Peshawar Valley and the riverine tracts of the Indus in Dera Ismail Khan District, are extremely diversified. The latter district is one of the hottest areas of the Indian continent, while on the mountain ranges the weather is temperate in summer and intensely cold in winter. The air is generally dry and hence the annual ranges of temperature are frequently very large. The Province has two wet seasons, one the S.-W. Monsoon season, when moisture is brought up from the Arabian Sea and the Bay of Bengal: the other in winter, when storms from Mesopotamia, Persia and the Caspian Districts bring widespread rain and snowfall. Both sources of supply are precarious and not infrequently either the winter or the summer rainfall fails almost entirely. The following description of the Daman, the high ground above the Indus, stretching across Dera Ismail Khan to the mountains on the west, occurs in an account written some years ago by Captain Croswaithe: "Men drink once a day and the cattle every second day. Washing is an impossible luxury. . . . It is possible in the hot weather to ride thirty miles and neither hear a dog bark nor see the smoke of a single fire." With the exception of the Kunhar River, in Hazara, which flows into the Jhelum, the whole territory drains into the Indus. The flora of the Province varies from the shrubby jungle of the south-eastern plains to barren hills, pine forests and fertile mountain valleys. Tigers used to abound in the forests but are now quite extinct; leopards, hyenas, wolves, jackals and foxes are the chief carnivora. Bear, deer and monkeys are found; a great variety of fish is caught in the Indus.

The mountain scenery is often magnificent. The frontier ranges contain many notable peaks of which the following are the principal:

Takht-i-Sulaiman, Sulaiman Range, in Dera Ismail Khan, 11,292 feet.

Pir Ghal, Sulaiman Range, in Mahsud Waziristan, 11,583 feet.

Sika Ram, in the Safed Koh, in the Kurram Agency, 15,621 feet.

Kagan Peaks of the Himalayas, in the Hazara District, 10,000 to 16,700 feet.

Istragh Peak (18,900 ft.), Kachin Peak 22,641 ft.), Tirich Mir (25,426 ft.), all in the Hindu Kush, on the northern border of Chitral Agency.

Trade and Occupations.

The population derives its subsistence almost wholly from agriculture. The Province is practically without manufactures. There is no considerable surplus of commercial products for export. Any commercial importance which the province possesses it owes to the fact that it lies across the great trade routes which connect the trans-border tribal territories and the marts of Afghanistan and Central Asia with India, but the influence of railways is diminishing the importance of these trading interests. The travelling traders (or Powindahs) from the trans-frontier area have always pursued their wanderings into India and now, instead of doing their trading in towns near the border, carry it by train to the large cities in India. Prices of agricultural produce have in recent years been high, but the agriculturists, owing to the poverty of the means of communication, have to some extent been deprived of access to Indian markets and have therefore been unable to profit by the rates prevailing. On the other hand, high prices are a hardship to the non-agricultural classes. The effects of recent extensions of irrigation have been important. Land tenures are generally the same in the British administered districts as in the Punjab. The cultivated area of the land amounts to 32 per cent. and uncultivated to 68 per cent.

The work of civilisation is now making steady progress. Relations with the tribes have improved, trade has advanced, free medical relief has been vastly extended, police administration has been reformed and the desire of people for education has been judiciously and sympathetically fostered. In the British administered districts 19 per cent. males and 7 per cent. females of the total population are returned as literates. The figures for males denote a very narrow diffusion of education even for India. Those for females are not notably low, but they are largely affected by the high literacy amongst Sikh women, of whom 13·3 per cent. are returned as literate. The inauguration of a system of light railways throughout the Province, apart from all considerations of strategy, must materially improve the condition of the people and also by that means strengthen the hold of the administration over them. The great engineering project of the Upper Swat River Canal, which was completed in 1914, and the lesser work of the Paharpur Canal, also completed a year or two ago, will bring ease and prosperity to a number of peasant homes. There has arisen in recent years the difficult question of the importation of thousands of rifles from the Persian Gulf. Elaborate measures were taken to stamp out the traffic, under the direction of the Naval Commander-in-Chief in the East Indies; and with the tardy consent of France an agreement was made with the Sultan of Muscat, to stop the trade in arms from that place, Muscat having been the entrepot for the traffic.

Administration.

The administration of the North-West Frontier Province is conducted by the Chief

Commissioner and Agent to the Governor-General in Council. His staff consists of—

- (1) Officers of the Political Department of the Government of India.
- (2) Members of the Provincial Civil Service.
- (3) Members of the Subordinate Civil Service.
- (4) Superintendents and Assistant Superintendents of Police.
- (5) Officers recruited for the service of departments requiring special knowledge—Militia, Engineering, Education, Medicine and Forestry.

The cadre posts reserved for officers coming under the first head above are:—

Administration.	}	Chief Commissioner & Agent to the Governor-General	}	5	
		Secretary			
		Assistant Secretary			
		Personal Assistant			
		Revenue Commissioner and Revenue Secretary			
		Resident in Waziristan...			1
		Deputy Commissioners ..			5
		Political Agents ..			5
		District Judges ..			2
		Assistant Commissioners and Assistant Political Agents			13
High Court and Divisional Judges.	}	One Judicial Commissioner.	}	4	
		Two Divisional and Sessions Judges.			
		One Additional ditto.			

The districts under the Deputy Commissioners are divided into from two to five sub-collectorates, in charge of tahsildars, who are invested with criminal and civil and revenue powers, and are assisted by naib-tahsildars, who exercise only criminal and revenue powers. Some sub-divisions are in charge of Assistant or Extra Assistant Commissioners. The village community characteristic of some parts of India is not indigenous among the Pathans. Its place as a social unit is to some extent taken by the tribe, which is held together by the ties of kinship and ancient ancestry, real or imaginary. Modern municipal local government has been introduced in the towns. There are also district boards. The district is the unit for police, medical and educational administration and the ordinary staff includes a District Superintendent of Police, a Civil Surgeon, who is also the Superintendent of Jail and a District Inspector of Schools. The Province forms a single educational circle and only possesses one forest division, that of Hazara. There are four divisions of the Roads and Building Branch of the Public Works Department, each under an Executive Engineer. The Irrigation Department of the P. W. D. is in charge of a Chief Engineer, Irrigation, who is also *ex-officio* Secretary to the Chief Commissioner. The administration of the civil police force of the districts is vested in an Inspector-General. There is a special force of Frontier Constabulary. The revenue and expenditure of the Province are wholly Imperial. Of the Agencies only Kurram and

Tochi Valley pay land revenue to the British Government. The revenue administration of all five administered districts is controlled by the Revenue Commissioner. For the administration of civil and criminal justice there are two Civil and Sessions divisions, each presided over by a Divisional and Sessions Judge. The Judicial Commissioner is the controlling authority in the Judicial branch of the administration, and his Court is the highest criminal and appellate tribunal in this Province. The principal officers in the present Administration are:—

Agent to the Governor General and Chief Commissioner, The Hon'ble Sir Alfred Hamilton Grant, K.C.I.E., C.S.I., I.C.S., (assumed charge, 10th September 1919).

Resident Waziristan, The Hon'ble Sir John Donald, K.C.I.E., C.S.I. (on leave).

Judicial Commissioner, F. P. Rennie, I.C.S.

Revenue Secretary, S. E. Pears, C.I.E., I.C.S.

Secretary to Chief Commissioner, E. H. Kealy, I.C.S.

Assistant Secretary to Chief Commissioner, J. R. Makeig-Jones, I.C.S.

Assistant Financial Secretary to Chief Commissioner, Bhai Sunder Singh.

Indian Personal Assistant to Chief Commissioner, Khan Bahadur Sadulla Khan.

Inspecting Officer Frontier Corps, Major A. C. Tancock, I.A.

Secretary, Public Works Department, Buildings and Roads Branch, Col. H. A. D. Fraser, R.E.

Secretary, Public Works Department, Irrigation Branch, F. W. Carne.

Chief Medical Officer, Lieut.-Col. J. H. Hugo, D.S.O., I.M.S.

Inspector-General of Police, E. W. Tomkins, O.B.E., (offg.)

Commandant, Frontier Constabulary, R. C. Boyle. Director of Public Instruction, C. E. W. Jones, M.A.

Superintendent, Archaeological Survey, H. Hargreaves; K. S. Mian Wasiuddin (offg.)

Divisional and Sessions Judges, Lieut.-Col. C. F. Minchin, D.S.O., I.A., (Derajat), T. B. Copeland, I.C.S., (Peshawar), Major R. A. Yule (Additional Sessions Judge, Peshawar).

Vice-President, Provincial Recruiting Board and Special Recruiting Officer, S. E. Pears, C.I.E.

Political Agents.

Major J. A. Brett, Dir, Swat and Chitral.

Major F. H. Humphrys, Khyber.

Major R. Garratt, Tochi.

Major R. J. W. Heale, Kurram.

Major C. G. Crosthwaite, O.B.E., Wana.

Deputy Commissioners.

Major G. F. W. Anson (offg.), Peshawar.

Major C. W. Prescott, Bannu.

C. Latimer, I.C.S., Dera Ismail Khan.

Major R. E. H. Griffith, C.I.E., Kohat.

J. H. R. Fraser, O.B.E., I.C.S., Hazara.

Former Chief Commissioners.

Lieut. Col. Sir Harold Deane, K.C.S.I., Died 7th July 1908.

Lieut.-Col. Sir George Roos-Keppel, G.C.I.E., K.C.S.I., to 9th September 1919.

Assam.

The Province of Assam, 61,682 square miles in area, includes the Assam Valley Division, the Surma Valley and Hills Division and the State of Manipur. It owes its importance to its situation on the north-east frontier of India. It is surrounded by mountainous ranges on three sides while on the fourth (the west) lies the Province of Bengal on to the plains of which debouch the two valleys of the Brahmaputra and the Surma which form the plains of Assam. These two valleys are separated from each other by the Assam Range, which projects westward from the hills on the eastern border.

Population.

The total population of the province in 1911 was 7,059,857, of whom $1\frac{1}{2}$ millions were Mahomedans, $3\frac{1}{2}$ millions Hindus and $1\frac{1}{2}$ millions Animists. 46 per cent. of the population speak Bengali, 22 per cent. speak Assamese; other languages spoken in the province are Hindi, Uriya and a great variety of languages classified under the general heading of the Tibeto-Chinese languages. Owing to the great areas of waste and rivers the density of the province is only 115, which, compared with that of most other parts of India, is low, but is more than double that of Burma.

Agricultural Products.

It has agricultural advantages for which it would be difficult to find a parallel in any part of India, climate, soil, rainfall and river systems all being alike favourable to cultivation. Rice is the staple food crop, nearly 5 million acres being devoted to this crop. In 1917-18 the outturn of rice was 1,584,924 tons. Except in the Himalayan Terai irrigation is unnecessary. Jute and tea are the most important crops grown for export; the area under jute in 1917-18 being 100,324 acres that under tea about 399,690 acres. The number of tea gardens in 796, the production being about 243 million lbs. Wheat and tobacco are also grown and about 30 square miles are devoted to sugarcane. The total area of 'reserved' forest is about 5,381 square miles and the unclassified state forests cover about 18,509 square miles.

Meteorological Conditions.

Rainfall is everywhere abundant, and ranges from 98 to 124 inches. The maximum is reached at Cherapunji in the Khasi Hills, which is one of the wettest places in the world, having a rainfall of 453 inches. The temperature ranges from 59° at Sibsagar in January to 84° in July. Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1897.

Land Tenures.

Most of the actual cultivators of the soil usually hold direct from the State, and the area of land on which rent is paid is inconsiderable. A large part of Goalpara and of the more densely populated portions of Sylhet was however included in the permanent settlement of Bengal; and the system of land tenure in Cachar, and the existence of large estates on privileged rates of revenue in Kamrup have tended to produce a tenant class which at the 1901 census amounted to more than one-third of the total number of persons supported by

agriculture. In the 1911 census a very marked increase in tenancy throughout the Province is shown.

The Assam Labour and Emigration (Amendment) Bill was passed on the 24th March 1915. The Act carries with it the abolition of the recruiting contractor and the creation of a Labour Bureau to supervise recruiting.

Mines and Minerals.

The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. The most extensive coal measures are in the Naga Hills district, where about 300,000 tons are raised annually and used mainly by the river steamers. Limestone is quarried in the Khasi and Jaintia Hills, in Sylhet, and in the Gare hills. Petroleum is worked only in Lakimpur.

An account of the petroleum occurrences in Assam was recently published in the memoirs of the Geological Survey of India. It states that the petroleum localities in this province are confined to a curved belt of country along the basins of the Brahmaputra and Surma. This belt is traceable over a distance of some 800 miles from N.E. Assam through Kachar and Chittagong to the Arakan coast, where it has a S.S.E. trend. It is roughly concentric with the trend of the Burmese oil belt, the distance between the two varying from 70 to 150 miles.

Manufactures and Trade.

Silk is manufactured in the Assam Valley, the weaving being done by the women. Cotton weaving is also largely practised by the women, and almost every house contains a loom; the cloth is being gradually displaced by imported goods of finer texture and colour. Boat building, brass and metal and earthenwares, tea manufacture and limestone burning are the other industries apart from agriculture, which itself employs about 84 per cent. of the population. Assam carries on a considerable trade with the adjoining foreign tribes and countries. The total value of imports during 1918-19 amounted to Rs. 8,88,200 against Rs. 16,79,915 in the previous year, showing a decrease of Rs. 7,91,715 or 47.1 per cent. The total value of exports was Rs. 9,56,243 against Rs. 16,54,952 in the preceding year, the decrease being Rs. 6,98,709 or 42.2 per cent. The value of the total trade with Bhutan was Rs. 10,49,577 during the year under report as against Rs. 26,50,290 in the preceding year. The exclusion of the trade registered at Tambulpur and the prevalence of influenza in the hills are mainly responsible for this decrease. The import trade of Bhutan declined from Rs. 13,79,665 to Rs. 5,61,228.

Communications.

The trade of Assam is chiefly carried by river, but increasing use is being made of the Assam Bengal Railway which runs from the port of Chittagong to Silchar at the eastern end of the Surma Valley. A branch of that line runs along the south of the Assam Valley from Gauhati to Tinsukia, a station on the Dibru-Sadiya Railway, and is connected with the Surma Valley branch by a line that pierces

the North Cachar Hills, the points of junction being Lumding in the northern and Badarpur in the southern valley. The Eastern Bengal State Railway connects Assam with the Bengal system *via* the valley of the Brahmaputra. The excellence of its water communication makes Assam less dependent upon roads than other parts of India; but in recent years the road system has been developed and there is a trunk road through the whole length of the Brahmaputra Valley and an excellent road from Gauhati to Shillong. A large fleet of steamers maintained by the India General Steam Navigation Company and the Rivers Steam Navigation Company plies on the rivers of both valleys. A daily service of passenger boats runs from Goalundo to Dibrugarh.

Finance.

The total revenue realised within the province during 1917-18 was Rs. 1,93,07,374, the imperial receipts being Rs. 62,10,543 and provincial receipts Rs. 1,30,96,831. An assignment of Rs. 18,43,724, which was made from imperial to provincial funds, brought the nett provincial income to Rs. 1,49,40,555. The imperial assignment being left out of account the provincial receipts expanded by Rs. 2,94,525. Receipts from land revenue owing to the recovery of large arrears of 1916-17 when suspensions of payment were necessitated by floods, increased by Rs. 2,71,507; those from forests by Rs. 1,61,334, and those from income-tax by Rs. 75,438. On the other hand, excise revenue fell by Rs. 1,67,248, and receipts from stamps and registration also declined in sympathy with general economic conditions. The total provincial expenditure was Rs. 1,43,29,234, rather over a lakh less than in 1916-17. The province commenced the year with a balance of Rs. 21,20,213 and closed it with one of Rs. 27,31,534.

Education.

There are in the Province at present 4,619 educational institutions including two Arts Colleges with 221,469 students. Of the total population 333,672 are returned as literate. The distribution of literacy naturally varies considerably throughout the Province. The large number of immigrant coolies and of aboriginal tribes tends to lower the proportion of literates in the Brahmaputra Valley, and a comparatively high standard of literacy in the Hills is due mainly to the progress of education amongst the Khasis of whom a large proportion have been converted to Christianity. Amongst the Animists in the Hills the Lushais seem to have an extraordinary keenness for learning, which is the more remarkable, because the administration of their district dates from quite recent times.

Administration.

The province of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1903, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912: the Eastern Bengal Districts were united with the Bengal Commissionerships

of Burdwan and the Presidency to form the Presidency of Bengal under a Governor-in-Council, Bihar, Chota Nagpur and Orissa were formed into a separate province, while the old Province of Assam was re-constituted under a Chief Commissioner.

The capital is Shillong, a town laid out with great taste and judgment among the pine woods on the slopes of the Shillong Range which rises to a height of 6,450 feet above the sea. It was destroyed in the earthquake of 1897 and has been rebuilt in a way more likely to withstand the shocks of earthquake.

Chief Commissioner, The Hon. Sir Nicholas Dodd Beatson Bell, K.C.I.E., C.S.I., appointed 1st April 1918.

Personal Asst., Captain H. R. Harington, I.A.

Chief Secretary, J. E. Webster, C.I.E.

Second Secretary, A. R. Edwards.

Secretary, Public Works Department, F. E. Bull.

Inspector General of Registration, S. N. Mackenzie, I.C.S.

Judges, Abdul Majid on leave, Henry Crawford Liddell.

Director of Public Instruction, J. R. Cunningham.

Inspector-General of Police, Lt.-Col. D. Herbert.

Sanitary Commissioner, Major T. C. M. Young, M.B., I.M.S.

Comptroller, Financial Department, Philip Gordon Jacob, B.A.

Political Agent in Manipur, Lieut.-Col. H. W. G. Coie.

Superintendent and Remembrancer of Legal Affairs, Abdul Majid, B.A.

Director of Land Records and Agriculture, J. McSwiney.

Senior Inspector of Factories, E. R. Powell.

LEGISLATIVE COUNCIL.

Lieut.-Col. D. Herbert, J. E. Webster, C.I.E., A. Mellor, Abdul Majid, Colonel J. Garvie, A. R. Edwards, O. H. Desenne, F. W. Sudmerson, Munshi Riaz Baksh, Rajendra Narayan Chaudhuri, Rai Nalini Kanta Ray Dastidar Bahadur, A. B. Hawkins and C. H. Holder.

Elected Members.

Rai Ghanasym Barua, Bahadur; Babu Ramani Mohan Das; R. St. J. Hickman; Maulvi Saiyid Abdul Majid, Khan Bahadur; Muhammad Bakht Mazumdar, Khan Bahadur; Maulvi Saiyid Muhammad Saadulla; H. B. Fox; A. L. Playfair; Rai Krishna Kumar Barua; Srijut Chandradhar Barua; and Rai Nagendra Nath Chaudhari, Bahadur.

Chief Commissioners of Assam.

Colonel R. H. Keatinge, C.S.I.	1874
Sir S. C. Bayle, K.C.S.I.	1878
C. A. Elliot, C.S.I.	1881
W. E. Ward	1883
Dennis Fitzpatrick, C.S.I.	1887
J. Westland, C.S.I.	1889
J. W. Quinton, C.S.I.	1889
Brig.-General Sir H. Collett, K.C.B.	1891
W. E. Ward, C.S.I.	1891
C. J. Lyall, C.S.I.	1894
H. J. S. Cotton, C.S.I.	1896
J. B. Fuller, C.I.E.	1900
J. B. Fuller, C.I.E.	1902
C. W. Bolton, C.S.I.	1903
<i>Note.</i> —The Chief Commissionership of Assam was revived 1st April 1912			
Sir Archdale Earle, K.C.I.F.	1912
Sir Nicholas Dodd Beatson Bell, K. C.I.E., C.S.I.	1918

Baluchistan.

Baluchistan is an oblong stretch of country occupying the extreme western corner of the Indian Empire. It is divided into three main divisions; (1) British Baluchistan with an area of 9,476 square miles consisting of tracts assigned to the British Government by treaty in 1879; (2) Agency Territories with an area of 44,345 square miles composed of tracts which have, from time to time, been acquired by lease or otherwise brought under control and placed directly under British officers; and (3) the Native States of Kalat and Las Bela with an area of 78,434 square miles. The Province embraces an area of 134,638 square miles and according to the census of 1911 it contains 834,703 inhabitants, divided roughly half and half between the administered districts and States.

The country, which is almost wholly mountainous, lies on a great belt of ranges connecting the Safed Koh with the hill system of Southern Persia. It thus forms a watershed the drainage of which enters the Indus on the east and the Arabian Sea on the south while on the north and west it makes its way to the inland lakes which form so large a feature of Central Asia. Rugged, barren, sun-burnt mountains, rent by high chasms and gorges, alternate with arid deserts and stony plains, the prevailing colour of which is a monotonous sight. But this is redeemed in places by level valleys of considerable size in which irrigation enables much cultivation to be carried on and rich crops of all kinds to be raised.

The political connection of the British Government with Baluchistan commenced from the outbreak of the First Afghan War in 1839; it was traversed by the Army of the Indus and was afterwards occupied until 1842 to protect the British lines of communication. The districts of Kachi, Quetta and Mastung were handed over to the Amir of Afghanistan and Political Officers were appointed to administer the country. At the close of the First Afghan War, the British withdrew and these districts were assigned to the Khan of Kalat. The founder of the Baluchistan Province as it now exists was Sir Roberts Sandeman who broke down the close border system and welded the Baluch and Brahui Chiefs into a close confederacy. In the Afghan War of 1879 Pishin, Sibi, Harnai and Thal-Chotiali were handed over by Yakub Khan to the British Government and retained at Sir Robert Sandeman's strenuous insistence.

Industries.

Baluchistan lies outside the monsoon area and its rainfall is exceedingly irregular and scanty. Shahrigh which has the heaviest rainfall, records no more than 11½ inches in a year. In the highlands few places receive more than 10 inches and in the plains the average rainfall is about 5 inches, decreasing in some cases to 3. The majority of the indigenous population are dependent for their livelihood on agriculture, provision and care of animals and transport. The Afghan and the Baluch, as

a rule, cultivate their own lands. The Brahuils dislike agriculture and prefer a pastoral life. Previous to the advent of the British life and property were so insecure that the cultivator was fortunate if he reaped his harvest. The establishment of peace and security has been accompanied by a marked extension of agriculture which accounts for the increase in the numbers of the purely cultivating classes. The Mekran Coast is famous for the quantity and quality of its fish and the industry is constantly developing. Fruit is extensively grown in the highlands and the export is increasing.

Education is imparted in 194 schools with 5,284 scholars. There is a distinct desire for education amongst the more enlightened headmen round about Quetta-Pishin and other centres where the Local Government with its officers stays at certain seasons, such as Sibi and Ziarat; but on the whole education or the desire of it has made little or no advance in the outlying districts. The mineral wealth of the Province is believed to be considerable, but cannot be exploited until railways are developed. Coal is mined at Khost on the Sind-Pishin railway and in the Bolan Pass. Chromite is extracted in the Quetta-Pishin District, but the industry awaits the extension of the railway from Khanai to Hindubagh for its adequate exploitation. Lime-stone is quarried in small quantities. An oil-prospecting licence has been granted by the Las Bela State to the Burma Oil Company.

Administration.

The head of the local administration is the officer styled Agent to the Governor-General and Chief Commissioner. Next in rank comes the Revenue Commissioner who advises the Agent to the Governor-General in financial matters and generally controls the revenue administration. The keynote of administration in Baluchistan is self-government by the tribesmen, as far as may be, by means of their Jirgas or Councils of Elders along the ancient customary lines of tribal law, the essence of which is the satisfaction of the aggrieved and the settlement of the feud, not retaliation on the aggressor or the vindictive punishment of a crime. The district levies which normally numbered 2,300 odd play an unobtrusive but invaluable part in the work of the Civil Administration not only in watch and ward and the investigation of crime, but also in the carrying of the mails, the serving of processes and other miscellaneous work. In addition to these district levies there are ordinarily three irregular Corps in the Province; the Zhub Militia (formerly known as the Zhub Levy Corps), the Makran Levy Corps, and the Chagai Levy Corps. Their combined strength in the latest returns was 953 cavalry and 892 infantry. The Province does not pay for itself and receives large subsidies from the Imperial Government. The receipts and expenditure roughly balance each other at 29 lakhs. The land revenue demanded is about Rs. 12 lakhs annually.

ADMINISTRATION.

Agent to the Governor-General and Chief Commissioner, The Hon'ble Lt. Col. A. B. Dew, C.S.I., C.I.E.

Offg. Revenue and Judicial Commissioner, Lt.-Col. A. D. G. Ramsay, C.I.E., O.B.E.

Secretary, Public Works Department, Brig.-General J. A. Dealy, C.M.G., D.S.O.

First Assistant to the Agent to the Governor-General and Secretary to the Chief Commissioner, Major R. H. Chenevix-Trench.

Political Agent, Zhob, Lieut.-Colonel A. L. Jacob, I.A.

Political Agent, Kalat and Bolan Pass, J. E. G. Acheson, I.C.S.

Assistant for Mekran to the Political Agent in Kalat and ex-officio Commandant, Mekran Levy Corps, C. H. Gidney, I.C.S.

Political Agent and Deputy Commissioner, Quetta, Lt.-Col. H. L. Stewart, C.I.E.

Assistant Political Agent and Assistant Commissioner, Quetta, T. H. Davies, I.C.S.

Political Agent, Chagai, Major W. G. Hutchinson, I.A.

Political Agent and Deputy Commissioner, Sibi, Captain H. C. Finnis.

Assistant Political Agent, Sibi, Captain C. E. U. Bremner.

Political Agent, Loralai, Major C. E. Bruce, I.A.

Residency Surgeon and Chief Medical Officer, Dr. S. Gaster.

Civil Surgeon, Sibi, J. A. Guizelar.

ANDAMAN AND NICOBAR ISLANDS.

This is a group of islands in the Bay of Bengal of which the headquarters are at Port Blair, by sea 780 miles from Calcutta, 740 miles from Madras and 360 miles from Rangoon, with which ports there is regular communication.

The land area of the islands under the administration is 3,143 square miles, namely, 2,508 square miles in the Andamans and 635 square miles in the Nicobars. The total population of the islands was returned in the census of 1911 as 26,459. The Islands are administered by the Chief Commissioner of the Andaman and Nicobar Islands who is also the Superintendent of the Penal Settlement. The penal settlement, which was established in 1858, is the most important in India.

Superintendent of Port Blair, Lieut.-Col. M. W. Douglas, C.I.E.

Acting Commandant and District Superintendent of Military Police, B. T. Roussac.

Medical Superintendent of Jails, and Senior Medical Officer, Major J. H. Murray, I.M.S.

COORG.

Coorg is a small petty Province in Southern India west of the State of Mysore. Its area is 1,582 square miles and its population 174,976. Coorg came under the direct protection of the British Government during the war with Sultan Tipu of Seringapatam. In May 1834, owing to misgovernment, it was annexed. The Province is directly under the Government of India and administered by the Chief Commissioner of Coorg who is the Resident in Mysore with his headquarters at Bangalore. In him are combined all the functions of a local government and a High Court. The Secretariat is at Bangalore where the Assistant Resident is styled Secretary to the Chief Commissioner of Coorg. In Coorg his chief authority is the Commissioner whose headquarters are at Mercara and whose duties extend to every branch of the administration. The chief wealth of the country is agriculture and especially the growth of coffee. Although owing to over-production and insect pests coffee no longer commands the profits it once enjoyed, the Indian output still holds its own against the severe competition of Brazil. The bulk of the output is exported to France.

Resident and Chief Commissioner, Coorg, H. V. Cobb, C.S.I., C.I.E., I.O.S.

AJMER-MERWARA.

Ajmer-Merwara is an isolated British Province in Rajputana. The Agent to the Governor-General in Rajputana administers it as Chief Commissioner. The Province consists of two small separate districts, Ajmer and Merwara, with a total area of 2,711 square miles and a population of 501,395. At the close of the Pindari war Daulat Rao Scindia, by a treaty dated June 25, 1818, ceded the district to the British. Fifty-five per cent. of the population are supported by agriculture, the industrial population being principally employed in the cotton and other industries. The principal crops are maize, millet, barley, cotton, oil-seeds and wheat.

Officiating Agent to the Governor-General in Rajputana and Chief Commissioner of Ajmer, Merwara, A. T. Holme.

Aden was the first new territory added to the Empire after the accession of Queen Victoria. Its acquisition in 1839 was the outcome of an outrage committed by the local Fadhli chief upon the passengers and crew of a British bug-galow wrecked in the neighbourhood. Various acts of treachery supervened during the negotiations regarding the bug-galow outrage and Aden was captured by a force sent by the Bombay Government under Major Baillie. The act has been described as one of those opportune political strokes which have given geographical continuity to British possessions scattered over the world.

Aden is an extinct volcano, five miles long and three broad, jutting out to sea much as Gibraltar does, having a circumference of about 15 miles and connected with the mainland by a narrow isthmus of flat ground. This is nearly covered at one part at high spring tides, but the causeway and aqueduct are always above, though sometimes only just above, water. The highest peak on the wall of precipitous hills that surrounds the old crater which constitutes Aden is 1,775 feet above sea level. Rugged spurs, with valleys between, radiate from the centre to the circumference of the crater. A great gap has been rent by some volcanic disturbance on the sea surface of the circle of hills and this opens to the magnificent harbour. The peninsula of Little Aden, adjacent to Aden proper, was obtained by purchase in 1868 and the adjoining tract of Shaikh Othman, 39 square miles in extent, was subsequently purchased when, in 1882, it was found necessary to make provision for an over-flowing population.

Attached to the settlement of Aden are the islands of Perim, an island of 5 square miles extent in the Straits of Bab-el-Mandeb, in the entrance to the Arabian Sea; Sokotra island, at the entrance to the Gulf of Aden, in the Arabian Sea, acquired by treaty in 1886 and 1,382 miles in extent; and the five small Kuria Muria islands, ceded by the Imam of Maskat in 1854 for the purpose of landing the Red Sea cable, and otherwise valuable only for the guano deposits found upon them. They are off the Arabian coast about two-thirds of the way from Aden to Maskat. The whole extent of the Aden settlement, including Aden, Little Aden, Shaikh Othman and Perim, and subject to post-war adjustments, is approximately 80 miles. The 1911 census showed Aden, with Little Aden, Shaikh Othman, and Perim to have a population of 46,165. The population of Perim is a matter of a few hundreds, largely dependent on the Coal Depot maintained there by a commercial firm. That of Sokotra is 12,000, mostly pastoral and migratory inland, fishing on the coast.

Strategic Importance.

Aden's first importance is as a naval and military station of strategic importance. This aspect was ably discussed by Colonel A. M. Murray, in his "Imperial Outposts." He points out that Aden is not a naval base in the same sense that Gibraltar, Malta and Hong Kong were made, but a *point d'appui*, a rendezvous and striking point for the fleet. It was seized in 1839 because of its usefulness as a harbour of refuge for British ships and from a strategist's point of view this is its primary purpose and the *raison d'être* of its forts and garrison. Aden under British rule has retained its ancient prestige as a fortress of impregnable strength,

invulnerable by sea and by land, dominating the entrance to the Red Sea, and valuable to its owners as a commercial emporium, a port of call and a cable centre. The harbour extends 8 miles from east to west and 4 from north to south and is divided into two bays by a spit of land. The depth of water in the western bay is from 3 to 4 fathoms, across the entrance 4½ to 5 fathoms, with 10 to 12 fathoms 2 miles outside. The bottom is sand and mud. There are several islands in the inner bay. Strategic control of the Red Sea was rendered complete by the annexation of Perim and Sokotra, which may both be regarded as outposts of Aden, and are under the political jurisdiction of the Resident.

The Arab chiefs of the hinterland of Arabia are nearly all stipendiaries of the British Government. Colonel Wahab and Mr. G. H. Fitzmaurice, of the Constantinople Embassy, were appointed in 1902 as Commissioners to delimitate the frontier between Turkish Arabia and the British protectorate around Aden. A convention was signed in 1905 settling details, the frontier line being drawn from Shaikh Murad, a point on the Red Sea coast opposite Perim, to the bank of the river Bana, the eastern limit of Turkish claims, at a point some 29 miles north-east of Dthala, and thence north-east to the great desert. The area left within the British Protectorate was about 9,000 square miles. The arrangement gave to Turkey Cape Bab-el Mandeb, which forms the Arabian bank of the eastern channel past Perim into the Red Sea. England took this gatepost of the Red Sea from the Turks in November 1914. A sanitorium and small British garrison used to be maintained at Dthala, which is 7,700 feet high, but the garrison was withdrawn in 1906, Lord Morley explaining this step as being in accordance with the policy stated in the House of Lords in 1903,—that His Majesty's Government had never desired to interfere with the internal and domestic affairs of the tribes on the British side of the boundary, but had throughout made it plain that they would not assent to the interference of any other Power with those affairs. Affairs in this respect have been disarranged considerably by the war.

British Policy.

There has been much criticism of a policy under which Aden has failed to advance with the same progressive strides which have marked the development of other British dependencies. It is said that the former Persian possessors of Aden built its wonderful water tanks, and the Arabs made an aqueduct 20 miles long, while the British have done nothing except mount guns to protect their coal yards. Trade, it is argued, flourishes because this is a natural emporium of commerce, but not because of the attention its needs get from Government. Lord Roberts, writing on this point a few years ago said: "It is not creditable to British rule to make use of a dependency like Aden for selfish purposes of political necessity without attempting to extend the benefits of civilised Government to the neighbouring native tribes, especially when those tribes are living under the aegis of the British Crown. The Persians, the Turks and even the Arabs did more for Aden in their time than we have done during our seventy years' occupation.....Aden has always suffered under the disadvantage of being an

appanage of the Bombay Presidency, with which it has neither geographical, racial nor political affinity. Probably the best solution of the matter would be to hand over the place to the Colonial Office, relieving the Government of Bombay of a charge which is only looked upon as an incubus." Some important steps have been taken in the past few years to satisfy the commercial needs of the port.

Trade.

The trade of Aden has developed immensely since British acquisition in 1839, largely through the Government of India declaring it a free port in 1850, since when it has attracted much of the valuable trade between Arabia and Africa, formerly monopolised by the Red Sea ports of Hodeida and Mokha. The opening of the Suez Canal was also responsible for a large increase of trade through Aden into the interior.

The total imports by sea in the last pre-war year amounted to £3,756,964, exclusive of treasure, and exports to £3,267,283 imports overland were £270,213 and exports £140,159, exclusive of treasure. The war practically overturned the overseas trade and some time must elapse before it can return to normal conditions. There has been a great increase of trade since the signing of the Armistice, but prices have so greatly risen that comparisons are difficult. Foreign trade in the official year 1918-19 amounted to £6,888,484 and Indian trade to £3,034,642, these amounts representing increases of £1,652,435 and £575,700 respectively. Land trade amounted to £121,533, a decrease of £8,547. Since the cessation of the hostilities on the Shaikh Othman front, the inland trade has increased by one thousand camel loads monthly. In March last the Aden Railway, running between Maa'la and Lahej, also began transporting goods.

Language.

The language of the settlement is Arabic, but several other Asiatic tongues are spoken. The population is chiefly returned as Arabs and Shaikhs. The Somalis from the African coast and Arabs do the hard labour of the port. So far as the settlement is concerned there are no products whatever, with the important exception of salt. The crops of the tribal low country adjoining are jowar, sesamum, a little cotton, madder, a bastard saffron and a little indigo. In the hills, wheat, madder, fruit, coffee and a considerable quantity of wax and honey are obtained. The water supply forms the most important problem. Water is drawn from four sources—wells, aqueducts, tanks or reservoirs and condensers.

Administration.

The Aden settlement was until 1918 subject politically to the Government of Bombay, but it has now been handed over to the Foreign Office. Its administration is conducted by a Resident, who is assisted by four Assistants. The Resident is also ordinarily military Commandant and has hitherto usually been an officer selected from the Indian army, as have his assistants. The Resident has jurisdiction as a Judge of the Vice-Admiralty Court in matters connected with slave trading, his court being called the Colonial Court of the Admiralty. The laws in force in the settlement are generally speaking those in force in the Bombay Presidency, supplemented on certain points by special regulations to suit local conditions. The management of the port is under the control of a Board of Trustees formed in 1888. The principal business of the Port Trust has been the deepening of the harbour, so as to allow vessels of all sizes to enter and leave at all states of the tide. The Aden police force numbers slightly over 200 men. There are hospitals and dispensaries in both Aden and Perim, in addition to the military institutions of this character. The garrison comprises a troop of engineers, three companies of garrison artillery, one battalion of British infantry, two companies of sappers and miners and one Indian regiment. Detachments from the last named are maintained at Perim and Shaikh Othman respectively.

The average temperature of the station is 87 degrees in the shade, the mean range being from 75 in January to 98 in June, with variations up to 102. The lulls between the monsoons, in May and September are very oppressive. Consequently, long residence impairs the faculties and undermines the constitution of Europeans and even Indians suffer from the effects of too long an abode in the settlement, and troops are not posted in the station for long periods, being usually sent there one year and relieved the next. But Aden is exceptionally free from infectious diseases and epidemics, and the absence of vegetation, the dryness of the soil and the purity of the drinking water constitute efficient safeguards against many maladies common to tropical countries. The annual rainfall varies from $\frac{1}{4}$ inch to 8 $\frac{1}{2}$ inches, with an irregular average of 3 inches.

The following are the principal officers of the present administration:—

Political Resident, Major-General James Marshall Stewart, C.B.

Assistant Residents, Major E. R. L. Browning (Perim), Major C. C. J. Barrett, Capt. A. W. T. Webb, Major B. R. Reilly and Captain H. M. Wightwick.

The area enclosed within the boundaries of India is 1,773,168 square miles, with a population of 315,132,537 of people—nearly one-fifth of the human race. But of this total a very large part is not under British Administration. The area covered in the Native States is 675,267 square miles with a population of seventy millions. The Native States embrace the widest variety of country and jurisdiction. They vary in size from petty states like Lawa, in Rajputana, with an area of 19 square miles, and the Simla Hill States, which are little more than small holdings, to States like Hyderabad, as large as Italy, with a population of thirteen millions. They include the inhospitable regions of Western Rajputana, Baroda, part of the Garden of India, Mysore, rich in agricultural wealth, and Kashmir, one of the most favoured spots on the face of the globe. In the case of 175 States control is exercised by the Government of India, and of about 500 by the Provincial Governments. The four principal states, Hyderabad, Mysore, Baroda and Kashmir, are in direct relation with the Government of India. The other States are grouped under the direction of an Agent to the Governor-General, as for Rajputana and Central India; in one case the Provincial Government has been compelled to group its States, those of Kathiawar, under an Agent to the Governor.

Relations with the Paramount Power.

So diverse are the conditions under which the Native States were established and came into political relation with the Government of India, that it is impossible even to summarise them. But broadly it may be said that as the British boundaries expanded, the states came under the influence of the Government and the rulers were confirmed in their possessions. To this general policy however there was, for a brief period, an important departure. During the regime of Lord Dalhousie the Government introduced what was called annexation through lapse. That is to say, when there was no direct heir, the Government considered whether public interests would be secured by granting the right of adoption. Through the application of this policy, the states of Satara and of Nagpur fell in to the East India Company, and the kingdom of Oudh was annexed because of the gross misgovernment of its rulers. Then came the Mutiny. It was followed by the transference of the dominions of the East India Company to the Crown, and an irrevocable declaration of policy toward the Native States. In the historic Proclamation of Queen Victoria it was set out that "We desire no extension of our present territorial possessions; and while we will permit no aggression on our dominions or our rights to be attempted with impunity, we shall allow no encroachments on those of others. We shall respect the rights, dignity and honour of the Native Princes as our own; and we desire that they, as well as our own subjects, should enjoy that prosperity and that social advancement which can only be secured by internal peace and good government." Since the issue of that proclamation there has been no encroachment on the area under Native rule by the Government of India. On the contrary the movement has been in the op-

posite direction. In 1881 the State of Mysore, which had been so long under British administration that the traditions of Native rule were almost forgotten, was restored to the old Hindu ruling house. In 1911 the Maharajah of Benares, the great taluqqar of Oudh, was granted ruling powers over his extensive possessions. On many occasions the Government of India has had to intervene, to prevent gross misgovernment, or to carry on the administration during a long minority; but always with the undeviating intention of restoring the territories as soon as the necessity for intervention passed. Almost all states possess the right of adoption in default of heirs.

Rights of Native States.

The rights and obligations of the Native States are thus described by the Imperial Gazetteer. The Chiefs have, without exception, gained protection against dangers from without and a guarantee that the protector will respect their rights as rulers. The Paramount Power acts for them in relation to foreign Powers and other Native States. The inhabitants of the Native States are the subjects of their rulers, and except in case of personal jurisdiction over British subjects, these rulers and their subjects are free from the control of the laws of British India. Criminals escaping to a Native State must be handed over to it by its authorities; they cannot be arrested by the police of British India without the permission of the ruler of the State. The Native Princes have therefore a suzerain power which acts for them in all external affairs, and at the same time scrupulously respects their internal authority. The suzerain also intervenes when the internal peace of their territories is seriously threatened. Finally they participate in all the benefits which the protecting power obtains by its diplomatic action, or by its administration of its own dominions, and thus secure a share in the commerce, the railways, the ports, and the markets of British India. Except in rare cases, applied to maritime states, they have freedom of trade with British India although they levy their own customs, and their subjects are admitted to most of the public offices of the British Government.

Obligations of Native States.

On the other hand the Native States are under an obligation not to enter into relations with foreign nations or other states; the authority of their rulers has no existence outside their territories. Their subjects outside their dominions become for all intents and purposes British subjects. Where foreign interests are concerned, the Paramount Power must act so that no just cause of offence is given by its subordinate allies. All Native States alike are under an obligation to refer to the British every question of dispute with other states. Inasmuch as the Native States have no use for a military establishment other than for police, or display, or for co-operation with the Imperial Government, their military forces, their equipment and armament are prescribed by the Paramount Power. Although old and unaltered treaties declare that the British Government will have no manner of concern with any of a Maharajah's dependents or servants, with respect to whom the Maharajah is absolute, logic and public opinion

have endorsed the principle which Lord Canning set forth in his minute of 1860, that the "Government of India is not precluded from stepping in to set right such serious abuses in a Native Government as may threaten any part of the country with anarchy or disturbance, nor from assuming temporary charge of a Native State when there shall be sufficient reason to do so." Of this necessity the Governor-General in Council is the sole judge, subject to the control of Parliament. Where the law of British India confers jurisdiction over British subjects or other specified persons in foreign territory, that power is exercised by the British courts which possess it. The subjects of European Powers and the United States are on the same footing. Where cantonments exist in Native territory, jurisdiction both over the cantonment and the civil station is exercised by the suzerain power.

Political Officers.

The powers of the British Government are exercised through Political Officers who as a rule reside in the states themselves. In the larger states the Government is represented by a Resident, in groups of states by an Agent to the Governor-General, assisted by local Residents or Political Agents. These officers form the sole channel of communication between the Native States and the Government of India and its Foreign Department, with the officials of British India and with other Native States. They are expected to advise and assist the Ruling Chiefs in any administrative or other matters on which they may be consulted. Political Agents are similarly employed in the larger States under the Provincial Governments, but in the petty states scattered over British India the duties of the Agent are usually entrusted to the Collector or Commissioner in whose district they lie. All questions relating to the Native States are under the special supervision of the Supreme Government, and in the personal charge of the Governor-General. A proposal has been made by the Government of India that, in view of the increasing importance of the Native States, an additional Secretary, styled the Political Secretary, shall be appointed, who shall be in special charge, under the Viceroy, of these questions.

Closer Partnership.

Events have tended gradually to draw the Paramount Power and the Native States into closer harmony. Special care has been devoted to the education of the sons of Ruling Chiefs, first by the employment of tutors, and afterwards by the establishment of special colleges for the purpose. These are now established at Ajmere, Rajkot, Indore and Lahore. The Imperial Cadet Corps whose headquarters are at Dehra Dun, imparts military training to the scions of the ruling chiefs and

noble families. The spread of higher education has placed at the disposal of the Native States the products of the Universities. In these ways there has been a steady rise in the character of the administration of the Native States, approximating more closely to the British ideal. Most of the Native States have also come forward to bear their share in the burden of Imperial defence. Following on the spontaneous offer of military assistance when war with Russia appeared to be inevitable over the Penjdeh incident in 1885, the states have raised a portion of their forces up to the standard of the Native troops in the Indian Army. These are termed Imperial Service Troops; they belong to the states, they are officered by Indians; but they are inspected by a regular cadre of British officers, under the general direction of the Inspector-General of Imperial Service Troops. Their numbers are approximately 22,000 men; their armament is the same as that of the Indian Army and they have done good service often under their own Chiefs, on the Frontier and in China and in Somaliland. Secure in the knowledge that the Paramount Power will respect their rights and privileges, the Ruling Chiefs have lost the suspicion which was common when their position was less assured, and the visits of the Prince of Wales in 1875, of the Prince and Princess of Wales in 1905-06, and of the King and Queen in 1911-12 have tended to seal the devotion of the great feudatories to the Crown. The improvement in the standard of native rule has also permitted the Government of India largely to reduce the degree of interference in the internal affairs of the Native States. The new policy was authoritatively laid down by Lord Minto, the then Viceroy, in a speech at Udaipur in 1909, when he said:—

"Our policy is with rare exceptions, one of non-interference in the internal affairs of the Native States. But in guaranteeing their internal independence and in undertaking their protection against external aggression it naturally follows that the Imperial Government has assumed a certain degree of responsibility for the general soundness of their administration and could not consent to incur the reproach of being an indirect instrument of misrule. There are also certain matters in which it is necessary for the Government of India to safeguard the interests of the community as a whole as well as those of the paramount power, such as railways, telegraphs and other services of an Imperial character. But the relationship of the Supreme Government to the State is one of suzerainty. The foundation-stone of the whole system is the recognition of identity of interests between the Imperial Government and Durbars and the minimum of interference with the latter in their own affairs."

HYDERABAD.

Hyderabad, the premier Native State in India, is in the Deccan. Its area is 82,698 square miles and population 13,374,676. The general physical characteristics of the State are an elevated plateau, divided geographically and ethnologically by the Manjra and Godavari rivers. To the North-West is the Trappean region, peopled

by Marathas, a country of black cotton soil, producing wheat and cotton. To the South-East is the granitic region of the Telugus and producing rice.

HISTORY.—In pre-historic times Hyderabad came within the great Dravidian zone. The date of the Aryan conquest is obscure, but the

dominions of Asoka 272 to 231 B.C. embraced the northern and western portions of the State. Three great Hindu dynasties followed, those of the Pallavas, Chalukyas and Yadavas. In 1294 the irruption of the Mahomedans under Ala-ud-din Khilji, commenced, and thenceforward till the time of Aurungzebe the history of the State is a confused story of struggles against the surviving Hindu kingdom of the South, and after the fall of Vijayanagar, with each other. Aurungzebe stamped out the remains of Mahomedan independence of the South, and set up his General, Asaf Jah, of Turcoman descent, as Viceroy, or Subhadar of the Deccan in 1713. In the chaos which followed the death of Aurungzebe, Asaf Jah had no difficulty in establishing and maintaining his independence, and thus founded the present House. During the struggle between the British and the French for mastery in India, the Nizam finally threw in his lot with the British, and unshaken even by the excitement of the mutiny, has been so staunch to his engagements as to earn the title of "Our Faithful Ally." The present ruler is His Exalted Highness Sir Usman Ali Khan Bahadur Fateh Jung, G.C.S.I.

THE BERARS.—A most important event in the history of the State occurred in November 1902, when the Assigned Districts of Berar were leased in perpetuity to the British Government. These districts had been administered by the British Government on behalf of the Nizam since 1853; under the treaties of 1853 and 1860, they were "assigned" without limit of time to the British Government to provide for the maintenance of the Hyderabad contingent, a body of troops kept by the British Government for the Nizam's use, the surplus revenues, if any, being payable to the Nizam. In course of time it had become apparent that the maintenance of the Hyderabad contingent on its old footing as a separate force was inexpedient and unnecessary, and that similarly the administration of Berar as a separate unit was very costly, while from the point of view of the Nizam, the precarious and fluctuating nature of the surplus was financially inconvenient. The agreement of 1902 re-affirmed His Highness' sovereignty over Berar, which instead of being indefinitely "assigned" to the Government of India, was leased in perpetuity to an annual rental of 25 lakhs (nearly £167,000); the rental is for the present charged with an annual debit towards the repayment of loans made by the Government of India. The Government of India were at the same time authorised to administer Berar in such manner as they might think desirable, and to redistribute, reduce, re-organise and control the Hyderabad Contingent, due provision being made, as stipulated in the treaty of 1853, for the protection of His Highness' dominions. In accordance with this agreement the Contingent ceased in March 1903 to be a separate force and was re-organised and redistributed as an integral part of the Indian Army, and in October 1903 Berar was transferred to the administration of the Chief Commissioner of the Central Provinces.

ADMINISTRATION.—The Nizam is supreme in the State and exercises the power of life and death over his subjects. The form of government was changed in 1919, an Executive Council being

established which consists of seven ordinary and one extraordinary members under a president Sir Syed Ali Imam, K.C.S.I. Below the Secretariat the State is divided into Subhas or Divisions, Districts and Talukas. Fifteen District, 88 Taluk and nine Divisional Boards are at work in the District. A Legislative Council, consisting of 23 members, of whom 12 are official and 11 non-official, is responsible for making laws. The State maintains its own currency, the Osmania Sica rupee with a subordinate coinage. In 1904 an improved Mahubia rupee was struck and this exchanges with the British rupee at the ratio of 115 or 116 to 100. It has its own postal system and stamps for internal purposes. It maintains its own Army, comprising 15,357 troops, of which 3,726 are classed as Regular and 11,631 as Irregular. There are in addition 1,264 Imperial Service Troops.

FINANCE.—After many vicissitudes, the financial position of the State is strong. For the year 1916-17 receipts amounted to Rs. 603 lakhs and expenditure to Rs. 568 lakhs. Under the latter heading must be noted His Exalted Highness' donation of £100,000 to the Admiralty for the anti-submarine campaign in addition to Rs. 3 lakhs per mensem as a war contribution.

PRODUCTION AND INDUSTRY.—The principal industry of the State is agriculture, which maintains 57·1 per cent. of the population. The common system of land tenure is ryotwari—As no reliable figures are available to show the gross produce it is impossible to say what proportion the land revenue bears to it, but it is collected without difficulty. The principal food crops are millet and rice; the staple money crops cotton, which is grown extensively on the black cotton soils, and oil-seeds. The State is rich in minerals. The great Warangal coal measures are worked at Singareni, but the efforts to revive the historic gold and diamond mines have met with very qualified success. The manufacturing industries are consequent on the growth of cotton, and comprise three spinning and weaving mills and ginning and pressing factories in the cotton tracts.

COMMUNICATIONS.—One hundred and thirty-seven miles of the broad gauge line from Bombay to Madras traverse the State. At Wadi, on this section, the broad gauge system of the Nizam's Guaranteed State Railway takes off, running East to Warangal and South-East toward Bezwada, a total length of 330 miles. From Hyderabad the metre gauge Godavari Railway runs North-West to Manmad on the Great Indian Peninsula Company's system 391 miles. There are thus 471 miles of broad gauge and 391 of metre in the State. The Barsi Light Railway owns a short extension to Latur. The roads are generally inferior.

EDUCATION.—The State maintains two Colleges. The Nizam College at Hyderabad (first grade) is affiliated to the Madras University. The Oriental College at Hyderabad prepares students for the local Moulvi and Munshi examinations. In 1916-17 the total number of educational institutions rose from 1,254 to 2,579, the number of primary schools in particular having been largely increased.

British Resident—Mr. C. L. S. Russell, I.C.S.

MYSORE.

The State of Mysore is surrounded on all sides by the Madras Presidency except on the north and north-west where it is bounded by the districts of Dharwar and North Canara respectively and towards the south-west by Coorg. It is naturally divided into two regions of distinct character; the hill country (the Malnad) on the west and the wide-spreading valleys and plains (the Maidan) on the east. The State has an area of 29,461 square miles excluding that of the Civil and Military Station of Bangalore and a population of 5,705,359, of whom over 92 per cent. are Hindus. Kanarese is the distinctive language of the State.

HISTORY.—The ancient history of the country is varied and interesting. Tradition connects the table-land of Mysore with many a legend enshrined in the great Indian epics, the Ramayana and the Mahabharata. Coming down to historical times, the north-eastern portion of the country formed part of Asoka's Empire in the third century B. C. Mysore then came under the rule of the Andhra dynasty. From about the third to the eleventh century A. D. Mysore was ruled by three dynasties, the north-western portion by the Kadambas, the eastern and northern portions by the Pallavas and the central and southern portions by the Gangas. In the eleventh century, Mysore formed part of the Chola dominion, but the Cholas were driven out early in the twelfth century by the Hoysalas, an indigenous dynasty with its capital at Halebid. The Hoysala power came to an end in the early part of the fourteenth century. Mysore was next connected with the Vijayanagar Empire. At the end of the fourteenth century, Mysore became associated with the present ruling dynasty. At first tributary to the dominant empire of Vijayanagar, the dynasty attained its independence after the downfall of Vijayanagar in 1565. In the latter part of the eighteenth century the real sovereignty passed into the hands of Haidar Ali and then his son Tippu Sultan. In 1799, on the fall of Seringapatam, the British Government restored the State comprised within its present limits, to the ancient dynasty in the person of Maharaja Sri Krishnaraja Wadiyar Bahadur III. Owing to the insurrections that broke out in some parts of the country, the management was assumed by the British Government in 1831. In 1881, the State was restored to the dynasty in the person of Sri Chamarajendra Wadiyar Bahadur under conditions and stipulations laid down in the Instruments of Transfer. That ruler, with the assistance of Mr. (afterwards Sir) K. Seshadri Iyer, K.C.S.I., as Dewan, brought Mysore to a state of great prosperity. He died in 1894 and was succeeded by the present Maharaja Sir Sri Krishnaraja Wadiyar Bahadur, G.C.S.I., who was installed in 1902. In November 1913, the Instrument of Transfer was replaced by a Treaty which indicates more appropriately the relation subsisting between the British Government and the State of Mysore.

ADMINISTRATION.—The city of Mysore is the capital of the State, but Bangalore City is the administrative head quarters. His Highness the Maharaja is the ultimate authority

in the State and the administration is conducted under his control, by the Dewan and four Members of the Council including the Extraordinary Member. The Chief Court consisting of three Judges is the highest judicial tribunal in the State. A Representative Assembly meets twice a year at Mysore—once in October during the Dasara and a second time during the latter part of April. In the October Session the Dewan presents to the Assembly an account of the Finances of the State of the preceding Official year and deals also with the more important administrative measures. Representations about wants and grievances are heard and discussed. In the April Session the Budget for the ensuing year is placed before the Assembly and its opinion invited. Such of the representations of the October Session as were not heard for want of time are taken up and discussed along with the fresh subjects brought up. There is also a Legislative Council consisting of 25 members, of whom 12 are officials, and 13 non-officials, eight elected and five nominated. The Council has been given the privileges of interpellation, discussion of the State budget and the moving of resolutions on matters other than the budget. All the important branches of the administration are controlled by separate heads of departments. For administrative purposes, the State is divided into 8 districts and subdivided into 68 talukas, each district being under a Deputy Commissioner and District Magistrate and each taluk under an Amildar and Subordinate Magistrate. The State maintains a military force of 3,883 including 925 in the Imperial Service Lancers and 748 in the Imperial Service Transport Corps, which are on active service.

The cash balance at the beginning of 1917-18 was 66 lakhs. Total receipts during the year 1917-18 were Rs. 315 lakhs and total disbursement 313. The principal revenue heads are:—Land Revenue Rs. 107 lakhs; Mining Royalty Rs. 16 lakhs; Forest revenue Rs. 44 lakhs; Excise Rs. 62 lakhs; Stamps Rs. 12 lakhs; Railways Rs. 14 lakhs and Electric Power Rs. 14 lakhs. Mysore pays an annual subsidy of Rs. 35 lakhs to the British Government besides contributing indirectly to the British Revenues under Customs and Salt.

ECONOMIC CONFERENCE.—The Mysore Economic Conference was organised in June 1911 with the object of creating and keeping alive public interest in matters connected with the economic progress of the State by a frequent interchange of views and discussions among those competent to deal with them and in order to associate men of enlightenment, public spirited citizens, prominent agriculturists, merchants and others with the officers of Government in such deliberations. The Conference meets annually at Mysore during the festivities in connection with His Highness the Maharaja's birthday. The Dewan is the President of the Conference. It has three Central Committees dealing with questions connected with Agriculture, Education and Industries and Commerce, and Committees for developing economic activities in local areas, such as districts, talukas and towns. Under the auspices of the Conference a monthly Journal

is issued in English and a weekly paper in Kannada, and bulletins on important subjects are periodically issued.

Agencies for carrying on the work of the Economic Conference in the interior of the State.

(1) There is a full time officer attached to each District, called the District Economic Superintendent, whose main duty is to study and investigate local conditions and organise economic activities in the District.

(2) A number of non-official gentlemen have been appointed Honorary Supervisors in Taluks to assist Taluk Progress Committees and other agencies connected with the Economic Conference in stimulating the activities of the people in the advancement of education, agriculture, industries and trade.

AGRICULTURE.—Nearly three-fourths of the population are employed in agriculture and the general system of land tenure is Ryotwari. The principal food crops are ragi, rice, jola, millets, gram and sugarcane and the chief fibres are cotton and san-hemp. Over 28,000 acres are under mulberry, the silk industry being the most profitable in Mysore next to gold mining. A Superintendent of Sericulture has recently been appointed, arrangements are being made for the supply of disease free seed and a central and 6 Taluka Popular Schools have been started. The Department of Agriculture which was recently reorganised on a large scale is popularising agriculture on scientific lines by means of demonstrations, investigations and experiments. There is one Central Farm at Hebbal to deal with all classes of crops and two others, one at Hiriur in connection with cotton and crops suited to localities where the rainfall is light and the other at Marathur in the region of heavy rainfall. A Sugarcane Farm has been opened under the new Krishnarajasagara works and Committees have been constituted in several districts for the development of the Sugarcane cultivation.

INDUSTRIES AND COMMERCE.—A Department of Industries and Commerce was organised in 1913 with a view to the development of Industries and Commerce in the State. Its main functions are stimulating private enterprise by the offer of technical advice and other assistance for starting new industries, undertaking experimental work for pioneering industries and developing existing industries and serving as a general bureau of information in industrial and commercial matters. A system of granting loans for the purchase of machinery and appliances has been introduced in the State. The manufacturing industries include two cotton mills, one woollen mill, nine cotton ginning mills, three cotton presses, and three silk filatures. There are also one oil mill, seventeen rice mills, nine sugar mills, sixteen brick and tile factories, one cigar factory, two tanneries, fifteen mechanical workshops, two distilleries, one silk reeling house, two flour mills, seven bone-crushing mills and coffee works, two dyeing factories, one hosiery, one brewery, one iron and brass foundry, one lacquer work factory, two taxidermic works, one saw-mill, one weaving factory, one Pharmaceutical work, one wood turning and one art Litho-

graphic press. In addition there are fifty-four pumping plants for irrigation. The Sandalwood Oil Factory started on an experimental basis is now working on a commercial scale. The factory at Mysore has also commenced operations on a large scale. Government have sanctioned a scheme for the manufacture of paper pulp from bamboos. Preliminary investigations have been completed for establishing wood distillation and iron works in the State and an agreement has been entered into with Messrs. Tata & Sons for working the Scheme. Local Syndicates have been formed at Davangere and Mysore for establishing cotton mills at those places. A button factory has just been started as well as a soap factory and a metal working factory. Concessions have been granted to a private gentleman in Mysore for the manufacture of matches as a home industry. An Arts and Crafts Depot has been opened to give special encouragement for inlay workers, sandalwood carvers and to those engaged in preparing high class silk, lace clothes and metal works. Home Industries Institutes have been established at Bangalore and Mysore. The establishment of a Central District and Commercial Museums at District Headquarters has been sanctioned. A Chamber of Commerce has been established at Bangalore with branches at important trade centres. The Department has been reconstituted so as to provide for a separate division for dealing solely with questions relating to commercial developments in the State.

BANKING.—In 1913, a State-aided bank called the Bank of Mysore was started with its headquarters in Bangalore and agencies at many of the important places in the State. Besides this there are two Provincial Banks, 2 District Banks, 15 Federal Banking Unions and 1,097 Co-operative Societies working with a total working Capital of Rs. 65'04 Lakhs.

COMMUNICATIONS.—The Railway system radiates from Bangalore, various branches of the Madras and Southern Mahratta Railway running through the State. The length of the lines owned by the State and worked under contract by the Company is 411'23 miles, of which 9'88 are of broad gauge and the rest metre gauge. The Kolar District Board Railway (63 miles) and the Bangalore-Chickballapur Light Railway (35 miles) both of 2'-6" gauge together with a tramway from Tarikere to Narasimharajapura (27 miles) 2 feet gauge have been opened and are being worked by State Agency.

Two lines, Chickjapur to Chitaldrug, 21 miles, metre-gauge, and Tadasa-Hebbe, 10 miles, 2 feet gauge, are under construction. Several other projects were under survey and investigation during the year and some of them are about to be taken up for construction in the near future.

EDUCATION.—A separate University for Mysore was established on the 1st July 1916. It is of the teaching and residential type composed of the Central College at Bangalore, and the Maharaja's College at Mysore, with headquarters at Mysore. An important feature is that the University course is one of three years, what corresponds to the first year in

other Universities being in the Collegiate High School which specially trains the students for one year to fit them for the University course. The two colleges are efficiently equipped and organised and there is a training college for men located at Mysore. There is also a college for women at Mysore, *i.e.*, the Maharani's College.

With the introduction of compulsory education in select towns and the increase in the number of village schools, primary education has during recent years made considerable advance. Schools have been started for imparting instruction in agricultural, commercial, engineering and other technical subjects. Adult education and vocational training have also been taken in hand. There were altogether in 1917-18, 9,633 public and 1,107 private educational institutions in the State. This gives one school to every 2.75 square miles of the area and to every 531 inhabitants.

PLACES OF INTEREST.—Mysore City, the capital, is a modern city laid out with fine roads and suburbs. The prominent buildings

are the Palace, the Chamarajendra Technical Institute, Government House, the Maharaja's College, the Maharani's College and the Oriental Library.

Bangalore, the largest city in the State and the commercial and manufacturing centre, stands on a table land, 3,000 feet above the sea and is noted for its salubrious climate and luxuriant gardens. The principal places of interest are the Public Offices, the Central College buildings, the Museum, the Lal Bagh, the Indian Institute of Science and the Indian Sanskrit Institute.

The historic town of Seringapatam, the famous Jog Falls, the Kolar Gold Fields, the Sivasamudram Falls, and Belur, Somnathpur and Halebid with their temples of exquisite architecture, are some of the other important places of interest in the State.

Resident in Mysore and Chief Commissioner of Coorg.—H. V. Cobb, C.S.I., C.I.E., I.C.S.

Dewan.—Sardar M. Kantaraja Urs, C. S. I.

BARODA.

The State of Baroda is situated partly in Gujarat and partly in Kathiawar. It is divided into four distinct blocks: (1) the southern district of Navsari near the mouth of the Tapi river, and mostly surrounded by British territory; (2) central district, North of the Narbada, in which lies Baroda, the capital city; (3) to the North of Ahmedabad, the district of Kadi; and (4) to the West, in the Peninsula of Kathiawar, the district of Amreli, formed of scattered tracts of land. The area of the State is 8,182 square miles; the population is over two millions, of whom over four-fifths are Hindus.

HISTORY.—The history of the Baroda State as such dates from the break-up of the Mughal Empire. The first Maratha invasion of Gujarat took place in 1705. In later expeditions Pilaji Gaikwar, who may be considered as the founder of the present ruling family, greatly distinguished himself. Songhad was the headquarters till 1766. Since 1723 Pilaji regularly levied tribute in Gujarat. His son Damaji finally captured Baroda in 1734, since when it has always been in the hands of the Gaikwars; but Mughal authority in Gujarat did not end until the fall of Ahmedabad in 1758, after which the country was divided between the Gaikwar and the Peshwa. In spite of the fact that Damaji was one of the Maratha chiefs defeated at Panipat by Ahmed Shah, he continued to add to his territory. He died in 1768, leaving the succession in dispute between two rival sons. He was succeeded in turn by his sons Sayaji Rao I, Fattesing Rao, Manaji Rao and Govind Rao. The last died in 1800, and was succeeded by Anand Rao. A period of political instability ensued which was ended in 1802 by the help

of the Bombay Government, who established the authority of Anand Rao at Baroda. By a treaty of 1805 between the British Government and Baroda, it was arranged *inter alia* that the foreign policy of the State should be conducted by the British, and that all differences with the Peshwa should be similarly arranged. Baroda was a staunch ally of the British during the wars with Bajji Rao Peshwa, the Pindari hordes and Holkar. But from 1820 to 1841, when Sayaji Rao II. was Gaikwar, differences arose between the two Governments, which were settled by Sir James Carnac, Governor of Bombay in 1841. Ganpat Rao succeeded Sayaji Rao in 1847. During his rule, the political supervision of Baroda was transferred to the Supreme Government. His successor Khande Rao, who ascended the *Gadi* in 1856, introduced many reforms. He stood by the British in the Mutiny. He was succeeded by his brother Malhar Rao in 1870. Malhar Rao was deposed in 1875 for "notorious misconduct" and "gross misgovernment," but the suggestion that he had instigated the attempt to poison Col. Phayre, the Resident, was not proved. Sayaji Rao III., a boy of 13 years of age, who was descended from a distant branch of the family, was adopted as heir of Khande Rao in 1875 and is the present Gaikwar. He was invested with full powers in 1881.

ADMINISTRATION.—An executive council, consisting of the principal officers of the State, carries on the administration, subject to the control of the Maharaja, who is assisted by a Dewan and other officers. A number of departments have been formed, which are presided over by officials corresponding to those in British India. The State is divided

into four *prants* each of which is subdivided into *Mahals* and *Peta Mahals* of which there are in all 42. Attempts have for some years been made to restore village autonomy, and village panchayats have been formed which form part of a scheme for local self-government. There is a Legislative Department, under a Legal Remembrancer, which is responsible for making laws. There is also a Legislative Council, consisting of nominated and elected members. A High Court at Baroda possesses jurisdiction over the whole of the State and hears all final appeals. From the decisions of the High Court, appeals lie in certain cases, to the Maharaja, who decides them on the advice of the Huzur Nyaya Sabha. The State Army consists of 5,084 Regular forces and 3,806 Irregular forces.

FINANCE.—In 1916-17, the total receipts of the State were Rs. 202 lakhs and the disbursements Rs. 189 lakhs. The principal Revenue heads were:—Land Revenue, Rs. 114 lakhs; Abkari, Rs. 26 lakhs; Opium, Rs. 5 lakhs; Railways, Rs. 11 lakhs; Interest Rs. 10 lakhs; Tribute from other States, Rs. 7 lakhs. British Currency was introduced in 1901.

PRODUCTION AND INDUSTRY.—Agriculture and pasture support 63 per cent. of the people. The principal crops are rice, wheat, gram, castor-oil, rapeseed, poppy, cotton, sun-hemp, tobacco, sugarcane, maize, and garden crops. The greater part of the State is held on *ryotwari* tenure. The State contains few minerals, except sandstone, which is quarried at Songar, and a variety of other stones which are little worked. There are 39 industrial or commercial concerns in the State registered under the State Companies' Act. There are four Agricultural Banks and 359 Co-operative Societies in the Baroda State.

COMMUNICATIONS.—The B. B. & C. I. Railway crosses part of the Navsari and Baroda *prants*,

and the Rajputana-Malwa Railway passes through the Kadi *prant*. A system of branch lines has been built by the Baroda Durbar in all the four *prants*, in addition to which the Lapti Valley Railway and the Baroda-Godhra Chord line (B. B. & C. I.) pass through the State. The Railways constructed by the State are about 500 miles in length and 93 miles are under construction. Good roads are not numerous.

EDUCATION.—The Education Department controls 3,113 institutions of different kinds, in 59 of which English is taught. The Baroda College is affiliated to the Bombay University. There are a number of high schools, technical schools, and schools for special classes, such as the jungle tribes and unclean castes. The State is "in a way pledged to the policy of free and compulsory primary education." It maintains a system of rural and travelling libraries. Ten per cent. of the population is returned in the census as literate. Total expense on Education is about Rs. 23 lakhs.

CAPITAL CITY.—Baroda City with the cantonment has a population of 99,345. It contains a public park, a number of fine public buildings, palaces and offices; and it is crowded with Hindu temples. The cantonment is to the North-west of the city and is garrisoned by an infantry battalion of the Indian Army. An Improvement Trust has been formed to work in Baroda City and has set itself an ambitious programme.

RULER.—His Highness Farzand-i-Khas-i, Dowlat-i-Englishia Maharaja Sir Sayaji Rao Gaekwar Sena Khas Khel, Samsher Bahadur, G.C.S.I., G.C.I.E., Maharaja of Baroda.

Offg. Resident—W. P. Barton, C.I.E.

Dewan—Manubhai N. Mehta, Esq., M.A., LL.B., C. S. I.

BALUCHISTAN AGENCY.

In this Agency are included the Native States of Kalat, Kharan and Las Bela. The Khan of Kalat is head of the Baluchistan tribal chiefs whose territories are comprised under the following divisions:—Jhalawan, Sarawan, Makran, Kachhi and Domki-Kaheri-Umrani. These districts form what may be termed Kalati Baluchistan, and occupy an area of 54,713 square miles. The inhabitants of the country are either Brahuis or Baluchis, both being Mahomedans of the Sunni sect. The country is sparsely populated, the total number being about 336,423. It derives its chief importance from its position with regard to Afghanistan on the north-western frontier of British India. The relations of Kalat with the British Government are governed by two treaties of 1854 and 1876, by the latter of which the Khan agreed to act in subordinate co-operation with the British Government. There are, however, agreements with Kalat in connection with the construction of the Indo-European telegraph, the cession of jurisdiction on the

railways and in the Bolan Pass, and the permanent leases of Quetta, Nushki and Nasirabad. The Khan is assisted in the administration of the State by a Wazir-i-Azam lent by the British Government. The Governor-General's Agent in Baluchistan conducts the relations between the Government of India and the Khan, and exercises his general political supervision over the district. The revenue of the State is about Rs. 12,14,000. The present Khan is, His Highness Beglar Begi Mir Sir Mahmud Khan of Kalat, G.C.I.E. He was born in 1864.

Kharan extends in a westerly and south-westerly direction from near Nushki and Kalat to the Persian border. Its area is 18,565 square miles; it has a population of 22,663 and an annual average revenue of about Rs. 1,00,000.

The present Chief, Sardar Bahadur Habibullah Khan, was born about 1897 and succeeded his father Sardar Yakub Khan in 1911, when the latter was murdered by his uncle Amir Khan. The State is divided into 13 Niabats

and the whole sources of income are entirely agricultural.

Las Bela is a small State occupying the valley and delta of the Purali river, about 50 miles west of the Sind boundary. Area 7,132 square miles; population 61,205, chiefly Sunni Mahomedans; estimated revenue about Rs. 3,85,000. The Chief of Las Bela, known as the Jam, is bound by agreement with the British Government to conduct the administration of his State in

accordance with the advice of the Governor-General's Agent. This control is exercised through the Political Agent in Kalat. The Jam also employs an approved Wazir, to whose advice he is subject and who generally assists him in the transaction of State business.

Agent to the Governor-General for Baluchistan:—Hon. Lt.-Col. A. B. Dew, C.S.I., C.I.E.

RAJPUTANA AGENCY.

Rajputana is the name of a great territorial circle with a total area of about 130,462 square miles, which includes 18 Native States, two chiefships, and the small British province of Ajmer-Merwara. It is bounded on the west by Sind, on the north-west by the Punjab State of Bahawalpur, on the north and north-east by the Punjab, on the east by the United Provinces and Gwalior, while the southern boundary runs across the central region of India in an irregular zigzag line. Of the Native States 17 are Rajput, 2 (Bharatpur and Dholpur) are Jat, and one (Tonk) is Mahomedan. The chief administrative control of the British district is vested *ex-officio* in the political officer, who holds the post of Governor-General's Agent for the supervision of the relations between the several Native States of Rajputana and the Government of India. For administrative purposes they are divided into the following groups:—Alwar Agency; Bikanir Agency, Eastern Rajputana Agency, 3 States (Bharatpur, Dholpur Karauli); Haraoti and Tonk Agency, 3 States (principal States Bundi and Tonk); Jaipur Residency, 3 States (principal State, Jaipur); Kotah and Jhalawar Agency, 2 States; Mewar Residency; Southern Rajputana States Agency, 4 States (principal State, Banswara); Western Rajputana States Agency; 3 States (principal States, Marwar and Sirohi).

The Aravalli Hills intersect the country almost from end to end. The tract to the north-west of the hills is, as a whole, sandy, ill-watered and unproductive, but improves gradually from being a mere desert in the far west to comparatively fertile lands to the north-east. To the south-east on the Aravali Hills lie higher and more fertile regions which contain extensive hill ranges and which are traversed by considerable rivers.

COMMUNICATIONS.—The total length of railways in Rajputana is 1,576 miles, of which 739 are the property of the British Government. The Rajputana-Malwa (Government) runs from Ahmedabad to Bandikui and from there branches to Agra and Delhi. Of the Native State railways the most important is the Jodhpur-Bikaner line from Marwar Junction to Hyderabad (Sind) and to Bikaner.

INHABITANTS.—Over 50 per cent. of the population are engaged in some form of agriculture; about 20 per cent. of the total population are maintained by the preparation and supply of material substances; personal and domestic service provides employment for about 5 per cent. and commerce for 2½ per cent. of the population. The principal language is Rajasthani. Among castes and tribes, the most numerous

are the Brahmans, Jats, Mahajans, Chamars, Rajputs, Minas, Gujars, Bhils, Malis, and Balais. The Rajputs are, of course, the aristocracy of the country, and as such hold the land to a very large extent, either as receivers of rent or as cultivators. By reason of their position as integral families of pure descent, as a landed nobility, and as the kinsmen of ruling chiefs, they are also the aristocracy of India; and their social prestige may be measured by observing that there is hardly a tribe or clan (as distinguished from a caste) in India which does not claim descent from, or irregular connection with, one of these Rajput stocks.

The population and area of the States are as follows:—

Name of State.	Area in square miles.	Population in 1911.
<i>Mewar Residency—</i>		
Udaipur	12,953	1,293,776
Banswara	1,946	165,463
Dungarpur	1,447	159,192
Partabgarh	886	62,704
<i>Western States Residency—</i>		
Jodhpur	34,963	2,057,553
Jaisalmer	16,062	88,311
Sirohi	1,964	189,127
<i>Jaipur Residency—</i>		
Jaipur	15,579	2,636,674
Kishangarh	858	87,191
Lawa	19	2,564
<i>Haraoti-Tonk Agency—</i>		
Bundi	2,220	218,730
Tonk	1,114	303,181
Shahpura	405	47,397
<i>Eastern States Agency—</i>		
Bharatpur	1,982	626,665
Dholpur	1,155	270,973
Karauli	1,242	156,786
<i>Kotah-Jhalawar Agency—</i>		
Kotah	5,684	639,089
Jhalawar	810	96,271
Bikaner	23,311	700,983
Alwar	3,141	791,688

Udaipur State (also called Meywar) was founded in about 646 A.D. The capital city is Udaipur, which is beautifully situated on the slope of a low ridge, the summit of which is crowned by the Maharajah's palaces, and to the north and west, houses extend to the banks of a beautiful piece of water known as the Pichola Lake in the middle of which stand two island palaces. It is situated near the terminus of the Udaipur-Chitor Railway, 697 miles north of Bombay. The present ruler is His Highness Maharajadhiraj Maharana Sir Fateh Singh Bahadur, G.C.S.I., G.C.I.E., who was born in 1849 and succeeded in 1884. He is the head of the Seesodia Rajputs and is the Premier Chief. The administration is carried on by the Maharana, assisted by two ministerial officers who form the chief executive department in the State. The revenue and expenditure of the State are now about 35 and 32 lakhs a year respectively. Udaipur is rich in minerals which are little worked. Its archaeological remains are numerous, and stone inscriptions dating from the third century have been found.

Banswara State, the southernmost in Rajputana, became a separate State about 1527. Towards the end of the eighteenth century Banswara became more or less subject to the Marathas, and paid tribute to the Raja of Dhar. In 1812 the Maharawal offered to become tributary to the British Government on condition of the expulsion of the Marathas, but no definite relations were formed with him till the end of 1818. The present ruler is His Highness Ray Rayan Maharawal Sri Prithi Singh Bahadur, who was born in 1888 and succeeded his father in 1913. The normal revenue is about 8 lakhs and the expenditure is nearly equal to the income. The area of the State is 1,946 square miles, and the population 187,468. His Highness is entitled to a salute of 15 guns.

Dongarpur State, with Banswara, formerly comprised the country called the Pagar. It was invaded by the Mahrattas in 1818. As in other States, inhabited by hill tribes, it became necessary at an early period of British supremacy to employ a military force to coerce the Bhills. The State represents the *Gadhi* of the eldest branch of the Sisodiyas and dates its separate existence from about the close of the 12th Century, when Mahup, the rightful heir to the Chittor Throne, migrated to these parts. The present Chief is His Highness Rai Rayan Maharawal Shri Lakshman Singhji born on 7th March 1908 and succeeded on 15th November 1918. His Highness being minor, the administration is carried on by the Executive Council of the State under the supervision of the Political Agent, Southern Rajputana States. No railway line crosses the territory, the nearest railway station, Udaipur, being 65 miles distant. Revenue a little above 5 lakhs.

Partabgarh State, also called the Kanthal, was founded in the sixteenth century by a descendant of Rana Mokul of Mewar. The town of Partabgarh was founded in 1698 by Partab Singh. In the time of Jaswant Singh (1775-1844), the country was overrun by the Marathas, and the Maharawal only saved his State by agreeing to pay Holkar a tribute of *Salim Shahi* Rs. 72,700, (which then being

coined in the State Mint was legal tender throughout the surrounding Native States) in lieu of Rs. 15,000 formerly paid to Delhi. The first connexion of the State with the British Government was formed in 1804; but the treaty then entered into was subsequently cancelled by Lord Cornwallis, and a fresh treaty, by which the State was taken under protection, was made in 1818. The tribute to Holkar is paid through the British Government, and in 1904 was converted to Rs. 30,350 British currency. The present ruler is His Highness Maharawal Sir Raghunath Singh Bahadur, K.C.I.E., who was born in 1859 and succeeded in 1890. The State is governed by the Maharawat with the help of the Heir-Apparent, and, in judicial matters, of a Committee of eleven members styled the Raj Sabha or State Council. Revenue about 4 lakhs; expenditure nearly 3½ lakhs. The financial administration is now under the direct supervision of the State.

Jodhpur State, the largest in Rajputana, also called Marwar, consists largely of desolate, sandy country. The Maharaja of Jodhpur is the head of the Rathor Clan of Rajputs and claims descent from Rama, the deified king of Ayodhya. The earliest known king of the clan lived in the sixth century from which time onwards their history is fairly clear. The foundation of Jodhpur dates from about 1212, and the foundations of Jodhpur City were laid in 1459 by Rao Jodha. The State came under British protection in 1818. In 1839 the British Government had to interfere owing to misrule, and the same thing occurred again in 1868. Jaswant Singh succeeded in 1873 and reformed the State. His son Sardar Singh was invested with powers in 1898, the minority rule having been carried on by his uncle Maharaja Sir Pratap Singh. He died in 1911 and was succeeded by his eldest son Maharaja Sumer Singh Bahadur, who was then 14 years of age. The administration of the State was carried on by a Council of Regency appointed by the Government, presided over by Major-General Maharaja Sir Pratap Singh, who abdicated the Gadi of Idar to carry on as Regent the reforms in Jodhpur which he had begun in the time of his nephew, Maharaja Sir Sardar Singh Bahadur. On the outbreak of the European War both the Maharaja and the Regent offered their services and were allowed to proceed to the Front. The young Maharaja was, for his services at the Front, honoured with an Honorary Lieutenantship in the British Army, and was invested with full ruling powers in 1916 and died on 3rd October 1918. He was succeeded by his younger brother Maharaja Umed Singhji Saheb Bahadur, who is a minor, the administration of the State being carried on by a Council of Regency presided over by Major-General H. H. Maharaja Sir Pratap Singhji Saheb Bahadur as before. Revenue 80 lakhs; expenditure 50 lakhs.

Jaisalmer State is one of the largest States in Rajputana and covers an area of 16,062 square miles. The Rulers of Jaisalmer belong to the Jadon clan and claim descent from Krishna. Jaisalmer City was founded in 1156, and the State entered into an alliance of perpetual friendship with the British Government in 1818. In 1844, after the British conquest of Sind the forts of Shabgarh, Garsia, and Ghotaru, which had

formerly belonged to Jaisalmer, were restored to the State. The present Ruling Prince is His Highness Maharajahdiraja Maharawal Shri Jawaharsinghi Bahadur. Revenue about four lakhs.

Sirohi State is much broken up by hills of which the main feature is Mount Abu, 5,650 feet. The Chiefs of Sirohi are Deora Rajputs, a branch of the famous Chauhan clan which furnished the last Hindu kings of Delhi. The present capital of Sirohi was built in 1425. The city suffered in the eighteenth century from the wars with Jodhpur and the depredations of wild Mina tribes. Jodhpur claimed suzerainty over Sirohi but this was disallowed and British protection was granted in 1823. The present ruler is His Highness Maharajah Dhiraj Maharao Sir Kesri Singh Bahadur, G.C.I.E., K.C.I.E. The State is ruled by the Maharao with the assistance of a Musahib Ala who is the heir apparent and other officials. Revenue about 8 lakhs; expenditure 7 lakhs.

Jaipur State is the fourth largest in Rajputana. It consists, for the most part, of level and open country. The Maharaja of Jaipur is the head of the Kachwaha clan of Rajputs, which claims descent from Kusa, the son of Rama, king of Ajodhya, and the hero of the famous epic poem the Ramayana. The dynasty in Eastern Rajputana dates from about the middle of the twelfth century, when Amber was made the capital of a small State. The Chiefs of that State acquired fame as generals under the Mughals in later centuries, one of the best known being Sawai Jai Singh in the eighteenth century who was remarkable for his scientific knowledge and skill. It was he who moved the capital from Amber and built the present city of Jaipur and elevated the State above the principalities around. On his death a part of the State was annexed by the Jats of Bharatpur and internal disputes brought Jaipur to great confusion. British protection was extended to Jaipur in 1818, but the State continued to be disturbed and a Council of Regency was appointed, which governed up to 1851, when Maharaja Ram Singh assumed full powers. He nominated as his successor Kaim Singh who succeeded in 1880, under the name of Sawai Madho Singh II, and is the present ruler. He was born in 1861, and, in consideration of his youth, the administration was at first conducted by a Council under the joint presidency of the Maharaja and the Political Agent. He was invested with full powers in 1882. In 1887, his salute was raised from 17 to 19 guns as a personal distinction, followed in 1896 by two additional guns. In 1888 he was created a G.C.S.I. In 1901 a G.C.I.E., and in 1903 a G.C.V.O. In 1904 he was made honorary colonel of the 13th Rajputs, and in 1911 a Major General. In 1908 he was presented with the Honorary degree of LL.D. of Edinburgh University and in 1912, made a Donat of the Order of the Hospital of St. John of Jerusalem. He was made a G.B.E. in 1918. Among important events of His Highness's rule may be mentioned the raising of the Imperial Service Transport Corps in 1889-90; the construction of numerous irrigation works, hospitals and dispensaries; and the gift of 25 lakhs as an endowment to the Indian People's Famine Relief Trust. His Highness has contributed about 14 lakhs to various War funds, and 10 machine guns as a thank-offering

for the recovery of H. M. the King from his accident in France. Jaipur City is the largest town in Rajputana and is one of the few eastern cities laid out on a regular plan. It contains, in addition to the Maharaja's Palace, many fine buildings. The administration of the State is carried on by the Maharaja assisted by a Council of ten members. The military force consists of an Imperial Service Transport Corps which has twice served in Frontier campaigns and in the present war, and about 5,000 infantry, 700 cavalry and 860 artillerymen. The normal revenue is about 65 lakhs; expenditure about 59 lakhs.

Kishangarh State is in the centre of Rajputana and consists practically of two narrow strips of land separated from each other; the northern mostly sandy, the southern generally flat and fertile. The Chiefs of Kishangarh belong to the Rathor clan of Rajputs and are descended from Raja Udai Singh of Jodhpur, whose second son founded the town of Kishangarh in 1611. The State was brought under British protection in 1818. After various disputes necessitating British mediation, the State entered into good hands and was well ruled during the latter part of the nineteenth century. The present ruler is Lieut.-Colonel His Highness Maharajahdiraj Sir Madan Singh Bahadur, K.C.S.I., K.C.I.E., Umdai Rajhai-Buland Makan, who was born in 1884 and was invested with powers in 1905. He administers the State with the help of a Council of two members. His Highness served in France in 1914-15 and was mentioned in despatches by Field-Marshal Lord French. Revenue 5·7 lakhs; Expenditure 4·6 lakhs.

Lawa State, or takurat, of Rajputana is a separate chiefship under the protection of the British Government and independent of any Native States. It formerly belonged to Jaipur and then became part of the State of Tonk. In 1867, the Nawab of Tonk murdered the Thakur's uncle and his followers, and Lawa was then raised to its present State. The Thakurs of Lawa belonged to the Naruka sept of the Kachwaha Rajputs. The present Thakur, Mangal Singh, was born in 1873, and succeeded to the estate in May, 1892. Revenue about Rs. 11,000.

Bundi State is a mountainous territory in the south-east of Rajputana. The Chief of Bundi is the head of the Hara sept of the great clan of Chauhan Rajputs and the country occupied by this sept has for the last five or six centuries been known as Haraoti. The State was founded in the early part of the thirteenth century and constant feuds with Mewar and Malwa followed. It threw in its lot with the Mahomedan emperors in the sixteenth century. In later times it was constantly ravaged by the Marathas and Pindaries and came under British protection in 1818 at which time it was paying tribute to Holkar. The present ruler of this State—which is administered by the Maharao Raja and a Council of 8 in an old-fashioned but popular manner—is His Highness Maharao Raja Sir Raghbir Singh Bahadur, G.C.I.E., G.C.V.O., G.C.S.I. He was born in 1869 and succeeded in 1889. Revenue about 10 lakhs; Expenditure 9·6 lakhs.

Tonk State—Partly in Rajputana and partly in Central India, consists of six districts separated from each other. The ruling family

belongs to the Salarzai Clan of the Bunerwal tribe. The founder of the dynasty was Amir-ud-Dowla Nawab Mahomed Amir Khan Bahadur, General of the Army collected at the end of the eighteenth century. The foundation of the State was laid down in the year 1817. His grandson was deposed. The present ruler of the State is His Highness Amir-ud-Dowla Wazirul Mulk Nawab Sir Hafiz Muhammad Ibrahim Ali Khan Bahadur, G.C.I.E., G.C.S.I. The administration is conducted by the Nawab and a Council of three members. Revenue 17 lakhs; Expenditure 16 lakhs.

Shahpura Chiefship is a small pastoral State. The ruling family belongs to the Seesodia clan of Rajputs. The Chiefship came into existence about 1629, being a grant from the Emperor Shah Jahan to one Sujan Singh. The present Chief is Sir Nahar Singh, K.C.I.E., who succeeded by adoption in 1870 and received full powers in 1876. In addition to holding Shahpura by grant from the British Government the Raja Dhiraj possesses the estate of Kachhola in Udaipur for which he pays tribute and does formal service as a great noble of that State. Revenue 3 lakhs; Expenditure 2·6 lakhs.

Bharatpur State.—Consists largely of an immense alluvial plain, watered by the Banganga and other rivers.

The present ruling family are Jats, of the Sinsinawal clan who trace their pedigree to the eleventh century. The Bharatpur ruling family is of the Sinsinawal clan named so after their old village Sinsini. Bharatpur was the first State in Rajputana that made alliance with the British Government in 1803, helped Lord Lake with 5,000 horse in his conquest of Agra and battle of Laswari wherein the Maratha power was entirely broken and received 5 districts as reward for the service. In 1804, however, Bharatpur sided with Jaswant Rao Holkar against the Government which resulted in a fight with the Government. Peace was re-established in 1805 under a treaty of alliance and it continues in force. The State, being usurped by Durjan Sal in 1825, the British Government took the cause of the rightful heir Maharaja Balwant Singh Sahab. Bharatpur was besieged by Lord Combermere, and as the faithful subjects almost all joined the British Army, the result could not be otherwise than capture of the Capital and restoration of the State to its rightful owner. Bharatpur rendered valuable service to the British Government during the Mutiny. The present Chief is a minor, Maharaja Sawai Kishen Singh Bahadur, who was born in 1899 and succeeded in the following year his father Ram Singh, who was deposed. The administration is carried on by a Council of four Members presided over by a Political Agent. Revenue 32 lakhs. Expenditure 31 lakhs.

Dholpur State, the easternmost State in Rajputana, has changed hands an unusual number of times. It was occupied by the British in 1803 and restored to the Gwalior Chief who formerly owned it, but by a fresh arrangement of 1805 it was constituted a State with other districts and made over to Maharaj Rana Kirat Singh, in exchange for his territory of Gohad which was given up to Sindhia. The ruling family are Jats of the Bamraolia clan, the

latter name being derived from a place near Agra where the family held land in the twelfth century. The present chief—who is assisted in the administration by three Ministers—is H. H. Maharaj Rana Sir Udaibhan Singh Lokinder Bahadur. He was born in 1893 and succeeded in 1911. He was created a K.C.S.I. in January 1918. Revenue 15 lakhs; Expenditure 12 lakhs.

Karauli State is a hilly tract in Eastern Rajputana, of which the ruler is the head of the Jadon clan of Rajputs who claim direct descent from Krishna and were at one time very powerful. On the decline of the Mughal power the State was subjugated by the Marathas, but by the treaty of 1817 it was taken under British protection. Its subsequent history is of interest chiefly for a famous adoption case, in 1852. The present ruler is H. H. Maharaja Sir Banwar Pal Deo Bahadur, G.C.I.E., who was born in 1864, installed in 1889, and invested with powers in 1889. He is assisted by a council of two members. Revenue 6 lakhs; Expenditure 5 lakhs.

Kotah State belongs to the Hara sect of the clan of Chauhan Rajputs, and the early history of their house is, up to the 17th century, identical with that of the Bundi family from which they are an offshoot. Its existence as a separate State dates from 1625. It came under British protection in 1817. The present ruler is H. H. Lieut.-Colonel Maharaja Sir Umed Singh Bahadur, G.C.S.I., G.C.I.E., G.B.E., who was born in 1873 and invested with full powers in 1896. In administration he is assisted by a Diwan (Dewan Bahadur Chaube Raghunath Das, C.S.I.) The most important event of his rule has been the restoration, on the deposition of the late chief of the Jhalawar State, of 15 out of the 17 districts which had been ceded in 1838 to form that principality. Revenue 46 lakhs; Expenditure 42 lakhs.

Jhalawar State (for history see under Kotah) consists of two separate tracts in the south-east of Rajputana. The ruling family belongs to the Jhala clan of Rajputs. The last ruler was deposed for misgovernment in 1896, part of the State was reassigned to Kotah, and Kunwar Bhawani Singh, son of Thakur Chhatarsalji of Fatehpur, was selected by Government to be the Chief of the new State. He was born in 1874 and was created a K.C.S.I. in 1908. He is assisted in administration by a Council, has established many useful institutions, and has done much to extend education in the State. Revenue 6 lakhs.

Bikaner State, the second largest in Rajputana, consists largely of sandy and ill-watered land. It was founded by Bika, a Rathor Rajput, the sixth son of a Chief of Marwar, in the 15th century. Rai Singh, the first Raja, was one of Akbar's most distinguished generals, and built the main fort of Bikaner. Throughout the 18th century there was constant fighting between Bikaner and Jodhpur. In 1818 the Maharaja invited the assistance of British troops to quell a rebellion, and subsequently a special force had to be raised to deal with the dacoits on the southern borders of the State. The Thakurs of the State continued to give trouble up to the eighties. The present Ruler is Major-General H. H. Maharajah Sri Sir

Ganga Singhji Bahadur, G.C.S.I., G.C.I.E., A.D.C. to the King, who was born in 1880 and invested with full powers in 1898. He raised an Imperial Service Camel Corps which served in China and Somaliland, and His Highness served in the former campaign himself, being mentioned in despatches. In 1900 he was awarded the first class Kaisar-i-Hind medal for the active part he took in relieving the great famine of 1899-1900. He is an honorary LL.D. of Cambridge. In administration His Highness is assisted by five secretaries, to each of whom are allotted certain departments; and there is a council of five members which is primarily a judicial body, but is consulted in matters of importance. The revenue of the State is now about sixty lakhs; there are no debts. A coal mine is worked at Palana, 14 miles south of the capital.

Alwar State is a hilly tract of land in the East of Rajputana. Its Rulers belong to the Lalawat Naruka branch of the Kuchhwaha Kshatrias, Solar Dynasty. This ruling family is descended from Raja Udai Karan, who was the common ancestor of both Alwar and Jaipur. The State was founded by Pratab Singh, who before his death in 1791 had secured possession of large portions of the Jaipur State. His successor sent a force to co-operate with Lord Lake in the war of 1803 and an alliance was concluded with him in that year, when the boundaries of the State as now recognised were fixed. Various rebellions and disputes about succession mark the history of the State during the earlier part of the nineteenth century. The

present chief, H. H. Lt.-Col. Sewai Maharaja Sir Jey Singhji Bahadur, K.C.S.I., K.C.I.E., who was born in 1882, succeeded his father in 1892 and was invested with powers in 1903. He carries on the administration with the assistance of a Council of four Ministers, Members of His Highness' Council and various heads of departments. The normal revenue and expenditure are about Rs. 32 lakhs a year. The State maintains an Imperial service of cavalry, another of infantry, and an irregular force. The late Maharaja was the first chief in Rajputana to offer (in 1888) aid in the defence of the Empire. The capital is Alwar on the Rajputana-Malwa Railway, 98 miles south-west of Delhi.

CENTRAL INDIA AGENCY.

Central India is the name given to the country occupied by the Native States grouped together under the supervision of the Political Officer in charge of the Central India Agency. These States lie between 21° 24' and 26° 32' N. lat. and between 74° 0' and 83° 0' E. long. The British districts of Jhansi and Lalitpur divide the agency into two main divisions—Bundelkhand and Baghelkhand lying to the east, and Central India proper to the west. The total area covered is 78,772 square miles, and the population (1911) amounts to 93,980. The great majority of the people are Hindus. The principal States are eight in number—Gwalior, Indore, Bhopal, Rewa, Dhar, Jaora, Datia and Orcha of which two, Bhopal and Jaora, are Mahomedan and the rest are Hindu. Besides these there are a multitude of petty States held by their rulers under the immediate guarantee of the British Government, but having feudal relations with one or other of the larger States. The total number of States amounts to 153. For administrative purposes they are divided into the following groups: Baghelkhand Agency, 12 States (principal State Rewa); Bhopal Agency, 19 States (principal Bhopal) State Bhopawar Agency, 21 States (principal State Dhar); Bundelkhand Agency, 22 States (principal States, Datia and Orcha); Gwalior Agency, 32 States (principal State, Gwalior); Indore Residency, 9 States (principal State, Indore); Malwa Agency, 38 States (principal State, Jaora). The Agency may be divided into three natural divisions, the plateau, lowlying, and hilly. The plateau tract includes the Malwa

plateau, the Highland tract stretching from the great wall of the Vindhya to Marwar, the land of open rolling plains. The lowlying tract embraces Northern Gwalior and stretches across into Bundelkhand and Baghelkhand up to the Kaimur Range. The hilly tract lies along the ranges of the Vindhya and the Satpuras. There agriculture is little practised, the inhabitants being mostly members of the wild tribes. The territories of the different States are much intermingled, and their political relations with the Government of India and each other are very varied. Eleven Chiefs have direct treaty engagements with the British Government.

The following list gives the approximate size, population and revenue of the eight principal States above mentioned:—

Name.	Area in square miles.	Population.	Revenue.
			Rs. lakhs.
Gwalior ..	25,133	3,102,279	140
Indore ..	9,506	1,007,856	70
Bhopal ..	6,902	730,383	30
Rewah ..	13,000	1,514,843	53
Dhar ..	1,783	154,070	9
Jaora ..	568	75,951	8
Datia ..	911	154,603	9
Orcha ..	2,079	330,032	11

Gwalior.—The house of Scindia traces its descent to a family of which one branch held the hereditary post of patel in a village near Satara. The head of the family received a patent of rank from Aurangzeb. The founder of the Gwalior House was Ranoji Scindia who is said to have been a personal attendant on the Peshwa Bajji Rao. In 1726 together with Malhar Rao Holkar, the founder of the house of Indore, he was authorised by the Peshwa to collect revenues and he fixed his headquarters at the ancient city of Ujjain, which became the capital of the Scindia dominions. Gwalior subsequently played a leading part in shaping the history of India. The reverses which Scindia's troops met with at the hands of the British in 1778 and 1780 led to the treaty of Salbai (1782), which made the British arbiters in India and recognised Scindia as an independent Chief and not as a vassal under the Peshwa. Subsequently Scindia's military power, developed by the French Commander DeBoigne, was completely destroyed by the British victories of Ahmednagar, Assaye, Asirgarh and Laswari.

The present ruler is Major-General H. H. Maharaja Sir Madho Rao Alijah Bahadur Scindia, G.C.V.O., G.C.S.I., A.D.C. to the King. He succeeded in 1886 and obtained powers in 1894. In 1901 he went to China during the war; he holds the rank of honorary Major-General of the British Army and the honorary degrees of LL.D., Cambridge, and D.C.L., Oxon. He is also a Donat of the Order of St. John of Jerusalem in England. The administration is controlled by the Maharaja assisted by five members of the Majlis-i-khas.

The northern part of the State is traversed by the G. I. P. Railway and two branches run from Bhopal to Ujjain and from Bina to Baran. The Gwalior Light Railway runs for 250 miles from Gwalior to Bhind, from Gwalior to Sheopur and from Gwalior to Sipri. The main industries are cotton ginning, which is done all over the State; fine muslins made at Chanderi, leather work, etc. The State maintains three regiments of Imperial Service Cavalry, two battalions of Imperial Service Infantry and a transport corps. Lashkar, the capital city, is two miles to the south of the ancient city and the fort of Gwalior. Annual expenditure 144 lakhs.

Indore.—The Holkars of Indore belong to the shepherd class, the founder of the house, Malhar Rao Holkar, being born in 1693. His soldierly qualities brought him to the front under the Peshwa, who took him into his service and employed him in his conquests. When the Maratha power was broken at the battle of Panipat, in 1761, Malhar Rao had acquired vast territories stretching from the Deccan to the Ganges. He was succeeded by a lunatic grandson who again was succeeded by his mother, Ahilya Bai, whose administration is still looked upon as that of a model ruler. Disputes as to the succession and other causes weakened this powerful State, and, when it assumed a hostile attitude on the outbreak of war in 1817 between the British and the Peshwa, Holkar was compelled to come to terms. The Treaty of Mandasari in 1818 still governs the regulations existing between the State and the British Government. In the mutiny of 1857, when Holkar was unable to control his troops he personally gave every possible assistance to the authorities at Mhow,

In 1903 Sivaji Rao, who died in 1908, abdicated in favour of his son, His Highness Maharaja Tukoji Rao Holkar, the present ruler, who was born in 1890, and was formally invested with ruling powers in November 1911. In the administration His Highness is assisted by his Chief Minister and a Council of 5 Ministers. The State Army consists of 519 Imperial Service Troops and 1,629 State forces. The capital is Indore City on the Ajmer-Khandwa Section of the Rajputana-Malwa Railway. The ordinary revenue is estimated at Rs. 85 lakhs.

Bhopal.—The principal Mussalman State in Central India, ranks next in importance to Hyderabad among the Muhammadan States of India. The ruling family was founded by Dost Mohammed Khan, a Tirah Afghan in the service of Aurangzeb. He was nominated Governor of the Bairasia Ilaka and succeeded in establishing eventually his independent authority in Bhopal and its neighbourhood. In the early part of the 19th century, the Nawabs successfully withstood the inroads of Scindia and Bhonsia and by the agreement of 1817 Bhopal undertook to assist the British with a contingent force and to co-operate against the Pindari bands.

The present Ruler of the State, Her Highness Nawab Sultan Jahan Begum, C. I., G.C.S.I., G.C.I.E., G.B.E., is the third in the successive line of lady-rulers, who have ruled the destinies of the State with marked ability. Having succeeded in 1901, she personally conducts, and has introduced a number of reforms in, the administration of her State. Her eldest son, Hon. Colonel Nawab Mahommed Nasrullah Khan, controls the Forest Department and her second son Hon. Major Nawabzada Mahommed Obaidullah Khan, C.S.I., who holds the rank of Brig.-Genl. in the State Army, is the Commander-in-Chief of the State Forces, while the youngest Nawabzada Mahommed Hamidullah Khan, B.A. and Hon. Major in the Bhopal Army, is the head of her Highness' Secretariat. The State maintains one regiment each of Imperial Service Cavalry and Infantry. The Capital, Bhopal City, on the northern bank of an extensive lake is situated at the junction of the G. I. P. Ry. with the Bhopal Ujjain Railway.

Rewah.—This State lies in the Baghelkhand Agency, and falls into two natural divisions separated by the scarp of the Kaimur range. Its Chiefs are Baghel Rajputs descended from the Solanki clan which ruled over Gujrat from the tenth to the thirteenth century. In 1812, a body of Pindaries raided Mirzapur from Rewah territory and the chief, who had previously rejected overtures for an alliance, was called upon to accede to a treaty acknowledging the protection of the British Government. During the Mutiny, Rewah offered troops to the British, and for his services then, various parganas, which had been seized by the Marathas, were restored to the Rewah Chief. The present chief is H. H. Maharaja Sir Venkat Raman Singh, G.C.S.I., who was born in 1876. He is assisted in the administration by two Commissioners, one for revenue matters and one for judicial. The State force consist of about 1,700 men. The State is famous for its archaeological remains and is rich in minerals, coal being mined at Umaria. The average expenditure is Rs. 11 lakhs,

Dhar.—This State, under the Agency for Southern States in Central India, takes its name from the old city of Dhar, long famous as the capital of the Paramara Rajputs, who ruled over Malwa from ninth to the thirteenth century and from whom the present chiefs of Dhar—Ponwar Marathas—claim descent. In the middle of the 18th century the Chief of Dhar, Anand Rao, was one of the leading chiefs of Central India, sharing with Holkar and Sindhia the rule of Malwa. But in 1819, when a treaty was made with the British, the State had become so reduced that it consisted of little more than the capital. The ruler is H. H. Maharaja Sir Udaji Rao Ponwar, K.C.S.I., K.B.E., who was born in 1886, and has control of all civil, judicial, and ordinary administrative matters. There are 22 feudatories, of whom 13 hold a guarantee from the British Government. The average expenditure is about 12 lakhs.

Jaora State.—This State is in the Malwa Agency covering an area of about 600 square miles with a total population of 82,497, and has its headquarters at Jaora town. The first Nawab was an Afghan from Swat, who had come to India to make his fortune, found employment under the freebooter Amir Khan, and obtained the State after the treaty of Mandasore in 1818. The present chief is Major H. H. Sir Iftikhar Ali Khan Bahadur, K.C.I.E., who was born in 1883 and is an Honorary Major in the Indian Army. The soil of the State is among the richest in Malwa, being mainly of the best black cotton variety, bearing excellent crops of poppy. The average annual revenue is Rs. 9,78,909.

Rutlam.—Is the premier Rajput State in the Malwa Agency. It covers an area of 871 square miles, including that of the Jagir of Khera in the Kushalgarh Chiefship, which pays an annual tribute to the Ratlam Darbar. The State was founded by Raja Ratansinghji, a great grandson of Raja Udai Singh of Jodhpur, in 1652. The Raja of Ratlam is the religious head of the Rajputs of Malwa, and important caste questions are referred to him for decision. The present Chief of Rutlam is Col. His Highness Raja Sir Sajjan Singh, K.C.S.I., who was born in 1880, educated at Daly College, Indore, received military training in Imperial Cadet Corps and invested with full powers in 1898. The administration is carried on under him by Rutlam State Council composed of four members. His Highness served in the war in France and Egypt from 1915 to 1918, was mentioned in despatches and received the Croix d'Officiers de legion d'Honneur. He is also Regent of Rewa State. Salute: 13 guns.

Senior Member of Council—Raj Kumar Sirdar Singh of Shahpura.

Datia State.—The chiefs of this State, in the Bundelkhand Agency, are Bundela Rajputs of the Orchha house. The territory was granted by the chief of Orchha to his son Bhagwan Rao in 1626, and this was extended by conquest and by grants from the Delhi emperors. The present chief is H. H. Maharaja Lokendra Sir Govind Singh Bahadur, K.C.S.I., who was born in 1886 and succeeded in 1907. The heir-apparent, Raja Bahadur Balbhadra Singh (b 1907) is being educated at the Daly College.

Orchha State.—The chiefs of this State are Bundela Rajputs claiming to be descendants of the Gaharwars of Benares. It was founded as an independent State in 1048 A. D. It entered into relations with the British by the treaty made in 1812. The present ruler is His Highness Sir Pratap Singh, G.C.S.I., G.C.I.E., who was born in 1854. He has the title of His Highness Saramad-i-Rajhai-Bundelkhand Maharaja Mahendra Sawai Bahadur. The present chief enjoys a salute of 17 guns. The State has a population of 330,032 and an area of 2,080 square miles. The capital is Tikamgarh, 36 miles from Lalitpur on the G. I. P. Railway. Orchha, the old capital, has fallen into decay but is a place of interest on account of its magnificent buildings of which the finest were erected by Bir Singh Deo, the most famous ruler of the State (1605-1627).

Agent to Governor-General—O. V. Bosanquet, C.S.I., C.I.E.

GWALIOR.

Sikkim.

Sikkim is bounded on the north and north-east by Tibet, on the south-east by Bhutan, on the south by the British district of Darjeeling, and on the west by Nepal. The population consists of Bhutias, Lepchas, and Nepalese. It forms the direct route to the Chumbi Valley in Tibet. The main axis of the Himalayas, which runs east and west, forms the boundary between Sikkim and Tibet. The Singalila and Chola ranges, which run southwards from the main chain, separate Sikkim from Nepal on the west, and from Tibet and Bhutan on the east. From the eastern flank of the Singalila range rise the great snow peaks of Kinchinjunga (28,146 feet), one of the highest mountains in the world; it throws out a second spur terminating at Tendong. The Chola range which is much loftier than that of Singalila, leaves the main chain at the Dongkya mountain.

Tradition says that the ancestors of the Rajas of Sikkim originally came from eastern Tibet. The State was twice invaded by the Gurkhas at the end of the eighteenth century. On the outbreak of the Nepal War in 1814, the British formed an alliance with the Raja of Sikkim and at the close of the war the Raja was rewarded by a considerable cession of territory. In 1835 the Raja granted the site of Darjeeling to the British and received Rs. 12,000 annually in lieu of it. The State was previously under the Government of Bengal, but was brought under the direct supervision of the Government of India in 1906. The State is thinly populated, the area being 2,818 square miles, and the population 87,920, chiefly Buddhists and Hindus. The most im-

portant crops are maize and rice. There are several trade routes through Sikkim from Darjeeling District into Tibet. In the convention of 1890 provision was made for the opening of a trade mart but the results were disappointing, and the failure of the Tibetans to fulfil their obligations resulted in 1904 in the despatch of a mission to Lhasa, where a new convention was signed. Trade with the British has increased in recent years, and is now between 40 and 50 lakhs yearly. A number of good roads have been constructed in recent years. The present ruler, His Highness Maharajah Tashi Namgyal, C.I.E., was born in 1893 and succeeded in 1914. His Highness was invested with full ruling powers on the 5th April 1918. The title of a C.I.E. was conferred upon the Maharaja on the 1st January 1918. The average revenue is Rs. 2,62,000.

Political Officer in Sikkim:—Major W. L. Campbell, C.I.E.

Bhutan.

Bhutan extends for a distance of approximately 190 miles east and west along the southern slopes of the central axis of the Himalayas, adjacent to the northern border of Eastern Bengal and Assam. Its area is 18,000 square miles and its population, consisting of Buddhists and Hindus, has been estimated at 300,000. The country formerly belonged to a tribe called Tek-pa, but was wrested from them by some Tibetan soldiers about the middle of the seventeenth century. British relations with Bhutan commenced in 1772 when the Bhotias invaded the principality of Cooch Behar and British aid was invoked by that State. After a number of raids by the Bhutanese into Assam, an envoy (the Hon. A. Eden) was sent to Bhutan, who was grossly insulted and compelled to sign a treaty surrendering the Duars to Bhutan. On his return the treaty was disallowed and the Duars annexed. This was followed by the treaty of 1865, by which the State's relations with the Government of India were satisfactorily regulated. The State formerly received an allowance of half a lakh a year from the British Government in consideration of the cession in 1865 of some areas on the southern borders. This allowance was doubled by a new treaty concluded in January 1910, by which the Bhutanese Government bound itself to be guided by the advice of the British Government in regard to its external relations, while the British Government undertook to exercise no interference in the internal administration of Bhutan. On the occasion of the Tibet Mission of 1904, the Bhotias gave strong proof of their friendly attitude. Not only did they consent to the survey of a road through their country to Chumbi, but their ruler, the Tongsa Penlop, accompanied the British troops to Lhasa, and assisted in the negotiations with the Tibetan authorities. For these services he was made a K.C.I.E., and he has since entertained the British Agent hospitably at his capital. The ruler is now known as H. H. the Maharaja of Bhutan, Sir Ugsen Wangchuk, K.C.S.I., K.J.I.E. At the head of the Bhutan Government, there are nominally two supreme authorities; the Dharma Raja, known as Shapting Renipoche, the spiritual head; and the Deb or Depa Raja, the

temporal ruler. The Dharma Raja is regarded as a very high incarnation of Buddha, far higher than the ordinary incarnations in Tibet, of which there are several hundreds. On the death of a Dharma Raja a year or two is allowed to elapse, and his reincarnation then takes place, always in the Choje, or royal family of Bhutan.

Cultivation is backward and the chief crop is maize. The Military force consists of local levies under the control of the different chiefs. They are of no military value.

Nepal.

The kingdom of Nepal is a narrow tract of country extending for about 520 miles along the southern slope of the central axis of the Himalayas. It has an area of about 54,000 square miles, with a population of about 5,000,000, chiefly Hindus. The greater part of the country is mountainous, the lower slopes being cultivated. Above these is a rugged broken wall of rock leading up to the chain of snow-clad peaks which culminate in Mount Everest (29,002 feet) and others of slightly less altitude. The country before the Gurkha occupation was split up into several small kingdoms under Newar kings. The Gurkhas under Prithvi Narayan Shah overran and conquered the different kingdoms of Patan, Kathmandu, and Bhatgaon, and other places during the latter half of the 18th century and since then have been rulers of the whole of Nepal. In 1846 the head of the Rana family obtained from the sovereign the perpetual right to the office of Prime Minister of Nepal, and the right is still enjoyed by his descendant. In 1850 Jung Bahadur paid a visit to England and was thus the first Hindu Chief to leave India and to become acquainted with the power and resources of the British nation. The relations of Nepal with the Government of India are regulated by the treaty of 1816 and subsequent agreements by which a representative of the British Government is received at Kathmandu. This British representative has come to be styled as Resident though his function differs much from that of a Resident at the courts of the Native States of India. By virtue of the same treaty Nepal maintains a Representative at Delhi and her treaty relations with Tibet allow her to keep a Resident at Lhasa of her own. Her relation with China is of a friendly nature. Ever since the conclusion of the treaty of 1816 the friendly relations with the British Government have steadily been maintained and during the rule of the present Prime Minister it has been at its height as is evidenced by the valuable friendly help in men and money which has been given and which was appreciatively mentioned in both the Houses of Parliament and by Mr. Asquith in his Guildhall speech in 1915. The message from His Majesty the King Emperor to the Nepalese Prime Minister sent on the termination of hostilities and published at the time as also the Viceroy's valedictory address to the Nepalese contingent on the eve of their return home after having laudably fulfilled their mission in India eloquently and gratefully acknowledged the valuable help rendered by Nepal during the four and a half years of war.

From the foregoing account of the history of Nepal it will be seen that the Government of

the country has generally been in the hands of the Minister of the day. Since the time of Jung Bahadur this system of government has been clearly laid down and defined. The sovereign, or Maharajadhiraja, as he is called, is but a dignified figure-head, whose position can best be likened to that of the Emperor of Japan during the Shogunate. The present ruler, His Majesty Maharajadhiraja Tribhubana Bir Bikram Jung Bahadur Shah Bahadur Shum Shere Jung, ascended the throne on the death of his father in 1911. The real ruler of the country is the Minister who, while enjoying complete monopoly of power, couples with his official rank the exalted title of Maharaja. Next to him comes the Commander-in-Chief, who ordinarily succeeds to the office of Minister.

The present Minister at the head of affairs of Nepal is Maharaja Sir Chandra Shum Shere

Jung Bahadur Rana, G.C.B., G.C.S.I., G.C.V.O., D.C.L. and Honorary General in the British Army. He has been Prime Minister and Marshal of Nepal since June, 1901.

Rice, wheat and maize form the chief crops in the lowlands. Mineral wealth is supposed to be great, but, like other sources of revenue, has not been developed. Communications in the State are primitive. The revenue is about two crores of rupees per annum. The standing army is estimated at 45,000, the high posts in it being filled by relations of the Minister. The State is of considerable archaeological interest and many of the sites connected with scenes of Buddha's life have been identified in it by the remains of inscribed pillars.

Resident, Lieut.-Col. W. F. T. O'Connor, C.I.E.

NORTH-WEST FRONTIER STATES.

The native states of the North-West Frontier Provinces are Amb, Chitral, Dir, Nawagai (Bajaur), and Phulera. The total area is about 7,704 square miles and the population, mainly Mahomedan, is 1,622,094. The average annual revenue of the first four is about Rs. 4,65,000; that of Phulera is unknown.

Amb.—Is only a village on the western bank of the Indus in Independent Tanawala.

Chitral.—Runs from Dir to the south of the Hindu-Kush range in the north, and has an area of about 4,500 square miles. The ruling dynasty has maintained itself for more than three hundred years, during the greater part of which the State has constantly been at war with its neighbours. It was visited in 1885 by the Lockhart Mission, and in 1889, on the establishment of a political agency in Gilgit, the ruler of Chitral received an annual subsidy from the British Government. That subsidy was increased two years later on condition that the ruler, Amam-ul-Mulk, accepted the advice of the British Government in all matters connected with foreign policy and frontier defence. His sudden death in 1892 was followed by a dispute as to the succession. The eldest son Nizam-ul-Mulk was recognised by Government, but he was murdered in 1895. A religious war was declared against the infidels and the Agent at Gilgit, who had been sent to Chitral to report on the situation, was besieged with his escort and a force had to be despatched (April 1895) to their relief.

The three valleys of which the State consists are extremely fertile and continuously culti-

vated. The internal administration of the country is conducted by the Mehtar, and the foreign policy is regulated by the Political Agent.

Dir.—The territories of this State, about 5,000 square miles in area, include the country drained by the Panjkora and its affluents down to the junction of the former river with the Bajaur Rud, and also the country east of this from a point a little above Tirah in Upper Swat down to the Dush Khel Country, following the right bank of the Swat river throughout. The Khan of Dir is the overlord of the country, exacting allegiance from the petty chiefs of the clans. Dir is mainly held by Yusufzai Pathans, the old non-Pathan inhabitants being now confined to the upper portion of the Panjkora Valley known as the Bashkar.

Bajaur.—Nawagai is a tract of country included in the territories collectively known as Bajaur which is bounded on the north by the Panjkora river, on the east by the Utman Khel and Mohmand territories and on the west by the watershed of the Kunar river which divides it from Afghanistan. The political system, if it can be termed system, is a communal form of party government, the country being divided into several minor Khanates, each governed by a chieftain. But virtually the authority of the chieftains is limited to the rights to levy tithe, or *ushar*, when they can enforce its payment, and to exact military service (if the tribesmen choose to render it.)

Political Agent for Dir, Swat and Chitral,
Major F. H. Humphrys, I. A.

NATIVE STATES UNDER LOCAL GOVERNMENTS.

The Madras Presidency includes 5 Native States covering an area of 10,087 square miles. Of these the States of Travancore and Cochin represent ancient Hindu dynasties. Pudukottai is the inheritance of the chieftain called the Tondiman. Banganapalle and Sandur, two petty States, of which the first is ruled by a Nawab, lie in the centre of two British districts.

Name.	Area sq. miles.	Popula-tion.	Approx. Revenue in lakhs of rupees.
Travancore ..	7,129	3,428,975	128
Cochin ..	1,361	918,110	47
Pudukottai ..	1,178	411,878	16

Travancore.—This State occupies the south-west portion of the Indian Peninsula, forming an irregular triangle with its apex at Cape Comorin. The early history of Travancore is in great part traditional; but there is little doubt that H. H. the Maharaja is the representative of the Chera dynasty, one of the three great Hindu dynasties which exercised sovereignty at one time in Southern India. The petty chiefs, who had subsequently set up as independent rulers within the State, were all subdued, and the whole country, included within its present boundaries, was consolidated and brought under one rule, by the Maharaja Marthanda Varma (1729-58). The English first settled at Anjengo, a few miles to the north of Trivandrum, and built a factory there in 1684. In the wars in which the East India Company were engaged in Madura and Tinnevely, in the middle of the 18th century, the Travancore State gave assistance to the British authorities. Travancore was reckoned as one of the staunchest allies of the British Power and was accordingly included in the Treaty made in 1784 between the East India Company and the Sultan of Mysore. To protect the State from possible inroads by Tippu, an arrangement was come to in 1788 with the East India Company, and in 1795 a formal treaty was concluded, by which the Company agreed to protect Travancore from all foreign enemies. In 1805 the annual subsidy to be paid by Travancore was fixed at 8 lakhs of rupees.

The present ruler is His Highness Maharaja Sir Rama Varma, G.C.S.I., G.C.I.E., who was born in 1857 and ascended the masnad in 1885. The government is conducted in his name with the assistance of a Dewan (Dewan Bahadur M. Krishnan Nair). The work of legislation is entrusted to a Council brought into existence in 1888. An assembly known as the Sri Mulam Popular Assembly meets once a year, when its members are able to bring suggestions before the Dewan. The State supports a military force of 1,472 men. Education has advanced consider-

ably in recent years and the State takes a leading place in that respect. The principal food grain grown is rice, but the main source of agricultural wealth is the cocoanut. Other crops are pepper, arca-nut, jack-fruit and tapioca. Cotton weaving and the making of matting from the coir are among the chief industries. The State is well provided with roads, and with a natural system of back-waters, besides canals and rivers navigable for country crafts. Two lines of railways intersect the country, the Cochin-Shoranore in the north-west and the Tinnevely-Quilon passing through the heart of the State. A third line, from Quilon to Trivandrum, was opened on the 1st January 1918. The capital is Trivandrum.

Political Agent : H. L. Braidwood, I.C.S.

Cochin.—This State on the south-west coast of India is bounded by the Malabar District of the Madras Presidency and the State of Travancore. Very little is known of its early history. According to tradition, the Rajas of Cochin hold the territory in right of descent from Cheraman Perumal, who governed the whole country of Kerala, including Travancore and Malabar, as Viceroy of the Chola Kings about the beginning of the ninth century, and afterwards established himself as an independent Ruler. In 1502, the Portuguese were allowed to settle in what is now British Cochin and in the following year they built a fort and established commercial relations in the State. In the earlier wars with the Zamorin of Calicut, they assisted the Rajas of Cochin. The influence of the Portuguese on the west coast began to decline about the latter part of the seventeenth century, and in 1663 they were ousted from the town of Cochin by the Dutch with whom the Raja entered into friendly relations. About a century later, in 1759, when the Dutch power began to decline, the Raja was attacked by the Zamorin of Calicut, who was expelled with the assistance of the Raja of Travancore. In 1776, the State was conquered by Hyder Ali, to whom it remained tributary and subordinate, and subsequently to his son, Tippu Sultan. A treaty was concluded in 1791 between the Raja and the East India Company, by which His Highness agreed to become tributary to the British Government for his territories which were then in the possession of Tippu, and to pay a subsidy.

His Highness Raja Sri Rama Varmah, G.C.S.I., G.C.I.E., who was born in 1852, and who ascended the Masnad in 1895, having abdicated in December, 1914, His Highness Sri Sri Rama Varmah, G.C.I.E., who was born on 6th October, 1858, succeeded to the throne and was duly installed as Raja on the 21st January 1915. The administration is conducted under the control of the Raja whose chief Minister and Executive Officer is the Dewan Rao Bahadur T. Vijayaraghava Charya. The forests of Cochin form one of its most valuable assets. They abound in teak, ebony, blackwood, and other valuable trees. Rice forms the staple of cultivation. Cocoanuts are largely raised in the sandy tracts, and their products form the chief exports of the State. Communications by road and back-waters are good, and the State owns a line of railway from

Shoranore to Ernakulam, the capital of the State, and a Forest Steam Tramway used in developing the forests. The State supports a force of 24 officers and 250 men.

Political Agent : H. L. Braidwood, I.C.S.

Pudukkottai.—This State is bounded on the north and west by Trichinopoly, on the south by Madura and on the east by Tanjore. In early times a part of the State belonged to the Chola Kings and the southern part to the Pandya Kings of Madura. Relations with the English began during the Carnatic wars. During the siege of Trichinopoly by the French in 1752, the Tondiman of the time did good service to the Company's cause by sending them provisions, although his own country was on at least one occasion ravaged as a consequence of his fidelity to the English. In 1756 he sent some of his troops to assist Muhammad Yusuf, the Company's sepy commandant, in settling the Madura and Tinnevely countries. Subsequently he was of much service in the wars with Haidar Ali. His services were rewarded by a grant of territory subject to the conditions that the district should not be alienated (1806). Apart from that there is no treaty or arrangement with the Raja. The present ruler is His Highness Sri Brihadamba Das, Sir Marthanda Bhairava Tondiman Bahadur, C.C.I.E., who is eighth in descent from the founder of the family. He succeeded in 1886. The Collector of Trichinopoly is ex-officio Political Agent for Pudukkottai. The administration of the State, under the Raja, is entrusted to a State Council of three members, a Superintendent (Mr. Thomas Austin, I.C.S.), Dewan, and Councillor. The various departments are constituted on the British India model. The principal food crop is rice. The forests, which cover about one-seventh of the State, contain only small timber. There are no large industries. The State is well provided with roads, but Pudukkottai is the only municipal town in the State.

Political Agent: C. G. Austin, I.C.S.

Banganapalle.—This is a small State in two detached portions which in the eighteenth century passed from Hyderabad to Mysore and back again to Hyderabad. The control over it

was ceded to the Madras Government by the Nizam in 1800. The present ruler is Nawab Meer Ghulam Ali Khan Bahadur. The chief food grains grown are wheat and cholam. Roads have recently been constructed and the capital Baganapalle, is opened up with broad thoroughfares. The Nawab pays no tribute and maintains no military force. Sericulture, lac cultivation, and weaving industries have lately been started in the State.

Political Agent: C. F. Brackenbury, I.C.S.

Sandur.—This is a small State almost surrounded by the District of Bellary the Collector of which is the Political Agent. Its early history dates from 1728 when it was first seized by an ancestor of the present Raja, a Maratha named Sidhoji Rao. It subsequently became a vassal to the Peshwa, after whose downfall a formal title for the State was granted by the Madras Government to one Siva Rao. The present ruler is H. H. Raja Srimant Venkata Rao, Rao Saheb Ghorpade, Mamulkat Madar, Senapathi, who was born in 1892. The State was administered by the Raja and the Dewan (M. R. R. A. Subraya Modliar Avergal) but the Raja was temporarily removed from powers and the administration of the State was assumed by the Government of Madras, with effect from 1st October 1918. The Raja pays no tribute and maintains no military force. The most important staple crop is cholam. Teak and sandal wood are found in small quantities in the forests.

The minerals of the State possess unusual interest. The hematites found in it are probably the richest ore in India. An outcrop near the southern boundary forms the crest of a ridge 150 feet in height, which apparently consists entirely of pure steel grey crystalline hematite (specular iron) of intense hardness. Some of the softer ores used to be smelted, but the industry has been killed by the cheaper English iron. Manganese deposits have also been found in three places, and during 1911 to 1914 over 2,23,000 tons of manganese ore were transported by one company.

Ag. Political Agent: J. I. Smith, I.C.S.

UNDER THE GOVERNMENT OF BOMBAY.

More than a half of the total number of the very various units counted as Native States in India are under the Government of Bombay. The characteristic feature of the Bombay States is the great number of petty principalities; the peninsula of Kathiawar alone contains nearly two hundred separate States. The recognition of these innumerable jurisdictions is due to the circumstance that the early Bombay administrators were induced to treat the *de facto* exercise of civil and criminal jurisdiction by a landholder as carrying with it a quasi-sovereign status. As the rule of succession by primogeniture applies only to the larger principalities, the minor states are continually suffering disintegration. In Bombay, as in Central India, there are to be found everywhere the traces of disintegration and disorder left by the eighteenth century. In no part of

India is there a greater variety of principalities. The bulk of them are of modern origin, the majority having been founded by Marathas in the general scramble for power in the middle of the eighteenth century, but several Rajput houses date from earlier times. Interesting traces of ancient history are to be found at Sachin, Janjira and Jafarabad, where chiefs of a foreign ancestry, descended from Abyssinian admirals of the Deccan fleets, still remain. A few aboriginal chiefs, Bhils or Kolis, exercise an enfeebled authority in the Dangs and the hilly country that fringes the Mahi and the Narbada rivers.

The control of the Bombay Government is exercised through Political Agents, whose positions and duties vary greatly. In some of the more important States their functions are confined to the giving of advice and the

exercise of a general surveillance; in other cases they are invested with an actual share in the administration; while States whose rulers are minors—and the number of these is always large—are directly managed by Government officers. Some of the States are subordinate to other States, and not in direct relations with the British Government; in these cases the status of the feudatories is usually guaranteed by Government. The powers of the chiefs are regulated by treaty or custom, and range downwards to a mere right to collect revenue in a share of a village, without criminal or civil jurisdiction, as in the case of the petty chiefs of Kathiawar.

The Native States in the Bombay Presidency number 377. Area 65,761 square miles. Population (1911) 7,411,675. They are divided for administrative purposes into the following agencies:—Bijapur Agency, 2 states; Cutch Agency, 1 state; Dharwar Agency, 1 state (Savanur); Kaira Agency, 1 state (Cambay); Kathiawar Agency, 187 states (principal states, Bhavnagar, Dhrangadhra, Gondal, Junagadh, Navanagar); West Khandesh Agency, 20 states; Kolaba Agency, 1 state (Janjira); Kolhapur Agency, 9 states (principal state Kolhapur, with 9 feudatory states): Mahi Kantha Agency, 51 states (principal state, Idar); Nasik Agency, 1 state (Surgana); Palanpur Agency, 17 states (principal state, Palanpur); Poona Agency, 1 state (Bhor); Rewa Kantha Agency, 62 states (principal State, Rajpipla); Satara Agency, 2 states; Savantvadi Agency, 1 state; Sholapur Agency, 1 state; Sukkur Agency, 1 state (Khairpur); Surat Agency, 17 states; Thana Agency, 1 state (Jauhar). The table below gives details of the area, etc., of the more important States:—

State.	Area in sq. miles.	Popula- tion.	Approx. Revenue in lakhs of rupees.
Bhavnagar ..	2,860	441,367	47
Cutch ..	7,616	513,429	25
Dhrangadhra ..	1,156	79,142	12
Gondal ..	1,024	161,916	15
Idar ..	1,669	202,811	6
Junagadh ..	3,284	434,222	26
Khairpur ..	6,050	223,788	15
Kolhapur ..	3,165	833,441	57
Navanagar ..	3,791	349,400	22
Palanpur ..	1,750	226,250	5
Rajpipla ..	1,517	161,588	9

Bijapur Agency.—This comprises the Satara Jaghir of Jath (980.8 square miles in area). On the annexation of Satara, in 1849, Jath and Daffapur like other Satara Jaghirs, became feudatories of the British Government. The latter has more than once interfered to adjust the pecuniary affairs of the Jath Jaghir and in consequence of numerous acts of oppression on the part of the then ruler was compelled to assume direct management from 1874 to 1885. The small Estate of Daffapur with an area of 96.8 square miles lapsed to the Jath Jaghir on the demise of its last ruler Ranibai Saheb Daffe in January 1917. The Chief of Jath who belongs to the Maratha caste, is a Treaty Chief and ranks as a first class Sardar.

He holds a sanad of adoption, and the succession follows the rule of primogeniture. The gross revenue of the State is about 3 lakhs chiefly derived from land revenue. The Jath State pays to the British Government Rs. 6,400 per annum in lieu of horse contingent and Rs. 4,840 on account of Sardeshmukhi rights.

Political Agent.—A. Master, Collector of Bijapur.

Cutch.—The State is bounded on the north and north-west by Sind, on the east by the Palanpur Agency, on the south by the Peninsula of Kathiawar and the Gulf of Cutch and the south-west by the Indian Ocean. Its area, exclusive of the great salt marsh called the Rann of Cutch, is 7,616 square miles. The capital is Bhuj, where the ruling Chief (the Maharao His Highness Maha Rao Sri Khengarji Savai Bahadur, G.C.S.I., G.C.I.E., resides. From its isolated position, the special character of its people, their peculiar dialect, and their strong feeling of personal loyalty to their ruler, the peninsula of Cutch has more of the elements of a distinct nationality than any other of the dependencies of Bombay. The earliest historic notices of the State occur in the Greek writers. Its modern history dates from its conquest by the Sind tribe of Samma Rajputs in the fourteenth century. The section of the Sammas forming the ruling family in Cutch were known as the Jadejas or 'children of Jada.' The British made a treaty with the State in 1815. There is a fair proportion of good arable soil in Cutch, and wheat, barley and cotton are cultivated. Both iron and coal are found but are not worked. Cutch is noted for its beautiful embroidery and silverwork and its manufactures of silk and cotton are of some importance. Trade is chiefly carried by sea. The ruling chief is the supreme authority. A few of the Bhayats are invested with jurisdictional powers in varying degrees in their own Estates and over their own ryots. A notable fact in connection with the administration of the Cutch State is the number and position of the Bhayat. These are Rajput nobles forming the brotherhood of the Rao. They were granted a share in the territories of the ruling chief as provision for their maintenance and are bound to furnish troops on an emergency. The number of these chiefs is 137, and the total number of the Jadeja tribe in Cutch is about 16,000. The British military force having been withdrawn from Bhuj, the State now pays Rs. 82,257 annually as an Anjar equivalent to the British Government. The military force consists of about 1,000 in addition to which, there are some irregular infantry, and the Bhayats could furnish on requisition a mixed force of four thousand.

Political Agent : Lt.-Col. R. S. Pottinger.

Dharwar Agency.—This comprises only the small State of Savanur. The founder of the reigning family who are Mahomedans of Pathan origin was a Jagirdar of Emperor Aurangzebe. At the close of the last Maratha War the Nawab of Savanur whose conduct had been exceptionally loyal was confirmed in his possessions by the British Government. The State pays no tribute. The principal crops are jwari and cotton. The area is 70 square miles and population 17,909. The revenue is about one lakh.

The present chief is Captain Abdul Majidkhan Dilerjang Bahadur.

Political Agent: A. E. L. Emanuel, I.C.S.

Kaira Agency.—This includes only the State of Cambay at the head of the Gulf of the same name. Cambay was formerly one of the chief ports of India and of the Anhilvada Kingdom. At the end of the thirteenth century it is said to have been one of the richest towns in India; at the beginning of the sixteenth century also it formed one of the chief centres of commerce in Western India. Factories were established there by the English and the Dutch. It was established a distinct State about 1730, the founder of the present family of Chiefs being the last but one of the Mahomedan Governors of Gujarat. The present Nawab is His Highness Mirza Hussein Yawar Khan who is a Shiah Mogul of the Najumisani family of Persia, and was born on the 16th May, 1911. His father, the late Nawab Jaffar Ali Khan, died on 21st January, 1915, leaving him a minor. The State is therefore under British Administration. The State pays a tribute of Rs. 21,924 to the British Government. Wheat and cotton are the principal crops. There is a broad gauge line from Cambay to Petlad, connecting with the B. B. & C. I. Railway at Anand. Cambay is a first class State having full jurisdiction. Revenue is about six lakhs. The area of the State is 350 square miles, population 72,656.

Political Agent: J. C. Ker, I.C.S.

Kathiawar Agency.—Kathiawar is the peninsula or western portion of the Province of Gujarat, Bombay. Its extreme length is about 220 miles and its greatest breadth about 165 miles, the area being 23,445 square miles. Of this total about 20,882 square miles with a population of 2,496,057 is the territory forming the Political Agency subordinate to the Government of Bombay, established in 1822, having under its control nearly 200 separate States whose chiefs divided amongst themselves the greater portion of the peninsula. The Kathiawar Agency is divided for administrative purposes into four prants or divisions—Jhalawar, Halar, Sorath and Gohelwar—and the States have since 1863 been arranged in seven classes. Since 1822 political authority in Kathiawar has been vested in the Political Agent subordinate to the Government of Bombay. In 1902 the designations of the Political Agent and his Assistants were changed to those of Agent to the Governor and Political Agents of the prants. Before 1863, except for the criminal court of the Agent to the Governor, established in 1831, to aid the Darbars of the several States in the trial of heinous crimes, interference with the judicial administration of the territories was diplomatic, not magisterial; and the criminal jurisdiction of the first and second-class chiefs alone was defined. In 1863, however, the country underwent an important change. The jurisdiction of all the chiefs was classified and defined: that of chiefs of the first and second classes was made plenary; that of lesser chiefs was graded in a diminishing scale. The four Political Agents of the prants resident in the four divisions of Kathiawar, now exercise residuary jurisdiction with large civil and criminal powers. Each Political Agent of a prant has a deputy, who resides at the headquarters of the prant or division, and

exercises subordinate civil and criminal powers. Serious criminal cases are committed by the deputies to the court of the Agent to the Governor, to whom also civil and criminal appeals lie. The Agent to the Governor is aided in this work by an officer known as the Political Agent and Judicial Assistant, who is usually a member of the Indian Civil Service. Appeals from his decisions lie direct to the Governor of Bombay in Council in his executive capacity. Two Deputy Assistants also help the Agent.

Agent to the Governor in Kathiawar: Evan Maconochie, C.S.I., I.C.S.

Bhavnagar.—This State lies at the head and west side of the Gulf of Cambay. The Gohe Rajputs, to which tribe the Chief of Bhavnagar belongs, are said to have settled in the country about the year 1260, under Sajakji from whose three sons—Ranoji, Saranji and Shahji—are descended respectively the chiefs of Bhavnagar Lathi and Palitana. An intimate connexion was formed between the Bombay Government and Bhavnagar in the eighteenth century when the chief of that State took pains to destroy the pirates which infested the neighbouring seas. The State was split up when Gujarat and Kathiawar were divided between the Peshwa and the Gaekwar; but the various claims over Bhavnagar were consolidated in the hands of the British Government in 1807. The State pays an annual tribute of Rs. 1,28,060 to the British Government, Rs. 3,581-8-0 as Peshkash to Baroda, and Rs. 22,858 as Zortalbi to Junagadh. During the minority of the present heir to His Highness the Maharaja who died in 1911 the administration of the State has been entrusted to an Administrator, the present occupant of the post being Sir Prabhashankar I. Pattani, K.C.I.E., a former Dewan of the State and until recently a member of the India Council. One noteworthy feature in the administration is the complete separation of judicial from executive functions and the decentralisation of authority is another. The authority and powers of all the Heads of Departments have been clearly defined, and each within his own sphere is independent of the others, being directly responsible to the Dewan.

The chief products of the State are grain, cotton and salt. The chief manufactures are oil, copper and brass vessels and cloth. The Bhavnagar State Railway is 205 miles in length and the management of it undertakes also the working of the Dhrangadhra State Railway for a length of 40 miles. The capital of the State is the town and port of Bhavnagar, which has a good and safe harbour for shipping and carries on an extensive trade as one of the principal markets and harbours of export for cotton in Kathiawar. Bhavnagar supports 300 Imperial Service Lancers and 282 Infantry of Armed Police.

Dhrangadhra State is an uneven tract of land (intersected by small streams) which consists of hilly and rocky ground where stone is quarried. The chief of Dhrangadhra belongs to the Jhala tribe, originally a subdivision of the Makvana family. This tribe is of great antiquity, and is said to have entered Kathiawar from the north, establishing itself first at Patri in the Ahmedabad District, then moving to Halvad and finally settling in it.

present seat. The greater part of this territory was probably annexed at one time by the Mahomedan rulers of Gujarat. Subsequently, during the reign of the Emperor Aurangzebe (1658-1707), the sub-division of Halvad, then called Muhammadnagar, was restored to the Jhala family. The petty States of Limbdi, Wadhwan, Chuda, Sayla, and Than-Lakhtar in Kathiawar are offshoots from Dhrangadhra; His Highness the Maharana Shri Sir Ghanshyamsinhji, K.C.S.I., Maharaja Raj Saheb, is the ruling chief, who is the head of the Jhala Rajput family. The State pays a tribute of Rs. 40,671 to the British Government, and Rs. 4,006 to Junagadh State. The administration is conducted under the Maharaja's directions by the Dewan Rana Shri Mansinhji S. Jhala, C.I.E. The principal crops are cotton and grain. The Capital town is Dhrangadhra, a fortified town, 75 miles west of Ahmedabad.

Dhrangadhra State owns its railway from Wadhwan Junction to Halvad, a distance of 40 miles which is worked by the Bhavnagar State Railway on certain conditions.

Gondal State.—The Chief of Gondal is a Rajput of the Jadeja stock with the title of H. H. Thakore Sahib, the present Chief being H. H. Shri Bhagwat Sinhji, G.C.I.E. The early founder of the State, Kumbhoji I., had a modest estate of 20 villages. Kumbhoji II., the most powerful Chief of the House, widened the territories to almost their present limits by conquest; but it was left to the present ruler to develop its resources to the utmost, and in the words of Lord Reay, Governor of Bombay, by its "importance and advanced administration" to get it recognised as a First Class State. The State pays a tribute of Rs. 1,10,721. The chief products are cotton and grain and the chief manufactures are cotton and woollen fabrics and gold embroidery. Gondal has always been pre-eminent amongst the States of its class for the vigour with which public works have been prosecuted, and was one of the earliest pioneers of railway enterprise in Kathiawar, having initiated the Dhasa-Dhoraji line: it subsequently built other lines in partnership with other Native States in Kathiawar. There are no export and import dues, the people being free from taxes and dues. Comparatively speaking Gondal stands first in Kathiawar in respect of the spread of education. Compulsory female education in the State has been recently ordered by His Highness. Rs. 13 lakhs has been spent on irrigation tanks and canals and water supply to the town of Gondal. The Capital is Gondal, a fortified town on the line between Rajkot and Jetalsar.

Junagadh State.—This State has an area of 3,283 square miles and an average revenue of about 50 lakhs and is bounded on the north by the Bardas and Halar and on the west and south by the Arabian Sea. The river Saraswati, famous in the sacred annals of the Hindus, passes through the State. A sparsely wooded tract called the Gir, is contained in the State and is well known as the last haunt in India of the lion. Until 1472, when it was conquered by Sultan Mahmud Begra of Ahmedabad, Junagadh was a Rajput State, ruled by Chiefs of the Chudasama tribe. During the reign of the Emperor Akbar it became a

dependency of Delhi, under the immediate authority of the Mughal Viceroy of Gujarat. About 1735, when the representative of the Mughals had lost his authority in Gujarat, Sher Khan Babi, a soldier of fortune, expelled the Mughal Governor, and established his own rule. The ruler of Junagadh first entered into engagements with the British Government in 1807. The Chief bears the title of Nawab, the present Nawab being tenth in succession from the founder of the family. He is His Highness Mahabat Khan, who was born in 1900 and succeeded in 1911. The agricultural products are cotton, shipped in considerable quantities from Veraval to Bombay, wheat and other grains. The coast line is well supplied with fair weather harbours. The State pays a tribute of Rs. 65,604 to the Gaekwar of Baroda and the British Government, but the Nawab receives contributions, called *zortabi*, amounting to Rs. 92,421 from a number of chiefs in Kathiawar—a relic of the days of Mahomedan supremacy. The State maintains 100 Imperial Service Lancers. The Capital is Junagadh, situated under the Girnar and Datar hills, which is one of the most picturesque towns in India, while in antiquity and historical interest it yields to none. The Uparkot, or old citadel, contains interesting Buddhist caves, and the whole of the ditch and neighbourhood is honeycombed with caves or their remains. There are a number of fine modern buildings in the town.

Administrator: H. D. Rendall, I.C.S.

Navanagar State, on the southern shore of the Gulf of Cutch, has an area of 3,791 square miles. The Maharaja of Navanagar is a Jadeja Rajput by caste, and belongs to the same family as the Rao of Cutch. The Jadejas originally entered Kathiawar from Cutch, and dispossessed the ancient family of Jethwas (probably a branch of Jats) then established at Ghumli. The town of Navanagar was founded in 1540. The present Jam Sahib is the well-known cricketer, H. H. Jam Sahib Shri Ranjitsinhji Vibhaji, who was born in 1872 and succeeded in 1907. The principal products are grain and cotton, shipped from the ports of the State. A small pearl fishery lies off the coast. The State pays a tribute of Rs. 1,20,093 per annum jointly to the British Government, the Gaekwar of Baroda and the Nawab of Junagadh. The State maintains a squadron of Imperial Service Lancers. The Capital is Navanagar (or Jamnagar) a flourishing place, nearly 4 miles in circuit, situated 5 miles east of the port of Bedi. Population, 349,400. Revenue nearly Rs. 40 lakhs.

Dewan: K. B. Merwanji Pestonji.

Kolaba Agency.—This Agency includes the State of Janjira in the Konkan, a country covered with spurs and hill ranges and much intersected by creeks and backwaters. The ruling family is said to be descended from an Abyssinian in the service of one of the Nizam Shahi Kings of Ahmednagar at the end of the fifteenth century. The most noticeable point in its history is the successful resistance that it alone, of all the states of Western India, made against the determined attacks of the Marathas. The British on succeeding the Marathas as masters of the Konkan retained

from interfering in the internal administration of the State. The chief is a Sunni Mahomedan, by race a Sidi or Abyssinian, with a title of Nawab. He has a sanad guaranteeing succession according to Mahomedan law and pays no tribute. Till 1868 the State enjoyed singular independence, there being no Political Agent, and no interference whatever in its internal affairs. About that year the maladministration of the chief, especially in matters of police and criminal justice, became flagrant; those branches of administration were in consequence taken out of his hands and vested in a Political Agent. The present ruler is H. H. Nawab Sidi Sir Ahmed Khan, G.C.L.E., who was born in 1862. The heir-apparent is Sidi Mahammad Khan, born on the 7th March 1914. The area of the State is 377 square miles, and the population 101,120. The average revenue is 6 lakhs. The State maintains an irregular military force of 246. The capital is Janjira, 44 miles south of Bombay Island. The Chief exercises full powers in Criminal, Civil and Revenue matters of the State including Jafarabad, a dependency of the Janjira State in Kathiawar. He is entitled to a dynastic salute of 11 guns. In recognition of services rendered in connection with the war his salute was raised on the 1st January 1918 to 13 guns personal.

Kolhapur Agency.—Kolhapur is a State with an area of 3,217 square miles and population of 833,441. Subordinate to Kolhapur are nine feudatories, of which the following five are important: Vishalgarh, Bavda, Kagal (senior), Kapsi and Ichalkaranji. The present ruling chief Col. Sir Shahu Chhatrapati Maharaja,

G.C.S.I.; G.C.L.E.; G.C.V.O.; traces his descent from a younger son of Shivaji, founder of the Maratha power. The prevalence of piracy from the Kolhapur port of Malvan compelled the Bombay Government to send expeditions against Kolhapur in 1765, and again in 1792; when the Raja agreed to give compensation for the losses which British merchants had sustained since 1785, and to permit the establishment of factories at Malvan and Kolhapur. Internal dissensions and wars with neighbouring States gradually weakened the power of Kolhapur. In 1812 a treaty was concluded with the British Government, by which, in return for the cession of certain ports, the Kolhapur Raja was guaranteed against the attacks of foreign powers; while on his part he engaged to abstain from hostilities with other States, and to refer all disputes to the arbitration of the British Government. The principal articles of production are rice, jawar and sugar-cane and the manufactures are coarse cotton and woollen cloths, pottery and hardware. The State pays no tribute, and supports a military force of 690. The nine feudatory estates are administered by their holders, except in the case of two whose holders are minors. Kolhapur proper is divided into five pethas or talukas and four mahals and is managed by the Maharaja, who has full powers of life and death. The Southern Mahratta Railway passes through the State and is connected with Kolhapur City by a line which is the property of the State.

*Resident and Senior Political Agent for Kolhapur and the Southern Mahratta Country—*Lt.-Col. F. W. Wodehouse, C.I.E.

Southern Maratha Country States.—The Agency consists of the following eight States:—

Name of State.	Area in square miles.	Population.	Tribute to British Government.	Average revenue.
			Rs.	Rs.
Sangl	1,112	227,146	1,35,000	10,75,756
Miraj (Senior)	339	80,281	12,557	3,12,980
Miraj (Junior)	210	36,490	7,388	2,55,263
Kurundwad (Senior)	185	38,375	1,54,369
Kurundwad (Junior)	114	34,084	9,618	1,73,669
Jamkhandi	524	100,304	20,515	9,41,105
Mudhol	368	62,831	2,671	3,52,916
Ramdrug	169	36,610	1,50,729
Total ..	3,021	616,121	1,87,749	34,16,787

Mahi Kantha.—This group of States has a total area of 3,124 square miles and a population of 412,631 including that of Idar which is 202,811. The revenue is about 14 lakhs. The Agency consists of the first class State of Idar and 51 small States. The Native State of Idar covers more than half the territory. It has an area of 1,669 square miles and an average revenue of Rs. 10,01,725; eleven other States are of some importance; and the remainder are estates belonging to Rajput or Koli Thakurs, once the lawless feudatories of Baroda, and still requiring the anxious supervision of the Poli-

tical Officer. H. H. Major-General Sir Partab Singh, a Rajput of the Rathor Clan, having been appointed regent of the State of Jodhpur, resigned the gadi of Idar in June 1911 and was succeeded by his adopted son Daulatsinhji, who is aged 39. His Highness had been on active service. Many relatives of the Maharaja and feudal chiefs whose ancestors helped to secure the country for the present dynasty, now enjoy large estates on service tenures, and there are numerous petty chiefs or *bhumias* who have held considerable estates from the time of the Raos of Idar, or earlier, and are under no

obligation of service. The revenues of the State are shared by the Maharaja with these feudal chiefs. The Maharaja receives Rs. 52,427 annually on account of Khichdi and other Raj Haks from its subordinate Sardars, the tributary Talukas of the Mahi Kantha Agency and others, and pays Rs. 30,340 as tribute to the Gaekwar of Baroda through the British Government. The subordinate Sardars of Idar, known locally as pattawats, hold their estates on condition of military service, the quota being three horsemen for every 1,000 Rupees of Revenue; but for many years this service has not been exacted and no military force is maintained at present. The second class States are Polo and Danta. The success of minor Rao Hamirsinghji has been recognised by Government to the Chiefship of the former, while the Ruler of the latter is Maharana Hamirsinghji.

Political Agent—Lt.-Col. W. Beale.

Nasik Agency.—This consists of one State Surgana, lying in the north-west corner of the Nasik District. Surgana has an area of 360 square miles and a population of 15,180. The ruling chief is Prataprav Shankarrao Deshmukh, who is descended from a Maratha Pawar family. He rules the State subject to the orders of the Collector of Nasik. The revenue of the State is about Rs. 33,000.

Palanpur Agency.—This group of States in Gujarat comprises two first class States, Palanpur and Radhanpur, and a few minor States and petty talukas. Its total area is 6,393 square miles and the population is 515,092. The gross revenue is about 14½ lakhs. The territory included in the Agency has, like the more central parts of Gujarat, passed during historical times under the sway of the different Rajput dynasties of Anhilvada, the early Khilji and Tughlak Shahi dynasties of Delhi, the Ahmedabad Sultans, the Mughal Emperors, the Mahrattas, and lastly the British. The State from which the Agency takes its name is under the rule of H. H. Taley Muhammad Khan, who is entitled Nawab and Dewan of Palanpur. He is descended from the Lohanis, an Afghan tribe who appeared in Gujarat in the fourteenth century. The connection of the British Government with the State dates from 1819 in which year the chief was murdered by a body of nobles. Two high roads from Ahmedabad pass through the State and a considerable trade in cotton, cloth, grain, sugar and rice is carried on. The State maintains a constabulary force of 600 and pays tribute of Rs. 38,000 to the Gaekwar of Baroda. The capital is Palanpur, situated at the junction of the Palanpur-Deesa Branch of the B. B. & C. I. Railway. It is a very old settlement of which mention was made in the eighth century.

Political Agent—Lt.-Col. J. W. B. Merewether.

Radhanpur is a State, with an area of 1,150 square miles, which is held by a branch of the Babi family, who since the reign of Humayun have always been prominent in the annals of Gujarat. The present chief is H. H. Jalalud-din Khanji, the Nawab of Radhanpur. He has powers to try his own subjects even for capital offences without permission from the Political Agent. The State maintains a military force of 200. The principal products

are cotton; wheat and grain. The capital is Radhanpur town, a considerable trade centre for Northern Gujarat and Cutch.

Rewa Kantha Agency.—This Agency, with an area of 4,956 square miles and a population of 665,099, comprises 61 States, of which Rajpipla is a first class State, 5 are second class, one is third class and the rest are either petty States or talukas. Among those petty States are Sanjeli in the north, Bhadarva and Umeta in the west, Narukot in the south-east, and two groups of Mehwas. The 26 Sankheda Mehwas petty estates lie on the right bank of the Narbada, while the 24 Pandu Mehwas petty estates including Dodka, Anghad and Raika, which together form the Dodka Mehwas are situated on the border of the Mahi.

The following are the statistics of area and population for the principal States:—

State.	Area in square miles.	Population.
Balasinor	189	40,563
Bariya	813	115,350
Chhota Udaipur	873	103,639
Lunavada	388	75,998
Narukot (Jambhughoda) ..	143	8,485
Rajpipla	1,517	161,588
Sunth	394	59,350
Other Jurisdictional States, Civil Stations and Thana Circles	639	100,126

Under the first Anhilvada dynasty (746-961), almost all the Rewa Kantha lands except Champaner were under the government of the Bariyas, that is, Koli and Bhil chiefs. In the eleventh, twelfth and thirteenth centuries chiefs of Rajput or part Rajput blood, driven south and east by the pressure of Muhammadan invasions, took the place of the Koli and Bhil leaders. The first of the present States to be established was the house of the Raja of Rajpipla.

Political Agent—H. B. Clayton, I.C.S.

Rajpipla.—This State lies to the south of the Narbada. It has an area of 1,517 square miles, and largely consists of the Rajpipla Hills which form the watershed between the Narbada and Tapti rivers. The family of the Raja of Rajpipla, H. H. Maharana Shri Vijayasinji is said to derive its origin from a Rajput of the Gohel clan. The State pays an annual sum of Rs. 50,000 on account of Ghasdana to the Gaekwar of Baroda. Cotton is the most important crop in the State. In the south there are valuable teak forests. The capital is Nandod, which is connected with Anklesvar by railway built by the State.

Satara Jagirs.—Under this heading are grouped the following six States:—

State.	Area in sq. miles.	Popu- lation.	Revenue in lakhs.
Aundh	501	38,995	3
Phaltan	397	55,996	2
Bhor	925	144,601	5
Akalkot	498	89,082	4
Jath	884	69,810	2
Daphlapur	96	8,833	2

These were formerly feudatory to the Raja of Satara. In 1849 five of them were placed under the Collector of Satara, and Akalkot under the Collector of Sholapur. Subsequently, the Jagir of Bhor was transferred to the Collector of Poona and Jath and Daphlapur to the Southern Mahratta country. The last two are now under the Collector of Bijapur. The ruling chiefs are as follows:—

State.	Ruling Chiefs,	Tribute to British Government
Aundh	Bhavanrav Shrinivasrao <i>alias</i> Baba Saheb, Pant Pratinidhi.	Rs.
Phaltan	Mudhojirav Janrav Nimbalkar	9,600
Bhor	H. H. Shankarrav Chimmaji, Pant Sachiv	4,684
Akalkot	Fatehsinh Shahai Raje Bhonsle <i>alias</i> Babu Saheb	14,592
Jath	Ramrav Amritrav <i>alias</i> Aba Saheb Daphle	6,400
Daphlapur	Rani Bai Saheb Daphle, widow of Ramchandrav Venkatrav Chavan Daphle.

Savantwadi.—This State has an area of 925 square miles and population of 217,240. The average revenue is $5\frac{1}{2}$ lakhs. It lies to the north of the Portuguese territory of Goa, the general aspect of the country being extremely picturesque. Early inscriptions take the history of the State back to the sixth century. So late as the nineteenth century the ports on this coast swarmed with pirates and the country was very much disturbed. The present chief is Khem Savant V, *alias* Babu Saheb Bhonsle. Rice is the principal crop of the State, and it is rich in valuable teak. The sturdy Marathas of the State are favourite troops for the Indian Army and supply much of the immigrant labour in the adjacent British districts. The Capital is Savantwadi, also called Sundar Vadi, or simply Vadi.

Sholapur Agency.—This contains the State of Akalkot which forms part of the tableland of the Deccan. It has an area of 498 square miles and a population of 89,082. In the beginning of the eighteenth century the Akalkot territory, which had formerly been part of the Mussulman kingdom of Ahmednagar was granted by the Raja of Satara to a Maratha Sardar, the ancestor of the present chief, subject to the supply of a contingent of horse. In 1849 after the annexation of Satara, the Akalkot Chief became a feudatory of the British Government.

Baria.—The State has an area of 813 square miles and is situated in the heart of the Panchmahals district. The Capital Devgad Baria is reached by road from Piplod station on the B. B. & C. I. Railway, at a distance

of eight miles. The average revenue of the State is about 8 lakhs. The State enjoys plenary powers and pays no tribute to the British Government or any other State. The Ruler Captain Maharaoi Shree Ranjitsinhji enjoys a salute of nine guns. He served in France and Flanders in the war. The staple crop is maize. The forests are rich in teak wood and all sorts of jungle produce. There is a flourishing glass industry within the State. There is a large scope for forest industries.

The Sukkur Agency.—This consists of the Khairpur State, a great alluvial plain in Sind. It has an area of 6,050 square miles and a population of 223,788, and revenue of over 20 lakhs, 59 thousands. The present chief, H. H. Mir Sir Imam Buksh Khan Talpur, G.C.I.E., belongs to a Baloch family called Talpur. Previous to the accession of this family on the fall of the Kalhora dynasty of Sind in 1783, the history of Khairpur belongs to the general history of Sind. In that year Mir Fateh Ali Khan Talpur established himself as Rais or ruler of Sind; and subsequently his nephew, Mir Sohrab Khan Talpur, founded the Khairpur branch of the Talpur family. In 1832 the individuality of the Khairpur State, as separate from the other Talpur Mirs in Sind, was recognised by the British Government in a treaty, under which the use of the river Indus and the roads of Sind were secured to the British. The chief products of the State are oil-seeds, ghee, hides, tobacco, fuller's earth, carbonate of soda, cotton, wool and grain. The manufactures comprise cotton fabrics and various kinds of silverware and metal work.

There is an industrial school at the capital where lacquer work, carpets, pottery, etc., are produced. The Railway from Hyderabad to Rohri runs through the whole length of the State. The rule of the Mir is patriarchal, but many changes have been made in recent years introducing greater regularity of procedure into

the administration. The Wazir, an officer sent from British service, conducts the administration under the Mir. The State supports a military force of 564 including an Imperial Service Camel and Baggage Corps which is 139 strong and served at the Front.

Political Agent: The Collector of Sukkur.

Surat Agency.—This is a small group of three second class States under the superintendence of the Collector of Surat.

State.	Ruling Chiefs.	Area in sq. miles.	Population.
Dharampur ..	Maharana Shri Mohandevji Narayandevji.. .. .	704	114,995
Bansda ..	Maharaval Shri Indrasinhji Pratapsinhji	215	44,594
Sachin ..	His Highness Nawab Sidi Ibrahim Muhammad Yakut Khan Mubazarat Daula Nasrat Jung Bahadur.	49	18,930

The joint revenue of these states is 16½ lakhs. Tribute is paid to the British Government of Rs. 9,154. There is also attached to this Agency a tract of country known as the Dangs, which has an area of 999 square miles and a population of 29,353 and a revenue of Rs. 30,000. The country is divided into 14 Dangs or States of very unequal area, each under the purely nominal rule of a Bhil Chief with the title of Raja, Naik, Pradhan or Povar.

Thana Agency.—This includes the State of Jawhar, in the Thana District, on a plateau above the Konkan plain. It has an area of

310 square miles and a population of 53,489 and revenue of 2½ lakhs. Up to 1294, the period of the first Mahomedan invasion of the Deccan, Jawhar was held by a Varli, not a Koli chief. The first Koli chief, obtained his footing in Jawhar by a device similar to that of Dido, when she asked for and received as much land as the hide of a bull would cover. The Koli chief cut a hide into strips, and thus enclosed the territory of the State. The present chief is Raja Vikramshah Patangshah, who administers the State, assisted by a Karbhari under the supervision of the Collector of Thana, who is Political Agent of the State.

UNDER THE GOVERNMENT OF BENGAL.

Cooch Behar.—This State, which at one time comprised almost the whole of the Northern Bengal, Assam and a part of Bhutan now known as the Duars, is a low-lying plain in North Bengal. It has an area of 1,307 square miles, a population of 593,052 and revenue of nearly 30 lakhs, which will be considerably enhanced this year after the completion of the settlement operations. The ruling chief is H. H. Maharaja Jitendra Narayan Bhup Bahadur who married Rani Indira Debi, eldest daughter of H. H. Maharaja Sayaji Rao Gaekwar of Baroda in 1913 and succeeded his brother Maharaja Raj Rajendra Narayan in the same year. A daughter was born to His Highness in October 1914 and a son and heir in December 1915. His family is according to some ethnologists of either Dravidian or Mongolian origin or a mixture of both types, but according to others of Kshatriya origin. H. H. administers the State with the assistance of the State Council of which he is President. Cooch Behar once formed part of the famous kingdom of Kamup. British connection with it began in 1772 when owing to inroads of the Bhutes, the assistance of the East India Company was invited. The chief products of the State are rice, jute, mustard seed and tobacco. The capital is Cooch Behar, which is reached by the Cooch Behar State Railway, a branch from the Eastern Bengal State Railway System.

Hill Tippera.—This State lies to the east of the district of Tippera and consists largely of hills covered with dense jungles. It has an area of 4,086 square miles and a population of 229,613. The revenue from the State is about 11 lakhs and from the Zemindari in

British territory a slightly smaller sum. The present ruler is Maharaja Birendra Kishore Deb Barman Manikya Bahadur, who is a Kshatriya by caste and comes of the Lunar race and is entitled to a salute of 13 guns. The military prestige of the Tippera Rajas dates back to the fifteenth century and a mythical account of the State takes the history to an even earlier date. Both as regards its constitution and its relations with the British Government, the State differs alike from the large Native States of India, and from those which are classed as tributary. Besides being the ruler of Hill Tippera, the Maharaja also holds a large landed property situated in the plains of the Districts of Tippera, Naokhali and Sylhet. This estate covers an area of 600 square miles, and is held to form with the State an indivisible Raj. Disputes as to the right of succession have occurred on the occasion of almost every vacancy in the Raj producing in times gone by disturbances and domestic wars, and exposing the inhabitants of the hills to serious disorders and attacks from the Kukis, who were always called in as auxiliaries by one or other of the contending parties. The principles which govern succession to the State have recently, however, been embodied in a *sanad* which was drawn up in 1904. The chief products of the State are rice, cotton, *til* and forest produce of various kinds, the traffic being carried chiefly by water. The administration is conducted by the Chief Dewan at Agartala, the capital, assisted by two assistants.

Political Agent: J. Youmie, I.C.S.

UNDER THE GOVERNMENT OF BIHAR AND ORISSA.

Under this Government there are the Chota Nagpur political States of Kharsawan and Seraikela, and the Orissa feudatory States, 24 in number. The total area is 28,648 square miles, and the total population 3,942,972. The revenue is about 70 lakhs. The inhabitants are hill-men of Kolarian or Dravidian origin, and their condition is still very primitive. The chief of **Kharsawan** belongs to a junior branch of the Porahat Raja's family. The State first came under the notice of the British in 1793, when, in consequences of disturbances on the frontier of the old Jungle Mahals, the Thakur of Kharsawan and the Kunwar of Seraikela were compelled to enter into certain agreements relating to the treatment of fugitive rebels. The chief is bound, when called upon, to render service to the British Government, but he has never had to pay tribute. His present sanad was granted in 1899. He exercises all administrative powers, executive and judicial, subject to the control of the Deputy Commissioner of Singhbhum and the Commissioner of Chota Nagpur. The Bengal Nagpur Railway runs through a part of the State. The adjoining State of Seraikela is held by the elder branch of the Porahat Raja's family.

Orissa Feudatory States.—This group of 24 dependent territories is situated between the Mahanadi Delta and the Central Provinces, and forms the mountainous background of Orissa. The names of the individual States are Athgarh, Talcher, Mayurbhanj, Nilgiri, Keonjhar, Pal Lahara, Dhenkanal, Athmallik, Hindol, Narsinghpur, Baramba, Tigiria, Khanpara, Nayagarh, Ranpur, Daspalla and Baud. To these there were added in 1905 the following States: Bamra, Rairakhol, Sonpur, Patna and Kalahandi from the Central Provinces, and Gangpur and Bonai from the Chota Nagpur States. The total population in 1915 was 3,798,038 with a revenue of about 60 lakhs. The Feudatory States have no connected or authentic history. Comprising the western and hilly portion of the province of Orissa they were never brought under the central government, but from the earliest times consisted of numerous petty principalities which were more or less independent of one another. They were first inhabited by aboriginal races, who were divided into innumerable communal or tribal groups each under its own chief or headman. These carried on incessant warfare with their neighbours on the one hand and with the wild beasts of the forests on the other. In course of time their hill retreats were penetrated by Aryan adventurers, who gradually overthrew the tribal chiefs and established themselves in their place. Tradition relates how these daring interlopers, most of whom were Rajputs from the north, come to Puri on a pilgrimage and remained behind to found kingdoms and dynasties. It was thus that Jai Singh became ruler of Mayurbhanj over 1,300 years ago, and was succeeded by his eldest son, while his second son seized Keonjhar. The chiefs of Baud and Daspalla are said to be descended from

the same stock; and a Rajput origin is also claimed by the Rajas of Athmallik, Narsinghpur, Pal Lahara, Talcher and Tigiria. Nayagarh, it is alleged, was founded by a Rajput from Rewah, and a scion of the same family was the ancestor of the present house of Khandpara. On the other hand, the chiefs of a few States, such as Athgarh, Baramba and Dhenkanal, owe their origin to favourites or distinguished servants of the ruling sovereigns of Orissa. The State of Ranpur is believed to be the most ancient, the list of its chiefs covering a period of over 3,600 years. It is noteworthy that this family is admittedly of Khond origin, and furnishes the only known instance in which, amid many vicissitudes, the supremacy of the original settlers has remained intact. The States acknowledged the suzerainty of the paramount power and were under an implied obligation to render assistance in resisting invaders; but in other respects neither the ancient kings of Orissa nor their successors, the Mughals and Marathas, ever interfered with their internal administration. All the States have annals of the dynasties that have ruled over them; but they are made up in most part of legend and fiction and long genealogical tables of doubtful accuracy, and contain very few features of general interest. The British conquest of Orissa from the Marathas, which took place in 1803, was immediately followed by the submission of ten of the Tributary States the chiefs of which were the first to enter into treaty engagements.

The States have formed the subject of frequent legislation of a special character. They were taken over from the Marathas in 1803 with the rest of Orissa; but, as they had always been tributary states rather than regular districts of the native governments they were exempted from the operation of the general regulation system. This was on the ground of expediency only and it was held that there was nothing in the nature of British relations with the proprietors that would preclude their being brought under the ordinary jurisdiction of the British courts, if that should ever be found advisable. In 1882 it was held that the States did not form part of British India and this was afterwards accepted by the Secretary of State.

The staple crop in these States is rice. The forests in them were at one time among the best timber producing tracts in India, but until lately forest conservancy was practically unknown. The States have formed the subject of frequent legislation of a special character. The relations with the British Government are governed mainly by the sanads granted in similar terms to all the chiefs in 1894. They contain ten clauses reciting the rights, privileges, duties and obligations of the chiefs, providing for the settlement of boundary disputes, and indicating the nature and extent of the control of the Political Agent.

Political Agent: L. E. B. Cobden-Ramsay, O.I.E., I.C.S., I.S.O.

UNDER THE GOVERNMENT OF THE UNITED PROVINCES.

Three States: Rampur, Tehri and Benares are included under this Government:—

State.	Area Sq. Miles.	Population.	Revenue in lakhs.
Rampur ..	892	531,898	45
Tehri (Garhwal)	4,200	299,853	6
Benares ..	988

Rampur is a fertile level tract of country. The ruler Colonel His Highness Alijah Farzandi-Dapizir-i-Daulet-i-Inglishta, Mukhlie-ud-Daulah, Nasir-ul Mulk, Amir-ul-Umara, Nawab Sir Syed Mohammed Hamid Ali Khan Bahadur Mustaid Jang, G.C.I.E., G.C.V.O., A.D.C., to His Imperial Majesty the King Emperor. Born 31st August 1875, descended from the famous Sadats of Bahera. Succeeded in February 1889. His Highness is the sole surviving representative of the once great Rohilla power in India. He is the Premier Chief in the United Provinces, and rules over a territory of 892 square miles with a population of 531,217. His Highness is an enlightened Prince and is well educated in Arabic, Persian and English languages. He is a keen supporter of education for Mohammedans, and has travelled extensively in America and Europe. During the Mutiny of 1857 the then Nawab of Rampur displayed his unswerving loyalty to the British Government by affording pecuniary aid, protecting the lives of Europeans, and rendering other valuable services which were suitably recognised by the Paramount Power. This State contributes towards the defence of the Indian Empire by maintaining a well-equipped and well trained battalion of Imperial Service Infantry and a cavalry unit consisting of two squadrons.

The Imperial Service Infantry has served at the Front and a detachment of Imperial Service Lancers is training Government horses at the Remount Depot, Aurangabad.

His Highness has 3 sons, the eldest Sahibzada Syed Raza Ali Khan Bahadur being the heir apparent.

The State has an income of over £300,000 (three hundred thousand pounds) a year.

Tehri State (or Tehri Garhwal).—This State lies entirely in the Himalayas and contains a tangled series of ridges and spurs radiating from a lofty series of peaks on the border of Tibet. The sources of the Ganges and the Jumna are in it. The early history of the State is that of Garhwal District, the two tracts having formerly been ruled by the

same dynasty. Parduman Shah, the last Raja of the whole territory, was killed in battle, fighting against the Gurkhas; but at the close of the Nepalese War in 1815, his son received from the British the present State of Tehri. During the Mutiny the latter rendered valuable assistance to Government. He died in 1859 without issue, and was succeeded by his near relative Bhawani Shah; and he subsequently received a *sanad* giving him the right of adoption. The present Raja Lieutenant H. H. Narendra Shah has completed his education in the Mayo Chiefs' College at Ajmere and is now receiving training in the administration of his State under a Council of Regency. The principal product is rice, grown on terraces on the hill sides. The State forests are very valuable and there is considerable export of timber. The Raja has full powers within the State. A unit of Imperial Service Sappers is maintained. The capital is Tehri, the summer capital being Pratapnagar, 8,000 feet above the sea-level.

Political Agent: The Commissioner of Kumaon.

Benares.—The founder of the ruling family of Benares was one Mansa Ram, who entered the service of the Governor of Benares under the Nawab of Oudh in the early eighteenth century. His son, Balvant Singh, conquered the neighbouring countries and created a big state out of them over which he ruled till 1770. Raja Chet Singh succeeded him, but was expelled by Warren Hastings in 1781. In 1794, owing to the mal-administration of the estates which had accumulated under the Raja of Benares, an agreement was concluded by which the lands held by the Raja in his own right were separated from the rest of the province, of which he was simply administrator. The direct control of the latter was assumed by the Government, and an annual income of one lakh of rupees was assured to the Raja, while the former constituted the Domains. Within the Domains the Raja had revenue powers similar to those of a Collector in a British District, which were delegated to certain of his own officials. There was thus constituted what for over a century was known as the Family Domains of the Maharaja of Benares. On the 1st of April 1911 these Domains became a State consisting of the parganas of Bhadohi (or Konrh) and Chakia (or Kera Mangraur) with the fort of Ramnagar and its appertences. The Maharaja's powers are those of a ruling chief, subject to certain conditions, of which the most important are the maintenance of all rights acquired under laws in force prior to the transfer, the reservation to Government of the control of the postal and telegraph systems, of plenary criminal jurisdiction within the State over servants of the British Government and European British subjects, and of a right of control in certain matters connected with excise. The present ruler is H. H. Maharaja Sir Prabhu Narayan Singh Bahadur, G.C.I.E., who was born in 1855 and succeeded to the State in 1889.

UNDER THE GOVERNMENT OF THE PUNJAB.

Under this Government there are 34 states, varying considerably in size and importance. Area, 36,532 square miles. Population (1911), 4,212,794. Revenue, about £1,000,000.

The Punjab states may be grouped under three main classes. The hill States, 23 in number, lie among the Punjab Himalayas and are held by some of the most ancient Rajput families in all India. Along the western half of the southern border lies the Muhammadan state of Bahawalpur. The remaining States, including the Sikh principalities of Patiala, Jind, Nabha, Kapurthala, Faridkot and Kalsia, and the Muhammadan chiefships of Maler Kotla, Pataudi, Loharu and Dujana, lie east of Lahore, and, with insignificant exceptions, occupy the centre of the eastern plains of the province.

The list below gives details of the area, population, and revenue of the more important states:—

Name.	Area square miles.	Popula- tion.	Revenue Approx. in lakhs.
Bahawalpur ..	15,000	780,394	27
Chamba ..	3,216	134,351	7
Faridkot ..	642	130,374	8
Jind ..	1,259	271,728	15
Kapurthala ..	630	268,244	25
Maler Kotla ..	167	71,144	14½
Mandi ..	1,200	181,110	5
Nabha ..	928	248,892	15
Patiala ..	5,412	1,407,659	72

Bahawalpur.—This State, which is about 300 miles in length and about 40 miles wide, is divided lengthwise into three great strips. Of these, the first is a part of the Great Indian Desert; the central tract is chiefly desert, not capable of cultivation, identical with the Bar or Pat uplands of the Western Punjab; and the third, a fertile alluvial tract in the river valley, is called the Sind. The ruling family claims descent from the Abbaside Khalifas of Egypt. The tribe originally came from Sind, and assumed independence during the dismemberment of the Durrani empire. On the rise of Ranjit Singh, the Nawab made several applications to the British Government for an engagement of protection. These, however, were declined, although the Treaty of Lahore in 1809, whereby Ranjit Singh was confined to the right bank of the Sutlej, in reality effected his object. The first treaty with Bahawalpur was negotiated in 1833, the year after the treaty with Ranjit Singh for regulating traffic on the Indus. It secured the independence of the Nawab within his own territories, and opened up the traffic on the Indus and Sutlej. During the first Afghan War the Nawab rendered assistance to the British and was rewarded by a grant of territory and life pension. On his death the succession was disputed and for a time the State was in the hands of the British. The present Nawab is H. H. Nawab Sadiq Muhammad Khan, who was born in 1904 and succeeded in 1907. During his minority the State is managed by a Council of Regency. The chief crops are wheat, rice and millet. The

Lahore-Karachi branch of the North-Western State Railway passes through the State. The State supports an Imperial Service Silladar Camel Transport Corps consisting of 372 men and 966 camels and a Mounted Escort consisting of 299 men and 166 camels, in addition to other troops. The capital is Bahawalpur, a walled town built in 1748.

Political Agent: W. C. Renouf, I.C.S.

Chamba.—This State is enclosed on the west and north by Kashmir, on the east and south by the British districts of Kangra and Gurdaspur, and it is shut in on almost every side by lofty hill ranges. The whole country is mountainous and is a favourite resort of sportsmen. It possesses a remarkable series of copper plate inscriptions from which its chronicles have been completed.

Founded probably in the sixth century by Marut, a Surajbansi Rajput, who built Brahmapur, the modern Barmaur, Chamba was extended by Meru Varma (680) and the town of Chamba built by Sahil Varma about 920. The State maintained its independence, until the Moghal conquest of India.

Under the Moghals it became tributary to the empire, but its internal administration was not interfered with, and it escaped almost unscathed from Sikh aggression. The State first came under British influence in 1846. The part, west of the Ravi, was at first handed over to Kashmir, but subsequently the boundaries of the State were fixed as they now stand, and it was declared independent of Kashmir. The present chief is H. H. Raja Sir Bhure Singh, K.C.S.I., K.C.I.E., who was born in 1869, and succeeded in 1904. The principal crops are rice, maize and millets. There are some valuable forests which were partly leased to Government in 1864 for a term of 99 years, but the management of them has now been retroceded to the Chamba Durbar. The mountain ranges are rich in minerals which are little worked. The principal road to Chamba town is from Pathankot, the terminus of the Amritsar Pathankot branch of the North-Western Railway. The Raja is the head of the judicial department and is assisted by the Wazir-i-Wazarats. Chamba town, on the right bank of the Ravi, contains a number of interesting temples, of which that of Lakshmi Narayan, dating possibly from the tenth century, is the most famous.

Faridkot.—The ruling family of this sandy level tract of land belongs to the Sidhu-Barar clan of the Jats, and is descended from the same stock as the Phulkian houses. Their occupation of Faridkot and Kot Kapura dates from the time of Akbar, though quarrels with the surrounding Sikh States and internal dissensions have greatly reduced the patrimony.

The present chief, Farzand-i-Saadat Nishan Hazrat-i-Kaisar-i-Hind Brar Bans Raja Har Indar Singh Bahadur was born in 1915 and succeeded his father in 1919. Under the orders of the Government of India the administration of the State has been entrusted to a Council of Administration consisting of a President and 4 members. The State has an area of 643 square miles with a population of 130,294

and has an annual income of 12 lakhs. The ruler is entitled to a salute of 11 guns. The State possesses a company of Imperial Service Sappers.

Jind.—The three Native States of Jind, Patiala and Nabha form collectively the Phulkian States, the most important of the Cis-Sutlej States. This area is the ancestral possession of the Phulkian houses. It lies mainly in the great natural tract called the Jangal (desert or forest), but stretches north-east into that known as the Pwadh and southwards across the Ghaggar into the Nardak, while its southernmost tract, round the ancient town of Jind, claims to lie within the sacred limits of Kurukshetra. This vast tract is not, however, the exclusive property of the States; for in it lie several islands of British territory, and the State of Maler Kotla enters the centre of its northern border. On the other hand, the States hold many outlying villages surrounded by British territory.

The history of Jind as a separate State dates from 1763 when the confederated Sikhs captured Sirhind town and partitioned the whole Jind Province. The Maharaja of Jind, H. H. Maharaja Sir Ranbir Singh, G.C.I.E., K.C.S.I., was born in 1879 and succeeded in 1887. He is descended from the ancestors of the Phulkian family. During the Sikh War and the Mutiny the Raja of Jind was of great service to the British and was rewarded with a grant of nearly 600 square miles of land. The principal crops are wheat, barley and gram. The only industries of importance are the manufactures of gold and silver ornaments, leather and woodwork and cotton cloth. The capital is Sangru which is connected by a State Railway with the North-Western Railway. Under His Highness' Court there is a Council Wizarat which controls all the departments of the State.

Kapurthala.—This State consists of three detached pieces of territory in the great plain of the Doab. The ancestors of the chief of Kapurthala at one time held possessions both in the Cis and Trans-Sutlej and also in the Bari Doab. In the latter lies the village of Ahlu, whence the family springs, and from which it takes the name of Ahluwalia. Some of these estates were confiscated after the first Sikh War and when the Jullundur Doab came under the dominion of the British Government in 1846, the estates north of the Sutlej were maintained in the independent possession of the Ahluwalia chieftain, conditional on his paying a commutation in cash for the service engagements by which he had previously been bound to Ranjit Singh. The Bari Doab estates have been released to the head of the house in perpetuity, the civil and police jurisdiction remaining in the hands of the British authorities. For good services during the Mutiny, the Raja was rewarded with a grant of other States in Oudh in which, however, he exercises no ruling powers, though in Oudh he is, to mark his superiority, addressed as Raja-i-Rajagan. The present chief is H. H. Maharaja Sir Jagatjit Singh Bahadur, G.C.S.I., who was born in 1872 and succeeded in 1877. He was granted the title of Maharaja as an hereditary distinction in 1911. The chiefs of Kapurthala are Sikhs. Sardar Jassa Singh was always known as Jassa Kajal; but the

family claim descent from Rana Kapur, a semi-mythical member of the Rajput house of Jaisalmer, who is said to have left his home and founded Kapurthala 900 years ago. Only a small proportion of the population however are Sikhs, the majority being Mahomedans. The chief crops are wheat, gram, maize, cotton and sugar-cane. The town of Sultanpur in this State is famous for hand-painted cloths. The main line of the North-Western Railway passes through part of the State and the Grand Trunk Road runs parallel to it. A branch railway from Jullundur City to Ferozepur passes through the State. Kapurthala maintains a battalion of Imperial Service infantry and a small force of local troops. The capital is Kapurthala, which is said to have been founded in the eleventh century.

Agent to the Lieutenant-Governor for Kapurthala, the Commissioner of the Jullundur Division.

Maler Kotla.—This State consists of a level sandy plain bounded by the district of Ludhiana on the north and by Patiala territory elsewhere. The Nawabs of Maler Kotla are of Afghan descent, and originally held positions of trust in the Sirhind province under the Moghal Emperors. As the Empire sank into decay during the eighteenth century, the local chiefs gradually became independent. The result was constant feuds with the adjacent Sikh States. After the victory of Laswari, gained by the British over Sindhia in 1803, and the subjugation and flight of Holkar in 1805, when the Nawab of Maler Kotla joined the British army, the British Government succeeded to the power of the Marathas in the districts between the Sutlej and the Jumna. The final treaty which affirmed the dependence of the State on the British Government was signed after the submission of Ranjit Singh in 1809. The present Nawab is H. H. Nawab Ahmud Ali Khan Bahadur, K.C.S.I., who was born in 1881 and succeeded in 1908. He was created Hon. Major in the Indian Army for his services during the war. The chief products are cotton, sugar and opium. The State supports two double companies of Imperial Service Sappers. The capital is Maler Kotla. Revenue 14½ lakhs.

Mandi.—This is a mountainous State in the upper reaches of the Beas. It has a history of considerable length, as it once formed part of the Suket State. Its relations with the British were determined after the battle of Sobraon in 1846. The present minor Chief H. H. Raja Jogindra Sen was installed in 1913. The administration is carried on by Mr. J. R. S. Parsons, I.C.S., the Superintendent, and Mahta Ganda Mal, Assistant Superintendent. The principal crops are rice, maize, wheat and millet. About three-fifths of the State are occupied by forest and grazing lands. It is rich in minerals. The capital is Mandi, founded in 1527, which contains several temples and other buildings of interest and is one of the chief marts for commerce with Ladakh and Yarkhand.

Nabha.—Nabha which became a separate State in 1763 is one of the 3 Phulkian States—Nabha, Patiala and Jind and though second in point of population and revenue of the 3 sister States, it claims seniority being descended from the eldest branch. It consists of two

distinct parts, the main portion comprising 12 separate pieces of territory scattered among the other Punjab States and Districts, forms the City of Nabha and the *Nizamats* of Phul and Amloh; the second portion forms the *Nizamat* of Bawal in the extreme south-east of the Punjab on the border of Rajputana; this *Nizamat* of Bawal was subsequently added to its territory as a reward from the British Government for the loyalty of the Rulers of Nabha. The State now covers an area of about 1,000 square miles and has a population of about 3 lakhs. The present Ruler is Shri Maharaja Ripudaman Singhji Malavendra Bahadur, who was born in 1883 and succeeded his father in 1911. The administration of the State is carried on by His Highness the Maharaja assisted by a Council of Ministers. The High Court is the head of the Judicial Department. The State supports one battalion of Imperial Service Infantry consisting of 600 men; besides this there are local forces of Infantry, cavalry and artillery, etc., consisting of about 1,000 men all told and also a Transport Corps. For the preservation of the peace there is a Police force consisting of about 600 men.

The State is traversed by the main and 3 branch lines of the N. W. Railway and the Rajputana Malwa Railway crosses the *Nizamat* of Bawal. A large portion of the State is irrigated by the Sirhind Canal. The crops of the State are gram, pulses, bajra, sugarcane, cotton, wheat and barley; to facilitate trade the Darbar has opened grain markets and Banks near the principal railway stations within the State territory; The chief industries of the State consist of the manufacture of silver and gold ornaments, brass utensils, and cotton carpets, lace and *gota*, etc. There are some ginning factories and a cotton steam press in the State which are working successfully. The State has so far contributed roughly about 45 lakhs of rupees to the various funds and loans in connection with the War, including a fully equipped Hospital Ship for Mesopotamia, people of the State have subscribed about 13 lakhs to the Indian War Loans.

Patiala.—This is the largest of the Phulkian States, and the premier State in the Punjab. Its territory is scattered and interspersed with small estates and even single villages belonging to other States and British districts. It also comprises a portion of the Simla Hills and territory on the border of Jaipur and Alwar States. Area 5,951 square miles. Population 1,407,659. Its history as a separate state begins in 1762. During the Sikh war and the Mutiny the Maharaja was loyal and was substantially rewarded. The present Ruler, His Highness Farzand-i-Khas Daulat-i-Inghlishia Mansur-i-Zaman Amir-ul-Umra Maharaja

Dhiraj Rajeshwar Sri Maharaja-i-Rajgan Major General Sir Bhupinder Singh Mahinder Bahadur, G.C.I.E., G.B.E., was born in 1891 and succeeded in 1909. During his minority his administrative functions were exercised by a Council of Regency consisting of three members. The principal crops are gram, barley and wheat; cotton and tobacco are also grown in parts of the state. A great part of the state is irrigated by the Sirhind and Western Jumna Canal distributaries. It possesses valuable forests. The State is rich in antiquities, especially at Pinjaur, Sunam and Sirhind. The North-Western Railway, the E. I. Railway, and a branch of the B. B. and C. I. Railway traverse the state. It contains an Imperial Service contingent of a regiment of cavalry and two battalions of infantry. The State has besides these standing forces supplied British Government with two mule and one camel corps raised expressly for war exigencies. Also undertaken to raise three new battalions of full war strength. In 1900 it was decided by the Government of India to appoint a Political Agent for Patiala and the other two Phulkian States of Jind and Nabha were included in the Agency, to which was afterwards added the Mohammadan State of Bhawalpur, but a separate Agency has since been established for this last mentioned state. The Headquarters of the Agency are at Patiala. Gross income in round figures is 1,10,00,000 rupees per annum.

Sirmur (Nahan).—This is a hilly State in the Himalayas under the Political control of the Commissioner of Ambala Division. Its history is said to date from the 11th century. In the eighteenth century the State was able to repulse the Gurkha invasion, but the Gurkhas were invited to aid in the suppression of an internal revolt in the State and they in turn had to be evicted by the British. In 1857 the Raja rendered valuable services to the British, and during the second Afghan War he sent a contingent to the North-West Frontier. The present Chief is Lieut.-Colonel H. H. Maharaja Amar Prakash Bahadur, K.C.S.I., who was born in 1888 and succeeded in 1911. The main agricultural feature of the State is the recent development of the Kiarda Dun, a fertile level plain which produces wheat, gram, rice, maize and other crops. The State forests are valuable and there is an iron foundry at Nahan which was started in 1867 but, being unable to compete with the imported iron, is now used for the manufacture of sugar-cane crushing mills. The State supports an Imperial Service Corps of Sappers and Miners which served in the Tirah Expedition of 1897 and has been serving in the war. It was captured with General Townshend's force at Kut-al-Amara but the Corps has since been re-constituted and has again gone on service.

UNDER THE GOVERNMENT OF BURMA.

Under this Government there are four Shan States, two in the Mandalay Division (Hkmati Long and Mong Mit); and two in the Sagaing Division (Hsawnghsup and Singkaling Hkmati), the area of which is 7,374 square miles and the population about 67,051, consisting chiefly

of Buddhists. There are in addition 48 petty States, 5 in the Northern Shan States, 43 in the Southern Shan States, with an area of 58,835 square miles and a population of 1,358,498 consisting of Buddhists and Animists.

The Shan States—Though a portion of British India, do not form part of Burma proper and are not comprised in the regularly administered area of the Province. They lie for the most part to the east of Upper Burma. They owed allegiance to the Burmese Government, but were administered by their own rulers (Sawbwas) and the British Government has continued to a certain extent the semi-independence which it found existing in 1835. As at present defined, the Shan States are divided into—

1. States under the supervision of the Superintendent, Northern Shan States, whose headquarters are at Lashio; area 14,294 square miles and population 58,952.
2. States under the supervision of the Superintendent and Political Officer, Southern Shan States, whose headquarters are at Taunggyi; area, 40,434 square miles and population 900,202.

There are five States in the Northern and 38 in the Southern Shan States. There are in addition two Shan States under the supervision of the Commissioner of the Mandalay Division, namely, Hkamti Long in the unadministered territory to the north of the Myitkyina District and Mong Mit lying north-east of the Ruby Mines District. In the north-west of the Upper Chindwin District towards Manipur there are two small Shan States, Hsawngshup and Singkaling Hkamti, whose administration is supervised by the Commissioner of the Sagaing Division.

The Northern Shan States are North Hsenwi in the north, South Hsenwi near the Salween in the east, Manglon in the south-east, Hsipaw in the south-west, and Tawngpeng in the north-west. The Wa States east of the Salween can hardly be said to be under British control. In ordinary matters the States are administered by their Sawbwas, who are assisted by amats, or ministers, in various departments. The Superintendent exercises general control

over the jurisdiction of justice and is vested with wide revisionary powers. In revenue matters the Sawbwas administer their States in accordance with local customs which have been but little modified. Of prime importance in the economy of the country is the Mandalay Lashio railway, 180 miles in length, of which 126 miles lie within the Northern Shan States. The line is a single track, and was constructed in the face of considerable engineering difficulties, of which not least the notable was the Gokteik gorge, now spanned by a viaduct. It had been proposed to continue the railway about 90 miles farther east to the Kunlong; where is a ferry over the Salween, and eventually to penetrate into Yunnan; but this extension is for the present in abeyance.

The most important of the Southern Shan States are Kengtung and Yawnghwe. Under the supervision of the Superintendent and Political Officer and his Assistants, the chiefs—known as Sawbwas, Myozas, and Ngwegunhmus—control their own States, exercising revenue, civil and criminal jurisdiction therein. There are in all 9 Sawbwas; 18 Myozas and 11 Ngwegunhmus.

Karenni.—This district consists of five States, with a total area of approximately 4,200 square miles and a population of about 64,000, lying on the frontier south of the Shan States. The largest State is Kantarawadi with an area of 3,000 square miles, a population of nearly 40,000, and a gross revenue of about 1½ lakhs of rupees. More than half of the inhabitants belong to the Red Karens, a people low in the scale of civilisation. An Assistant Political Officer is posted at Loikaw as Agent of the British Government, and a certain amount of control is exercised through him over the chiefs. The principal wealth of the country is teak timber, and the considerable alien population is largely supported by the timber trade, which, however, has declined greatly in the last few years. The Karens themselves are distinguished as hunters.

UNDER THE GOVERNMENT OF ASSAM.

The only State of importance under the Chief Commissioner of Assam is **Manipur**, which has an area of 8,456 square miles and a population of 346,222, of which about 60 per cent. are Hindus, and 36 per cent. animistic forest tribes. Manipur consists of a great tract of hilly country and a valley, about 30 miles long 20 miles wide, which is shut in on every side. The State adopted Hinduism in the early eighteenth century, when it came under a Naga Raja who subsequently made several invasions into Burma. On the Burmese retaliating, Manipur negotiated a treaty of alliance with the British, in 1762. The Burmese again invaded Manipur during the first Burmese War and on the conclusion of peace, in 1826, Manipur was declared independent. The chief event in its subsequent history was the intervention of the British in 1891 to establish the claim of Kula Chandra Singh as Maharaja, followed by the treacherous murder of the Chief Commissioner, Mr. Quinton and the officers with him and the withdrawal of the escort which accompanied him. From 1891 to 1908 the State was administered by a Political Agent and Superintendent of the State during

the minority of H. H. Raja Chura Chand Singh. The Raja was invested with ruling powers in 1908. The administration of the State is now conducted by the Durbar, consisting of the Raja as President, a vice-president, a member of the Indian Civil Service whose services are lent to the State, three ordinary and three additional members who are all Manipuris. The staple crop of the country is rice. Forests of great variety cover the whole of the hill ranges.

Khasi and Jaintia Hills.—These petty chiefs, 25 in number, with a total area of about 3,900 square miles and a population of 126,000, are included under the Government of Assam. Most of the States have treaties or engagements with the British Government. The largest of them is Khyrim, the smallest is Nonglewai, which has a population of 169. Most of them are ruled by a chief or Siem. The Siemship usually remains in one family, but the succession was originally controlled by a small electoral body constituted from the heads of certain priestly clans. Of recent years there has been a tendency to broaden the elective basis, and the constitution of a

Khasi State has always been of a very democratic character, a Siem exercising but little control over his people. Among many of the north-east frontier tribes there is little security of life and property, and the people

are compelled to live in large villages on sites selected for their defensive capabilities. The Khasis seem, however, to have been less distracted by internal warfare, and the villages, as a rule, are small.

UNDER THE GOVERNMENT OF THE CENTRAL PROVINCES.

The Central Provinces include fifteen feudatory States subordinate to the administration, with an area of 31,174 square miles and a population of 2,117,002. One of the States, Makrai, lies within Hoshangabad District; the remainder are situated in the Chhattisgarh Division, to the different districts of which they were formerly attached. Their relations with Government are controlled by a Political Agent. The States vary greatly in size and importance. Sakti the smallest, having an area of 138 square miles and Bastar the largest an area of 13,062 square miles. They are administered by hereditary chiefs, who hold on conditions of loyalty and good government set forth in patents and acknowledgments of fealty, but are nominally free from direct interference save in the case of sentences of death, which require the Chief Commissioner's confirmation. But, as a fact, the Government has exercised a very large amount of control, owing mainly to the frequency with which the States have been taken under direct management, because of either the minority or the misconduct of the chief.

The States pay a tribute to Government which amounts in the aggregate to about 2½ lakhs.

Statistics relating to the chief States are contained in the following table:—

State	Area.	Population 1911.	Revenue (approximate) in Lakhs.
	Sq. Miles.		
Bastar ..	13,062	433,310	3
Jashpur ..	1,963	174,458	1
Kanker ..	1,429	127,014	2
Khairagarh ..	931	155,471	3
Nandgaon ..	871	167,362	4
Raigarh ..	1,486	218,860	2
Surguja ..	6,055	248,703	2
Eight other States ..	5,377	411,824	6
Total ..	31,174	2,117,002	23

Bastar.—This State, which lies to the south-east corner of the Provinces, is the most important of the group. It has an area of 13,062 square miles and a population of 433,310. The family of the Raja is very ancient, and is stated to belong to the Rajputs of the Lunar race. Up to the time of the Marathas, Bastar occupied an almost independent position, but a tribute was imposed on it by the Nagpur government in the eighteenth century. At this period the constant feuds between Bastar

and the neighbouring State of Jeypore in Madras kept the country for many years in a state of anarchy. The chief object of contention was the Kotpad tract, which had originally belonged to Bastar, but had been ceded in return for assistance given by Jeypore to one of the Bastar chiefs during some family dissensions. The Central Provinces Administration finally made this over to Jeypore in 1863, on condition of payment of tribute of Rs. 3,000, two-thirds of which sum was remitted from the amount payable by Bastar. By virtue of this arrangement the tribute of Bastar was, until recently, reduced to a nominal amount. The cultivation of the State is extremely sparse. Rice is the most important crop. The State is ruled by the feudatory Chief, Raja Rudra Pratap Deo. He is a Donatè of the Order of St. John of Jerusalem. The Dewan of the State (Khan Bahadur Hafiz Mohammad Walayatullah) is an extra Assistant Commissioner of the Central Provinces on deputation who has three assistants under him. After a recent period of disturbance the State has returned to complete tranquillity and precautions are being taken to remove all causes of unrest by better supervision over the minor State officials and a very considerate forest policy. The chief town is Jagdalpur on the Indravati River. The famous falls on the Indravati called the Chitrakote are 23 miles away from Jagdalpur.

Surguja.—Until 1905 this was included in Chota Nagpur State of Bengal. The most important feature is the Manipat, a magnificent tableland forming the southern barrier of the State. The early history of Surguja is obscure; but according to a local tradition in Palamau, the present ruling family is said to be descended from a Raksal Raja of Palamau. In 1758 a Maratha army overran the State, and compelled its chief to acknowledge himself a tributary of the Bhonsla Raja. At the end of the eighteenth century, in consequence of the chief having aided a rebellion in Palamau against the British, an expedition entered Surguja; and, though order was temporarily restored, disputes again broke out between the chief and his relations, necessitating British interference. Until 1818 the State continued to be the scene of constant lawlessness; but in that year it was ceded to the British Government under the provisional agreement concluded with Mudhoji Bhonsla of Berar, and order was soon established. The principal crops are rice and other cereals. The present Chief of the State is Maharaja Ramanuj Saran Singh Deo, C.B.E., who succeeded to the *gadi* in 1918 and enjoys full powers of a Feudatory Chief.

KASHMIR.

Kashmir (known to Indians as Jammu) lies to the east of the Indus and to the west of the Ravi. It is a mountainous country with just a strip of level land along the Punjab frontier, and intersected by valleys of which many are of

surpassing beauty and grandeur. It may be divided physically into two areas: the north-eastern comprising the area drained by the Indus with its tributaries, and the south-western, including the country drained by the Jhelum,

the Kishanganga and the Chenab. The dividing line between those two areas is the great central mountain range. The area of the State is 84,432 square miles, and the population 3,158,126.

HISTORY.—Various poets have left more or less trustworthy records of the history of the valley down to 1586, when it was conquered by Akbar. Srinagar, the capital, had by then been long established, though many of the fine buildings erected by early Hindu rulers had been destroyed by the Mahomedan kings who first appeared in the 12th century. In the reign of Sikandar the population became almost entirely Mahomedan. Akbar visited the valley three times. Jehangir did much to beautify it; but after Aurangzebe there was a period of disorder and decay, and by the middle of the eighteenth century the *Subah* of Kashmir was practically independent of Delhi. Thereafter it experienced the oppression of Afghan rule until it was rescued, in 1819, by an army sent by Ranjit Singh. Sikh rule was less oppressive than that of the Afghans. The history of the State as at present constituted is practically that of one man, a Dogra Rajput, Gulab Singh of Jammu. For his services to the Sikhs this remarkable man had been made Raja of Jammu in 1820, and he added largely to his territory by conquest. He held aloof from the war between the British and the Sikhs, only appearing as mediator after the battle of Sobraon (1846) when the British made over to him for Rs. 75 lakhs the present territories of the State. He had to fight for the valley and subsequently lost part of his State, Gilgit, over which the successors had at a heavy cost to reassert their claims. His son Ranbir Singh, a model Hindu, ruled from 1857 to 1885, when he was succeeded by his eldest son Major-General H. H. Maharaja Sir Partab Singh, G.C.S.I., G.C.I.E.

ADMINISTRATION.—For some years the administration of the State was conducted by a Council over which the Maharaja presided but since 1905 he has exercised full powers, assisted by a Chief Minister—Rai Saheb Diwan Amar Nath, C.I.E.—a Home Minister, and a Revenue Minister. The four chief executive officers are the Governors of Jammu and of Kashmir, the Wazir Wazarat of Gilgit and the Wazir Wazarat of Ladakh. The real administrative power lies with the petty subordinate officers (*tahsildars*) who exercise revenue, civil, and criminal jurisdiction with regular stages of appeal: but distance and the absence of easy communications are practical checks on the use or abuse of appeals. The British Resident has his headquarters at Srinagar; there is also a Political Agent at Gilgit responsible to the Government of India for the administration of the outlying petty States; and a British Officer is stationed at Leh to assist in the supervision of Central Asian trade. In the Dogras the State has splendid materials for an Army, which consists of 6,961 troops, of whom 3,370 are maintained as Imperial Service troops.

FINANCE.—The financial position of the State is strong, and it has more than 46 lakhs invested in Government of India securities. The total revenue last year was 93 lakhs, the chief items being land revenue, forests, customs and octroi.

PRODUCTION AND INDUSTRY.—The population is pre-eminently agricultural and pastoral.

The system of land tenure has been described as "ryotwari in ruins," great complexity existing owing to the fact that there is no local law of rent and revenue. The principal food crop is rice, maize, cotton, saffron, tobacco, hops (autumn crops) and wheat, barley, poppy, beans (spring crops) are also grown. Sheep are largely kept. The State forests are extensive and valuable. A survey of the mineral resources of the State is being conducted under an expert. Vast fields of irriable, dusty coal have been found. Gold has been found at Gulmarg, Sapphires in Padar Aquamarine in Skardu and lead in Uri. The industries of manufacture are chiefly connected with sericulture (the silk flature at Srinagar, the largest in the world, was destroyed by fire in July 1912), oil-pressing and the manufacture of wine. The woollen cloth, shawls, and wood carving of the State are famous.

COMMUNICATIONS.—Great efforts have been made and are being made towards the improvement of wheeled traffic in the Kashmir State. The Jhelum Valley Road (196 miles) which links the Kashmir Valley with the Punjab and the North Western Province is used by wheeled traffic of sorts, *viz.*, Ekkas, Tangas, Carts, Motor Cars and Motor Lorries. The Banihal Cart Road (nearly as long as the Jhelum Valley Road) which is nearing completion, will soon join Kashmir with the Jammu Tawi Railway Station. Road fit for pack-animals lead from Srinagar, the summer Capital of Kashmir, to the frontier districts of Gilgit and Leh. Internal village communications have also been much improved.

PUBLIC WORKS.—In 1904, a flood spill channel above Srinagar was constructed with a view to minimising the constant risk of floods; and it was hoped that the danger would be still further reduced by the carrying out of a scheme for lowering a part of the bed of the Jhelum, which has since been taken in hand. Good progress has been made with irrigation; but the most important schemes of recent years have been those for an electrical power station on the Jhelum River, and for a Railway into Kashmir. It was proposed to supply from this power station electrical energy for various State schemes (including the Jhelum dredging scheme) and for private enterprise and possibly for working the proposed Kashmir Railway. The works were completed about 1907, and the scheme according to the latest reports is working very satisfactorily. The proposal for a railway to Kashmir had been under discussion for many years, the nature of the country making the question of route a difficult one. In 1905, a decision was taken in favour of a line from Srinagar *via* the Jhelum Valley and Abbottabad, but the project has remained in abeyance pending the consideration of further schemes, among which are proposals for lines of ropeway from Jammu to Srinagar and from Srinagar to the western borders *via* the Jhelum Valley.

EDUCATION.—In education Kashmir is still backward. In the State as a whole only 2 in every 100 persons can read and write. The number of educational institutions including two Colleges is 715.

Resident:—Lieut.-Col. A. D' A. G. Bannerman, C.V.O., C.I.E.

Political Agent at Gilgit:—Major C. A. Smith,

Native States' Tribute.

Many of the States pay tribute, varying in amount according to the circumstances of each case; to the British Government. This tribute is frequently due to exchanges of territory or settlement of claims between the Governments, but is chiefly in lieu of former obligations to supply or maintain troops. The actual annual receipts in the form of tribute and contributions from Native States are summarised in the following table. The relations of the States to one another in respect of tributes are complicated, and it would serve no useful purpose to enter upon the question. It may, however, be mentioned that a large number of the States of Kathiawar and Gujarat pay tribute of some kind to Baroda, and that Gwalior claims tribute from some of the smaller States of Central India:—

States paying tribute directly to the Government of India.

	£	
Tribute from Jaipur	26,667	
" " Kotah	15,648	
" " Udaipur	13,333	
" " Jodhpur	6,533	
" " Bundi	8,000

Grand Total	591,097

It was announced at the Coronation Durbar of 1911 that there would in future be no Nazarana payments on successions.

Foreign Possessions in India.

Portugal and France both hold small territorial possessions in the Indian Peninsula.

The Portuguese possessions in India consist of the province of Goa, situated within the limits of the Bombay Presidency, on the Arabian Sea coast; the territory of Daman with the small territory called Pragana-Nagar Avdy on the Gujarat coast, at the entrance to the Gulf of Cambay; and the little island of Diu, with two places called Gogla and Simbor, on the southern extremity of the Kathiawar Peninsula.

GOA.

Goa forms a compact block of territory surrounded by British districts. Savantwadi State lies to the north of it, the Arabian Sea on the west and North Kanara on the south, and the eastern boundary is the range of the Western Ghats, which separates it from the British districts of Belgaum and North Kanara. The extreme length from north to south is 62 miles and the greatest breadth from east to west 40 miles. The territory has a total area of 1,301 square miles and consists of the *Velhas Conquistas*, or Old Conquests, comprising the island of Goa, acquired by the Portuguese in 1510, and the neighbouring districts of Salsette and Bardez, acquired in 1543; and of the *Novas Conquistas*, or New Conquests, comprising the districts of Pernem, Sanquelim, Satary, Ponda, Sanguem, Quepem and Canacona, acquired in the latter half of the 18th century. The small island of Anjediva situated opposite the port of Karwar, in the British district of North Kanara, forms administratively a portion of the province of Goa. This was acquired in 1505. The whole country is hilly, especially the eastern portion, the predominating physical feature being the Eastern Ghats, which besides bounding the country along the north-east and south-east, jut off westward and spread across the country in a succession of spurs and ridges. There are several conspicuous isolated peaks, of which the highest, Sonsagar, is 3,827 feet high.

The country is intersected by numerous rivers running westward from the Ghats, and the principal eight, which are all navigable, are in size of some importance. Goa possesses a fine harbour, formed by the promontaries of Bardez and Salsette. Half-way between these extremities lies the *cabo*, or cape, which forms the extremity of the island of Goa. This divides the whole bay into two anchorages, known as Aguada and Marmagao. Both are capable of accommodating the largest shipping from September to May, but Aguada is virtually closed during the south-west monsoon, owing to the high winds and sea and to the formation of sand bars across the estuary of the Mandovi river, which opens into Aguada. Marmagao is accessible at all times and is therefore the harbour of commercial importance. It is the terminus of the railway running to the coast from the inland British system of lines, a breakwater and port have been built there and the trade is considerable, being chiefly transit trade from British territory.

The People.

The total population in the whole Goa territory was 486,752 at the census of 1910. This gives a density of 343 persons to the square mile and the population showed an increase of 6 per cent. since the census ten years previously. In the Velhas Conquistas 91 per cent. of the population is Christian. In the Novas Conquistas Christians and Hindus are almost equally numerous. The Moslems in the territory are numbered in a few thousands. The Christians still very largely adhere to caste distinctions, claiming to be Brahmans, Charados and low castes, which do not intermarry. The Hindus are largely Maratha and do not differ from those of the adjacent Konkan districts of Bombay. All classes of the people, with the exception of Europeans, use the Konkani dialect of Marathi, with some admixture of Portuguese words. The official language is Portuguese, which is commonly spoken in the capital and the principal towns, as well as by all educated people. Nearly all the Christians profess the Roman Catholic religion and are spiritually subject to an archbishop, who has the titles of Primate of the East and Patriarch of the East Indies and exercises ecclesiastical jurisdiction also over a great portion of British India. (The Christians of Daman and Diu are subject to a Bishop who bears the titles of Bishop of Daman and Archbishop of Cranganore.) There are numerous churches in Goa, mostly built by the Jesuits and Franciscans prior to the extinction of the religious orders in Portuguese territory. The churches are in charge of secular priests. Hindus and Mahomedans now enjoy perfect freedom in religious matters and have their own places of worship. In the early days of Portuguese rule the worship of Hindu gods in public and the observance of Hindu usages were strictly forbidden and rigorously suppressed.

The Country.

One-third of the entire territory of Goa is stated to be under cultivation. A regular land survey was only recently made. The fertility of the soil varies considerably according to quality, situation and water-supply. The Velhas Conquistas are as a rule better cultivated than the Novas Conquistas. In both these divisions a holding of fifteen or sixteen acres would be considered a good sized farm, and the majority of holdings are of smaller extent. The staple produce of the country is rice, of which there are two good harvests; but the quantity produced is barely sufficient to meet the needs of the population for two-thirds of the year. Next to rice, the culture of coconut palms is deemed most important, from the variety of uses to which the products are applied. Hilly places and inferior soils are set apart for the cultivation of cereals and several kinds of fruits and vegetables are cultivated to an important extent. The condition of the agricultural classes in the Velhas Conquistas has improved during recent years; owing to the general rise in the prices of all classes of agricultural produce and partly to the current of emigration to British territory. Stately forests are found in the Novas

Conquistas. They cover an area of 116 square miles and are under conservation and yield some profit to the administration. Iron is found in parts of the territory, but has not been seriously worked. Manganese also exists and was worked to an important extent a few years ago.

Commerce.

In the days of its glory, Goa was the chief entrepot of commerce between East and West and was specially famous for its trade in horses with the Persian Gulf. It lost its commercial importance with the downfall of the Portuguese empire and its trade is now insignificant. Few manufacturing industries of any moment exist, and most manufactured articles in use are imported. Exports chiefly consist of coconuts, betel nuts, mangoes and other fruits and raw produce. A line of railway connects Marmagao with the Madras and Southern Mahratta Railway. Its length from Marmagao to Castle Rock, above the Ghats, where it joins the British system, is 51 miles, of which 49 are in Portuguese territory. The railway is under the management of the Madras and Southern Mahratta Railway administration, and the bulk of the trade of Marmagao port is what it brings down from and takes to the interior. The telegraphs in Goa territory are worked as part of the system of British India, and are maintained jointly by the British and Portuguese Governments. The Goa territory was formerly subject to devastating famines and the people now suffer heavy losses in times of drought. They are then supplied, though at great cost, with rice from British territory.

The Capital.

Nova Goa, the present capital of Portuguese India, comprehends Panjim and Ribandar, as well as the old city of Goa, and is six miles in extent. Old Goa is some five miles distant from the new city. Panjim occupies a narrow strip of land leading up to the Cabo, the cape dividing the Aguada bay from that of Marmagao, and mainly slopes down to the edge of the Aguada. It was selected as the residence of the Portuguese Viceroy in 1759, and in 1843 it was raised to its present rank as the capital of Portuguese India. The appearance of the city, with its row of public buildings and elegant private residences, as seen from the water, is very picturesque and this impression is not belied by a closer inspection of its neat and spacious roads, bordered by decent, tidy houses. The most imposing public structures are the barracks, an immense quadrangular building the eastern wing of which accommodates the Lyceum, the Public Library and the Government Press. Other noticeable buildings are the Cathedral and various churches, the viceregal palace, the High Court and so on. The square in the lower part of the town is adorned with a life-sized statue of Albuquerque standing under a canopy.

History.

Goa was captured for the Portuguese by Alfonso de Albuquerque in 1510. Albuquerque promptly fortified the place and established Portuguese rule on a firm basis. From this time Goa rapidly rose in importance and be-

came the metropolis of Portuguese power in the East. There was constant fighting with the armies of the Bijapur Kingdom, but the Portuguese held their own and gained the surrounding territory now known as the Velhas Conquistas.

The subsequent history of the town is one of ostentation and decay. Goa reached its summit of prosperity at the end of the sixteenth century. The accounts of travellers show that the Goa of those days presented a scene of military, ecclesiastical and commercial magnificence which has had no parallel in the British capitals of India. But the Portuguese based their dominion in India on conquest by the sword and they laboured to consolidate it by a proselytizing organisation which throws the missionary efforts of every other European power in India into the shade. Old Goa, as the ruins of the old capital are called to-day, had a hundred churches, many of them of magnificent proportions, and the Inquisition was a power in the land. The result showed how rotten was this basis and how feebly cemented the superstructure reared upon it.

Modern Times.

There was frequently recurring fighting and in 1741 the Marathas invaded the neighbourhood of Goa and threatened the city itself. An army of 12,000 men arrived from Portugal at the critical moment. The invaders were beaten off, and the Novas Conquistas were added to the Portuguese possessions. In 1844 the shelter given by Goa to fugitives from justice in British territory threatened to bring about a rupture with the British Government at Bombay. In 1852 the Ranes of Satari, in the Novas Conquistas revolted. In 1871 the native army in Goa mutinied and the king's own brother came from Lisbon to deal with the trouble and having done so disbanded the native army, which has never been reconstituted. But another outbreak among the troops took place in 1895 and the Ranes joined them the trouble was again not quieted until the arrival of another special expedition from Lisbon. The Ranes again broke out in 1901 and again in 1912, troops being again imported to deal with the last outbreak, which was only reported concluded in the summer of 1913.

Administration.

The Lisbon Government by Decree No. 3266, dated 27th July 1917, enacted new rules regarding the administration of Portuguese India under an Organic Charter (Carta Organica) in force since 1st July 1919.

As the principal organ of administration next to the Governor-General, and in collaboration with him, is working a council composed of official and elected members.

The official members are:—the Governor-General, president; the Chief Secretary; the Attorney-General; the Director of Public Works the Director of Finances; the Head of Marine Department; the Head of the Military Department; the Chief Health Officer; the Director of Agriculture and Forests and the Director of Customs.

The elected members are:—One representative of each of the districts of the New Conquests (Novas Conquestas) and one of the districts Daman and Diu, elected in the same way; one citizen elected by the Commercial and Industrial Associations; one citizen elected by 90 highest tax payers; one citizen elected by the Associations of Agriculture and of Land owners; one citizen elected by the Attorneys of the Communities and one citizen elected by the Associations of Class.

Under the Presidency of the Governor of each district there is District Council, which in Goa is composed of—the Chief Secretary, President; the Attorney General's Delegate at the Civil Court of the Islands; the Deputy Chief Health Officer; the Engineer next to the Director of Public Works; the Deputy Director of Finances; the Chairman of the Municipal Corporation of the Islands; one member elected by the Commercial and Industrial Associations of the district; one member elected by the 60 highest tax payers of Goa; one member elected by the Associations of Landowners and Farmers of the District and one member advocates elected by the Governor's Council among the legally qualified.

At Daman and Diu the corresponding body is composed of the local Governor, as President, the Delegate of the Attorney General, the Chief of the Public Works Department, the Health Officer, the Financial Director of the district, the Chairman of the Municipal Corporation, two members elected by 40 highest tax payers of the District and one member elected by the Merchants, Industrialists and Farmers of the district.

Under the provisions of the above quoted Decree is also officiating in the capital of Portuguese India a special tribunal to take cognizance and decide all litigious administrative matters, fiscal questions and accounts. It is named *Tribunal do Contencioso e de Contas* and is composed of the Chief Justice, as President, two High Court Judges, the Chief Secretary and the citizens who are not government officers nor belong to the administration, bodies of corporations, whether they may be or may not be on actual duty, elected by the Governor's Council, two of whom are advocates and the third a merchant, industrialist or landowner or a highest tax payer. In the decision of matters of accounts the Director of Finances also sits on the special tribunal.

Under the presidency of the Governor-General the following bodies are also working:—

Technical Council of Public Works.—Its members are all engineers on permanent duty in the head office, a military officer of highest rank in the army or navy, the Director of Finances, the Attorney-General, the Chief Health Officer and a Secretary being a clerk of the Public Works Department appointed by the Director of Public Works.

Council of Public Instruction.—This is composed of three members appointed by Government and six elected among the Professors, there being one elected by the Medical College of Nova-Goa, two by the Lyceum of Nova-Goa, one by the Commercial Institute, one by the Normal School and one by the Corporation of the Professors of Primary Instruction.

DAMAN.

The settlement of Daman lies at the entrance to the Gulf of Cambay, about 100 miles north of Bombay. It is composed of two portions, namely, Daman proper, lying on the coast, and the detached pargana of Nagar Aveli, separated from it by a narrow strip of British territory and bisected by the B. B. & C. I. Railway. Daman proper contains an area of 22 square miles and 26 villages and has a population (1910) of 18,300. Nagar Aveli has an area of 60 square miles and a population (1910) of 29,020. The town of Daman was sacked by the Portuguese in 1531, rebuilt by the natives and retaken by the Portuguese in 1558, when they made it one of their permanent establishments in India. They converted the mosque into a church and have since built eight other places of worship. Of the total population the number of Christians is 1,586. The number of houses is 8,971, according to the same census. The native Christians adopt the European costume, some of the women dressing themselves after the present European fashion, and others following the old style of petticoat and mantle once prevalent in Spain and Portugal.

The soil of the settlement is moist and fertile, especially in the pargana of Nagar Aveli,

but despite the ease of cultivation only one-twentieth part of the territory is under tillage. The principal crops are rice, wheat, the inferior cereals of Gujarat and tobacco. The settlement contains no minerals. There are stately forests in Nagar Aveli, and about two-thirds of them consist of teak, but the forests are not conserved and the extent of land covered by each kind of timber has not been determined. Before the decline of Portuguese power in the East, Daman carried on an extensive commerce; especially with the east coast of Africa. In those days it was noted for its dyeing and weaving.

The territory forms for administrative purposes a single district and has a Municipal Chamber and Corporation. It is ruled by a Governor invested with both civil and military functions, subordinate to the Governor-General of Goa. The judicial department is administered by a judge, with an establishment composed of a delegate of the Attorney-General and two clerks. In Nagar Aveli the greater part of the soil is the property of the Government, from whom the cultivators hold their tenures direct. A tax is levied on all lands, whether alienated or the property of the State. The chief sources of revenue are land-tax, forests, excise and customs duties.

DIU.

Diu is an island lying off the southern extremity of the Kathiawar Peninsula, from which it is separated by a narrow channel through a considerable swamp. It is composed of three portions, namely, Diu proper (island), the village of Gogla, on the Peninsula, separated by the channel, and the fortress of Simbor, about 5 miles west of the island. It has a small but excellent harbour, where vessels can safely ride at anchor in two fathoms of water and owing to the great advantages which its position offers for trade with Arabia and the Persian Gulf, the Portuguese were fired at an early period with a desire to obtain possession

of it. This they gained, first by treaty with the Sultan of Gujarat and then by force of arms. Diu became opulent and famous for its commerce. It has now dwindled into insignificance. The extreme length of the island is about seven miles and its breadth, from north to south, two miles. The area is 20 square miles. The population of the town of Diu, from which the island takes its name, is said to have been 50,000 in the days of its commercial prosperity. The total population of the island, according to the census of 1910, is 14,170, of whom 271 were Christians.

FRENCH POSSESSIONS.

The French possessions in India comprise five Settlements, with certain dependent lodges, or plots. They aggregate 203 square miles, and had a total population in 1912 of 282,386. The first French expedition into Indian waters, with a view to open up commercial relations, was attempted in 1603. It was undertaken by private merchants at Rouen, but it failed, as also did several similar attempts which followed. In 1642 Cardinal Richelieu founded the first *Campagne d'Orient*, but its efforts met with no success. Colbert reconstituted the Company on a larger basis in 1664, granting exemption from taxes and a monopoly of the Indian trade for fifty years. After having twice attempted, without success, to establish itself in Madagascar, Colbert's Company again took up the idea of direct trade with India and its President, Caron, founded in 1668 the *Comptoir*, or agency, at Surat. But on finding that city unsuited for a head establishment he seized the harbour of Trincomalee in Ceylon from the Dutch. The Dutch, however, speedily retook Trincomalee; and Caron, passing over to the Coromandel coast, in 1672 seized St. Thome, a Portuguese town adjoining Madras, which had for twelve years been in the possession of Holland. He was, however, compelled to restore it to the Dutch in 1674.

The ruin of the Company seemed impending when one of its agents, the celebrated Francois Martin, suddenly restored it. Rallying under him a handful of sixty Frenchmen, saved out of the wreck of the settlements at Trincomalee and St. Thome, he took up his abode at Pondicherry, then a small village, which he purchased in 1683 from the Raja of Gingee. He built fortifications, and a trade began to spring up; but he was unable to hold the town against the Dutch, who wrested it from him in 1693, and held it until it was res-

tored to the French by the Peace of Ryswick in 1697. Pondicherry became in this year, and has ever since remained, the most important of the French Settlements in India. Its foundation was contemporaneous with that of Calcutta. Like Calcutta, its site was purchased by a European Company from a native prince, and what Job Charnock was to Calcutta Francois Martin proved to Pondicherry. On its restitution to the French by the Peace of Ryswick in 1697, Martin was appointed Governor, and under his able management Pondicherry became an entrepôt of trade.

Chandernagar, in Lower Bengal, had been acquired by the French Company in 1688, by grant from the Delhi Emperor; Mahé, on the Malabar Coast, was obtained in 1725-6, under the government of M. Lenoir; Karikal, on the Coromandel Coast, under that of M. Duma, in 1739. Yanam, on the coast of the Northern Circars, was taken possession of in 1750, and formally ceded to the French two years later.

Administration.

The military command and administration-in-chief of the French possessions in India are vested in a Governor, whose residence is at Pondicherry. The office is at present held by Monsieur L. Gerbinis. He is assisted by a Chief Justice and by several "Chefs de Service" in the different administrative departments. In 1879 local councils and a council-general were established, the members being chosen by a sort of universal suffrage within the French territories. Seventeen Municipalities, or Communal Boards, were erected in 1907, namely, Pondicherry, Ariancoupam, Modeliarpeth, Oulgaret, Villenour, Tiroubouvane, Bahour and Nettapacam, for the establishment of Pondicherry; Karikal, Neravy, Nedoucadou, Tirunalar, Grande Aldée, Cotchery, for the establishment

of Karikal, and also Chandernagar, Mahé and Yanam. On municipal boards natives are entitled to a proportion of the seats. Civil and criminal courts, courts of first instance and a court of appeal compose the judicial machinery. The army and establishments connected with the Governor and his staff at Pondicherry, and those of administrators at Chandernagar, Yanam, Mahé and Karikal, together with other headquarters charges, necessarily engross a large proportion of the revenue. All the state and dignity of an independent Government, with four dependent ones, have to be maintained. This is effected by rigid economy, and the prestige of the French Government is worthily maintained in the East. Pondicherry is also the scene of considerable religious pomp and missionary activity. It forms the seat of an Archbishop, with a body of priests for all French India; and of the Missions Etrangères, the successors of the Mission du Carnatic founded by the Jesuits in 1776. But the chief field of this mission lies outside the French Settlements, a large proportion of its Christians are British subjects and many of the churches are in British territory. The British rupee is the ordinary tender within French territories. A line of railway running *via* Villenour, from Pondicherry to Villupuram on the South Indian Railway, maintains communication with Madras and the rest of British India, and Karikal is linked to the same railway by the branch from Peralam. A Chamber of Commerce consisting of fifteen members, nine of them Europeans or persons

of European descent, was reorganised by a decree of 7th March, 1914. The capital, Pondicherry, is a very handsome town, and presents, especially from the sea, a striking appearance of French civilisation.

People and Trade.

The Settlements are represented in Parliament at Paris by one senator and one deputy. These are at the present time Mons. E. Flandin and Mons. P. Bluysen, respectively. There were in 1918, 61 primary schools and 3 colleges, all maintained by the Government, with 312 teachers and 9,676 pupils. Local revenue and expenditure (budget of 1919) Rs. 19,63,500. The principal crops are paddy, groundnut, and ragi. There are at Pondicherry 5 cotton mills, and at Chandernagar 1 jute mill; the cotton mills have, in all, 1,622 looms and 73,092 spindles, employing 12,020 persons. There are also at work one oil factory and a few oil presses for groundnuts, one ice factory, one ironworks and a cocotina factory. The chief exports from Pondicherry are oil seeds. At the ports of Pondicherry, Karikal, and Mahé in 1918 the imports amounted to 4,289,071 francs and the exports to 15,886,384 francs. At these three ports in 1918, 241 vessels entered and cleared. Tonnage 30,190T, 965K. Pondicherry is visited by French steamers sailing monthly between Colombo and Calcutta in connection with the Messageries Maritimes. The figures contained in this paragraph are the latest available and are corrected up to September 1918.

PONDICHERRY.

Pondicherry is the chief of the French Settlements in India and its capital is the headquarters of their Governor. It is situated on the Coromandel Coast, 105 miles from Madras by road and 122 by the Villupuram-Pondicherry branch of the South Indian Railway. The area of the Settlement is 115 square miles and its population in 1915 was 266,828. It consists of the four communes of Pondicherry. The Settlement was founded in 1674 under Francois Martin. In 1693 it was captured by the Dutch but was restored in 1699. It was besieged four times by the English. The first siege under Admiral Boscawen in 1748 was unsuccessful. The second, under Eyre Coote in 1761, resulted in the capture of the place, which was restored in 1765. It was again besieged and captured in 1778 by Sir Hector Munro, and the fortifications were demolished in 1779. The place was again restored in 1785 under the Treaty of Versailles of 1783. It was captured a fourth time by Colonel Braithwaite in 1793, and finally restored in 1816.

The Settlement comprises a number of isolated pieces of territory which are cut off from the main part and surrounded by the British District of South Arcot, except where they border on the sea. The Collector of

South Arcot is empowered to deal with ordinary correspondence with the French authorities on these and kindred matters, and in this capacity is styled the Special Agent. At Pondicherry itself is a British Consular Agent accredited to the French Government, who is usually an officer of the Indian Army. The town is compact, neat and clean, and is divided by a canal into two parts, the *Ville blanche* and the *Ville noire*. The *Ville blanche* has a European appearance, the streets being laid at right angles to one another with trees along their margins reminding the visitor of continental boulevards, and the houses being constructed with courtyards and embellished with green venetians. All the cross streets lead down to the shore, where a wide promenade facing the sea is again different from anything of its kind in British India. In the middle is a screw-pile pier, which serves, when ships touch at the port, as a point for the landing of cargo, and on holidays as a general promenade for the population. There is no real harbour at Pondicherry; ships lie at a distance of about a mile from the shore, and communication with them is conducted by the usual *masula* boats of this coast. Facing the shore end of the pier is a statue of the great Duplexe, to whom the place and the French name owed so much.

CHANDERNAGAR.

Chandernagar is situated on the bank of the Hooghly, a short distance below Chinsura. Population (1915) 27,644. The town was permanently occupied by the French in 1688, though previously it had been temporarily occupied by them at a date given as 1672 or 1676. It did not, however, rise to any importance till the time of Duplex. It changed hands between British and French various times during the Napoleonic wars and was finally restored to the French in 1816.

The former grandeur of Chandernagar has

disappeared, and at present it is little more than a quiet suburban town with little external trade. The railway station on the East Indian Railway is just outside French territory 22 miles from Calcutta (Howrah). The chief administrative officer is the Administrator who is subordinate to the Governor of the French Possessions. The chief public institution is the College Duplex, formerly called St. Mary's Institution, founded in 1882 and under the direct control of the French Government.

KARIKAL.

Karikal lies on the Coromandel Coast between the Tanjore District of Madras and the Bay of Bengal. The Settlement is divided into three communes, containing 110 villages in all, and covering an area of 53 square miles. It is governed by an Administrator subordinate to the Governor at Pondicherry. The population has in recent years rapidly decreased. In 1883 it was 93,055; in 1891, 70,526; in 1901, 56,595; in 1912, 56,579; and in 1915, 56,867; but the density is still very high, being 1,068 persons per square mile. Kumbakonam is the only taluk in Tanjore District which has a higher density. Each of the three communes—namely, Karikal, La Grande Aldee, and Nedungadu—possesses a mayor and council. The members are all elected by universal suffrage, but in the muni-

cipality of Karikal half the number of seats are reserved for Europeans or their descendants. The country is very fertile, being irrigated by seven branches of the Cauvery, besides many smaller channels.

The capital of the settlement is situated on the north bank of the river Arasalar, about $1\frac{1}{2}$ miles from its mouth. It has a brisk trade in rice with Ceylon, and to a less extent with the Straits Settlements. It has no commerce with France, and very little with other French colonies. The port is merely an open roadstead, provided with a light-house 142 feet high, the light in which has a range of from 8 to 10 miles. In 1899 Karikal was connected with Peralem on the Tanjore District Board Railway. Karikal finally came into French possession on the settlement after 1815.

The Indian Frontiers.

A chapter on the frontiers of India at the present time is like a chapter on snakes in Iceland; on a large part of the north-west there is no frontier, nor will there be one until peace has been concluded with Turkey. That has been delayed from month to month, until now, more than a year after the armistice, although we are informed that the Allies have come to a general agreement, we are still without any news of the lines on which that agreement will be based.

The Indian frontier question has to be orientated afresh. All the old governing forces have disappeared, or been revolutionised. For generations Indian frontier policy was dominated by one idea, and one alone—it was fear of Russian expansion. All our movements on the North-West Frontier, and in regard to Persia and the Persian Gulf, were governed by one impulse—to arrest, if possible, the glacier-like advance of Russia towards India, whether that advance was through Afghanistan or through Persia and Seistan. These alarms and excursions were somewhat allayed by the conclusion of the Anglo-Russian agreement, but they were not dispersed; they continued to form the mainspring of what was known as the Forward School—the school of publicists and soldiers who were for ever clamouring for the pushing forward of the British frontier line.

Germany.—But the conclusion of the Anglo-Russian Agreement only changed the potential enemy from Russia to Germany. As soon as we were able, by the lightening of our insensate distrust of Russia, to examine the situation more tranquilly we saw that the real enemy was not Russia but Germany. Whilst Russia was advancing in Asia in a formless and sporadic manner, Germany was building her road to the East on deep foundations. The whole of her policy is summed up in the words Berlin-Byzantium-Baghdad—the great railway which was to carry German influence, along a railroad constructed and managed by Germans, from Berlin through Constantinople to the Persian Gulf and so to India. Indeed this project was one of the primary causes of the war, for Serbia blocked the way to a German line from Berlin to Baghdad, and there can be little doubt that appreciation of this fact exercised a great influence on the ex-Kaiser when he pledged the full might of Germany to Austria in her determination to deal severally with Serbia. And at one moment Germany hovered on the brink of success. The military collapse of Russia, and the close alliance which the Bolsheviks made with the Central Powers, opened the road to India, and German troops were pushed through the Caucasus to the Caspian, and Turkish troops, which were the instruments of Germany, advanced into Persia. This dream was dissipated when the smashing victories of General Allenby in Palestine struck the knell of German hopes and were the prelude to the entire collapse of Germany in the West.

Confusion.—Now in place of Russia and Germany we have on our frontiers nothing but confusion. The old Turkish Empire has ceased

to exist. None knows what will take its place. But it is certain that Great Britain will have to assume responsibility for the administration of Mesopotamia, for there is no other agency to keep order, and there is little order now beyond reach of the rifles of the Army of Occupation. People are beginning to count the cost, and faced with the heavy expenses of the war the British taxpayer is not contemplating with equanimity the burden of an unremunerative administration in Mesopotamia. The boundaries of our mandate have not been determined; but they are expected to stop short of Mosul. A very close agreement has been reached between Persia and Great Britain, under which British help in men and money will be given to assist the government of the Shah to restore and maintain order. The old North-West Frontier of India is now in a state of flux. The laborious work of Abdurrahman Khan and his successor Habibullah Khan in Afghanistan was brought to nought when in the early part of 1919 Habibullah Khan was foully murdered. The details of that crime are yet obscure. There is little doubt that it was inspired in the main by the fanatical and reactionary clique in the country against which Habibullah Khan had had to fight throughout his reign. This clique, led by the Amir's brother Nasrullah and the Afghan Commander-in-Chief, had striven by every means to involve Afghanistan in the war on the side of Turkey. They had failed, because of the tenacity with which Habibullah Khan had adhered, amid circumstances of great difficulty, to his pledge of neutrality. The military defeat of the Central Powers, and of Turkey, had proved the wisdom of Habibullah Khan's policy; if he had lived he would have been supreme in the State; there is little reason to doubt that he would have used his power to deal straightly with the enemies who had harassed him and would have launched on a policy to develop the resources and communications of Afghanistan. Realising this, the fanatical reactionaries had him done to death outside Jelalabad and proclaimed Nasrullah Khan Amir in his stead. But Afghan opinion revolted against the accession of Nasrullah Khan over the murdered body of his brother, and rallied round Amanullah Khan, the late Amir's third son, who was governor of Kabul, and installed him on the throne, throwing the assassins of Habibullah Khan into gaol.

New Afghan War.—But it was a thorny throne which the new Amir ascended. The turbulent Afghans had only with difficulty been held in leash by the iron rule of Abdurrahman Khan and his son. They were in no mood to settle down under their new ruler. And that ruler, like others before him, sought internal peace through a foreign war. The idea of a jihad—a religious war against the Christian peoples by Islam—had long been popular amongst an influential section of the Afghans. Turkish, German and Austrian emissaries sent to Kabul during the war were with difficulty controlled by the then Amir. This faction broke loose and carried the Amir with him amid the turmoil caused by the assassination and

the change of rule. Whether Amanullah Khan entertained any real hopes of success after the smashing defeat of Germany and Turkey is a mystery. He was certainly encouraged by the reports which reached him from his agents of the serious troubles in India which followed the passing of the Rowlatt Act and led to riots and loss of life in the Punjab and in Bombay. He undoubtedly desired to find an outlet for his restless soldiery and expected that the Government of India would be embarrassed by the internal disturbances and the war weariness of the army. But if so he choose his time with singular fatuity. An offensive which might have been embarrassing when we were at death grips with Germany, or when the Punjab disturbances were at their height, was futile when Germany was smashed and order reigned in the Punjab. However it was in these circumstances that Amanullah Khan issued his challenge; proclaimed a jihad; called upon the Frontier tribes to rise; and promised his soldiers the loot of Hindustan. The campaign was a miserable fiasco. A large British force moving swiftly out seized Dakka; the Afghan armies, severely bombed by aeroplanes and destitute of transport, melted away; and in a few weeks the Amir sued for peace. Peace was concluded, the Amir receiving the right to enter into negotiations with foreign powers direct, instead of through the Government of India, but forfeiting the right to the large subsidy which the Government of India had paid to his predecessors and agreeing to the final delimitation of the frontier.

The Frontier Tribes.—The Frontier tribes generally ignored the appeal of the Afghans to join in the jihad and remained quiescent. The exceptions were the Waziris against whom a long bill had been accumulating. This troublesome tribe, and especially the Mahsud Waziris, had been rebellious for years, and had persisted in raids, murders and looting on our side of the Frontier. A reckoning with them was necessarily delayed during the war, but was taken in hand as soon as the Afghan peace was settled. Columns entered their country, destroying rebellious villages, and preparing the way for a permanent road, which like Wade's road through the Highlands of Scotland after Culloden, will permanently break the power of these rascally marauders. The Mahsuds resisted desperately, and the fighting was the most severe in the history of the Fron-

tier; but the opposition of the Mahsuds was steadily broken down, and the expedition had substantially done its work by the end of January.

Uncertainty.—The main results of these events is to leave this large section of the frontiers of India in a deplorable state of uncertainty. We have yet to learn the exact extent of the territory for which we shall have to assume responsibility in Mesopotamia. Whatever the frontier line, it will be subject to raids from the undisciplined peoples who will be our neighbours. The Anglo-Persian Agreement is full of promise, but the fulfilment of that promise is on the knees of the gods. None dares hazard an opinion as to the probable trend of events in Kabul; all look forward with apprehension to a long period of disturbance in Afghanistan. The tribes on our Frontier are comparatively quiet, but they must be affected by conditions in Afghanistan. Over all hangs the sinister menace of Bolshevism. As the year closed, the Bolsheviks seemed to be triumphing over their domestic enemies. Admiral Koltchak was in full retreat, with confusion in front and behind. General Denikin was in full retreat, with the Bolshevik armies rushing through his centre on Rostoff-on-Don. General Judenitch's dash for Petrograd had ended in hopeless failure. These successes placed the Bolsheviks in possession of the Orenburg-Tashkent railway and gave them easy access to Persia and to the northern provinces of Afghanistan. They announced their intention of using this favourable position for the spread of their power and principles throughout Asia. The future is therefore exceedingly unsatisfactory, and indicates that so far from Indian frontier responsibilities declining as the result of the war, they are likely to be more acute and anxious than ever.

The story of the long struggle for the mastery of Asia Minor, and of German intrigues, which has been briefly sketched here, was told in detail in earlier editions of *The Indian Year Book*. The conditions in the Persian Gulf are more permanent, so the essential features of the situation are recapitulated below. The new Anglo-Persian Agreement is also given in full, as well as the story of the assassination of the Amir of Afghanistan, of the war with Afghanistan, and of the troubles with the Frontier tribes. That is as far as it is possible now to go in an attempt to outline the conditions on the Indian frontiers.

THE PERSIAN GULF.

Our first appearances in the Persian Gulf was in connection with the long struggle for supremacy with the Portuguese, the French and the Dutch, who had established trading stations there. With the capture and destruction of the great entrepot which the Portuguese had established at Ormuz, and the supersession of the land route by the sea route, coupled with the appearance of anarchy in the interior, the importance of the Gulf declined. The Indian Government remained there primarily to preserve the peace, and this task it has since successfully performed. Piracy, which was as destructive

as the ravages of the Barbary corsairs, was stamped out, the Trucial Chiefs who occupy the Pirate Coast were gradually brought into close relations with the British Government, and the vessels of the Royal Navy have since kept watch and ward in the Gulf, whilst our Consuls have regulated the external affairs of the Arab rulers on the Arabian Coast.

A Policy of Abnegation.

In return for these services Great Britain has claimed no selfish advantages. The waters of the Gulf are as free to the navigation of other

flags as to the Red Ensign. The only territorial possession is the tiny station of Bassidu. Point after point has at one time or another been occupied by British troops. Muhammerah and the lower valley of the Karun valley were occupied during the war with Persia in 1857. Bushire was long held in the same connection, and still bears marks of our regime in the one tolerable road. The Island of Kharak was occupied from 1833 to 1842, and again in 1857. We had a military station at Kais during the Pirate wars, and a military and naval station at Kishm from 1820 to 1879. Jask was occupied as a cable station, but subsequently returned to Persia. The only surveys of the waters are British; the only cables are British; the few navigation marks are maintained by the British India Company, and two steamship services, a fast mail service and a slow trading service, are run by the same corporation. Apart from these direct acts, Great Britain might at any time have seized the whole Arabian Coast and the Persian shore. But in pursuance of a resolute self-denying ordinance she has kept the peace and demanded no reward.

European Intrusions.

Left to herself, Great Britain would desire no other policy. But the affairs of the Persian Gulf have passed into the region of international politics, and the past quarter of a century has witnessed successive efforts to turn the British position. Basing her interference on a treaty which gives her equal rights with Great Britain, France attempted to acquire a coaling station at Jissa, near Maskat, and subsequently obstructed British efforts to stamp out the slave trade, and the arms traffic, which was supplying weapons of precision to the tribes on our North-Western Frontier. Turkey, whether acting on her own volition, or as the *avant courier* of Germany, threatened the territory of the Sheikh of Bahrein, who is in special relations with us, and of the Sheikh of Koweit, who owns the only harbour which would make a Gulf terminus of the Baghdad Railway. Persia, stirred from Teheran, when Russian influence at the court of the Shah in Shah was supreme, established a foreign Customs service in the Gulf, and pressed our good friend, the Sheikh of Muhammerah. Russia and Germany sent heavily-subsidised merchant ships into the Gulf, in order to establish trading rights, and posted Consuls, where there was neither trade nor legitimate interest.

The Gulf and the Empire.

With these attacks there came also a closer appreciation of the bearing of the Persian Gulf on the defence of the Indian Empire. The strategic importance of these waters has been laid down by a writer of unchallenged authority and unbiassed mind. Writing in the *National Review*, Admiral Mahan said, "Concession in the Persian Gulf, whether by formal arrangement (with other Powers) or by neglect of the local commercial interests which now underlie political and military control, will imperil Great Britain's naval situation in the Farther East, her political position in India, her commercial interests in both, and the Imperial tie between herself and Austra-

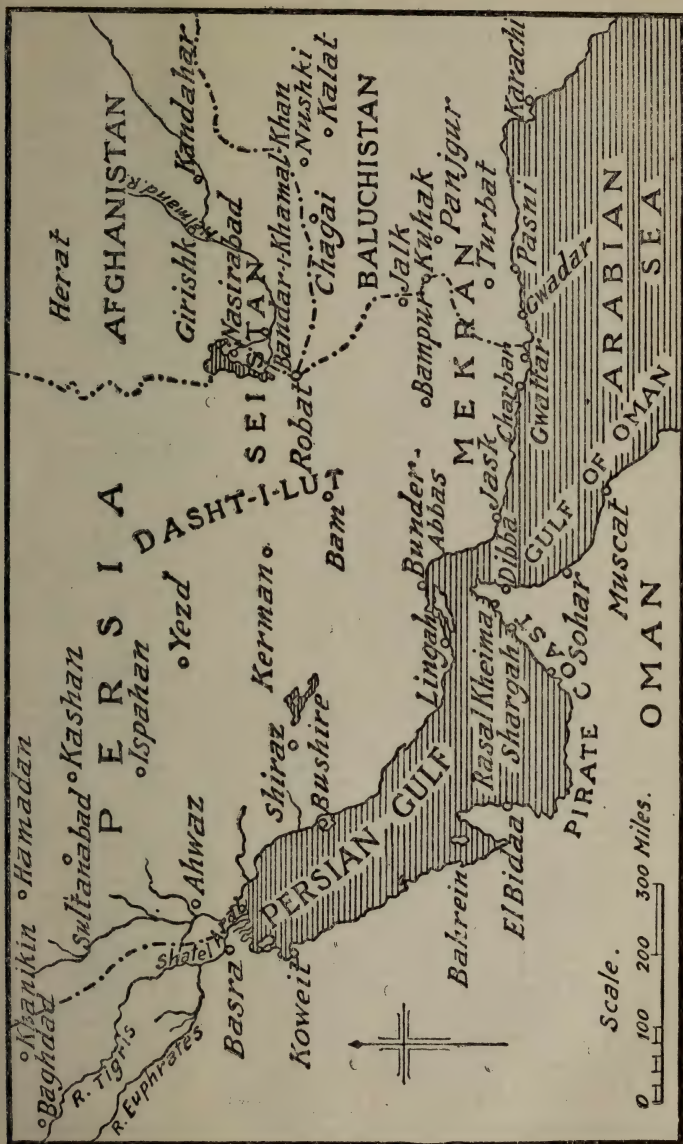

lasia." Following this, successive British Governments have made declarations of policy which are satisfactory, as far as words can go. Speaking in the House of Lords on May 5, 1903, Lord Lansdowne, then Secretary of State for Foreign Affairs, said "We (*i.e.*, His Majesty's Government) should regard the establishment of a naval base or of a fortified port in the Persian Gulf by any other Power as a very grave menace to British interests which we should certainly resist with all the means at our disposal." This declaration of policy has since been endorsed by Sir Edward Grey. But the question which arises is whether, in view of the intrusion of foreign Powers with aggressive designs, and the changing conditions on the littoral, the purely negative policy which has hitherto satisfied Great Britain will suffice. It is a hard fact but a true one, that if British authority disappeared to-morrow, it would leave no other relic than the Abadan oil refinery; a few consular buildings and the tradition of justice and fair dealing. That is a question which can best be considered after a brief survey of the various jurisdictions which are established in the Gulf.

Maskat.

Maskat, which is reached in about forty-eight hours from Karachi, is outside the Persian Gulf proper. It lies three hundred miles south of Cape Musandim, which is the real entrance to the Gulf, but its natural strength and historical prestige combine to make it inseparable from the politics of the Gulf, with which it has always been intimately associated.

The approach to Maskat is dramatic. The mail steamer gently feels her way along a coast more black and forbidding even than the iron-bound littoral of the Gulf of Suez, which is so familiar to the eastward passenger. Suddenly there appear on the coast the white houses of the trading settlement of Mattra, which lies to the north of Maskat. Then with a sharp turn the bow of the steamer passes under a gaunt rock painted with the names of the warships which have visited Maskat for half a century, and enters the landlocked harbour. Twin fortresses erected by the Portuguese command the heights which overlook the town; the town itself clusters on the shore and climbs the high ground behind it, and itself is shut off from the Arabian desert by a stout wall on the landward side. Formerly Maskat was part of a domain which embraced Zanzibar, and the Islands of Kishm and Larak, with Bunder Abbas on the Persian shore. Zanzibar was separated from it by agreement, and the Persians succeeded in establishing their authority over the possessions on the eastern shore.

The relations between Britain and Maskat have been intimate for a century and more. It was under British auspices that the separation between Zanzibar and Maskat was effected, the Sheikh accepted a British subsidy in return for the suppression of the slave trade and in 1892 sealed his dependence upon us by concluding a treaty pledging himself not to cede any part of his territory without our consent. Foreign intrigues with Maskat did not

commence until 1894, when the French, in pursuit of the pin-pricking policy through which they were avenging Egypt, and perhaps to assist Russia, established a consulate there. The Sultan was induced to cede to France a coaling station at Jissa, but this was such a clear violation of the Treaty of 1892 that it could not make good, and France had to accept the poor alternative of a leased depot. A more serious dispute arose over the use of the French flag to cover the slave trade. Native craft would secure the prohibition of the French flag by registering at Jubtil, and then defy the Sultan of Maskat, and they were enabled to traffic in slaves with impunity, inasmuch as there was rarely a French warship in the neighbourhood to search them. In April 1903 the trouble came to a head, and the French flagship *Infernet* was sent to Maskat to demand the release of dhows which had been arrested for a flagrant breach of the quarantine rules. This emphasised the necessity of a permanent settlement, and the question was referred to the Hague Tribunal, and a working compromise arranged. It was adjudged by the Hague Tribunal in 1905 that "after January 2, 1892, France was not entitled to authorise vessels belonging to subjects of H. H. the Sultan of Maskat to fly the French flag," except on condition that their "owners or fitters-out had established, or should establish, that they had been considered and treated by France as her proteges before the year 1863," though "owners of dhows who before 1892 had been authorised by France to fly the French flag retained this authorisation as long as France renewed it to the grantee." The conclusion of the *entente* with France put an end to these pinpricks, but one important issue remained outstanding until 1914. France claimed under the Anglo-French Treaty of 1862 freedom of trade with Maskat. This was carried on for years a lucrative arms traffic with the Gulf, rifles and ammunition being shipped from Europe to Maskat, and thence distributed all over the littoral and even to the North-West Frontier of India. The extent of this evil compelled the British Government to intervene, and elaborate arrangements were made to check the traffic by arresting the dhows carrying arms and by harrying the gunrunners ashore. In effect, the British warships had to witness the dumping of cargoes on the shore at Maskat, see them loaded into dhows, and trust to their own vigilance to arrest these consignments on the high seas. Prompted by the Colonial Party, the French Government refused to yield one jot of their treaty rights, in the hope that Great Britain would buy them out by surrenders at Gambia. The difficulty was largely overcome by the establishment of a bonded warehouse for arms at Maskat, where all consignments have to be deposited, and whence they are only issued under certificates of destination; and by an agreement negotiated in 1914 the French Government recognised the new Arms Traffic Regulations and abandoned the privileges and immunities secured to them by Treaty. Compensation was paid by the British Government to those French merchants whose stocks were rendered valueless by the Regulations.

In 1873 jurisdiction was given to the Vice-Admiralty Court at Aden and the consuls

within the dominions of Zanzibar, Maskat, and Madagascar for the more effectual suppression of the slave trade on the East Coast of Africa. By an Order-in-Council which came into force on August 1, 1914, the Act had been extended so as to comprise the Court established by the Persian Coast and Islands Order-in-Council, 1907. Thus the Consuls-General for Fars and the coasts and islands of the Persian Gulf will be able to enforce the suppression of the slave trade in that neighbourhood which was agreed to be desirable in a treaty made with the Persian Government so long ago as 1882.

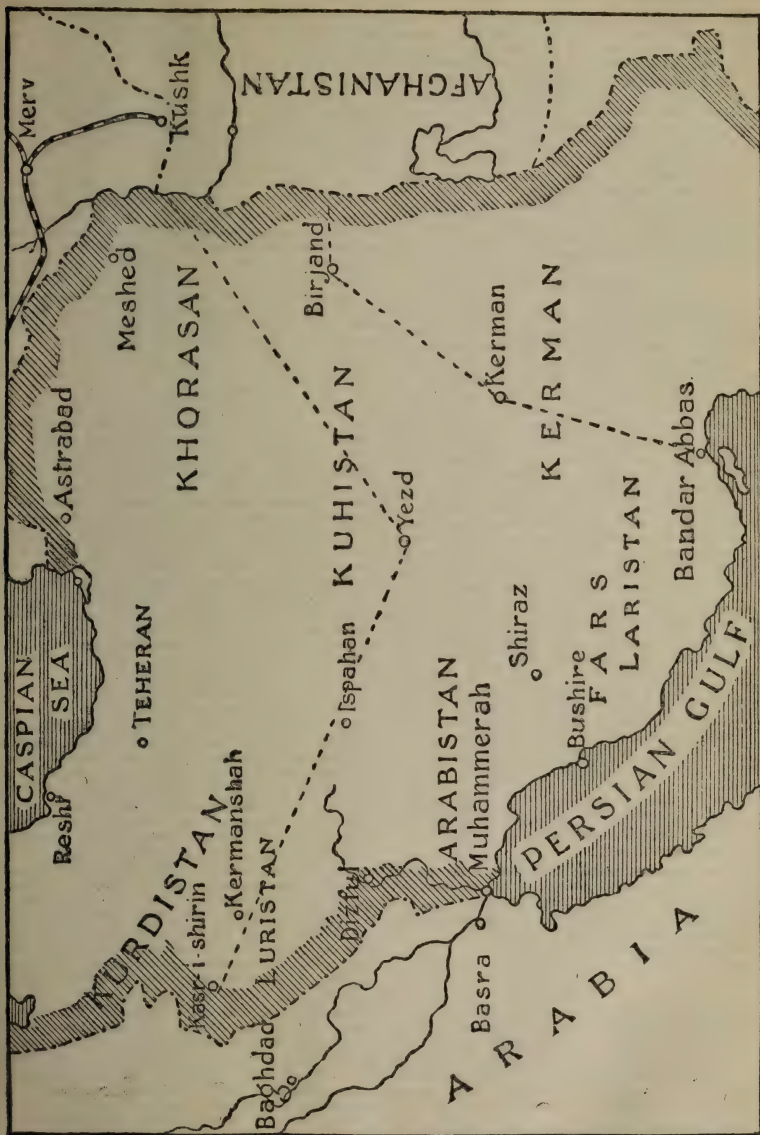

The Sultans have been in a difficult position for a good many years. They hold their capital of Maskat, the adjacent town of *Matra*, one or two other coast towns, and certain points in the interior, but as they possess few troops they find themselves unable to control the roving Beduin who wander at will over most of the State. When the Beduin wanted money they were wont to ride down to *Matra*, the centre of the date trade, and threaten to sack the town. The late Sultan, who died in 1913, was generally compelled to bribe them to go away. The rising which began in 1913 was a more serious affair. A Pretender, Sheikh Abdullah, seized the inland town of *Semal*, which stands in a spacious fertile valley where are grown most of the dates for which Maskat is famous. Great Britain has special interests at Maskat, based upon various documents, the chief of which is one drafted in 1891-92. The late Sultan asked us to protect him against the Pretender. We said we would protect his capital and coast, but could not send an expedition into the interior against the elusive Beduin. We sent Indian troops to Maskat.

British Consul: Major L. B. H. Hawarth.

Agency Surgeon, Vacant.

The Pirate Coast.

Turning Cape Musandim and entering the Gulf Proper, we pass the Pirate Coast, controlled by the six Trucial Chiefs. The ill-name of this territory has now ceased to have any meaning, but in the early days it had a very real relation to the actual conditions. The pirates were the boldest of their kind, and they did not hesitate to attack on occasion, and not always without success, the Company's ships of war. Large expeditions were fitted out to break their power, with such success that since 1820 no considerable punitive measures have been necessary. The Trucial Chiefs are bound to Great Britain by a series of engagements, beginning with 1806 and ending with the perpetual treaty of 1853 by which they bound themselves to avoid all hostilities at sea, and the subsequent treaty of 1873 by which they undertook to prohibit altogether the traffic in slaves. The relations of the Trucial Chiefs are controlled by the British Resident at Bushire, who visits the Pirate Coast every year on a tour of inspection. The German attempt to obtain a concession from the Sheikh of Shargarh has been mentioned. A more serious question arose in 1912 when a landing party from H. M. S. *Fox*, searching for contraband arms at *Debai*, was fired at by the resident Arabs and five men killed and nine wound-

ed. The Sheikh made ample amends to the British Resident, and submitted to a fine. There was at first the suspicion that this *emeute* arose from the spread of pan-Islamism on the coast, studiously fostered from Constantinople, and that it indicated a weakening respect for British authority. But fuller enquiries tended to show that it arose from an unfortunate series of misunderstandings. The commercial importance of the Pirate Coast is increasing through the rise of Debai. Formerly Lingah was the entrepot for this trade, but the exactions of the Belgian Customs officials in the employ of Persia has driven this traffic from Lingah to Debai. The Trucial Chiefs are—Debai, Abu Thabeeb, Shargah, Ajman, Um-al-Gawain and Ras-el-Khemya.

Bahrein.

North of the Pirate Coast lies the little Archipelago which forms the chiefship of the Sheikh of Bahrein. Of this group of islands only those of Bahrein and Maharak are of any size, but their importance is out of all proportion to their extent. This is the great centre of the Gulf pearl fishery, which, in a good year, may be worth half a million pounds sterling. The anchorage is wretched, and at certain states of the tide ships have to lie four miles from the shore, which is not even approachable by boats, and passengers, mails and cargo have to be landed in on the donkeys for which Bahrein is famous. But this notwithstanding the trade of the port is valued at over a million and a quarter sterling, and the customs revenue, which amounts to some eighty thousand pounds, makes the Sheikh the richest ruler in the Gulf.

Bahrein has passed through more than usually chequered experiences. Not the least formidable of these are the efforts of the Turks to threaten its independence. These took definite form in the third quarter of the last century, when Midhat Pasha, Vali of Basra, occupied the promontory of El Kater, as well as El Katif, over against Bahrein, and converted El Hasa into a district. The war with Russia put an end to these designs, but they were revived and the Turks at El Kater were a menace to Bahrein until the war diverted Turkish activities. The Sheikh by the treaty of 1861 entered into special engagements with the British Government, by whom his rights are guaranteed.

In the neighbourhood of Bahrein is the vast burying ground which has hitherto baffled archaeologists. The generally accepted theory is that they are relics of the Phœnicians, who are known to have traded in these waters.

Political Agent, Vacant.

Koweit.

In the north-west corner of the Gulf lies the port which has made more stir than any place of similar size in the world. The importance of Koweit lies solely in the fact that it is the one possible Gulf terminus of the Baghdad Railway. This is no new discovery, for when the Euphrates Valley Railway was under discussion, General Chesney selected it under the alternative name of the Grane—so called from the resemblance of the formation of the Bay to

a pair of horns—as the sea terminus of the line. Nowhere else would Koweit be called a good or a promising port. The Bay is 20 miles deep and 5 miles broad, but so shallow that heavy expense would have to be incurred to render it suitable for modern ocean-going steamers. It is sheltered from all but the westerly winds, and the clean thriving town is peopled by some 20,000 inhabitants, chiefly dependent on the sea, for the mariners of Koweit are noted for their boldness and hardihood.

The political status of Koweit would baffle the ingenuity of the international jurist to find a definition. Nominally the Sheikh owns allegiance to the Sultan of Turkey, from whom he has accepted the honorary title of Kaimakam, or Local Governor. In practice, he has always been independent. In 1898, the Turks attempted to convert their nominal sovereignty into something more actual; but the Sheikh Mubarak approached the British Government and placed his interests under their special protection. When, however, the German surveyors earmarked Koweit for the terminus of their line, the position of the Sheikh was indirectly attacked. To the north of Koweit there is a deep indentation in the lowlying shore chiefly occupied by the swampy island of Bubyau. Here a long narrow channel runs to Umm Khasa, the Khor Abdulla. It is sometimes held to be an alternative to Koweit as a Gulf Terminus, and with a view to earmarking it, the Turks have established military posts at Umm Khasa and on Bubyau Island. Threatened by domestic feuds, raids by sea, and attack by land Sheikh Mubarak, with a British backing, has fended off all assaults on his position, and with realisation of the fact that Basra must, in any circumstances, be the commercial terminus of the Baghdad Railway, the importance of Koweit has tended to recede.

Political Agent, Vacant.

Muhammerah.

On the opposite side of the entrance to the Shatt-el-Arab lie the territories of a Sheikh who stands to the Persian Government in much the same relation as does the Sheikh of Koweit to the Government of Turkey—Sheikh Khazzal of Muhammerah. Nominally, he is subject to Teheran, on whose behalf he governs his territories as Governor; in practice he is more like a semi-independent vassal. In personal characteristics, too, Sheikh Khazzal has much in common with Mubarak; he has proved that he possesses many of the qualities of an administrator, and has resisted Persian encroachments on his authority in all directions save one—despite his strong antipathy to the agents of a centralised government, the Persians have installed an officer of their Belgian Customs service at Muhammerah. The town, favourably situated near the mouth of the Karun River, has grown in importance since the opening of the Karun River route to trade through the enterprise of Messrs. Lynch Brothers. This route provides the shortest passage to Ispahan and the central tableland, and already competes with the older route by way of Bushire and Shiraz. This importance has grown since the Anglo-Persian Oil Company established refineries at Muhammerah for the

oil which they win in the rich fields which they have tapped near Ahwaz. Its importance will be still further accentuated, if the scheme for a railway to Khorremabad by way of Dizful matures. A concession for a road by this route has long been held by a British Company, and surveys for a railway are being made. There is a tacit assurance from the Persian Government that if a practicable scheme is put forward, they will facilitate the work. Such a line, meeting the projected branch from Teheran to Khannikin, would intercept the trade of Central Persia and make Muhammerah the principal outlet for the commerce of the country. Sheikh Khazzal is believed to have formed an excellent working understanding with his brother chief across the water, and as the head of the great Kaab tribe he is no mean power in south-western Persia.

Vice-Consul at Ahwaz, E. G. B. Peel.

Consul for Arabistan (Muhammerah), Asstt. Surgeon C. H. Lincoln.

Basra.

In a sense Basra and Turkish Arabistan can hardly be said to come within the scope of the frontiers of India, yet they are so indissolubly associated with the politics of the Gulf that they must be considered in relation thereto. Basra is the inevitable sea terminus of the Baghdad Railway. It stands on the Shatt-el-Arab, sixty miles from its mouth, favourably situated to receive the whole water-borne trade of the Tigris and Euphrates Rivers. This is already considerable, although Turkish obstruction has closed the Euphrates to navigation, as well as the Tigris above Baghdad—between Basra and Baghdad there were two services of river steamers, one controlled by Messrs. Lynch Brothers and the other by a Turkish Company. The local traffic is valuable, for the richness of the date groves on either side of the Shatt-el-Arab is indescribable, there is a considerable entrepot traffic, whilst Basra is the port of entry for Baghdad and for the trade with Persia, which follows the caravan route *via* Kerman-shah and Hamadan. When the Baghdad Railway is open, Basra must absorb the whole trade of the eastern zone, that is the trade which finds an easier outlet on the east than at Alexandretta on the Mediterranean. That is without taking account of the possibilities of the irrigation scheme prepared by Sir William Willcocks, which should revive the glories of ancient Mesopotamia, and make Arabistan another Egypt. Even now ocean-going steamers trade regularly with Basra and load grain in bulk from its wharves. The one obstacle to the development of the port is the bar at the entrance to the Shatt-el-Arab, where there are no more than ten feet of water at low tide, and where steamers drawing more than sixteen to eighteen feet have, even at high tide, to discharge part of their cargoes into lighters before making the river. The cost of dredging the bar would not be large, and that done a first class port is almost ready made at Basra. Nothing can prevent it from becoming the port of the Middle East, and since the British occupation of the port much has been done to increase the facilities that it offers alike for river and ocean trade.

The Persian Shore.

The Persian shore presents fewer points of permanent interest. The importance of Bushire is administrative rather than commercial. It is the headquarters of Persian authority, the residence of the British Resident, and the centre of many foreign consuls. It is also the main entrepot for the trade of Shiraz, and competes for that of Ispahan. But the anchorage is wretched and dangerous, the road to Shiraz passes over the notorious kotal which preclude the idea of rail connection, and if ever a railway to the central tableland is opened, the commercial value of Bushire will dwindle to insignificance. Further south lies Lingah, reputed to be the prettiest port on the Persian coast, but its trade is being diverted to Debal on the Pirate Coast. In the narrow channel which forms the entrance to the Gulf from the Arabian Sea is Bunder Abbas. Here we are at the key of the Gulf. Bunder Abbas is of some importance as the outlet for the trade of Kerman and Yezd. It is of still more importance as a possible naval base. To the west of the town between the Island of Kishm and the mainland, lie the Clarence Straits which narrow until they are less than three miles in width, and yet contain abundance of water. Here, according to sound naval opinion, there is the possibility of creating a naval base which would command the Gulf. The great obstacle is the climate, which is one of the worst in the world. On the opposite shore, under the shadow of Cape Musandim, lies another sheltered deep-water anchorage, Elphinstone's Inlet, where the climate conditions are equally vile. But between these two points there is the possibility of controlling the Gulf just as Gibraltar controls the Mediterranean. For many years Bunder Abbas loomed large in public discussions as the possible warm water port for which Russia was seeking. Now it has reappeared in connection with the Trans-Persian railway. It is understood that the British Admiralty insist on that line meeting the sea at Bunder Abbas, where it would enter the British zone, and whence, along the Coast of Mekran, it would be commanded from the sea. The Russian concessionaires wish the line to strike the sea much further east either at the actual British frontier, Gwettur, or at Chahbar, where there are believed to be the makings of a deep-water port. So far the project has not passed beyond the stage of academic discussion (q. v. Railways to India). On the Mekran coast, there is the cable station of Jask, and the possible port of Chahbar. The British Government temporarily occupied Bushire in 1915 in circumstances narrated in Persia (q. v.)

PERSIA.

The concentration of public attention on the Persian Gulf has been allowed to obscure the frontier importance of Seistan. Yet it has been a serious preoccupation with the Government of India. Seistan lies midway north and south between the point where the frontiers of Russia, Persia and Afghanistan meet at Zulfikar and that where the frontiers of Persia and of our Indian Empire meet on the open sea at Gwattur. It marches on its eastern border with Afghanistan and with Baluchistan, it commands the valley of the Helmand, and with it the road from Herat to Kandahar, and its immense resources as a wheat-producing region have been only partly developed under Persian misrule. It offers to an aggressive rival, an admirable strategic base for future military operations; it is also midway athwart the track of the shortest line which could be built to connect the Trans-Caspian Railway with the Indian Ocean, and if and when the line from Askabad to Meshed were built, the temptation to extend it through Seistan would be strong. Whilst the gaze of the British was concentrated on the North-West Frontier, and to possible lines of advance through Kandahar to Quetta, and through Kabul to Peshawar, there can be little doubt that Russian attention was directed to a more leisurely movement through Seistan, if the day came when she moved her armies against India.

Anglo-Russian Agreement.

Whether with this purpose or not, Russian intrigue was particularly active in Seistan in the early years of the century. Having Rus-

sian agents moved into Seistan; and through the agency of the Belgian Customs officials, "scientific missions" and an irritating plague cordon, sought to establish influence, and to stifle the British trade which was gradually being built up by way of Nushki. These efforts died down before the presence of the McMahon mission, which, in pursuance of Treaty rights, was demarcating the boundary between Persia and Afghanistan, with special reference to the distribution of the waters of the Helmand. They finally ceased with the conclusion of the Anglo-Russian Agreement. Since then the international importance of Seistan has waned. Whether on account of the Agreement, which bars the line of advance through Seistan, or because of the discovery of an easier route, we cannot determine, but Russian activities in railway construction were later diverted to the Trans-Persian route, which would take a direct line through Teheran from Baku, and meet the Arabian Sea at Bunder Abbas or Chahbar.

The natural conditions which give to Seistan this strategic importance persist. Meantime British influence is being consolidated through the Seistan trade route. The distance from Quetta to the Seistan border at Killa Robat is 465 miles, most of it dead level, and it has now been provided with fortified posts, dak bungalows, wells, and all facilities for caravan traffic. The railway has been pushed out from Spezand, on the Bolan Railway to Nushki, so as to provide a better starting point for the caravans than Quetta. This railway has since been extended to the Persian border.

NEW AGREEMENTS WITH PERSIA.

The condition of Persia during the war was one of helplessness. At the outset of hostilities German agents, who had carefully prepared the ground, raised the lawless element and spread over a large part of the country. They were expelled by the Russians, when they advanced from Kasvin to the neighbourhood of Baghdad. Later, on the fall of Kut, Turkish troops overran the western provinces; these had to beat a hasty retreat when the victories of General Maude took British arms to Baghdad. On the final collapse of Russia, the Turks again entered the country from the Caucasus, but before they could do much damage the crushing defeat of Turkey put an end to their activities. Simultaneously the efforts of the South Persian Rifles, organised with the co-operation of Great Britain, and of the expedition which passed through Persia to the Black Sea was responsible for restoring some semblance of order. In all these developments the Persian Government took little or no part; it was the sport of events which it could not effectively control or influence.

The cessation of hostilities created a new and perplexing situation in Persia. Thanks to Russian and British aid, that country had escaped with the bulk of her territories intact, but her administration remained weak and ineffective and offered an easy mark to Bol-

shevist intrigues which were clearly leading towards a war of conquest in Persia. With Russia in a state of chaos, Great Britain was the only country to which Persia could turn for aid, the only great power whose frontiers marched with those of Persia. What is more, open statements of policy had been made of a kind likely to reassure Persian statesmen in regard to the intentions of Great Britain. "We desire Persia to remain neutral during the War," said Lord Curzon in 1918, "and to retain its complete independence after the War." It was natural then that Persia should seek British assistance and the despatch of Sir Percy Cox to Teheran as British Minister, at the end of 1918, was the first step in negotiations of which the fruit was seen in August of the following year when it was announced that two agreements had been concluded with Persia. Of these one is political and aims at binding more closely Anglo-Persian relations and promoting the progress and prosperity of Persia. To these ends Great Britain agrees,

- To respect Persian integrity;
- To supply experts for Persian administration;
- To supply officers and equipment for a Persian force for the maintenance of order;

Railway Position in the Middle East.

To provide a loan for these purposes ;

To co-operate with the Persian Government in railway construction and other forms of transport.

Both Governments agree to the appointment of a joint committee to examine and revise the Customs tariff.

The second agreement defines the terms and conditions on which the loan is to be made to Persia. The loan is for £2,000,000 at 7 per cent. redeemable in 20 years. It is secured on the revenues and Customs' receipts assigned for the repayment of the 1911 loan and should these be insufficient the Persian Government is to make good the necessary sums from other sources.

Following is the text of the-agreement :—

No. 1. Agreement between the Governments of Great Britain and Persia.

Preamble : In virtue of the close ties of friendship which have existed between the two Governments in the past and in the conviction that it is in the essential and mutual interests of both in future that these ties should be cemented, and that the progress and prosperity of Persia should be promoted to the utmost, it is hereby agreed between the Persian Government on the one hand, and His Britannic Majesty's Minister, acting on behalf of his Government, on the other, as follows :—

1. The British Government reiterate, in the most categorical manner, the undertakings which they have repeatedly given in the past to respect absolutely the independence and integrity of Persia.

2. The British Government will supply, at the cost of the Persian Government, the services of whatever expert advisers may, after consultation between the two Governments, be considered necessary for the several departments of the Persian Administration. These advisers shall be engaged on contracts and endowed with adequate powers, the nature of which shall be the matter of agreement between the Persian Government and the advisers.

3. The British Government will supply, at the cost of the Persian Government, such officers and such munitions and equipment of modern type as may be adjudged necessary by a joint commission of military experts, British and Persian, which shall assemble forthwith for the purpose of estimating the needs of Persia in respect of the formation of a uniform force which the Persian Government proposes to create for the establishment and preservation of order in the country and on its frontiers.

4. For the purpose of financing the reforms indicated in clauses 2 and 3 of this agreement, the British Government offer to provide or arrange a substantial loan for the Persian Government, for which adequate security shall be sought by the two Governments in consultation in the revenues of the Customs or other sources of income at the disposal of the Persian Government. Pending the completion of negotiations for such a loan the British Government will supply on account of it such funds as may be necessary for initiating the said reforms.

5. The British Government fully recognizing the urgent need which exists for the improvement of communications in Persia, with a view both to the extension of trade and the prevention of famine, are prepared to co-operate with the Persian Government for the encouragement of Anglo-Persian enterprise in this direction both by means of railway construction and other forms of transport ; subject always to the examination of the problems by experts and to agreement between the two Governments as to the particular projects which may be most necessary, practicable, and profitable.

6. The two Governments agree to the appointment forthwith of a joint Committee of experts for the examination and revision of the existing Customs Tariff with a view to its reconstruction on a basis calculated to accord with the legitimate interests of the country and to promote its prosperity.

Signed at Teheran, August 9, 1919.

No. 2. Agreement relating to Loan of £2,000,000, at 7 per cent. redeemable in Twenty Years.

Preamble : Contract between the British Government and the Persian Government with reference to an agreement concluded this day between the said Government. It is agreed as follows :—

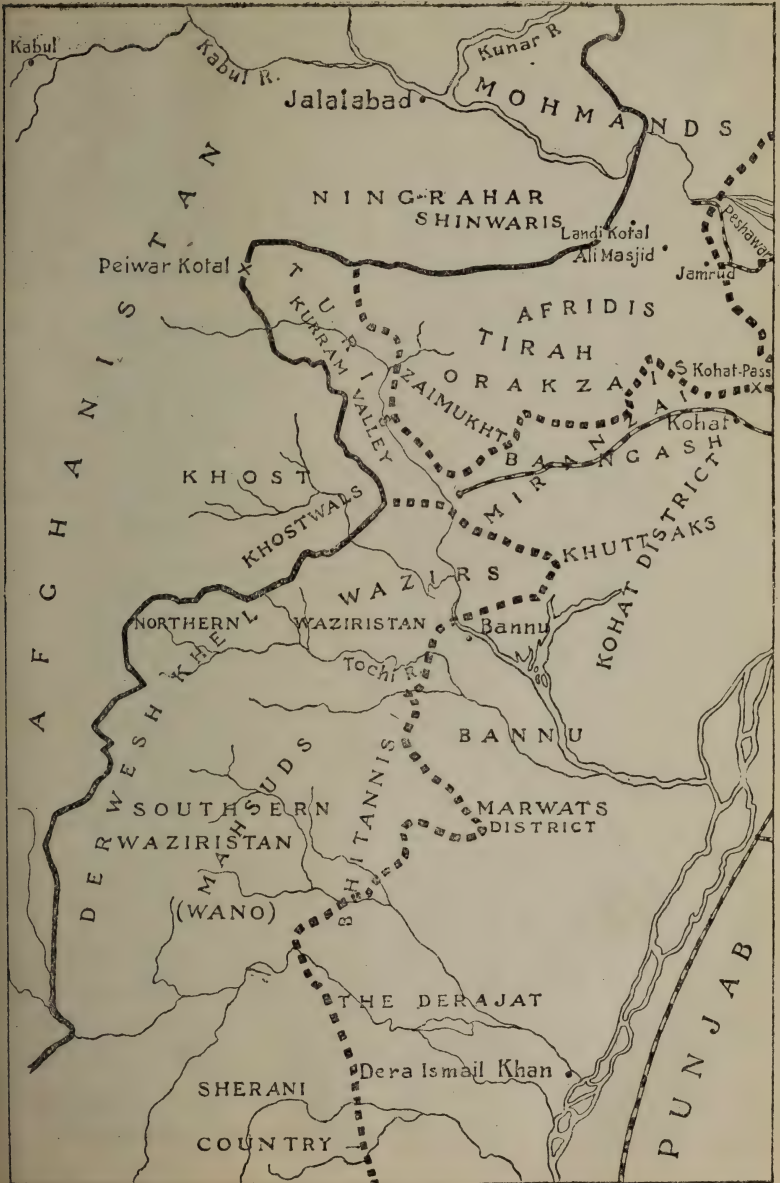

Article 1. The British Government grant a loan of £2,000,000 sterling to the Persian Government, to be paid to the Persian Government as required in such instalments and at such dates as may be indicated by the Persian Government, after the British Financial Adviser shall have taken up the duties of his office at Teheran, as provided for in the aforesaid agreement.

Article 2. The Persian Government undertakes to pay interest monthly at the rate of 7 per cent. per annum upon sums advanced in accordance with Article 1 up to March 20, 1921, and thereafter to pay monthly such amount as will suffice to liquidate the principal sum and interest thereon at 7 per cent. per annum in 20 years.

Article 3. All the revenues and Customs receipts assigned in virtue of the contract of May 8, 1911 [See No. 3], for the repayment of the loan of £1,250,000 are assigned for the repayment of the present loan with continuity of all conditions stipulated in the said contract and with priority over all debts other than the 1911 loan and subsequent advances made by the British Government. In case of insufficiency of the receipts indicated above the Persian Government undertakes to make good the necessary sums from other resources, and for this purpose the Persian Government hereby assigns to the service of the present loan, and of the other advances above mentioned, in priority and with continuity of conditions stipulated in the aforesaid contract, the Customs receipts of all other regions, in so far as these receipts are or shall be at its disposal.

Article 4. The Persian Government will have the right of repayment of the present loan at any date out of the proceeds of any British loan which it may contract for.

Signed at Teheran, August 9, 1919.

No. 3. Article 5 of Contract between the Persian Government and the Imperial Bank of Persia relating to the Persian Government Five per cent. Loan of £ 1,250,000 of May 8, 1911. (Included for reference).

5. The Imperial Government of Persia specially assigns to the service of the loan, and as a first charge thereon, subject only to prior charges amounting to £15,714 1s. 10d. per annum for three years, and £30,278 12s. 7d. per annum from the year 1913 to the year 1928, the full net. Customs receipts of every description which the Government now is, or at any time hereafter may be, entitled to collect and receive at all ports or places in the Persian Gulf, including Bushire, Bunder Abbas, Lingah, Mohammerah, and Ahwaz which receipts are hereby made payable to the Bank, and the Imperial Government of Persia hereby engages forthwith after receipt thereof to pay to the Bank all such Customs receipts as aforesaid without deduction other than for actual expenses of administration of the Customs of the said ports disbursed prior to the date of such payment.

(a) The Imperial Government of Persia undertakes that throughout the continuance of the loan all sums collected by the Customs Administration shall be paid to the Bank at the ports of collection or at its nearest branch, week by week for meeting the prior charges referred to above and for the service of the loan, and an account of such receipts shall be submitted to the Persian Government by the Bank at the end of each month.

(b) The Bank shall, out of the moneys so collected, pay the prior charges above mentioned, and the interest and sinking fund of the loan, and shall hold the surplus at the disposal of the Imperial Government of Persia.

(c) The Bank undertakes out of the moneys so received to pay on behalf of the Imperial Government of Persia the half-yearly coupon in London, and supervise the working of the sinking fund and service of the loan free of charges connected with the same.

(d) In the event of the Customs receipts of the above-mentioned ports for any three months falling short of the amount required for the prior charges and the service of the loan, either for interest or amortization, the Imperial Government of Persia binds itself to make good such deficiency from other sources of Government revenue, and further, should receipts from these sources fall below the amount required as above, the Persian Government hereby assigns for this purpose the revenue derived from the receipts of the telegraphs—this assignment to constitute a second charge on the said telegraph receipts up to the year 1928 after which the telegraph receipts will be free.

The following correspondence was also published:—

Sir P. Cox to His Highness Vossug-ed-Dowleh.

British Legation, Teheran, August 9, 1919.

Your Highness,—I trust your Highness has been able during your successful direction of affairs of the Persian State, to convince yourself that his Britannic Majesty's Government have always endeavoured to support to the utmost the efforts of your Highness's Cabinet on the one hand to restore order and security in the interior of the country, and on the other to maintain a policy of close co-operation between the Persian and British Governments.

As further evidence of the good will by which the Cabinet of London is inspired, I am now authorized to inform your Highness that, in the event of the agreement regarding projects of reforms which your Government contemplates introducing in Persia being concluded, his Britannic Majesty's Government will be prepared in due course to co-operate with the Persian Government with a view to the realization of the following desiderata:—

1. The revision of the treaties actually in force between the two Powers.
2. The claim of Persia to compensation for material damage suffered at the hands of other belligerents.
3. The rectification of the frontier of Persia at the points where it is agreed upon by the parties to be justifiable.

The precise manner, time and means to be chosen for pursuing these aims shall be discussed, as soon as practicable, by the two Governments.

(Signed) P. Z. COX.

Sir P. Cox to His Highness Vossug-ed-Dowleh.

British Legation, Teheran, August 9, 1919.

Your Highness,—With reference to the second desideratum indicated in my previous letter of to-day's date, it is understood and agreed between the two Governments reciprocally that, on the one hand his Majesty's Government will not claim from the Government of his Majesty the Shah the cost of the maintenance of British troops which his Majesty's Government were obliged to send to Persia owing to Persia's want of power to defend her neutrality, and that on the other hand the Persian Government will not claim from the British Government an indemnity for any damage which may have been caused by the said troops during their presence in Persian territory.

It is to be understood, however, that this agreement of the two parties does not in any way affect the claims of individuals and private institutions, which will be dealt with independently.

A note from your Highness informing me that you accept this position on behalf of the Persian Government will suffice to record the agreement of the two Governments on this subject.

(Signed) P. Z. COX.

THE INDEPENDENT TERRITORY.

There yet remains a small part of British India where the King's writ does not run. Under what is called the Durand Agreement with the Amir of Afghanistan, the boundary between India and Afghanistan was settled, and it was delimited in 1903 except for a small section which was delimited after the Afghan War in 1919. But the Government of India have never occupied up to the border. Between the administered territory and the Durand line there lies a belt of territory of varying width, extending from the Gomal Pass in the south, to Kashmir in the north; this is generically known as the Independent Territory. Its future is the keynote of the interminable discussions of frontier policy for nearly half a century.

This is a country of deep valleys and secluded glens, which nature has fenced in with almost inaccessible mountains. It is peopled with wild tribes of mysterious origin, in whom Afghan, Tartar, Turkoman, Persian, Indian, Arab and Jewish intermingle. They had lived their own lives for centuries, with little intercourse even amongst themselves, and as Sir Valentine Chirol truly said "the only bond that ever could unite them in common action was the bond of Islam." It is impossible to understand the Frontier problem unless two facts are steadily borne in mind. The strongest sentiment amongst these strange people is the desire to be left alone. They value their independence much more than their lives. The other factor is that the country does not suffice even in good years to maintain the population. They must find the means of subsistence outside, either in trade, by service in the Indian Army or in the Frontier Militia; or else in the outlet which hill-men all the world over have utilised from time immemorial, the raiding of the wealthier and more peaceful population of the Plains.

Frontier Policy.

The policy of the Government of India toward the Independent Territory has ebbed and flowed in a remarkable degree. It has fluctuated between the Forward School, which would occupy the frontier up to the confines of Afghanistan, and the school of Masterly Inactivity, which would leave the tribesmen entirely to their own resources, punishing them only when they raided British territory. Behind both the policies lay the menace of a Russian invasion, and that coloured our frontier policy until the Anglo-Russian Agreement. This induced what was called Hit and Retire tactics; in the half century which ended in 1897 there were nearly a score of punitive expeditions, each one of which left behind a legacy of distrust, and which brought no permanent improvement in its train. The fruit of the suspicion thus engendered was seen in 1897. Then the whole Frontier, from the Malakand to the Gomal, was ablaze. The extent of this rising and the magnitude of the military measures which were taken to meet it compelled a consideration of the whole position. The broad outlines of the new policy were laid down in a despatch from the Secre-

tary of State for India, which prescribed for the Government the "limitation of your interference with the tribes, so as to avoid the extension of administrative control over tribal territory." It fell to Lord Curzon to give effect to this policy. The main foundations of his action were to exercise over the tribes the political influence requisite to secure our imperial interests, to pay them subsidies for the performance of specific duties, but to respect their tribal independence and leave them, as far as possible, free to govern themselves according to their own traditions and to follow their own inherited habits of life without let or hindrance.

New Province.

As a first step Lord Curzon took the control of the tribes under the direct supervision of the Government of India. Up to this point they had been in charge of the Government of the Punjab, a province whose head is busied with many other concerns. Lord Curzon created in 1901, the North-West Frontier Province, and placed it in charge of a Chief Commissioner with an intimate frontier experience, directly subordinate to the Government of India. This was a revival of a scheme prepared by Lord Lytton in 1877, and often considered afterwards, but which had slipped for lack of driving power. Next Lord Curzon withdrew the regular troops so far as possible from the advanced posts, and placed these fortalices in charge of tribal levies, officered by a handful of British officers. The most successful of these is the Khyber Rifles, which steadfastly kept the peace of that historic Pass until 1919. At the same time the regular troops were cantoned in places whence they could quickly move to any danger point, and these bases were connected with the Indian Railway system. In pursuance of this policy frontier railways were run out to Dargai, and a narrow-gauge line, since converted to the broad-gauge, was constructed from Kushalgarh to Kohat at the entrance of the Kohat Pass, and to Thal at the mouth of the Kurram Valley. These railways have been completed by lines to Tonk and Bannu. By this means the striking power of the regular forces was greatly increased. Nor was the policy of economic development neglected. The railways gave a powerful stimulus to trade, and the Lower Swat Canal converted fractious tribesmen into successful agriculturists. This policy of economic development is receiving a great development through the completion of the Upper Swat Canal (*q. v.* Irrigation). Now it is completed there are other works awaiting attention.

Greater Peace.

For many this policy was completely justified by results. During Lord Curzon's Viceroyalty there was no frontier expedition. The recalcitrancy of the Mahsud Waziris necessitated punitive measures, but they took the form of a blockade. Critics have declared that the blockade was scarcely distinguishable from an expedition, but that is a secondary matter. It was not until 1908 that the peace

of the border was directly disturbed, and then the continued recalcitrancy of the Zakka Khel sept of the great Afridi tribe compelled the Government to take action. General Willcocks, moving swiftly down the Chura Pass, and Colonel Roos-Koppel taking the Khyber Rifles down the Bazar Valley inflicted such condign punishment on them that they were glad to accept terms of peace negotiated by the main Afridi tribe. A month later, action was necessary against the Mohmands. In this case the rebellious tribesmen were actively supported by Afghan levies, assembled and fitted out in Afghan territory at Lalpura. Two brigades entered their country and defeated them. There was a diversion when lashkars numbering nearly twenty thousand moved up from Afghanistan and threatened the British post of Landi Kotal in the Khyber. They too were driven back into Afghan territory, and the trouble was at an end. The Amir, who had been strangely quiescent, asserted his authority and the irregular warfare waged from Afghan territory ceased.

Policy Justified.

These expeditions have been seized upon by critics to condemn the present policy. They justify it. Thanks to the confidence engendered by ten years of non-aggression, the disturbed area was localised, the Khyber was kept open, the Afridis lent their aid in concluding peace. For these reasons, when the Government of India proposed the occupation of further strategical points in order to control the Zakka Khels, the Secretary of State wisely imposed his embargo. The strength of the position was still further demonstrated when in 1910 the tribesmen suffered heavy losses in consequence of measures to suppress the arms traffic (*q. v.* Gun-running). The frontier is always in a state of suppressed ferment. No one knows what will happen to-morrow. But the tribesmen, feeling confident in the knowledge that no attack on their independence is contemplated and growing richer in consequence of the development of trade and agriculture, are more easily handled. With the removal of the Russian menace, or rather its transference to Persia, the importance of the North-West Frontier has tended to subside. There are still heard mutterings of the necessity for a reversion to the forward policy, and for the occupation of the Independent Territory right up to the Durand line. But they are not regarded seriously. The tribesmen are so saturated with rifles and ammunition, as the result of importations from the Persian Gulf, that the task would be long and costly. When it was achieved the frontier problem would only have shifted. Instead of a frontier against the Independent tribesmen, India would have a frontier against Afghanistan, and the problem would still be present, only in an aggravated form.

The Frontier and the War.

The history of the Frontier during the war is one of sporadic unrest; but that is its normal history. There was however only one expedition, that of 1917 against the most troublesome tribe on the whole Frontier, the Mahsuds whose cup of iniquity was overflowing. These disturbances are fully described in the Indian

Year Book for 1917 (pp. 154, 155, 156). But in May of this year, when the effects of the German and Turkish machinations in Central Asia had had time fully to manifest themselves, the Chief Commissioner of the North-West Frontier Province was able to say that "as regards the Tribes, the Frontier has been quieter since the outbreak of the war than it was for the four years before it, and you have seen yourselves that in spite of the pre-occupations of Government they have not hesitated to go to great expense in men and money to guard the Peshawar border against the depredations of the Mohmands and the Derajat border against the incursions of the Mahsuds." The most active manifestation of discontent came farther west, from a part of the Frontier which is regarded as comparatively immune to disturbance. The Marris, one of the tribes in eastern Baluchistan, went on a raiding expedition and temporarily interrupted traffic on the Hurnai railway. A small column went into their country and they were sharply punished, the losses being stated by the tribe to be 300 killed and about 700 wounded out of a total male population of 12,500. The rising had some effect among neighbouring tribes, but the conduct of the leaders and tribesmen of Baluchistan was on the whole admirable.

Frontier Operations in 1919.

In the early stages of the Afghan war of 1919 (*vide infra*) it appeared that the frontier tribes had no desire to take part in the operations and the check given to the advance of the Afghan Army at the outset of the campaign further tended to keep the tribes quiet. The first signs of wavering were discerned on May 11, and a few days later owing to the number of desertions from the Khyber Rifles it became necessary to disband that corps, a step which was bound to have an effect on the Afridis. The danger of an Afridi rising was, however, averted. The danger zone later shifted to South Waziristan where, consequent on the abandonment by our troops of the Upper Tochi posts, the political situation changed in one night from set fair to stormy and the Viceroy on May 27 reported, "we must be ready for a possible rising of Mahsuds and Waziris, reaching possibly to Sheranni, Bhitanni and even Zhob." In a later despatch the Viceroy explained the circumstances in which the evacuation of the Upper Tochi posts was carried out and said:—"Adverse criticism of these withdrawals is easy after the event; but it is an open question whether we should not have found ourselves more seriously embarrassed had these isolated posts been invested by the enemy. The situation facing the officers responsible was critical and fraught with many difficulties; we are confident they took a deliberated review of the position before exercising their judgment as they did." The fears expressed on May 27 were to a great extent realised.

Action of the Tribesmen.

The Mahsuds and North Waziris seized Khajuri and Shinkai, surrounded Jandola, Murtaza, Kirghi Manji and other militia posts, threatened Miranshah, invaded the Bannu districts and burned villages in British territory. The South Waziris, in co-operation with the Bhitannis, hurried the

retirement of the South Waziristan Militia towards Fort Sandeman and poured into the Zhob Valley in pursuit. They succeeded in forcing the evacuation by the Zhob Militia of Mir Ali Khel Fort, with large stores of rifles, ammunition and supplies, induced the Sherannis, and the majority of the tribes in Lower Zhob to revolt and attacked Fort Sandeman. In the engagements with these Waziris on the 30th and 31st of May, five British officers of the Militia were killed and others wounded.

Throughout June and July, all sections of the Mahsuds and Waziris continued actively hostile. Mail tongas were looted, parties repairing telegraph lines were attacked and the posts still held by us were continually being sniped. A Mahsud Jirgah held at Kaniguram on the 9th of July, sent a message to the Afghan General Nadir Khan to the effect that if the Afghans would supply them with guns, rifles and money, they would drive the British across the Indus. Towards the end of July, the Mahsuds and North Waziris assisted Nadir Khan by occupying Boya, a point in the Daur country, eight miles above Miranshah. Meanwhile, the Wana Waziris continued to invade the Upper Zhob and at Kapip on the 15th and 16th July made an attack in force upon the troops escorting convoys to Fort Sandeman. In this engagement the British lost 66 killed (including 8 British officers) and 55 wounded.

August saw even greater activity. Early in the month four lashkars of Mahsuds were out. One of these attacked a picket of the 82nd Punjabis at Saidi, twelve miles from Bannu, killing twenty of them. Others attacked the Jandola convoys, threatened the Tank railway and raided Luni and other villages in the British area. On the 27th of August, the Birni post was entered, two of the garrison being killed and four wounded, but the Mahsuds were repulsed. One of these gangs on the 29th murdered 16 labour corps coolies near Laki Marwat and several smaller raids occurred in the Dera Ismail Khan and Bannu districts.

Punitive Measures Inevitable.

Although peace was signed with the Afghans on the 8th August, the Mahsuds and Waziris continued their raids throughout September, plundering peaceful villages. On the 19th of September, the Tank railway station was attacked and a raid was made on the Zarkani post in which a British officer was killed. On the 23rd Khirghi was attacked and five sepoy were killed. Insecurity of life and property in the Bannu and Dera Ismail Khan districts finally became such as to make the position intolerable and by the beginning of October it was clear that punitive measures could not be avoided. A belief was widespread in Waziristan that the British had made a compact with the Amir to transfer their country after six months to Afghanistan. The measure of success which the tribesmen had secured had tended to embolden them, and after such flagrant offences their continued immunity would have made our position very difficult. In order to win security for our harassed border population and teach the recalcitrant tribes a much needed lesson, it was decided to summon Wazir and Mahsud jirgas and demand reparation and compensation from them for the damage they had done, announcing to them

at the same time our intention of making roads and locating troops in certain parts of their territory. They were informed that if they refused to accept our terms they would, after being given ample time to remove their women and children to places of safety, be subjected to an intensive bombardment from the air. If the tribes still proved recalcitrant, punitive measures with troops would be undertaken but it was hoped that the effect of the aerial campaign would be such as to render more serious measures unnecessary.

The operations were under the command of Major-General S. H. Climo who had under him six Indian infantry brigades with the necessary complements of other arms. The operations began early in November and by the middle of the month the Tochi Waziris had accepted the terms offered to them, which were to the effect that there was no intention of handing their country over to the Amir; the British Government would make roads, station troops and build posts wherever it might be desirable in the Tochi Agency, and the Waziris would not interfere with that work; the Tochi Waziris were to hand back all rifles and other military equipment taken since 1st May 1919, and not to interfere with the movement of troops and convoys within the Agency; a fine was exacted and the tribal allowances were to be suspended. Similar terms were offered to, but refused by, the Mahsuds whose towns and villages together with those of the recalcitrant Waziris, were accordingly bombed and some of the Tochi posts were re-occupied. The bombing had the effect of quickly bringing in the Kazha section of the Madda Khel Waziris, who had held out previously, but the Wana Waziris and the Mahsuds continued to show opposition. At the same time there was a considerable amount of raiding by trans-border gangs, who in many cases were known to have been reinforced by deserters from the militia. Of these raids the most serious took place on the night of November 26, when the Indian cavalry lines at Kohat were raided, a sentry was killed, and a number of rifles and a box of ammunition were stolen from the magazine which was broken open. About the same date the Khyber caravan was attacked near Landi Kotal, and a few days later a train, carrying an escort of 24 rifles and two Lewis guns, was attacked by nomad Waziris near Thal when 36 were killed and 50 wounded on the train. While raids of this description were going on the Mahsuds, who showed signs of being well led and extremely mobile, attacked small parties of the Derajat column whenever an opportunity offered. On December 11 and 12 they were engaged north-west of Jandola and suffered heavily. It was in that neighbourhood that the Mahsuds, about 2,000 strong, were attacked when following the Sarkai ridge on December 18, and the following days. This attack culminated on the 21st when our casualties were British officers killed 2: wounded 8. Indian officers, killed one: wounded, 6. Indian other ranks, killed 28: wounded 208: missing 27. The Mahsuds suffered heavily in this engagement, which witnessed the hardest fighting ever known on the frontier, and a few days later it was announced that they had accepted our terms. Some sections of them, however, with the Wana Waziris still remained recalcitrant.

AFGHANISTAN.

The relations of Afghanistan with the Indian Empire were dominated by one main consideration—the relation of Afghanistan to a Russian invasion of India. All other considerations were of secondary importance. For nearly three-quarters of a century the attitude of Great Britain toward successive Amirs has been dictated by this one factor. It was in order to prevent Afghanistan from coming under the influence of Russia that the first Afghan War of 1838 was fought—the most melancholy episode in Indian frontier history. It was because a Russian envoy was received at Kabul whilst the British representative was turned back at Ali Masjid that the Afghan War of 1878 was waged. Since then the whole end of British policy toward Afghanistan has been to build up a strong independent State, friendly to Britain, which would act as a buffer against Russia, and so to order our frontier policy that we should be in a position to move large forces up, if necessary, to support the Afghans in resisting aggression.

Gates to India.

A knowledge of the trans-frontier geography of India brought home to her administrators the conviction that there were only two main gates to India—through Afghanistan, the historic route to India, along which successive invasions have poured, and by way of Seistan. It has been the purpose of British policy to close them, and of Russia to endeavour to keep them at any rate half open. To this end having pushed her trans-Persian railway to Samarkand Russia thrust a military line from Merv to the Kushkinsky Post, where railway material is collected for its immediate prolongation to Herat. Later, she connected the trans-Siberian railway with the trans-Caucasian system, by the Orenburg-Tashkent line, thus bringing Central Asia into direct touch with her European magazines. Nor has Great Britain been idle. A great military station has been created at Quetta. This is connected with the Indian railway system by lines of railway which climb to the Quetta Plateau by the Bolan Pass and through the Chapper Rift, lines which rank amongst the most picturesque and daring in the world. From Quetta the line has been carried by the Khojak tunnel through the Khwaja Amran Range, until it leads out to the Afghan Border at New Chaman, where it opens on the route to Kandahar. The material is stocked at New Chaman which would enable the line to be carried to Kandahar in sixty days. In view of the same menace the whole of Baluchistan has been brought under British control. Quetta is now one of the great strategical positions of the world, and nothing has been left undone which modern military science can achieve to add to its natural strength. In the opinion of many military authorities it firmly closes the western gate to India, either by way of Kandahar, or the direct route through Seistan.

Further east the Indian railway system has been carried to Jamrud, at the entrance to the Khyber Pass. A first class military road,

sometimes double, sometimes treble, threads the Pass to our advanced post at Landi Kotal, and then descends until it meets the Afghan frontier at Tor Khum. Later, a commencement was made with the Loi Shilman Railway, which, starting from Peshawar, was designed to penetrate the Mullagori country and provide an alternative advance to the Khyber for the movement of British troops for the defence of Kabul. For unexplained reasons, this line was suddenly stopped and is now thrust in the air. In this wise the two Powers prepared for the great conflict which was to be fought on the Kandahar-Ghazni-Kabul line.

Relations with India.

Between the advanced posts on either side stands the Kingdom of Afghanistan. The end of British policy has been to make it strong and friendly. In the first particular it has largely succeeded. When the late Abdurrahman was invited to ascend the throne, as the only means of escape from the tangle of 1879, none realised his great qualities. Previously the Amir of Afghanistan had been the chief of a confederacy of clans. Abdurrahman made himself master in his own kingdom. By means into which it is not well closely to enter, he beat down opposition until none dared lift a hand against him. Aided by a British subsidy of twelve lakhs of rupees a year, increased to eighteen by the Durand Agreement of 1893, and subsequently to over 20 lakhs, he established a strong standing army and set up arsenals under foreign supervision to furnish it with arms and ammunition. Step by step his position was regularised. The Anglo-Russian Boundary Commission,—which nearly precipitated war over the Penjdech episode in 1885,—determined the northern boundaries. The Pamirs Agreement delimited the borders amid those snowy heights. The Durand Agreement settled the border on the British side, except for a small section to the west of the Khyber which remained a fruitful source of trouble between Afghanistan and ourselves until 1919, when the Afghan claims and action upon the undemarcated section led to war. That section was finally surveyed and the frontier determined shortly after the conclusion of peace with Afghanistan. Finally the McMahon award closed the old feud with Persia over the distribution of the waters of the Helmand in Seistan. It was estimated by competent authorities that about the time of Abdurrahman's death Afghanistan was in a position to place in the field, in the event of war, one hundred thousand well-armed regular and irregular troops, together with two hundred thousand tribal levies and to leave fifty thousand regulars and irregulars and a hundred thousand levies to maintain order in Kabul and the provinces. But if Afghanistan were made strong, it was not made friendly. Abdurrahman Khan distrusted British policy up to the day of his death. All that can be said is that he distrusted it less than he distrusted Russia, and if the occasion had arisen for him to make a choice, he would have opposed a Russian ad-

vance with all the force at his disposal. He closed his country absolutely against all foreigners, except those who were necessary for the supervision of his arsenals and factories. He refused to accept a British Resident, on the ground that he could not protect him, and British affairs have been entrusted to an Indian agent, who is in a most equivocal position. At the same time he repeatedly pressed for the right to pass by the Government of India and to establish his own representative at the Court of St. James.

The Amir Habibulla.

It used to be one of the commonplaces of Indian discussion that the system which Abdurrahman Khan had set up would perish with him, because none other was capable of maintaining it. Abdurrahman Khan died in 1901. His favourite son, Habibulla, who had been gradually initiated into the administration, peacefully succeeded him, and peacefully retained his seat on the throne until he was murdered in 1919. He concluded in 1905 the Dane Treaty, by which he accepted the same obligations on the same terms as his father. He visited India in 1907, and apparently both enjoyed and profited by his experiences.

Immediately on the outbreak of the war His Majesty the Amir declared his strict neutrality, and that pledge he straitly observed. To those unacquainted with the difficulties of this Ruler some things occurred which it was not easy to understand. A German and Austrian mission was admitted to Kabul; several Turkish emissaries were entertained; and more than one representative of the revolutionary movement in India was permitted to roam the country. But the Amir had to reckon with the fanatical and ignorant forces in his own country. With the most sincere desire loyally to act up to his pledge of neutrality, he could not entirely ignore the forces in Afghanistan which, ignorant of the strength of the British Empire, were willing to lend a ready ear to the preachings of a jihad, or holy war of Islam. By degrees the Amir took matters into his own hand; the anti-British emissaries were gradually expelled. And when in 1918 Germany, with the Turks as her Islamic tools, prepared to stir up trouble in Afghanistan, with a view to diverting the energies of the British Government to the North-West frontier, the Amir took vigorous steps to maintain his authority and declared that no foreign troops, no matter what their nationality or religion, should be allowed to traverse Afghan territory.

THE AFGHAN WAR, 1919.

The whole situation in Afghanistan was changed by the murder (20 February 1919) of the Amir Habibulla Khan, at Laghman near Jellalabad. His brother, Nasrulla Khan, immediately assumed control of affairs and was proclaimed Amir at Jellalabad with the concurrence of the late Amir's eldest son, Inyatulla Khan, and some of the officers of the State. Meanwhile, **Amanulla Khan**, the third son of the late Amir, was proclaimed Amir at Kabul and Nasrulla Khan, having abdicated, swore allegiance to him. At a durbar in Kabul, Col. Shah Ali Raza was condemned to death as the actual murderer of the Amir and Nasrulla Khan was sentenced to imprisonment for life as an accomplice. The two eldest sons of the late Amir were also placed in close confinement.

The new Amir, confronted by faction troubles and by disaffection in the Army, and being accused by some of his subjects of having been a party to the murder, at once found himself in a position of great difficulty. At the durbar already mentioned he had sought to gain popularity by declaring Afghanistan independent internally and externally, and he sought further to establish his position by lavish offers of increased pay to his troops and by adopting from the first an attitude of open hostility towards the British Government which was calculated to appeal to those fanatical sections of the populace whom the Amir Habibulla had with difficulty restrained during the progress of the European War. Disaffection, however, threatened to grow into rebellion and by the end of April he had determined to distract the attention of his subjects from internal troubles by embarking on war. He sought to

win over the soldiers and the peasantry by spreading absurdly exaggerated accounts of the disturbances in the Punjab, the rich bazars and fair fields of which he described as lying defenceless at the mercy of the Afghan invaders. In a firman which he issued early in May, he said: "I am prevented by international law from interfering with the internal policy of the British Government, and I have nothing to do with it; but from the point of view of Islam and mankind, I dislike unfair laws and, in my view, Indians, in rising and creating disturbances, are right. But these risings and disturbances are not confined to India: in Afghanistan also their bad effects are seen." It was discovered later how grossly the Amir had been misled by informants in India, the sort of information on which he launched his rash campaign being shown by the following letter to him from the notorious Afghan Postmaster at Peshawar:—"Government has not sufficient troops in India and often moves about one regiment consisting of two or three companies to make a display. In spite of many telegrams sent by Chief Commissioner no regiments have arrived by train. British subjects will not supply recruits. There are disturbances throughout India and troops if sent for from England will not arrive in time. It has been given out in public meeting that Amir and Ghazis are ready to help Indians, and if war is delayed people will be displeased with Amir. They cried with one voice they could not forget oppressions and tyranny of British Government. If after sealed leaflets have been circulated Sipah Salar especially refrains from invading India, Hindus and Moslems will be much displeased. It is not

expedient to delay and give time to the English to collect troops." It was also found that the Amir hoped to obtain support from the Bolsheviks. Among letters from him which were intercepted was one addressed to a Peshawar agitator who had been a member of the Bolshevik committee there. Abdur Rahman, the new Afghan envoy, had also had dealings with the same committee, and his post-bag, which was intercepted, contained a number of copies for distribution of inflammatory leaflets, and also a letter from Tchitcherin, the Commissary for Foreign Affairs, instructing the envoy to obtain from Hindus and Mahomedans deeds of allegiance to the Amir. At Thal a manifesto was found couched in violent language, and issued by the Provisional Government of India." The follow-

ing extract is typical:—"A compact has been entered into with the forces of invasion by the Provisional Government. Your real interests would be destroyed by fighting against invaders; you should, therefore, not do this, but rather use every possible means to kill British, continue to tear up railways and cut down the telegraphs and refuse to help the British with men and money. Supply the armies of the invaders with provisions; thus shall you earn peace at their hands and obtain *sanads* of honour."

These facts have been cited to show how the Amir, in determining upon war, was supported by a wholly false idea of the reception his troops were likely to receive in India and possibly by an equally mistaken idea of the assistance he might obtain from the Bolsheviks in Central Asia.

TIBET.

Recent British policy in Tibet is really another phase in the long-drawn-out duel between Great Britain and Russia in Central Asia. The earliest efforts to establish communication with that country were not, of course, inspired by this apprehension. When in 1774 Warren Hastings despatched Bogle on a mission to the Tashi-Lama of Shigatse,—the spiritual equal, if not superior, of the Dalai Lama of Lhasa—his desire was to establish facilities for trade, to open up friendly relations with a Power which was giving us trouble on the frontier, and gradually to pave the way to a good understanding between the two countries. After Warren Hastings' departure from India the subject slept, and the last Englishman to visit Lhasa, until the Younghusband Expedition of 1904, was the unofficial Manning. In 1885, under the inspiration of Colman Macaulay, of the Bengal Civil Service, a further attempt was made to get into touch with the Tibetans, but it was abandoned in deference to the opposition of the Chinese, whose suzerainty over Tibet was recognised, and to whose views until the war with Japan, British statesmen were inclined to pay excessive deference. But the position on the Tibetan frontier continued to be most unsatisfactory. The Tibetans were aggressive and obstructive, and with a view to putting an end to an intolerable situation, a Convention was negotiated between Great Britain and China in 1890. This laid down the boundary between Sikkim and Tibet, it admitted a British protectorate over Sikkim, and paved the way for arrangements for the conduct of trade across the Sikkim-Tibet frontier. These supplementary arrangements provided for the opening of a trade mart at Yatung, on the Tibetan side of the frontier, to which British subjects should have the right of free access, and where there should be no restrictions on trade. The agreement proved useless in practice, because the Tibetans refused to recognise it, and despite their established suzerainty, the Chinese Government were unable to secure respect for it.

Russian Intervention.

This was the position when in 1899 Lord Curzon, Viceroy of India, endeavoured to get into direct touch with the Tibetan authorities.

Three letters which he addressed to the Dalai Lama were returned unopened, at a time when the Dalai Lama was in direct intercourse with the Tsar of Russia. His emissary was a Siberian Dorjief, who had established a remarkable ascendancy in the counsels of the Dalai Lama. After a few years' residence at Lhasa Dorjief went to Russia on a confidential mission in 1899. At the end of 1900 he returned to Russia at the head of a Tibetan mission, of which the head was officially described in Russia as "the senior Tسانite Khomba attached to the Dalai Lama of Tibet." This mission arrived at Odessa in October 1900, and was received in audience by the Tsar at Livadia. Dorjief returned to Lhasa to report progress, and in 1901 was at St. Petersburg with a Tibetan mission, where as bearers of an autograph letter from the Dalai Lama they were received by the Tsar at Peterhoff. They were escorted home through Central Asia by a Russian force to which several Intelligence Officers were attached. At the time it was rumoured that Dorjief had, on behalf of the Dalai Lama, concluded a treaty with Russia, which virtually placed Tibet under the protectorate of Russia. This rumour was afterwards officially contradicted by the Russian Government.

The Expedition of 1904.

In view of these conditions the Government of India, treating the idea of Chinese suzerainty over Tibet as a constitutional fiction, proposed in 1903 to despatch a mission, with an armed escort, to Lhasa to discuss the outstanding questions with the Tibetan authorities on the spot. To this the Home Government could not assent, but agreed, in conjunction with the Chinese Government, to a joint meeting at Khamba Jong, on the Tibetan side of the frontier. Sir Francis Younghusband was the British representative, but after months of delay it was ascertained that the Tibetans had no intention of committing themselves. It was therefore agreed that the mission, with a strong escort, should move to Gyantse. On the way the Tibetans developed marked hostility, and there was fighting at Tuna, and several sharp encounters in and around Gyantse. It was therefore decided that the mission should

advance to Lhasa, and on August 3rd, 1904, Lhasa was reached. There Sir Francis Younghusband negotiated a convention by which the Tibetans agreed to respect the Chinese Convention of 1890; to open trade marts at Gyantse, Gartok and Yatung; to pay an indemnity of £500,000 (seventy-five lakhs of rupees); the British to remain in occupation of the Chumbi Valley until this indemnity was paid off at the rate of a lakh of rupees a year. In a separate instrument the Tibetans agreed that the British Trade Agent at Gyantse should have the right to proceed to Lhasa to discuss commercial questions, if necessary.

Home Government intervenes.

For reasons which were not apparent at the time, but which have since been made clearer, the Home Government were unable to accept the full terms of this agreement. The indemnity was reduced from seventy-five lakhs of rupees to twenty-five lakhs, to be paid off in three years, and the occupation of the Chumbi Valley was reduced to that period. The right to despatch the British Trade Agent to Lhasa was withdrawn. Two years later (June 1906) a Convention was concluded between Great Britain and China regulating the position in Tibet. Under this Convention Great Britain agreed neither to annex Tibetan territory, nor to interfere in the internal administration of Tibet. China undertook not to permit any other foreign State to interfere with the territory or internal administration of Tibet. Great Britain was empowered to lay down telegraph lines to connect the trade stations with India, and it was provided that the provisions of the Convention of 1890, and the Trade Regulations of 1893, remained in force. The Chinese Government paid the indemnity in three years and the Chumbi Valley was evacuated. The only direct result of the Mission was the opening of the three trade marts and the establishment of a British Trade Agent at Gyantse.

The Anglo-Russian Agreement.

The reason underlying the action of the British Government in modifying, in such material particulars, the Convention of Lhasa was apparent later. The Anglo-Russian Agreement was in process of negotiation, and under that Agreement Great Britain was pledging herself not to annex any portion of Tibetan territory, nor to send a representative to Lhasa. A seventy-five year occupation of the Chumbi Valley would have been indistinguishable from annexation. The portions of the Anglo-Russian Agreement which relate to Tibet are as follows:—

Article I.—The two High Contracting Parties engage to respect the territorial integrity of Tibet and to abstain from all interference in its internal administration.

Article II.—In accordance with the admitted principle of the suzerainty of China over Tibet, Great Britain and Russia engage not to enter into negotiations with Tibet, except through the intermediary of the Chinese Government. This engagement does not exclude the direct relations between the British Commercial Agents and the Tibetan authorities, provided

for in Article V of the Convention between Great Britain and Tibet of the 7th September, 1904, and confirmed by the Convention between Great Britain and China of the 27th April 1906; nor does it modify the engagements entered into by Great Britain and China in Article I of the said Convention of 1906.

It is clearly understood that Buddhists; subjects of Great Britain or of Russia, may enter into direct relations on strictly religious matters with the Dalai Lama, and the other representatives of Buddhism in Tibet: the Governments of Great Britain and Russia engage, as far as they are concerned, not to allow those relations to infringe the stipulations of the present arrangement.

Article III.—The British and Russian Governments, respectively, engage not to send Representatives to Lhasa.

Article IV.—The two High Contracting Parties engage neither to seek nor to obtain, whether for themselves or for their subjects, any concessions for railways, roads, telegraphs and mines, or other rights in Tibet.

Article V.—The two Governments agree that no part of the revenues of Tibet, whether in kind or in cash, shall be pledged or assigned to Great Britain or Russia or to any of their subjects.

Annexed to the Agreement was a re-affirmation of the declaration for the evacuation of the Chumbi Valley after the payment of three annual instalments of the indemnity, provided that the trade marts had been effectively opened for three years and that the Tibetans had complied in all respects with the terms of the Treaty.

Chinese Action.

The sequel to the Anglo-Russian Agreement was dramatic, although it ought not to have been unexpected. On the approach of the Younghusband Mission the Dalai Lama fled to Urga, the sacred city of the Buddhists in Mongolia. He left the internal government of Tibet in confusion, and one of Sir Francis Younghusband's great difficulties was to find Tibetan officials who would underfake the responsibility of signing the Treaty. Now the suzerainty of China over Tibet had been explicitly reaffirmed. It was asserted that she would be held responsible for the foreign relations of Tibet. In the past this suzerainty, having been a "constitutional fiction," it was inevitable that China should take steps to see that she had the power to make her will respected at Lhasa. To this end she proceeded to convert Tibet from a vassal state into a province of China. In 1908 Chao Erh-feng, acting Viceroy in the neighbouring province of Szechuen, was appointed Resident in Tibet. He proceeded gradually to establish his authority, marching through eastern Tibet and treating the people with great severity. Meantime the Dalai Lama, finding his presence at Urga, the seat of another Buddhist Pontiff, irksome, had taken refuge in Si-ning. Thence he proceeded to Peking, where he arrived in 1908, was received by the Court, and despatched

to resume his duties at Lhasa. Moving by leisurely stages, he arrived there at Christmas 1909. But it was soon apparent that the ideas of the Dalai Lama and of the Chinese Government had little in common. The Dalai Lama expected to resume the temporal and spiritual despotism which he had exercised prior to 1904. The Chinese intended to deprive him of all temporal power and preserve him as a spiritual pope. The Tibetans had already been exasperated by the pressure of the Chinese soldiery. The report that a strong Chinese force was moving on Lhasa so alarmed the Dalai Lama that he fled from Lhasa, and by the irony of fate sought a refuge in India. He was chased to the frontier by Chinese troops, and took up his abode in Darjeeling, whilst Chinese troops overran Tibet.

Later Stages.

The British Government, acting on the representations of the Government of India; made strong protests to China against this action. They pointed out that Great Britain, while disclaiming any desire to interfere with the internal administration of Tibet, could not be indifferent to disturbances in the peace of a country which was a neighbour, on intimate terms with other neighbouring States on our frontier, especially with Nepal, and pressed that an effective Tibetan Government be maintained. The attitude of the Chinese Government was that no more troops had been sent to Tibet than were necessary for the preservation of order, that China had no intention of converting Tibet into a province, but that being responsible for the good conduct of Tibet, she must be in a position to see that her wishes were respected by the Tibetans. Finally, the Chinese remarked that the Dalai Lama was such an impossible person that they had been compelled again to depose him. Here the matter might have rested, but for the revolution in China. That revolution broke out in Szechuen, and one of the first victims was Chao Erh-feng. Cut off from all support from China, surrounded by a hostile and infuriated populace, the Chinese troops in Tibet were in a hopeless case; they surrendered, and sought escape not through China, but through India, by way of Darjeeling and Calcutta. The Dalai Lama returned to Lhasa, and in 1913, in the House of Lords on July 28, Lord Morley stated the policy of the British Government in relation to these changes. He said the declaration of the President of the Chinese Republic saying that Tibet came within the sphere of Chinese internal administration; and that Tibet was to be regarded as on an equal footing with other provinces of China, was met by a very vigorous protest from the British Government. The Chinese Government subsequently accepted the principle that China is to have no right of active intervention in the internal administration of Tibet, and agreed to the constitution of a conference to discuss the relation of the three countries. This Convention met at Simla when Sir Henry McMahon, Foreign Secretary to the Government of India; Mr. Ivan Chen, representing China; and Mr. Long Chen Shatra, Prime Minister to the Dalai Lama, threshed out these issues. Whilst no official pronouncement has been made on the subject, it is understood that

a Convention was initiated in June which recognised the complete autonomy of Tibet proper, with the right of China to maintain a Resident at Lhasa with a suitable guard. A semi-autonomous zone was to be constituted in Eastern Tibet, in which the Chinese position was to be relatively much stronger. But this Convention, it is understood, has not been ratified by the Chinese Government, owing to the difficulty of defining Outer and Inner Tibet, and in 1918 Tibet took the offensive and threw off the last vestiges of Chinese suzerainty. When the Chinese province of Szechuan went over to the South, the Central Government at Peking was unable to finance the frontier forces or to withstand the Tibetan advance, which was directed from Lhasa and appeared to be ably managed. After the Tibetan army had occupied some towns on the confines of the Szechuan marches, hostilities were suspended and an armistice was concluded. In the latter part of 1919, reports were circulated in China and Calcutta to the effect that this state of affairs had been interrupted by a Chinese invasion of Tibet; but the reports were contradicted by the Government of India.

Political Importance of Tibet.

The political importance of Tibet in relation to India has of necessity been changed by the Anglo-Russian Agreement. So long as that instrument is in force, it tends to decline. But no treaties are everlasting. The question has been admirably summed up by Sir Valentine Chirol ("The Middle Eastern Question"), written before the Agreement was reached. "What it would be impossible to view without some concern," he wrote, "would be the ascendancy of a foreign and possibly hostile power at Lhasa, controlling the policy of a great politico-religious organisation whose influence can and does make itself appreciably felt all along the north-eastern borderland of India. Lhasa is the stronghold of Lamaistic Buddhism, a debased form of Buddhism largely overgrown with tantic philosophy—Lhasa is in fact the Rome of Central Asian Buddhism, and the many-storied Po-ta-la on the hill to the west of the city is its Vatican, whence its influence radiates throughout innumerable lamaseries or Buddhist monasteries, not only into Turkestan and Mongolia and Western China, but across the Himalayas into the frontier States of our Indian Empire. Corrupt and degraded as it is, it is still unquestionably a power, and just because it is corrupt and degraded it might lend itself more readily to become for a consideration the tool of Russian ambitions. . . . Tibet as a Russian dependency would, at any rate, no longer be a *quantité négligeable*, and our north-eastern frontier, naturally formidable as it is, would require to be watched, just as every civilised country has to watch its frontiers, whatever they may be, where they march with a powerful neighbour, and most of all in India, where our frontier is fringed with semi-independent Native States, over which our authority is conditioned mainly on the hitherto unrivalled prestige of our Imperial power in Asia."

British Trade Agent, Yatung.—D. Macdonald.

British Trade Agent, Gyantse.—Major W. L. Campbell.

THE NORTH-EASTERN FRONTIER.

The position on the northern frontier has been considered as if the British line were contiguous with that of Tibet. This is not so. The real frontier States are Kashmir, Nepal, Sikkim and Bhutan. From Chitral to Gilgit, now the northernmost posts of the Indian Government, to Assam, with the exception of the small wedge between Kashmir and Nepal, where the British district of Kumaon is thrust right up to the confines of Tibet, for a distance of nearly fifteen hundred miles there is a narrow strip of native territory between British India and the true frontier. The first of these frontier States is **Kashmir**. The characteristics of this State are considered under Native States (*q.v.*); it is almost the only important Native State in India with frontier responsibilities, and it worthily discharges them through the agency of its efficient Imperial Service troops—four regiments of infantry and two Mountain Batteries, composed mainly of the Rajput Dogras, who make excellent fighting material. One of the most important trade routes with Tibet passes through Kashmir—that through Ladak. Then we come to the long narrow strip of **Nepal**. This Gurkha State stands in special relations with the British Government. It is for all practical purposes independent, and the British resident at Khatmandu exercises no influence on the internal administration. The governing machine in Nepal is also peculiar. The Maharaj Dhiraj, who comes from the Sesodia Rajput clan, the bluest blood in India, takes no part in the administration. All power vests in the Prime Minister, who occupies a place equivalent to that of the Mayors of the Palace, or the Shoguns of Japan. The present Prime Minister, Sir Chandra Shamsher, has visited England, and has given conspicuous evidence of his attachment to the British Government. Nepal is the main Indian outpost against Tibet, or against Chinese aggression through Tibet. The friction between the Chinese and the Nepalese used to be frequent, and in the eighteenth century the Chinese marched an army to the confines of Khatmandu—one of the most remarkable military achievements in the history of Asia. Under the firm rule of the present Prime Minister Nepal has been largely free from internal disturbance, and has been raised to a strong bulwark of India. Nepal is the recruiting ground for the Gurkha Infantry, who form such a splendid part of the fighting arm of the Indian Empire. Beyond Nepal are the smaller States of **Bhutan** and **Sikkim**, whose rulers are Mongolian by extraction and Buddhists by religion. In view of Chinese aggressions in Tibet, the Government of India in 1910 strengthened their relations with Bhutan by increasing their subsidy from fifty thousand to a lakh of rupees a year, and taking a guarantee that Bhutan would be guided by them in its foreign relations. Afterwards China had officially notified that Great Britain would protect the rights and interests of these States.

Assam and Burma.

We then come to the Assam border tribes—the Dapas, the Miris, the Abors and the Mishmis.

Excepting the Abors none of these tribes have recently given trouble. The murder of Mr. Williamson and Dr. Gregorson by the Minyong Abors in 1911 made necessary an expedition to the Dihang valley of the Abor country on the N. E. frontier. A force of 2,500 and about 400 military police was employed from October 1911 to April 1912 in subduing the tribe. After two or three small actions the murderers were delivered up. The cost of the expedition was Rs. 21,60,000. At the same time friendly missions were sent to the Mishmi and Miri countries. Close contact with these forest-clad and leech-infested hills has not encouraged any desire to establish more intimate relations with them. The area occupied by the Nagasares runs northwards from Manipur. The Nagasares, a Tibeto-Burman people, devoted to the practice of head hunting, which is still vigorously prosecuted by the independent tribes. The Chin Hills is a tract of mountainous country to the south of Manipur. The corner of India from the Assam boundary to the northern boundary of the Shan States is for the most part included in the Myitkyina and Bhamo districts of Burma. Over the greater part of this area, a labyrinth of hills in the north, no direct administrative control is at present exercised. It is peopled by the Shans and the Kachins. Civilisation is said to be progressing and steps have been taken to prevent encroachments from the Chinese side. There is a considerable trade with China through Bhamo. On the Eastern frontier of Burma are the Shan States, with an area of fifty thousand square miles and a population of 1,300,000. These States are still administered by the Sawbwas or hereditary chiefs, subject to the guidance of Superintendents and Assistant Superintendents. The Northern Shan Railway to Lashio, opened in 1903, was meant to be a stage in the construction of a direct railway link with China, but this idea has been put aside, for it is seen that there can never be a trade which would justify the heavy expenditure. The Southern Shan States are being developed by railway connection. The five Karenni States lie on the frontier south of the Shan States. South of Karenni the frontier runs between Siam and the Tenasserim Division of Burma. The relations between the Indian Government and the progressive kingdom of Siam are excellent.

The Frontier during the war.

Unrest, which had been brewing for some time among the Kachins, came to a head in December 1914 and January 1915, when punitive operations were undertaken. The columns originally consisted of Burma Military Police, but as the disturbance appeared more general and likely to spread, regular troops were ordered up to Myitkyina. In the Kamaing and Mogaung Jurisdictions, and the adjoining unadministered territory, six columns operated during January and February. The slight opposition encountered was in all cases successfully overcome, the rebel stockades captured, and the implicated villages destroyed.

Manipur maintained a double company for service with the Army during the war and raised a labour corps for service in France. Unfortunately some of the Kuki tribes subjects of the Manipur State, alarmed at the prospect of being sent to the scene of war and being ill-advised and misinformed as to the strength of the British forces, opposed all attempts to recruit for the labour corps and eventually broke into open rebellion. The columns of

the Assam Rifles sent against them met with serious opposition, and had a considerable number of casualties, before the campaign of pacification was successful. On the North-East Frontier the restriction on trans-frontier tours during the war prevented progress in the cultivation of friendly relations with the hill tribes. This is an unsatisfactory state of affairs and is calculated to lead to trouble in the future.

COPYRIGHT.

There is no provision of law in British India for the registration of Copyright. Protection for Copyright accrues under the Indian Copyright Act under which there is now no registration of rights but the printer has to supply copies of these work as stated in that Act and in the Printing Presses and Books, Act XXV of 1867. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting its provisions to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30, 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession, and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The Act to which these provisions are scheduled makes some formal adaptations of them to Indian law and procedure, and some material

modifications of them in their application to translations and musical compositions. In the case of works first published in British India the sole right to produce, reproduce, perform or publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies" it was explained in Council, "have not been published, i.e., written in staff notation, except through the medium of the phonograph. It is possible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining **musical work** as meaning any combination of melody and harmony, or either of them, printed, reduced to writing, or otherwise graphically produced or reproduced."

The prospect of linking Europe and Asia by a railway running eastwards through Asia Minor has fascinated men's minds for generations. The plans suggested have, owing to the British connection with India, always lain in the direction of lines approaching India. More than 40 years ago a Select Committee of the House of Commons sat for two years to consider the question of a Euphrates Valley railway. The Shah of Persia applied to the British Foreign Office for the investment of British capital in Persian railway construction many years before the end of the nineteenth century. A proposal was put forward in 1895 for a line of 1,000 miles from Cairo and Port Said to Koweit, at the head of the Persian Gulf. While these projects were in the air, German enterprise stepped in and made a small beginning by constructing the Anatolian railway system. Its lines start from Scutari, on the southern shore of the Bosphorus, opposite Constantinople, and serve the extreme western end of Asia Minor. And upon this foundation was based the Turkish concession to Germans to build the Baghdad Railway.

Meanwhile, Russia was pushing her railways from various directions into the Central Asian territory running along the northern frontiers of Persia and Afghanistan to the borders of Chinese Turkestan. The construction of a Trans-Persian railway, connecting India, across Persia, with the Russian lines between the Black Sea and the Caspian Sea came to the forefront after the conclusion of the historic Anglo-Russian agreement regarding Persia.

The Germans pushed forward their Baghdad railway project with a calculating shrewdness arising from their estimate of the value it would possess in their grand aim to overthrow the British Empire. The outbreak of the great war and the success of the Germans in invading Turkey into it saw the final stages of the construction of the railway pressed forward with passionate energy. Thus, before the overthrow of the Turks and Germans in Asia Minor and of the Germans in France the railway was completed and in use from Scutari across Anatolia, over the Taurus Mountains to Aleppo and thence eastward across the Euphrates to a point between Nisibin and Mosul. The Germans had also by that time constructed a line to Baghdad at the eastern end of the route, northwards from Baghdad to a point a considerable distance beyond Samara.

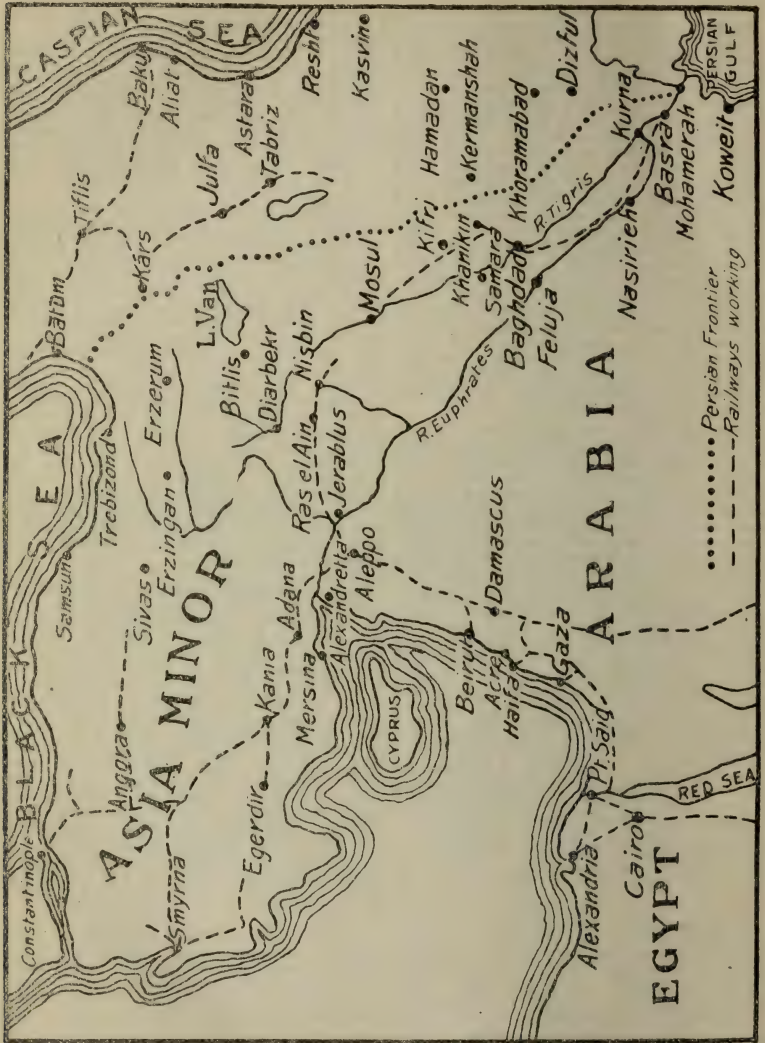

The war compelled the British to undertake considerable railway development northward from Basra, the port at the mouth of the Shat-et-Arab, the broad stream in which the Tigris and Euphrates, after their junction, flow into the head of the Persian Gulf. The British have since the conclusion of peace not yet undertaken the completion of the final stages of the line eastward from Nisibin. Their various lines in Lower Mesopotamia were designed to meet the special requirements of various stages of the war, and since the conclusion of peace some of them have been abolished and others perfected or newly laid. By the time this article appears in print the Mesopotamian system may roughly be de-

scribed as a metre-gauge line from Basra *via* Nasarieh, on the Euphrates, thence northwards to Baghdad, the line passing a considerable distance westward to Kut-I-Amara, of historic fame. From Baghdad the line runs eastward approximately to the foot of the pass through which the Persian road crosses the frontier of that country. A line branches off in the neighbourhood of Kifri in the direction of Mosul. A line also runs westward from Baghdad to Feluja, on the Euphrates.

The Trans-Persian line to join the Russian Caucasian system and the Indian railways first assumed proportions of practical importance in the winter of 1911. Both the Russian and the Indian railway systems were by then well developed up to the point likely to be the termini of a Trans-Persian line. The Russian system reached Julfa, on the Russo-Persian frontier in the Caucasus. During the war this line has been carried thence southward into the region east and south-east of Lake Urumia. The Indian railway system, on the borderland of India and Persia, was similarly much extended and improved during the war. No details have been published of proposals for the continuation of the Russo-Indian ink under the restored conditions of peace, but the new agreement negotiated last summer between England and Persia specially provides for British assistance in the development of Persian natural resources and particularly for the extension and improvement of Persian roads suitable for motor traffic.

There remains the possibility of linking the Russian and Indian railway system by way of Afghanistan. The suggestion has often been made in recent years that the Russian line from Merv to Herat, on the northern frontier of Afghanistan, should be linked to the Indian line which proceeds from Quetta to the Afghan border on Chaman. The distance between the railway heads is about 250 miles. But there have always for strategic reasons been strong military objections to the railway across Afghanistan and after the death of the late Amir Habibullah the Afghan Government flatly opposed any suggestion for carrying the Indian or Russian railway system within their borders. What the new Afghan Government will think about the matter was not shown up to the time this article was written, but the strange situation in Central Asia and beyond the Indian North-West Frontier does not suggest the early removal of the strategic difficulties.

Britain's special interests in regard to Persian communications have hitherto primarily been associated with lines running inland from the Persian Gulf, to supersede the old mule routes. Special importance has for many years been attached to schemes for a railway from Mohammerah (at the opening of the Karun Valley, where the Karun River runs into the Shat-el-Arab, just below Basra, northwards into the rich highland country of Western Persia where the valuable West Persian oil wells also lie. Britain has long established special relations with the Karun Valley and has a large trade there.

Foreign Consular Officers in India.

Name.	Appointment.	Port.
Argentine Republic.		
Mr. C. W. Rhodes	Vice-Consul	Calcutta.
Austria-Hungary.		
The Consul-General for Netherlands, Simla, is in charge of Austro-Hungarian interests during the War.		
Belgium.		
Mr. J. Rabins (in Charge)	Consul	Bombay.
Mr. J. Lince (in Charge)	Do.	Calcutta.
Mr. James Rorie Baxter (Ag.)	Do.	Karachi.
Mr. E. S. Murray	Do.	Aden.
Mr. G. K. Walker	Do.	Madras.
Mr. W. Macdonald	Do.	Rangoon.
Mr. R. A. Scott	Do.	Akyab.
Mr. J. Lince	Vice-Consul	Calcutta.
Bolivia.		
Kumar Shyama Kumar Tagore	Consul-General	Calcutta.
Mr. G. R. Neilson (Ag.)	Vice-Consul	Rangoon.
Brazil.		
Senor M. S. de Saint Brisson Marques	Consul	Calcutta.
Dr. Edward F. Underwood, M.A., M.D., Ph.D., J.P.	Do.	Bombay.
D. Robertson	Vice-Consul	Rangoon.
Mr. C. H. Straker	Do.	Madras.
Mr. V. E. Nazareth	Do.	Karachi.
Chili.		
Senor Don Arturo Cabrera	Consul-General	Calcutta.
Vacant	Vice-Consul	Bombay.
Vacant	Do.	Madras.
Mr. J. G. Bendien (Ag.) on leave	Do.	Bombay.
Mr. A. R. Leishman	Do.	Chittagong.
Mr. William Archbald	Do.	Rangoon.
China.		
Mr. Chow Kwo Hsein	Consul	Rangoon.
Costa Rica.		
Kumar Shyama Kumar Tagore	Consul	Calcutta.
Cuba.		
Mr. John Zuberhuhler (Acting) on leave	Honorary Consul	Bombay.
Senor Don B. Martinez Y. Montalvan	Consul	Calcutta.
Denmark.		
Mr. S. G. L. Eustace	Consul-General	Calcutta.
Mr. E. H. Danchell (Acting)	Consul	Bombay.
Mr. E. S. Murray	Do.	Aden.
Mr. R. T. Menzies	Do.	Madras.
Mr. C. Britton (Acting)	Do.	Rangoon.
Vacant	Vice-Consul	Karachi.
Mr. E. P. J. de B. Oakley	Do.	Calcutta.
Mr. P. T. Christensen	Do.	Moulmein.

Name.	Appointment.	Port.
Ecuador.		
Kumar Shyama Kumar Tagore	Consul	Calcutta.
France.		
Monsieur L. E. R. Laronce	Consul-General	Calcutta.
Monsieur J. J. Serre	Vice-Consul	Do.
M. Harold Martin	Acting Consul	Bombay.
M. Adolphe Ries	Consular Agent	Aden.
Mr. T. C. Beaumont (Acting)	Do.	Karachi.
Mr. F. E. L. Worke	Do.	Madras.
Vacant	Do.	Chittagong.
J. Scott	Do.	Rangoon.
Vacant	Do.	Akyab.
Do.	Do.	Coconada.
Do.	Do.	Tellicherry.

Venezuela.		
Kumar Shyama Kumar Tagore	Consul	Calcutta.

The Army.

The great sepoy army of India originated in the small establishments of guards, known as peons, enrolled for the protection of the factories of the East India Company; but sepoys were first enlisted and disciplined by the French, who appeared in India in 1665. Before this detachments of soldiers were sent from England to Bombay, and as early as 1665 the first fortified position was occupied by the East India Company at Armagon, near Masulipatam. Madras was acquired in 1640, but in 1654 the garrison of Fort St. George consisted of only ten men. In 1661 Bombay was occupied by 400 soldiers, and in 1668 the number was only 285 of whom 93 were English and the rest French, Portuguese, and natives.

After the declaration of war with France in 1744 the forces were considerably increased, but this did not prevent the French capturing Madras in 1746. Following the French example, the English raised considerable sepoy forces and largely increased the military establishments. In 1748 Major Stringer Lawrence landed at Fort St. David to command the forces of the Company. The English foothold in India was then precarious and the French under Dupleix were contemplating fresh attacks. It became necessary for the English Company to form a larger military establishment. The new commandant at once set about the organisation and discipline of his small force, and the garrison was given a company formation. This was the beginning of the regular Indian Army of which Lawrence subsequently became Commander-in-Chief. In Madras the European companies were developed into the Madras Fusiliers; similar companies in Bengal and Bombay became the 1st Bengal and 1st Bombay Fusiliers. The native infantry were similarly organised by Lawrence and Clive. By degrees Royal Regiments were sent to India, the first being the 39th Foot, which arrived in 1754.

Struggle with the French.—From this time for a century or more the army in India was engaged in constant war. After a prolonged war with the French, whom Dupleix had by 1750 raised to the position of the leading power in India, the efforts of Stringer Lawrence, Clive, and Eyre Coote completed the downfall of their rivals, and the power of England was established by the battle of Plassey in Bengal; and at Wandewash in Southern India, where the French were finally defeated in 1761. A number of independent States, owing nominal allegiance to the Emperor at Delhi, had risen on the decline of the Mughal Empire, some ruled by Mahratta Princes and others by Musalman adventurers such as Hyder Ali of Mysore. A prolonged struggle ensued with the latter and his son and successor Tipu Sultan, which ended only with the defeat and death of Tipu and the capture of Seringapatam in 1799.

Reorganisation of 1796.—In 1796 the native armies, which had been organised on the Presidency system, were reorganised. The European troops were 13,000 strong and the natives numbered some 67,000, the infantry being generally formed into regiments of two

battalions each. In Bengal regiments were formed by linking existing battalions of ten companies each with large establishments of English officers. The Madras and Bombay armies were at the same time reorganised on similar lines, and cavalry and artillery companies were raised.

In 1798 the Marquis Wellesley arrived as Governor-General, firmly imbued with the necessity of destroying the last vestiges of French influence. In pursuance of this policy he reduced Mysore, where Tipu was intriguing with the French, and then turned his attention to the Mahratta States, in which Sindhia had established power over the Mughal Emperor at Delhi by means of a large regular army officered by Europeans under the French adventurer Perron. In campaigns against Sindhia in Hindustan by a British Army under General Lake, and in the Deccan against that prince and the Raja of Berar by an army under General Wellesley, afterwards Duke of Wellington, the power of these Chiefs was broken in the battles of Laswari and Assaye. French influence was finally destroyed, and the Mughal Emperor was released from the domination of the Mahrattas. Subsequently Holkar also was reduced, and British power established on a firm footing.

Mutiny at Vellore.—The Indian Army had been from time to time subject to incidents of mutiny which were the precursors of the great cataclysm of 1857. The most serious of these outbreaks occurred at the fort of Vellore in 1806 when the native troops suddenly broke out and killed the majority of the European officers and soldiers quartered in the fort, while the striped flag of the Sultan of Mysore, whose sons were confined there, was raised upon the ramparts. The mutiny was suppressed by Colonel Gillespie, who galloped over from Arcot at the head of the 19th Light Dragoons, blew in the gate of the fort, and destroyed the mutineers. This retribution put a stop to any further outbreaks in the army.

Overseas expeditions.—Several important overseas expeditions were undertaken in the early part of the nineteenth century. Bourbon was taken from the French; Ceylon and the Spice Islands were wrested from the Dutch, and Java was conquered in 1811 by a force largely composed of Bengal troops which had volunteered for this service.

In 1814 the Nepal War took place in which the brave Gillespie, who had distinguished himself in Java, was killed when leading the assault on the fort of Kalunga. The Gurkhas were overcome in this war after offering a stout resistance.

In 1817 hostilities again broke out with the Mahrattas, who rose against the British during the progress of operations against the Pindaris. Practically the whole army took the field and all India was turned into a vast camp. The Mahratta Chiefs of Poona, Nagpur, and Indore rose in succession, and were beaten respectively at Kirki, Sitabaldi, and Mehidpur. This was the last war in Southern India. The tide of

war rolled to the north never to return. In the Punjab, to which our frontier now extended, our army came into touch with the great military community of the Sikhs.

In 1824 the armies were reorganised, the double-battalion regiments being separated, and the battalions numbered according to the dates they were raised. The Bengal Army was organised in three brigades of horse artillery, five battalions of foot artillery, two regiments of European and 68 of native infantry, 5 regiments of regular and 8 of irregular cavalry. The Madras and Bombay armies were constituted on similar lines, though of lesser strength.

First Afghan War and Sikh Wars.—In 1839 a British Army advanced into Afghanistan and occupied Cabul. There followed the murder of the British Envoys and the disastrous retreat in which the army perished. This disaster was in some measures retrieved by subsequent operations, but it had far-reaching effects on British prestige. The people of the Punjab had witnessed these unfortunate operations, they had seen the lost legions which never returned, and although they saw also the avenging armies, they no longer regarded them with their former eyes. Sikh aggression led to hostilities in 1845-46, when a large portion of the Bengal Army took the field under Sir Hugh Gough. The Sikhs were defeated after stubborn fights at Mudki and Ferozeshah, the opening battles, but did not surrender until they had been overthrown at the battles of Aliwal and Sohraon. Two years later an outbreak at Multan caused the Second Sikh War when, after an indecisive action at Chillianwala, our brave enemies were finally overcome at Gujerat, and the Punjab was annexed. Other campaigns of this period were the conquest of Sind by Sir Charles Napier, and the Second Burmese War, the first having taken place in 1824.

The conquest of the Punjab extended our frontier to the country inhabited by these turbulent tribes which have given so much trouble during the past sixty years while they have furnished many soldiers to our army. To keep order on this border the Punjab Frontier Force was established, and was constantly engaged in small expeditions which, while they involved little bloodshed, kept the force employed and involved much arduous work.

The Indian Mutiny.—On the eve of the mutiny in 1857 there were in the Bengal Army 21,000 British and 137,000 native troops; in the Madras Army 8,000 British and 49,000 native troops; and in Bombay 9,000 British and 45,000 native troops. The proportion of native to British was therefore too large for safety. The causes of the mutiny were many and various. Among these were the annexation policy of Lord Dalhousie, especially that of Oudh from which the greater part of the Bengal Army was drawn; interference with the privileges of the sepoy with respect to certain allowances; and lack of power on the part of commanding officers either to punish or reward. The final spark which fired the revolt was the introduction of a new cartridge. The muskets of those days were supplied with a cartridge in which the powder was enclosed in a paper cover, which had to be bitten off to expose the

powder to ignition. In 1857 a new cartridge was introduced with paper of a glazed texture which it was currently reported was greased with the fat of swine and oxen, and therefore unclean alike for Muhammadans and Hindus. This was interpreted as an attempt to destroy the caste and the religion of the sepoys. Skilful agitators exploited this grievance, which was not without foundation, and added reports that flour was mixed with bone-dust and sugar refined with the blood of oxen.

Disaffection culminated in mutiny at Barrackpore and in an outbreak at Barrackpore where sepoy Mangal Pande attacked a European officer. The next most serious manifestation was the refusal of men of the 3rd Bengal Cavalry at Meerut to take the obnoxious cartridge. These men were tried and sentenced to long terms of imprisonment, their fetters being riveted on parade on the 9th May. Next day the troops in Meerut rose, and, aided by the mob, burned the house of the Europeans and murdered many. The troops then went off to Delhi. Unfortunately there was in Meerut no senior officer capable of dealing with the situation. The European troops in the place remained inactive, and the mutineers were allowed to depart unmolested to spread the flames of rebellion.

Delhi is the historic capital of India. On its time worn walls brood the prestige of a thousand years of Empire. It contained a great magazine of ammunition. Yet Delhi was held only by a few native battalions, who joined the mutineers. The Europeans who did not succeed in escaping were massacred and the Delhi Emperor was proclaimed supreme in India. The capital constituted a nucleus to which the troops who mutinied in many places flocked to the standard of the Mughal. An army was assembled for the recovery of Delhi but the city was not captured until the middle of September. In the meantime mutiny had spread. The massacres of Cawnpore and Jhansi took place, and Lucknow was besieged until its relief on the 27th September. The rebellion spread throughout Central India and the territory that now forms the Central Provinces, which were not recovered until Sir Hugh Rose's operations in 1858 ended in the defeat of the Rani of Jhansi.

Re-organisation after the Mutiny.—After the mutiny the Government of India was assumed by Queen Victoria and the East India Company ceased to exist. The Company's European regiments were transferred to the Crown. The Bengal Army had almost disappeared and while a new army was raised for that Presidency the Madras and Bombay Armies were also reorganised. The native artillery was abolished, only mountain batteries and some field batteries of the Hyderabad Contingent being maintained. A Staff Corps of officers, borne on a general list for each Presidency, was instituted. The total strength on re-organisation was 65,000 British and 140,000 native troops.

Minor Campaigns.—During the period until 1879, when the Second Afghan War began, there were many minor campaigns including the China War of 1860, the Ambeyla Campaign, and the Abyssinian War. Then followed the Afghan War in which the leading figure was

Lord Roberts. There were expeditions to Egypt and China, and Frontier Campaigns of which the most important was the Tirah Campaign of 1897. There were also the prolonged operations which led up to or ensued upon the annexation of Burma, several campaigns in Africa, and the expeditions to Lhasa. But until 1914, since the Afghan War, the army of India, except that portion of the British garrison which was sent to South Africa in 1899, had little severe fighting, although engaged in many arduous enterprises.

Reforms.—During the period under review up to 1914 many reforms took place. Races considered of inferior military value were eliminated, their places in the ranks being taken by the warlike classes of the north. In this manner the greater part of the old Madras and Bombay armies lost its identity. Class regiments and class companies were formed, and regiments were linked in threes, each group with a regimental centre. Imperial Service troops were raised by the Chiefs for the service of the paramount power. In 1891 the Staff Corps of the three Presidencies were amalgamated, and in 1893 the appointment of Commander-in-Chief in the Bombay and Madras Armies was abolished. The number of British officers serving in Indian regiments was progressively increased, until the establishment was raised to 13 or 14, after having at one period sunk as low as 8 per battalion. The administrative services were improved, the Supply and Transport and the Ordnance and Military Works Services being reorganised.

Reforms received a great impetus during the term of office as Commander-in-Chief of **Lord Kitchener**, who arrived in India at the end of 1902. There had hitherto been no General Staff in India, all Staff work being carried out under orders issued from the offices of the Adjutant General and the Quartermaster General. The administrative services were under the Military Member of Council, who was independent of the Commander-in-Chief, who had to submit through the Military Member all proposals involving financial expenditure beyond his very limited powers. Lord Kitchener wished to remove what he considered the obstruction of the Military Department of the Government of India, and bring the entire army administration under the Commander-in-Chief. The proposal to abolish the Military Department was opposed by **Lord Curzon**, the Governor-General, who eventually resigned rather than assent to measures which he considered to be not in the best interests of the State. In place of the Military Department, a Military Supply Department was instituted with reduced powers, but this soon disappeared and an Army Department under control of the Commander-in-Chief in his capacity as Member of Council was established in its place.

Lord Kitchener's chief work lay in the reorganisation of the Army which was not based on war conditions but was scattered in units from which formations were organised for service. Nine Divisions were now formed, in addition to the Burma Division. These Divisions were organised for war, and could take the field intact, leaving behind sufficient troops for internal security. Armies and Divisions are

distributed strategically with their Headquarters at the stations indicated:—

<i>Northern Command</i>	Murree.
1st Division	Peshawar
2nd "	Rawalpindi.
3rd "	Lahore.
7th "	Meerut.
8th "	Lucknow.
<i>Independent Brigades</i> —			
Derajat Brigade	Bannu.
Kohat Brigade	Kohat.
<i>Southern Command</i>	Poona.
4th Division	Quetta.
5th "	Mhow.
6th "	Poona.
9th "	Bangalore.
<i>Independent Brigade</i>	Bombay.
<i>Burma Division</i>	Mandalay.

The fighting races.—The fighting classes that contribute to the composition of the Indian Army have hitherto been drawn mainly from the north of India, but the experiences of the great war have caused some modifications in the opinions previously held as to the relative value of these and other fighting men. The numbers of the various estates and tribes enlisted in the Army have since the war undergone fluctuations, and it is not possible at present to give exact information as to their proportions. Previous to the war the Sikhs contributed very large numbers both to the cavalry and infantry, and the contribution of the Gurkhas was also large; it is probable that these classes preserve their preponderance. The Sikhs, who inhabit the Punjab originated in a sect founded near Lahore by a peasant in the early part of the sixteenth century and in the course of a hundred years grew into a formidable militant power. Muhammadans of various races contribute a still larger proportion to both the cavalry and infantry. These are drawn both from the north and the south of India, as well as from beyond the Frontier. They are all excellent fighting men, hardy and warlike, who have furnished soldiers to all the great powers of India for many hundreds of years. As cavalry the Muhammadans are perhaps unequalled by any other race in the East, being good horsemen and expert men-at-arms.

Next in point of numbers are the Gurkhas of Nepal, who were at the outbreak of war formed in twenty complete battalions, but these have been considerably increased. As fighters in the hills they are unsurpassed even by the Pathans of the North-West Frontier, but the Garhwalis are equally good mountaineers.

The professional military caste of India from time immemorial has been the Rajput, inhabiting not only Rajputana but the United Provinces and Oudh. Of fine physique and martial bearing, these warriors of Hindustan formed the backbone of the old Bengal Army, and have sustained the English flag in every campaign in the East. Their high caste and consequent prejudices in no respect interfere with their martial instincts and efficiency in war. They furnish

many battalions. The Garhwalis are Hill Rajputs, good and gallant soldiers, who have proved themselves equal to any other troops on the field of battle and have established an imperishable record in the war both in Europe and in the East. The two battalions which were all we had in 1914 have since been added to. The Jats are a fine and warlike race of Hindus found in the Delhi and Rohtak districts and adjoining territory. It was these people who held out so bravely at Bharatpur and repelled Lord Lake's army in 1805. They have proved themselves good soldiers on the battlefields of Europe. Dogras are good and steady soldiers found in the hilly districts of the Punjab. They fought well in Flanders and in Mesopotamia.

Among those who have rendered signal and gallant service in the war are the Mahrattas of the Deccan and the Konkan, who have revived the reputation held by their race in the days of Shivaji, the founder of the Mahratta Empire. It is probable that their proved efficiency in war will lead to their recruitment in larger numbers in future.

In addition to the castes that have been mentioned, low caste men from the south and other parts of India have filled the ranks of the Pioneer regiments and Sappers and Miners, and done their duty well in every campaign in which they have been engaged.

The Indian Army in the Great War.—During the hundred and fifty years of its existence the Indian Army had taken no part in a European War with the exception of some few troops who were engaged against the French in Southern India and in Java and the Spice Islands. In 1885 some troops had been sent as far as Malta with a view to their employment in case of a war with Russia. In the last Boer war many Indians had been employed in a non-combatant capacity, but for reasons of policy their activity was confined to services of that nature. The Indian Army had been organised and trained mainly for Eastern warfare on or beyond the frontier of India; their despatch to a European theatre of war had not been contemplated, and the only European enemy they had been prepared to meet were the Russians. The army as a whole was organised and strategically disposed with a view to taking the field against the Russians in Central Asia, and the change in the situation due to the Anglo-Russian agreement with regard to Afghanistan and Persia did not bring with it any change in military policy, except possibly that it made the Financial Department draw still tighter the purse strings and curtail still further the military estimates.

Yet, notwithstanding these circumstances within a few months of the outbreak of war a great army estimated to reach 200,000 men was despatched to the various theatres of war—to France and Belgium, East Africa, Egypt, Turkish Arabia and Shantung. This Army, in its Indian ranks, comprised representatives of all the fighting races that have been mentioned and included a force of Imperial Service troops.

In July 1917, Lord Hardinge made the following statement in the House of Lords showing the extent of the expeditionary forces sent from India.

“In August and the early part of September an Indian Expeditionary Force of an Indian army corps of two divisions, under the command of General Sir James Willcocks, and one cavalry division was sent to France, and a second cavalry division was sent to join this force in the following November. It may be of interest to remark here that the theatre of action of these splendid Indian divisions was, in the first instance, restricted to the Mediterranean garrisons and the Sudan, and it was due to the insistence of the Government of India that they were sent to France, where they arrived in time to fill a gap that could not otherwise have been filled, and there consecrated with their blood the unity of India with the British Empire and their loyalty to the King Emperor. There are very few survivors of those two splendid divisions of infantry. But India has a land frontier, needing at all times a watchful eye, and at times such as those giving cause for special care. To guard that frontier three divisions were immediately mobilised. In September 1914, by the order of His Majesty's Government, a mixed division of troops was sent to East Africa, the co-operation of India with this force being limited to the supply of personnel, transport, equipment and ships. In October and November 1914, two divisions of Indian infantry and one brigade of cavalry were sent to Egypt. It was not till September, 26, 1914, by which time eight divisions had already been mobilised and sent either abroad or to the frontier, that the possibility of action at the head of the Persian Gulf was foreshadowed by the Secretary of State, and it was on October 31 that Turkey having entered the war against us, hostilities commenced with the seizure by an Indian brigade of the mouth of the Shatt-el-Arab. This brigade was reinforced to the strength of a division before the capture of Basra on November 23 and in three months' time increase to an army corps of two divisions. Of these 10 divisions of infantry and two divisions and two brigades of cavalry, enumerated above, seven divisions and all the cavalry were sent overseas. But in addition to these organised forces 20 batteries of artillery, and 32 battalions of British infantry, the flower of the British army, many of them 1,000 strong and more, were sent to England. A battalion of Indian infantry was sent to Mauritius, another to the Cameroons, and two battalions to the Persian Gulf, while Indian troops also co-operated with the Japanese at the capture of Tsingtau. Approximately 80,000 British officers and men and 210,000 Indian officers and men, all fully trained and equipped were despatched overseas. I would here remark that the largest Indian expedition ever previously sent overseas amounted to 18,000 men.

“A comparison between the ordinary establishment of the Army in India and of the units sent overseas in connexion with various expeditions shows in a striking manner the military effort made by India to assist the Empire. Of the British establishment in India, seven regiments of British cavalry out of nine were sent overseas: 44 British battalions of infantry out of 52, and 43 batteries of Royal artillery out of 56; while of the Indian establishment, 20 regiments of Indian cavalry out of 39 and 98 battalions of Indian infantry out of 138 were

sent abroad. In return for these troops, India received many months after the outbreak of war and the despatch of Indian divisions overseas, 29 Territorial batteries and 34 Territorial battalions, but these were unfit for immediate employment on the frontier or in Mesopotamia until they had been entirely rearmed and equipped and their training completed. Many of them were sent later to Mesopotamia, whether as units or drafts for Regular regiments, and all did splendid service. It is, however, a fact that for the space of some weeks before the arrival of the Territorials the British garrison in India was reduced to about 15,000 men. The safety of India was thus imperilled in the interests of the Empire as a whole. In such a cause I was naturally prepared to take risks, and I took them confidently because I trusted the people of India, and I am proud to say they fully justified my confidence in them. From the moment of the outbreak of war, and after, it was the steady policy of the Government of India to give readily to the home Government of everything it possessed, whether troops or war material. In the summer of 1914 India was absolutely ready for war in the light of what was then accepted as the requisite standard of preparation of her military forces and equipment. The Army was at war strength, the magazines were full, and the equipment was complete. Thanks to these facts, India was able, not merely to send her divisions to France and elsewhere, but also to supply to England within the first few weeks of the war 70,000,000 rounds of small-arm ammunition, 60,000 rifles and more than 550 guns of the latest pattern and type. In the first week of the war some 530 officers of the Army, who could ill be spared, were handed over to the War Office, and nearly 3,000 additional combatant officers have been sent overseas since the war began."

The Western Front.—The Germans had expected a rising in India, not the rallying of our Eastern Empire to the Flag. They had, in common with politicians elsewhere and in other countries taken at their face value the opinion of the most vociferous agitators, and mistaken it for the voice of the people of India. These agitators did not drop out of sight and hearing, either on the outbreak of war or during its continuance, but their machinations had no effect on the masses of the country, on the Princes who sprang to arms, and on the Army which remained true to its salt and upheld on the field of battle their traditions and character for loyalty.

The Indian Army Corps comprising the Lahore and Meerut Divisions, left India in August and September 1914, and on the 21st October the Lahore Division entered the battle area in the vicinity of Ypres. The position was critical and the arrival of reinforcements from India was timely. On this day the Germans began an offensive along nearly the whole front from La Bassee to the south of Menin.

A detailed account of the part taken by the Indian troops on the Western Front will be found in the book entitled "The Indian Corps in France," published under the authority of the Secretary of State for India. It is here possible only to refer briefly to the operations

in which they participated. The first battalions to enter the trenches in a European theatre of war were the 57th Rifles and the 129th Baluchis, which were attached to the 2nd Cavalry Division south-west of Ypres. These battalions took part in an attack on the German line on the 26th October, when both suffered some loss. A few days later a company of Punjabi Muhammadans of the 57th lost heavily in a German attack. The battalion was a typical one containing also Sikhs, Dogras, and Afridis, who all fought well. Severe fighting took place at this portion of the line up to the first of November. It is noteworthy that the first Victoria Cross awarded to an Indian was won in this battle by sepoy Khudadad Khan, 129th Baluchis. The Indian Army had been made eligible for the Cross only in 1911.

During this period three other battalions of the Lahore Division—the 15th Sikhs, 34th Sikh Pioneers and 59th Rifles—were in action near Givenchy on the the **La Bassee Canal**. This they held in the heavy fighting that continued until the 1st November, when they were relieved by two other battalions of the Jullunder Brigade, including the 47th Sikhs.

On the 26th and 27th October the Germans had effected the capture of the village of **Neuve Chapelle** and as this made a bulge in the British line it was necessary to recapture the village. The 9th Bhopal Infantry, 47th Sikhs, and two Companies of the Bengal Sappers and Miners were accordingly moved up on the night of the 27th and attacked the Germans next day. Desperate fighting ensued in which the Indian Infantry distinguished themselves and the Sappers and Miners maintained their high reputation. The casualties among the Indian troops up to the 3rd November numbered 18 British officers and 1,364 men wounded, 139 men killed; 28 British officers and 1,364 men wounded, 8 British officers and 338 men missing. The high proportion of wounded is a remarkable feature of the casualty list.

The Meerut Division did not leave India until September. It was concentrated at Orleans by the 22nd October, and a week later on the night of the 29th October the Indian Army Corps took over the line from just north of **Givenchy** in the south, past the rear of Neuve Chapelle, and eastward to the north of Fremelles. With the Corps was the Secunderabad Cavalry Brigade. The state of the swampy and water-logged ground might alone have damped the ardour of troops coming from the warmth and sunshine of the East. But these troops, who in loyalty and devotion to the King are second to none carried out during the succeeding ten months that they remained in the field the arduous duties they were called upon to perform, and at a time when there were not enough British troops available they filled the gap and held the line. Soon after the line was taken over the 28th Gurkhas were attacked and the Germans were eventually able to force their part of the front after inflicting heavy losses on this battalion. In a counter-attack the 58th Rifles and 107th Pioneers, aided by some British troops, succeeded in retaking the lost trenches.

The 12th November was memorable for the visit of Field Marshal Earl Roberts who visited

and addressed the Indian troops whose predecessors had served under him in many campaigns. Three days later the old Field Marshal died within sound of the guns in the midst of the troops that he had loved so well. Trench warfare in which Gurkhas, Garhwallis, Jats and Sappers and Miners were all engaged continued until the opening of the action of **Festubert** which the enemy began with an attack on Indian troops on the 23rd November. This action continued with varying fortunes for 48 hours. In the early part of the action the Germans succeeded in forcing a considerable portion of the trenches held by the Indian troops. But by the end of the second day all the lost ground had been recovered and the situation restored though at the cost of heavy losses in officers and men. The 39th Garhwalis were engaged for the first time and gained the reputation as being second to no Indian troops which they have since enhanced on many a field. The Victoria Cross was won by Naik Darwan Singh Negi of the 1st Battalion of this regiment, and by Captain de Pass of the Poona Horse, who was unfortunately killed. The 6th Jats and the 9th Bhopal Infantry also did well, and the other Corps fought with their usual tenacity. On the 1st December the Indian Corps was visited by the King, and the men were greatly encouraged by the Royal presence. Trench warfare continued and on the 11th-12th December the Jullunder Brigade relieved the French at Givenchy and Cuinchy. There followed the Battle of **Givenchy**, which began with a raid by the 129th Baluchis on the 16th December when that regiment behaved with great gallantry. In pursuance of somewhat vague indefinite, and conflicting orders of the higher command the battle continued during several days and assisted in the attack by the Leicestershire Regiment, the Indian troops of the Meerut Division carried out some excellent work with small losses. At the same time the Lahore Division attacked the main line of German trenches in front and north-east of Givenchy, the 59th Rifles doing specially good work and suffering heavy losses in a night attack on the 19th December. Much ground had been gained during the day, but most of this was lost at night in the fight with greatly superior numbers of Germans.

These operations were followed by very heavy fighting during a German counter-attack on Givenchy. The Secunderabad Cavalry Brigade, dismounted, were thrown into the fight, and the line occupied by the Indian troops in spite of strenuous resistance, was forced at least one point. Among the many who gained distinction in this battle was Subadar Arsla Khan of the 57th Rifles, who had distinguished himself in Frontier warfare. In his despatch on the Givenchy operations Sir John French wrote that "The Indian troops have fought with the utmost steadfastness and gallantry wherever they have been called upon."

The Indian Army Corps had now, at the end of December, been continuously engaged for two months. They had suffered a loss of nearly ten thousand killed, wounded and missing, including in this number the gallant British regiments which formed a portion of each Brigade, and they were in urgent need of rest.

They were accordingly moved into billets, where the time was occupied with training and refitting until the 15th January 1915 when Indian troops were again moved into the front line; but there was not much activity until the battle of Neuve Chapelle, which began on the 10th March. In this attack the Indian Corps co-operated with the 4th Corps, the Meerut Division, comprising over five thousand British and six thousand five hundred Indian ranks supplying the assaulting troops from their Corps, in co-operation with a Division of the 4th Corps.

The attack began with a heavy bombardment after which the assaulting troops in which the Indian Army supplied the 2-3rd Gurkhas and two battalions of the 29th Garhwal Rifles, rushed to the attack and rapidly attained their immediate objectives. In this attack Rifleman Gobar Singh Negi of the Garhwalis displayed great gallantry; he was unfortunately killed and was awarded posthumously the Victoria Cross. The British officers as usual led their men with great gallantry, and suffered disproportionate losses. At one portion of the front the 1-39th Garhwal Rifles were for a time held up, but succeeded in carrying their objective with the aid of reinforcements but at terrible cost. The positions gained were consolidated on the 11th and 12th March. **Neuve Chapelle** was cleared of the enemy and other Indian troops were moved forward. On the morning of the 12th the enemy massed to the counter-attack, but were shot to pieces before they reached the trenches of the defenders; a second attempt met with the same fate.

The battle of Neuve Chapelle ended on the 12th March when the operations were suspended and the position gained was consolidated. It was not an entire success, but the balance of heavy losses was on the side of the enemy and a dangerous salient was obliterated. The remainder of the month passed with little activity except shelling, and on the 21st the Indian Corps was directed to take over a new line in relief of the 4th Corps. The first part of April was uneventful, but towards the end of the month the Lahore Division was moved to the Ypres Front to take part in the **Second Battle of Ypres**. On the 25th April, after a long march, the Division moved into the Ypres area to take part in the battle which began with the German attack on the French line between Steenestraat and the East of Langemark, and in which the enemy for the first time used asphyxiating gas. This attack forced back the Allied line and so jeopardised the situation that every effort had to be made to arrest the German advance. It was in pursuance of this necessity that the Indian Division was sent into the fight, and came under the orders of Sir Horace Smith-Dorrien, Commanding the 2nd Army, and took up, on the morning of the 26th April, a position in front of Ypres with its left on the Ypres-Langemark road.

In the assault on the enemy's position the same day the 49th Pathans, 47th Sikhs, 129th Baluchis, and 57th Rifles pressed forward in spite of heavy losses, but were eventually forced back by a gas attack against which they had no provision. In this action Jemadar Mir Dast

behaved with great skill and gallantry and was rewarded with the Victoria Cross. The troops which delivered the assault composed the Ferozepore and Jullundur Brigades, the latter being relieved next day by the Sirhind Brigade. The 15th Sikhs and the 1-1st and 1-4th Gurkhas, and the Bhopal Battalion, as well as those already mentioned came into action next day, and heavy fighting, alternate attack and defence, continued until the end of April. The division remained on this front until the 3rd May. The defence of Ypres was successfully maintained, and the troops did all that was humanly possible under most trying circumstances. General Keary, who commanded the division stated that the carrying of the enemy's position was only prevented by their use of asphyxiating gases. Two days after their return from the battlefield, the Lahore Division relieved the Meerut Division in the trenches. The casualties in the British and Indian troops of the Indian Army Corps amounted to nearly 19,000 men up to the 1st May.

Throughout the month of May fighting was almost continuous, but the principal event was the battle of **Festubert** on the 9th to 11th May. This action was fought to support a French offensive further south. It opened with an attack by a Brigade of the Indian Corps, which failed owing to the strength of the enemy's position and insufficient artillery preparation. After terrible fighting in which the troops did all that was possible and suffered heavy casualties, the Indian Corps failed to attain its objec-

tive. Where all fought well it is invidious to pick out any particular units, but none did better than the 37th and 41st Dogras. The 41st had 401 casualties out of 645 engaged.

Early in June the 69th and 89th Punjabis arrived in relief of the 9th Bhopal Infantry and 125th Rifles which left for Egypt, and in this month the Corps was strengthened by the addition of Territorial Divisions, so that the Indian troops were now in the minority. There succeeded desultory operations until the **Battle of Loos** in which the Indian Corps, now under command of Lieutenant-General Sir Charles Anderson, who succeeded Sir James Willcocks took a prominent part. It is not possible in the space at our disposal to give any account of this battle, in which the Indian troops did their best in very adverse circumstances. They formed a comparatively small portion of the troops engaged, and it was no fault of those troops that the attack failed. In his despatch describing the operations Sir John French stated that the Indian Corps succeeded admirably in fulfilling the role allotted to them, and in holding large numbers of the enemy away from the main attack.

The difficulty of keeping the Indian Corps troops up to strength in both officers and men had led to their gradual deterioration, and in November they were moved from the Western Front, with the exception of the cavalry to other theatres of war. The last of them left Marseilles on the 26th December, 1915.

MESOPOTAMIA.

When in September 1914 it became evident that the Turks would enter the war on the side of our enemies it was decided to send an expedition to occupy Basra. The advanced Brigade under General Delamain reached Bahrein on the 23rd October, and the remainder of the 6th Division, which comprised the Expeditionary Force under Sir Arthur Barrett, arrived on the 14th November. Basra was occupied on the 22nd November. The advanced Brigade consisted of the 2nd Dorsets, 20th Punjabis, 104th Rifles and 117th Maharattas, with two Mountain Batteries. They occupied the oil refinery at Abadan without much opposition. The remainder of the Poona Division under General Barrett were two Brigades and divisional troops. The Ahmednagar Brigade was composed of the Oxford and Bucks Light Infantry, the 119th Infantry, and 103rd Maharattas.

The Belgaum Brigade consisted of the 2nd Norfolks, 7th Rajputs, 110th Maharattas, and 120th Rajputana Infantry. Divisional troops were the 33rd Light Cavalry three batteries R. F. A., 48th Pioneers, and 3rd Sappers and Miners. On the 15th November the Poona Brigade under General Delamain was sent forward and engaged and drove out of the village of Sahain. The Turks stood again at Sahil on the 17th, and were defeated with heavy loss after a sharp action in which the British

casualties numbered about 400. After this the Turks evacuated Basra. After some further fighting in December the Town of **Kurna** at the junction of the Tigris and Euphrates was occupied on the 7th of that month, when the Turkish Garrison surrendered unconditionally. This gave us complete control of the Delta.

In January 1915 it was found advisable to push out a force from Kurna to break up a hostile gathering to the northward, and some fighting took place in which the 33rd Cavalry was distinguished. In February more severe fighting took place. The town of Ahwaz in Persia had been occupied by a brigade of all arms to protect the oil wells. The Turks collected a force of 12,000 men to the westward, and a reconnaissance in force sent out from Ahwaz had some severe fighting and withdrew with difficulty. On the same day a cavalry force from Basra encountered the enemy at Nakhailla 25 miles up the Euphrates. In April Sir John Nixon took over command in relief of Sir Arthur Barrett and a period of activity followed. Active measures were taken against the enemy on the Karun and the Tigris, and during seven weeks the Turks were pushed back to Amara and several Arab tribes were dealt with. By the end of May the British had pushed forward to Kurna and a division 14,000 strong under General Townshend was

ready for a further advance. On the 31st May the Turks were driven further up the river by a strong attack, and on the 3rd June General Townshend occupied Amara, where 2,000 prisoners were taken. In June a force under General Gorringe was concentrated at Kurna, and on the 27th pushed westwards towards **Nasiriyeh**. The Turks were entrenched in front of the place; they were attacked and driven out of their position on the 24th July, and next day Nasiriyeh was occupied. The line had now been pushed forward on the Tigris and the Euphrates a hundred miles beyond Kurna.

A further advance began in August, and at the end of September after hard fighting culminating in the battle of **Kut**, that place was occupied by the troops under General Townshend. In all these and the subsequent operations many battalions of the Indian Army took part. To name all these would be to recapitulate the Army List. They belonged to all classes of troops, among which the Mahratta regiments in particular performed good and gallant service. It was decided to push on from Kut and attempt the capture of **Baghdad**, by water 227 miles beyond Kut. For this purpose only General Townshend's division was available. That General told Sir John Nixon that, in case of success at Kut, he would "take the risk of pushing on to Baghdad at the heels of the rout." This decision was taken in defiance of all strategic principles, and apparently only with a view to the immediate tactical situation on the spot. Townshend pushed on to Azizieh which he reached on the 3rd October. Here he appears to have had doubt as to the advisability of an advance on Baghdad without reinforcements. As these were expected from Europe, the advance was continued. The Turks had entrenched a position at **Ctesiphon**, where a bloody and indecisive battle was fought on the 23rd November. The British losses were very heavy, and though the enemy lost no less he brought up reinforcements and instead of an advance to Baghdad it became necessary to retreat. On the 20th General Townshend withdrew to Lajj; on the 27th he began his retreat to Kut. The Turks followed. As might have been expected they pushed round the flanks of the retreating force. But the pursued turned on their pursuer and the enemy were kept at a distance while the troops fell back on Kut which was occupied on December 3rd. Here the retreat ended. The wounded were sent back in circumstances of horror which fill one of the darkest pages of our history, owing to the lack of proper medical and transport arrangements. For this the General Staff at Simla appear mainly responsible in miscalculating probable casualties in such a war. Before the Turkish investment was complete, General Townshend wisely sent his cavalry brigade to the south, and behind this force were concentrated for the **Relief of Kut**. But it was not until the 4th January 1916 that the advance of relief forces under General Aylmer began. He had some 25,000 men, but the Turks also had been considerably reinforced. They were attacked at Shaikh Saad on the 7th January, and on the 9th, after very severe fighting, they were driven beyond

that place to a position about 25 miles from Kut. Here they were again attacked and defeated on the 13th January, but they only retreated to a stronger position a few miles further back, where they repulsed an attack delivered by General Aylmer's troops a week later. This ended the first attempt to relieve Kut, where the besieged held out and repelled all assaults, and maintained their moral notwithstanding the necessity of putting them on halt rations.

In January General Lake took over command of the troops in Mesopotamia, but it was not until the 7th March that General Aylmer made a third attempt to relieve the besieged garrison. On this occasion the attack was well-planned but delay in its delivery gave the Turks time to prepare and the operation failed with heavy losses. A third attempt failed in April and on the 29th of that month General Townshend was obliged to surrender to the Turks.

During the summer of 1916 the river transport and railway and other communications were organised, and large reinforcements were sent to Mesopotamia, so that when General Maude succeeded Sir Percy Lake in command the situation had in these respects greatly improved. The expedition was placed under control of the War Office.

When General Maude began his advance in December the Turks occupied a position covering Kut at **Sanna-i-Yat** and southward of the Tigris to the Hai stream. The Turks were attacked on the Hai on the morning of the 14th, when the passage of the stream was seized. Activity continued, and in the middle of January after heavy fighting they were driven from positions south of the Tigris. On the 25th January an assault was delivered on the Hai salient and a succession of actions took place between that date and the end of February, Kut being cleared of the enemy and captured on the 23rd and 24th. The pursuit then began which, except for a halt of a week at Azizieh, did not end until Baghdad was entered on the 11th March. In the operations which led up to the **Capture of Baghdad** the Indian troops took a glorious part. After the fall of Baghdad there still remained work for the Expeditionary Force, in order to ensure the security of the occupied territory. Desultory operations continued throughout 1917, and in September the Turks were heavily defeated at Ramadieh up the Euphrates on the road to Aleppo. This together with General Allenby's operations in Palestine, put an end to any project of the Turks for the recovery of Bagdad. In November General Maude died of cholera and was succeeded by General Marshall, under whose command operations were carried out on the Mosul road which completed the destruction of Turkish power in Mesopotamia. Some activity continued in both Mesopotamia and Persia and during the period until the conclusion of the armistice and an unfortunate expedition was undertaken to Baku. But the power of the Turk on this front had been finally broken, and such forces as the enemy was able to assemble had to be employed in the attempt to keep back General Allenby's advance in Syria.

THE WAR IN EAST AFRICA.

Early in the war it was decided to undertake operations in East Africa where the local forces were rapidly reinforced by troops from India. The first Indian regiment to arrive was the 29th Punjabis, which reached British East Africa in September and were followed by Jind Infantry of the Imperial Service Troops. The Germans took the offensive and engagements soon took place in the Tsavo region. Here the combatants had to contend not only with the hostility of man but with the forces of nature in the form of wild beasts which after an engagement attacked the wounded and devoured the dead left on the field of action at night.

Towards the end of October an expeditionary force 6,000 strong, consisting of British, Indian, and Imperial Service troops, left Bombay under command of Major-General A. E. Aitken, to seize the German port of **Tanga**. The troops comprised the North Lancashire Regiment, the 101st Grenadiers and other Indian corps, and the Kashmir Rifles. These succeeded in forcing a way into the town, but the troops were of unequal quality, the Germans had warning of and were prepared for the attack, and the enterprise failed. The troops re-embarked and were transferred to British East Africa. In the meantime a force of locals, Indian troops and Imperial Service Troops under Major-General J. M. Stewart which attempted to capture Longido in the Kilimanjaro region were repulsed. An officer described the attempt.—“We marched all night, attacked at dawn, fought all day, and then, having failed to turn the Germans out, came back here as we had no water.” The first British attempts in East Africa certainly did not cover us with glory.

There was a further reverse at **Jassin** in January 1915. But in June a successful ope-

ration against Bukoba was undertaken under the direction of Major-General Tighe, who had assumed command in East Africa. In February 1916 General Smuts took over command from General Tighe, who had skillfully organised the defence and prepared for the succeeding operations. The German forces were then strongly entrenched in British territory S. E. of Kilimanjaro. In the ensuing operations the Germans were driven out during a most arduous campaign in which the 129th and 130th Baluchis, the 29th Punjabis, and other Indian troops took part. The names of the following corps also figure in the account of the operations—17th Cavalry, 5th and 17th Infantry, 40th Pathans, 61st Pioneers, and 101st Grenadiers. In these operations, characterised by hard work in a bad climate and by hard fighting General Smuts conquered the region from Kilimanjaro to Dar-es-Salaam, and by the time that General handed over command to Lieut. General A. R. Hoskins in January 1917, a great deal had been accomplished towards the final defeat of the enemy. General Hoskins was soon succeeded by General Van Deventer. By the end of 1916 the enemy was confined to the south-east and south central parts of the protectorate, and in November a campaign was begun in the Rutuji country, but there was still hard fighting and campaigning in an unhealthy country before the troops, which suffered from a very severe type of malaria. Operations continued throughout 1917, and in November the remnant of the Germans were driven out of German East Africa into Portuguese territory, where they continued to hold out until the end of the war. The Indian troops bore a conspicuous part throughout.

GALLIPOLI.

The Indian troops, being few in number, played a comparatively small but not undistinguished part in the Dardanelles Campaign. The 29th Indian Brigade, consisting of the 14th Sikhs and 5th, 6th, and 10th Gurkhas, did not land at Cape Helles until the 1st May, some days after the first landing on the Peninsula. A Mountain Artillery Brigade also took part in the campaign, and Indian Transport did most notable and valuable service throughout. Soon after they landed the Turks made a determined attack on the troops in front of Krithia, and heavy fighting continued some days. By the middle of May the position had become stabilised and trench warfare had set in. But before this the 6th Gurkhas seized and consolidated a position on the summit of the cliff west of the Gully Ravine, afterwards known as Gurkha Bluff, and held until the end. In the fighting which took place during May the Indians suffered heavy losses, the 14th Sikhs in particular losing nearly all their British officers. On this front the Indian troops took part in the various attacks which were made during June and July in the attempt to capture Krithia.

Early in August the last attempt to dominate the passage of the Narrows was made. Fresh troops had been sent out from England

and some redistribution of the forces was made. The Anzac front was to be reinforced and from there a main attack was to be made in the hope of seizing the heights which commanded the waist of the Peninsula. This attack was to be aided by a subsidiary attack by fresh troops who were to be landed at Suvla, while at the same time a diversion to distract the enemy's attention was to be carried out on the Cape Helles front. The 29th Indian Brigade landed at Anzac to take part in the attack from that point. The battle began on the 6th August and the effort to carry the heights commanding the Narrows continued until the 10th. In these operations the Indian Brigade was employed in the assault on the Sari Bair heights under General Cox, and some Gurkhas succeeded in reaching the summit from whence could be seen the traffic rolling along the road to Constantinople and the gleaming water of the Dardanelles. But the Turkish counter-attack swept the assailants off the heights. The failure was no fault of the fighting men, nor can the blame be apportioned until the Proceedings of the Dardanelles Commission have been published in full.

At a later date the Indian troops were moved to Egypt.

Egypt and Palestine.—The possibility of a Turkish attack on Egypt was ridiculed in many quarters principally by ignorant people unacquainted with history which records many instances of armies crossing the Syrian desert, from ancient times to the expedition of Napoleon Bonaparte. The importance of Egypt in the world-system of communications of the British Empire rendered the adequate protection of that country necessary, and ensured an attempt on the part of the Turks to recover territory which formed a nominal portion of the Turkish Empire. It was obvious that troops for the defence of Egypt would be best supplied from the East, with which there was an almost safe line of communications. Indian troops were especially fitted for this important work owing to climatic reasons; and in earlier expeditions Indian troops had been often employed in Egypt. The Turks had hoped that the sympathies of the Muhammadan Indian troops would be with them, but in this, as might be expected, they were bitterly disappointed. They judged rather by the attitude of the "politically minded classes," and not by that of the Indian sepoys who have always shown such splendid loyalty to the Crown.

A considerable force was despatched from India, and was in a position for defending Egypt before the Turkish attack. It is not necessary to name in detail the Indian corps which took part in the campaigns in Egypt and Syria. Indeed the regiments which served in this theatre of war were from beginning to end so numerous that to detail them all would almost involve a recapitulation of the Army List. They represented every class and every arm of the service, including a considerable portion of the Imperial Service Troops.

It was not until February 1915 that the Turks, having advanced across the desert to the number of some 30,000 men, reached the bank of the **Suez Canal** in several columns and attempted to force a passage. They were opposed by considerable forces, including Sikhs, Punjabis, Rajputs, Gurkhas, and Pioneers, and were repulsed at Tussum-Serapeum, at Ismaïlia, El Kantara and other points. After repelling the enemy at Tussum the Indian troops counter-attacked with effect, as they did also at Serapeum. In these actions the Turks lost heavily. Only the absence of effective pursuit saved the retreating Turkish Army from destruction. The Indian troops had borne the brunt of the fighting and acquitted themselves well. The fighting which began on the 2nd was over on the 4th February. During 1915 minor operations took place on this front, but nothing of much importance occurred until the Turks were defeated at Roman Walls in August, and by February 1917 they were finally ejected from Egyptian territory.

Egypt and the Canal being now safe from invasion, operations for the conquest of Southern Palestine were undertaken by the Egyptian Expeditionary Force in 1917. Late in March an attack was made upon **Gaza**, and the second attempt in February, but these operations failed in their object. Sir Edmund Allenby then took over command and began those operations which terminated so brilliantly in October 1918. In April 1917 the Turkish

front from the Mediterranean near Gaza who strongly held to a point south and east of Bathsheba. Some Indian troops took part in the operations which began with the attack on Beersheba on the 31st October, and led to the capture of **Jerusalem** which was occupied on the 11th December 1917.

In the succeeding phases of the operations the Indian troops were largely augmented, for General Allenby had to send a large part of his force to Europe. The Jordan was crossed in March, but strong Turkish forces prevented the assumption of a vigorous offensive until some months later. In July the Turks made a determined attack on the British lines on the Jordan, and were repulsed with heavy loss; on the 18th September 1918, General Allenby began his new campaign, carrying the enemy's main position and driving him back in disorder and continuing the pursuit until he entered Damascus on the 1st October. In these operations some thirteen Indian Cavalry regiments and thirty-seven Indian battalions took part.

After this, **Beyrout** and **Tripoli** were successively occupied. **Aleppo** was entered on the 25th October, and the power of the Turk was completely broken. The operations which followed on the capture of Jerusalem resulted in the destruction of whole Turkish armies; but there is here no space for any description of these events, which added a new page to the glorious history of the Indian Army.

Additions to the Indian Army.—In 1918 large additions were made to the Indian Army, a great number of second battalions being raised to existing regiments. Men were enlisted from every part of India, classes being taken into the Army which had no military traditions whatever. Recruiting was proceeding when the armistice came to an end. The conclusion of the armistice and afterwards of peace did not bring the arduous work of the Indian Army to an end. They still garrisoned conquered territory, while a new war begun on the frontiers of Afghanistan gave prospect of prolonged campaigning.

Summary of India's Effort in the War.—In a despatch by the Commander-in-Chief published in July, 1919, the whole operations of the Indian Army during the war are reviewed. His Excellency gives in it the following figures showing the extent of India's contribution in terms of men. On the outbreak of war, the combatant strength of the Indian Army, including reservists, was 194,000 Indian ranks; enlistments during the war for all branches of the service amounted to 791,000, making a total combatant contribution of 985,000. Of this number 552,000 were sent overseas. As regards non-combatants, the pre-war strength was 45,000; an additional 427,000 were enrolled during the war; and 391,000 were sent overseas. The total contribution of Indian personnel has thus been 1,457,000 of whom 943,000 have served overseas. Casualties amounted to 106,594, which include 36,696 deaths from all causes. The number of animals sent overseas was 175,000.

Commission of Inquiry.—It was announced in July, 1919, that the Secretary of State for India, with the concurrence of the Secretary of

State for War, had appointed a committee to inquire into the administration and organisation of the Army in India. The composition of the committee is as follows:

President: Viscount Esher

Members: Sir M. O'Dwyer, I.C.S., late Lieut.-Governor of the Punjab; Sir G. Fell, I.C.S., late Financial Adviser, Military Finance Department, Government of India; Lieut.-General Sir H. V. Cox, Indian Army, Secretary, Military Department, India Office; Lieut.-General Sir C. W. Jacob, Indian Army, Commanding 2nd Army Corps, Army of the Rhine; Lieut.-General Sir H. Hudson, Indian Army, Adjutant-General in India; Lieut.-General Sir J. P. Du Cane (late R.A.), late Commanding XV Corps, B.E.F.; Major-General Sir W. Gillman (late R.A.), recently Chief of the General Staff in Mesopotamia.

Secretary: Brigadier-General C. M. Wagstaff, R.E.

The terms of reference are :—

1. To inquire into and report, with special reference to post-bellum conditions, upon the administration and, where necessary, the organisation of the Army in India, including its relations with the War Office and the India Office, and the relations of the two offices with one another.

2. To consider the position of the Commander-in-Chief in his dual capacity as head of the Army and member of the Executive Council, and to make recommendations.

2. To consider and report upon any other matters which they may decide are relevant to the inquiry.

The committee will meet first in London, where two months' work is anticipated; later the committee will proceed to India to examine witnesses and conditions on the spot.

Reserves.

The Indian Army Reserve dates from 1886. Under existing arrangements, it consists of men with not less than three years' colour service. Men passing into the Reserve still belong to their respective regiments, and come up for two months' training once in two years. In 1904 when the strength of the Reserve was about 24,500 men, it was decided to raise it gradually to 50,000 men, reducing the reserve pay from Rs. 3 to Rs. 2 a month, and also to form an Indian cavalry reserve by extending the system to Silladar cavalry regiments. Reservists obtain a pension after 25 years' total service.

Reserve of Officers.—For some years there has been entertained what was called The Indian Army Reserve of Officers—a small body of trained officers who would be available to replace the casualties amongst the British officers serving with the Indian troops in time of war. This branch of the service was however grievously neglected; the conditions of service were unattractive, the prospects of promotion

were practically nil; and the military authorities preferred to rely on the expedient of multiplying the number of British officers serving with Indian troops in order to meet casualties, rather than to train up an effective reserve. This policy tested by the war was found wanting. The casualties amongst the British officers with the Indian regiments were very large indeed; these regiments lost their initiative when deprived of the officers on whom they had been taught to rely, and it was impossible to make the great gaps good from the ordinary officer class, because of their lack of knowledge of the Indian languages and Indian conditions. An appeal for recruits for the Indian Army Reserve of Officers met with a very ready response. The first enrolments reached the substantial figure of fourteen hundred, a very large proportion of whom were drawn from the Volunteer Officers, or from the ranks of special corps like the Light Horse, who are ordinarily recruited from the officer class. The officers selected were put through a rapid course with British and Indian regiments; made to pass a language test, and when efficient were sent to serve with the Indian regiments at the front. They have done excellent service and have suffered many casualties; indeed, without this reinforcement of officers specially acquainted with Indian conditions, the efficiency of this Indian Regiments could not have been maintained. The numbers were raised to over 4,000.

The Imperial Service Troops.

The voluntary movement towards co-operation in the task of Imperial defence that led to the formation of the force of Imperial Service Troops was initiated in 1887 by an offer made by the Nizam of Hyderabad, whose example was at once followed by a number of the leading Native Princes. The troops, which are under regular inspection by British Officers, though available for Imperial service when placed at the disposal of the British Government by their Rulers, belong to the States and are recruited from their subjects. Their armament is the same as that of the Native Army, and in training, discipline, and efficiency they have reached a high standard of excellence. They have done good service on the North-West Frontier and also in China and Somaliland. At the beginning of the decade (1901-02 to 1911-12) twenty-three States between them supplied a total of over 16,000 men. Some additional offers of contingents have since been accepted, and the total strength is approximately 22,271, towards which twenty-nine States contributed. The total included some 10,000 infantry, and 7,500 cavalry, while transport and camel corps contributed 2,700 and 700 men respectively. Sappers also numbered about 700. Gwalior contributes nearly 4,000 men, and Kashmir over 3,500; Patiala, Hyderabad and Alwar contribute over 1,000 each. On the outbreak of the war practically the whole body of Imperial Service Troops was immediately placed at the unfettered service of the King-Emperor. Many of these offers were gratefully accepted and large bodies of Imperial Service Troops proceeded to one or other of the theatres of the war.

The Imperial Cadet Corps.

The Imperial Cadet Corps was founded in 1901, with the object of providing military training for the scions of ruling and noble families. The Corps consists of about 20 young

men of noble birth who have been educated at the Chiefs' Colleges. The course of instruction lasts between two and three years, and the cadets are taught military exercises and military science. Its headquarters are at Dehra Dun.

THE INDIAN DEFENCE FORCE.

For some time before the war began it was realised that the Volunteer system in India was unsatisfactory, and the war made that realisation all the more acute. Chambers of Commerce and other bodies passed resolutions in favour of some form of compulsory service for able-bodied Europeans, but none of the schemes suggested, either for the improvement of the Volunteers or for the creation of a new body, was very definite, nor indeed could it be, owing to the absence of any definite pronouncement by the Government of India as to the function which the Volunteers were supposed to perform in war and peace. It is true that from the outbreak of the war the Volunteers were freely used, especially in Bombay, for a variety of duties normally performed by garrison troops, such as embarkation work and later on for escorting prisoners to Ahmednagar. Volunteers joined the Army and the Indian Reserve of Officers in large numbers, a Volunteer Battery went to Mesopotamia and a Volunteer Maxim gun section went to East Africa; but of the force as a whole no use was made and no compulsory use could be made so long as Section 16 of the Indian Volunteers' Act, which prescribed local limits of service, remained in force.

By the beginning of 1916, however, the gradual withdrawal from India of European troops made it necessary to endeavour to form some scheme by which the Europeans remaining in the country could be employed for its defence. How many Europeans in India were fit to bear arms was not known, nor did the most recent Census figures afford any clue as large numbers had left since August, 1914, and their places were not being filled from England. The first step therefore towards the desired end was the registration of Europeans, and on February 2nd, the **Registration Ordinance, 1917**, was published. By that Ordinance every male European British subject (as defined in the Criminal Procedure Code, 1898) between the ages of 16 and 50 was compelled to register his name; place of residence; date of birth; whether single, married or widower; number of dependents, if any; profession or occupation, if any; name of business; address of employer, if any; and nature of employer's business; whether the work on which he was employed, if any, was work for or under any Government department; whether he had undergone military or naval training of any description, if so what and for what period.

European British Subject.—According to section 4 (1) of the Code of Criminal Procedure, European British subject means:—(1) Any subject of His Majesty, born, naturalised or domiciled in the United Kingdom of Great Britain and Ireland or in any of the European, American or Australian Colonies or possessions of His Majesty or in the Colony of New Zealand

or in the Colony of the Cape of Good Hope or Natal, (2) any child or grandchild of any such person by legitimate descent. That definition, as will be seen later, was amended before the passing of the Indian Defence Force Act.

Exception.—Persons in the following categories were non-liable to register but might be called upon to support their claims to such non-liability:—persons not ordinarily resident in British India; members of His Majesty's naval and military forces other than volunteers enrolled under the Indian Volunteers Act, 1869; persons in Holy Orders or regular ministers of any British denomination; persons who have at any times since the beginning of the war been prisoners of war, captured or interned by the enemy or have been released or exchanged.

Failure to comply with the Ordinance is punishable with a fine which may extend to Rs. 500, and failure to notify change of address within seven days is punishable with fine which may extend to Rs. 200.

Registration authorities.—It was provided by a schedule to the Ordinance that these authorities should be in the case of any person in Government employ the head of the department; in the case of any person in the employ of any public authority the chief executive officer of such authority; in the case of any person in the employ of any railway the head of the railway administration; in any other case where no special authority is prescribed the District Magistrate of the district where the person for the time being is resident, or, in the case of a person resident in a presidency town, the Commissioner of Police.

The Bill introduced.—The process of registration was carried out with little difficulty and but few cases of prosecution for failure to register were reported in the Press. Shortly afterwards the Indian Defence Force Bill was introduced (for the full text of the Act, see at the end of this article) and on that occasion **H. E. the Viceroy** explained that volunteering was a broken reed and that there must be equality of sacrifice. "It is useless," he said, "to spend money on a military force which is bound to be ineffective under the condition and the nature of its existence, so this new force will come under the provisions of the Indian Army Act. It is intended to be an effective military organisation as the British element under this Act is to be dealt with on the same lines as those of the British regulars, so the Indian element will come under the same military conditions which apply to the Indian regular forces, saving the fact in both cases that service is to be within India. I do not think it necessary for me to labour this point. We cannot play at soldiers in these times, nor I hope shall we play at soldiers at any future time."

In introducing the Bill **H. E. the Commander-in-Chief** stated that the service companies would for all intents and purposes be regular units for the time being, and would be clothed, equipped, rationed, and paid as regulars. They would relieve regular units on garrison duty and would be stationed anywhere in India where they might be required. He hoped that their work would be reckoned officially as war service.

In conclusion he said that "though the Indian Defence Force will be a second line force it will be in no sense a second rate force. For, we mean to make it a model of its kind. Its members must realise that we are dealing now with serious soldiering and that personal convenience and other considerations must yield to military efficiency, and to the creation of a spirit of discipline upon which that efficiency so largely depends. The old volunteer force has become an anachronism, it has been replaced at Home by the Territorial Force, and will now be replaced in India by a Defence Force designed to suit local requirements whose development and progress will be watched with the keenest interest."

European British Subjects.—The main alteration in the Bill suggested by the Select Committee to which it was referred related to the definition of the term "European British Subjects." It was proposed originally to define that phrase as in the code of Criminal Procedure, but the Committee made it more comprehensive. It retained the referential definition contained in the Bill and brought within the scope of the definition two other classes of persons, namely, persons who within the prescribed period have asserted the status of a European British Subject by lodging form (a) with the Registration authority under the Registration Ordinance, 1917, and persons who are members of a Volunteer corps constituted under the Indian Volunteers Act, 1869. "In the first case," said the Committee in their report, "the person concerned has himself put forward a claim to the status which should not lightly be refused, and in the second case the justification for such a course is that a person who has undergone some form of military training at the expense of the state may well be required to aid that state in the time of need. By this amendment we consider that a considerable extension will be given to the ambit of the definition, and though the change might not commend itself if we were undertaking normal legislation in normal times, we think that at the present juncture it is justifiable." The effect of this change was to include in the Force a number of Goanese and other aliens who had previously been members of the Volunteer Force many of whom were subsequently exempted by the Tribunals from liability to General Service.

Exemption Tribunals.—Hasty drafting of the Bill led to not a little confusion and particularly was this noticeable in the proceedings of the Exemption Tribunals. The grounds on which they could grant exemption were sufficiently clear but what was or was not in the "national interest" was a frequent source of discussion. Nor were the duties of the Selection Committees (which select the men

required at a given time for General Service) at first clearly laid down, and it was not until the Tribunals realised that a Selection Committee had power to refuse to select as well as power to select a given man that anything like uniformity of procedure became noticeable among the various Tribunals. But by that time some of the more lenient Tribunals, that in Calcutta more particularly, had either totally or partially exempted numbers of men who would have had little chance of obtaining any form of exemption from those Tribunals which more fully realised the gravity of the circumstances which had made the passing of the Indian Defence Force Act necessary.

The response of **Indians** to the invitation to enrol themselves in the Defence Force was from the first poor. Objection was taken to the terms offered and to the distinction made between Europeans who were compelled to serve and Indians who were only asked to gratify their frequently expressed longing to join the Volunteer force. In May the Government of India issued a resolution on the subject in which they noted with concern the disappointing response made to their appeal and recapitulated the circumstances in which the scheme was initiated. It is, said the Resolution, "a matter of disappointment to the Government of India to find that during the first two months after the passing of the Act only 300 men have been enrolled in place of the 6,000 for which preparations were made. It is felt that all who take an interest in the Defence Force and believe those sentiments of patriotism which have brought it into being, and who have the good name of India at heart will be disheartened to learn that out of the six months for which recruiting is open so much time should have elapsed without any adequate response being made." At the end of August, instead of 6,000 being enrolled as a preliminary step in six battalions, only 3,803 had applied to be enrolled. In September, when the Hon. Mr. Sarma moved in Council that the period of applications for enrolment should be extended, the Commander-in-Chief said the final figures were 5,634 which, allowing for rejections, were as many recruits as could well be drilled. After some months the question of increasing the force might be reconsidered.

Conditions of Service.—The conditions under which Indians were invited to serve were those applying to His Majesty's Indian Forces in the Regular Army, and, as periodical training was not demanded of those enrolled, were far less onerous than the terms imposed on Europeans in India. A further concession to Indian wishes was made in 1918 when it was announced that Indians might offer themselves for enlistment in any of six territorial L. D. F. units up to the total number of 6,200, after which Government would be prepared to consider a gradual augmentation of the establishment up to a maximum of 12,000. A Press-Note explained that "the Indian portion of the Indian Defence Force is to be of real value in the present emergency, it is very desirable that the six units above-named should be raised to the full establishment as soon as possible in order that immediate progress may be made with their training."

Act No. III of 1917.

[28th February 1917.]

An Act to constitute an Indian Defence Force and for other purposes.

Whereas it is necessary to constitute an Indian Defence Force, and compulsorily to enter for service in that Force certain European British subjects; and

Whereas in the case of others, it is deemed sufficient for the present to take power to enrol for such service only such persons as may offer themselves for enrolment; it is hereby enacted as follows:—

1. (1) This Act may be called the Indian Short title, extent Defence Force Act, 1917, and duration.

(2) It extends to the whole of British India, including British Baluchistan and the Sonthal Parganas, and applies also to European British subjects within the territory of any Native Prince or Chief in India.

(3) It shall remain in force during the continuance of the present war, and for a period of six months thereafter.

2. In this act, unless there is anything repugnant in the subject or context—
Definitions.

“European British subject,” means a European British subject as defined in the Code of Criminal Procedure, 1898, and shall, for the purposes of this Act, be deemed to include every person who, before the third day of March, 1917, has filled up, signed and lodged Form A with the Registration Authority under the Registration Ordinance, 1917, and also every person who at the commencement of this Act is a member of a corps of volunteers constituted under the Indian Volunteers Act, 1869;

“Prescribed” means prescribed by rules made under this Act.

3. Every male European British subject who, on the first day of February 1917, was ordinarily resident in India or thereafter becomes so resident, and who for the time being has attained the age of eighteen years and has not attained the age of forty-one years and who is not within the exceptions set out in the Schedule to this Act, shall be deemed to be enrolled for general military service within the meaning of this Act:

Provided that, if any person referred to in this section whilst engaged in actual military employment of which fact the Commander-in-Chief in India shall be the sole judge, attains the age of forty-one years, such person shall continue to serve for such additional period not exceeding one year as the prescribed military authority may direct.

4. Every male European British subject who, on the first day of February, 1917, was ordinarily resident in India, or thereafter becomes so resident, and who for the time being has attained the age of forty-one years

but has not attained the age of fifty years, and who is not within the exceptions set out in the Schedule to this Act, shall be deemed to be enrolled for local military service within the meaning of this Act.

5. Every male European British subject who, on the first day of February, 1917, was ordinarily resident in India, or thereafter becomes so resident, and for the time being has attained the age of sixteen years, but has not attained the age of eighteen years, shall be deemed to be enrolled for local military service, but shall only be liable to such military training as may be provided for by regulations made under this Act, and shall not be liable to any other form of military service.

6. Every person deemed to be enrolled for military service, whether local or general, shall, as from the commencement of this Act, be deemed to be enrolled in the Indian Defence Force, and may be appointed to such corps or unit thereof as he may thereafter be assigned to, and shall, if he is a person deemed to be enrolled for general military service, be liable to serve in any part of India.

7. Every person deemed to be enrolled for local military service shall be subject to any rules and regulations relating to that service which may be made under this Act:

Provided that no such rule or regulation shall require any such person to serve outside the limits of the prescribed local area.

8. (1) Every person deemed to be enrolled for general military service shall be subject to any rules and regulations relating to that service which may be made under this Act.

(2) Every such person, when called out in the prescribed manner for general military service shall be subject to the provisions of the Army Act and any orders or regulations made thereunder, whereupon the said Act orders and regulations shall apply to him as if the same were enacted in this Act, and as if such person held the same rank in the Army as he holds for the time being in the Indian Defence Force.

9. If any question arises, with reference to this Act, whether any person is a European British subject within the meaning of this Act or is “ordinarily resident” in British India, or is within the exceptions set out in the Schedule or as to the age of any person, the prescribed authority, or a person authorized in this behalf in writing by that authority, shall apply to the District Magistrate or to an officer specially empowered in this behalf by the Local Government, in the district or local area in which the person to whom the dispute relates is for the time being, and such Magistrate or other officer after

hearing such person or giving him a reasonable opportunity of being heard, shall summarily determine the question, and the decision of such Magistrate or other officer shall be final for all the purposes of this Act :

Provided that if any question referred to in this section has been decided in accordance with the procedure provided in the Registration Ordinance, 1917, such decision shall be deemed to be a decision under this section of this Act.

10. If any person who is deemed to be enrolled for military service, whether local or general, under obligation to call him out for such service, any District or Chief Presidency Magistrate may, on the application of the prescribed authority, or of a person authorized in this behalf in writing by that authority, cause such person to be arrested and brought before him, and if the Magistrate is satisfied that he is a person to whom Sections 3, 4 or 5 of this Act applies, and who has been called out for such service, the Magistrate without prejudice to any penalty which such person may have incurred shall make over such person to the custody of the military authorities.

11. (1) Application may be made to the prescribed authority by, or Certificate of exemption (subject to rules made under this Act) in respect of, any person referred to in Sections 3, 4 or 5, for the issue to him of a certificate of exemption under the provisions of this Act on any of the following grounds, namely:—

(a) that it is expedient in the national interest that he should instead of being employed in military service be engaged in other work; or

(b) if he is being educated or trained for any work that it is expedient in the national interest that he should continue to be so educated or trained; or

(c) ill-health or infirmity; and the prescribed authority, if it considers the grounds of the application established, shall grant such a certificate.

(2) The Governor-General in Council may also, by order in writing direct the issue to such persons or class of persons, as he thinks fit, of certificates of exemption if he is satisfied that such a course is desirable in the national interest.

(3) Any certificate of exemption may be absolute, conditional, or temporary, and may be renewed, varied or withdrawn at any time by the authority which granted it, and may provide that a person liable to general military service shall perform local military service:

Provided that every conditional or temporary certificate shall state the conditions under which or the period for which it is granted.

(4) If, for the purpose of obtaining exemption for himself or any other person, or for the purpose of obtaining the renewal, variation, or withdrawal of a certificate, any person makes a false statement or false representation, to any authority under this section, he shall be punishable with imprisonment for a term which may extend to six months, or with fine or with both.

12. (1) The Governor-General in Council may, by notification in the "Gazette of India," constitute, in any local area which he may specify in the notification, corps or units for the enrolment in the Indian Defence Force of persons other than European British subjects, who satisfy the prescribed conditions and, within six months from the commencement of this Act, offer themselves for enrolment for general military service, and such persons may be enrolled accordingly in the prescribed manner.

(2) Every person enrolled in a corps or unit constituted under Sub-Section (1) shall be liable to serve in any part of India, shall be subject to all rules and regulations that may be made under this Act relating to his corps or unit, and shall not quit such corps or unit, except in the prescribed manner.

(3) Every such person shall, when called out in the prescribed manner for general military service, be subject to the Indian Army Act, 1911, and the rules made thereunder, whereupon the said Act and rules shall apply to him as if he held the same rank in the Indian Army as he holds for the time being in the Indian Defence Force.

13. (1) The Governor-General in Council may make rules to carry out the purposes of this Act.

(2) In particular and without prejudice to the generality of the foregoing power, such rules may—

(a) prescribe authorities for the purposes of Sections 9 and 10;

(b) constitute authorities and prescribe the procedure of such authorities for the purpose of considering applications for exemption from military service;

(c) prescribe the time within which, and the form in which, such application may be made, and the persons other than the person to be exempted by whom it may be made;

(d) prescribe the conditions subject to which persons other than European British subjects should be permitted to offer themselves for general military service;

(e) prescribe the military or other obligations to which persons or any class of persons enrolled or deemed to be enrolled under this Act shall respectively be liable; constitute or specify Courts for the trial and punishment of breaches of such obligations; prescribe the procedure to be followed by such Courts; and provide for the enforcement or carrying out of the orders or sentences of such Courts;

(f) provide for the medical examination of persons liable to general military service;

(g) provide for the calling out and all purposes ancillary thereto of persons or any class of persons liable to general military service, and constitute authorities for the purpose of assisting in the selection of persons to be so called out; and

(h) provide for any matter in this Act directed to be prescribed.

(3) Rules made under this section may provide that any contravention thereof or of any order or notice issued under the authority of any such rules shall be punishable with imprisonment for a term which may extend to six months, or with fine or with both.

(4) All rules made under this Act shall be published in the "Gazette of India", and on such publication shall have effect as if enacted in this Act.

14. (1) The Commander-in-Chief in India may, subject to the control of the Governor-General in Council, specify the summary and minor punishments for breach of any rule made under this Act to which persons enrolled or deemed to be enrolled under this Act shall be liable, without the intervention of a Court, and the officer or officers by whom and the extent to which such summary and minor punishments may be awarded.

(2) No punishment exceeding in severity imprisonment in military custody for a period of seven days shall be imposed as a summary punishment, and no punishment involving any kind of imprisonment shall be imposed as a minor punishment.

15. (1) The Commander-in-Chief in India may make regulations providing generally for all details connected with the organization, personnel, duties, and military training of any persons liable to military service or training under this Act.

(2) In particular and without prejudice to the generality of the foregoing power, such regulations may—

(a) specify the units, whether of regular troops or any other military force with which any person or class of persons enrolled or deemed to be enrolled under this Act shall serve or undergo military training, or constitute special military units for that purpose;

(b) specify the courses of training or instruction to be followed by any person or class of persons liable to military service or training under this Act; and

(c) provide for and regulate the remuneration, allowances, gratuities or compensation (if any) to be paid to any person or class of persons

undergoing military service or training under this Act or to their dependants.

(3) Regulations made under this section may provide that any contravention thereof, or of any order or notice issued under the authority of any such regulation, shall be punishable with fine which may extend to five hundred rupees.

16. Nothing in this Act shall apply to any Act not to apply to persons confined in a prison or lunatic asylum.

17. The Governor-General in Council may disband any corps or unit constituted under this Act.

18. The provisions of the Registration Ordinance, 1917, shall be in force during the continuance of this Act, and shall have effect as if they had been enacted in this Act:

Provided that the following amendments shall be made therein, namely:—

(1) In Section 3, Sub-Section (1), of the said Ordinance, for the words "had not attained the age of fifty years on the first day of February, 1917," the words "who for the time being has not attained the age of fifty years," shall be substituted.

(2) In Schedule II of the said Ordinance in entry (1) after the word "forces" the words "or of the Royal Indian Marine Service" shall be inserted, and in entry (2) for the word "British," the word "religious" shall be substituted.

THE SCHEDULE.

(SEE SECTIONS 3 AND 4.)

Exceptions.

(1) Members of His Majesty's naval and military forces of the Royal Indian Marine Service other than Volunteers enrolled under the Indian Volunteers' Act, 1869.

(2) Persons in Holy Orders or regular Ministries of any religious denomination.

(3) Persons who have at any time since the beginning of the war been prisoners of war, captured or interned by the enemy, or have been released or exchanged.

AMENDING BILLS.

During the autumn, 1918, session of the Imperial Legislative Council three Bills were officially introduced which contained amendments to the I. D. F. Act. The first made it possible for men over 50 to volunteer for service in the Defence Force. Some such provision had been contemplated in 1917 but it was not then thought worthwhile to legislate

for the small number of men likely to be affected. Experience, however, showed that there was a good proportion of men in the Force who on attaining the age of 50 might wish to remain in it. **Territorial Limitations.** The second Bill known as the Indian Defence Bill brought men under 41 more on equality with their fellow citizens in the United Kingdom who are

liable to service in any part of the world. It enlarged the scope of the military service imposed by the I. D. F. Act so as to make service out of India compulsory in the case of European British subjects in the General Service class (i. e., between the ages of 18 and 41). This measure, said the Commander-in-Chief when introducing it, has the "advantage of considerably increasing the utility of the Indian Defence Force, for it is evident that military operations based on India might easily extend beyond its frontiers, and in such circumstances, the existing territorial limitations in regard to the employment of the force would prove highly inconvenient."

Industrial Compulsion Act.

Of greater importance, however than the two Bills just mentioned, was the Bill which sought to provide that persons deemed to be enrolled for military service under the I. D. F. Act might be called upon to perform war work. The bill was introduced and, after considerable criticism by two European members, postponed for six months. It is sufficiently explained in the statement of objects and reasons which states: Certain industries of national importance, which are essential to the maintenance of the forces in the field, are steadily expanding on a large scale necessitating the employment of men with special technical knowledge and training on a scale commensurate with such expansion. It is becoming increas-

ingly difficult to obtain the services of specialist from the United Kingdom and it is proposed to utilise to the fullest extent the services of those who are in India. The Bill is designed to give effect to this proposal. Briefly the Bill provides for taking power, by an order in writing to require any member of the European portion of the Indian Defence Force, whether in possession of an exemption certificate or not, to take up or continue any employment in any industry declared to be of national importance by the Governor-General in Council. Persons in respect of whom such an order has been made will be deemed to have been called out for general military service or to have been called upon to perform actual military duty as the case may be, according as they belong to the general military service or local military service class. It is not intended to exercise this power except for the purposes of Government service and industrial concerns under Government control. It is proposed to make provision for the payment of reasonable salaries to persons employed on technical work and to utilise the services of the selection committees formed under the Indian Defence Force Act for advising the Government as regards individual cases. This Act, owing to the conclusion of the war, was never enforced. The training of the Indian Defence Force was modified in 1919 and it is expected that a new scheme of service will replace that force early in 1920.

STRENGTH AND HEALTH OF THE ARMY.

The average strength of **European Troops**, Regulars and Territorials, in India during 1917 was 80,825 as compared with 60,737 in 1916. The following table shows the main facts as regards the health:—

Period.	Average strength.	Admissions.	Deaths.	Invalids sent home.	Average constantly sick.
1910-14 (Averages)	69,440	39,389	303	488	2094.57
1915	44,891	36,952	267	889	1754.19
1916	60,737	46,892	397	1,343	2414.56
1917	80,825	62,372	390	1,337	3686.45

The average strength of **Indian Troops** including those on duty in China and other stations outside India, but excluding those under field service conditions, was 191,242 in 1917 as compared with 139,076 in 1916. The following table gives the actuals of sickness, mortality and invaliding for each of the years 1917, 1916, 1915 and the averages for the quinquennial period 1910-14.

Period.	Average strength.	Admissions.	Deaths.	Invalids.	Average constantly sick.
1910-14 (average)	130,261	71,213	573	699	2,662
1915	119,985	89,315	1,026	5,415	4,065
1916	39,076	105,333	1,248	3,745	6,250
1917	191,242	141,787	2,201	3,421	6,556

THE EAST INDIES SQUADRON.

Since 1903 a squadron of the Royal Navy, known as the East Indies Squadron, has been maintained in Indian waters. It has naturally varied in strength from time to time, and of late years in particular there have been several changes in its composition, the most recent being in the direction of strengthening it, owing to the disappearance of strength in the other squadrons of the Eastern Fleet. In 1903 the squadron consisted of one second class and three smaller cruisers and four sloops or gunboats. In 1906, when the policy of withdrawal from Eastern waters was inaugur-

ated, it consisted of two second class and two third class cruisers, and remained at this strength until 1910: when one second class cruiser was withdrawn and two smaller vessels substituted, and three cruisers were lent from the Mediterranean to assist in the suppression of the arms traffic in the Gulf. By 1913 the position of the East Indies squadron had considerably improved. The battleship *Swiftsure* had taken the place of the second class cruiser which had been flagship, and a modern second class cruiser replaced the *Perseus*.

The proportion of contributions from the overseas Dominions towards naval expenditure is shown in the following table issued with the last Navy Estimates that gave details:—

Received from	Nature of Service.	Total.
		£
India	Maintenance of His Majesty's Ships in Indian Waters..	100,000
	Indian Troop Service (on account of work performed by the Admiralty)	3,400
	Repayment on account of services rendered by His Majesty's Ships engaged in the suppression of the Arms Traffic in the Persian Gulf	64,000
Australian Commonwealth Dominion of Canada.	Contributions on account of liability for Retired Pay of Officers and Pensions of Men lent from the Royal Navy.	10,800
Australian Commonwealth Do.	Survey of the N. W. Coast of Australia	7,500
Dominion of New Zealand.	Maintenance of an Australasian Squadron and of a branch of the Royal Navy Reserve	41,600
	Maintenance of an Australasian Squadron and of the Imperial Navy generally, also of a branch of the Royal Naval Reserve	100,000
Union of South Africa	General maintenance of the Navy	85,000
Newfoundland	Maintenance of a branch of the Royal Naval Reserve ..	3,000
	Total ..	415,300

India's Marine Expenditure.

Since 1869 India has paid a contribution of varying amounts to the Imperial Government in consideration of services performed by the Royal Navy. Under existing arrangements, which date from 1896-7, the subsidy of £100,000 a year, is paid for the upkeep of certain ships of the East India Squadron, which may not be employed beyond prescribed limits, except with the consent of the Government of India. The chief heads of marine expenditure, which amounts to nearly £400,000 annually, are shown below. Charges and receipts in respect of pilotage are no longer brought to account under this head:—

ROYAL INDIAN MARINE.

The Royal Indian Marine (The Sea Service under the Government of India) traces its origin so far back as 1612 when the East India Company stationed at Surat found that it was necessary to provide themselves with armed vessels to protect their commerce and settlements from the Dutch or Portuguese and from the pirates which infested the Indian coasts. The first two ships, the Dragon and Hoesander (or Osiander), were despatched from England in 1612 under a Captain Best, and since those days under slightly varying titles and of various strengths the Government in India have always maintained a sea service.

The periods and titles have been as follows:—

Hon. E. I. Co.'s Marine	..	1612—1686
Bombay	..	1686—1830
Indian Navy	..	1830—1863
Bombay Marine	..	1863—1877
H. M. Indian Marine	..	1877—1892
Royal Indian Marine	..	1892, Present day.

The Marine has always been most closely connected with Bombay, and in 1668 when the E. India Co. took over Bombay, Captain Young of the Marine was appointed Deputy Governor. From then until 1877 the Marine was under the Government of Bombay, and although from that date all the Marine Establishments were amalgamated into an Imperial Marine under the Government of India, Bombay has continued to be the headquarters and the official residence of the Director.

War Service of the Marine.

1612—1717 Continuous wars against Dutch, Portuguese and Pirates for supremacy of West Coast of India. 1744 War with France, capture of Chandernagore, and French ship *Indienne*. In 1756 Capture of Castle of Gheria, 1774 Mahratta War, capture of Tannah. Latter part of the eighteenth century, war with French and Dutch, Capture of Pondicherry, Trincomalee, Jafnapatam, Colombo, etc. 1801 Egyptian campaign under Sir Ralph Abercrombie. 1803 War with France. 1810 Taking of Mauritius and capture of French ship in Port Louis. Early part of the nineteenth century suppression of Jowasmi Pirates in the Persian Gulf. 1811 Conquest of Tara. 1813 Expedition against Sultan of Sambar. 1817-18 Mahratta War, capture of Forts at Severndroog. 1819 Expedition to exterminate piracy in the Persian Gulf. 1820 Capture of Mocha. 1821 Expedition against the Beni-koo-Ali Arabs. 1824-26 First Burma War. 1827 Blockade of Berbera and Somali Coast. 1835 Defeat of Beni Yas Pirate. 1838 Expedition to Afghanistan and capture of Karachi. 1838 Capture of Aden. 1840-42 War in China. 1843 Scinde War Battle of Meanee, capture of Hyderabad. 1845-46 Maori war in New Zealand. 1848-49 War in Punjab, siege of Mooltan. 1852 Second Burma War, Capture of Rangoon, Martaban, Bassein, Prome and Pegu. 1855 Persian War, capture of Bushire, Muhammerah and Ahwaz. 1856-57 War in China. 1857-59 The Indian Mutiny. 1859 Capture of the Island of Beyt. 1860 China War, Canton, Taku Forts, Fatshan and Peking. 1871 Abyssinian War. 1882 Egyptian Campaign. 1885

Egyptian Campaign. 1885 Third Burma War. 1889 Chin-Lshal Expedition. 1896 Suakin Expedition. 1897 Expedition to Imtirbe, Mombassa E. Africa. 1899-1902 S. African War. 1900-01 Boxer Rebellion in China; relief of Peking. 1902-04 Somaliland Expedition.

Service in the War 1914-18.—The Royal Indian Marine, though a small Service compared with the Army and Navy, has played a very active and conspicuous part in the European War. On the outbreak of the War the Service was under the administration of Captain (now Rear-Admiral) W. Lumsden, C.V.O., R.N., Director, Royal Indian Marine. Captain Lumsden retired on the 12th of February, 1918, and the post has since been held by Captain N. F. J. Wilson, C.M.G., C.B.E., R.I.M.

The first service performed by the Royal Indian Marine was the establishment at the large ports of Bombay, Calcutta, Aden, Karachi and Rangoon, of the Examination Service which in conjunction with the Military authorities safeguarded those ports from enemy action. Most of the larger ships of the Royal Indian Marine which are in peace times unarmed, and are employed in carrying troops, etc., were armed and fitted in the Government Dockyard at Bombay, and handed over to the Royal Navy for service as Auxiliary Cruisers. Most of the Royal Indian Marine personnel, both European and Indian, continued to serve on board these ships, some of which took part in actions. Early in 1915, the R.I.M.S. "Hardinge" took part in the defence of the Suez Canal, and was struck by a Turkish 8-inch shell on the starboard side, carrying away the fore funnel and part of the bridge. The "Comet" was sunk by the Turks during the battle of Ctesiphon in 1916. The "Lawrence" took part in the advance up the Tigris, and was in action at the taking of Kurna, and constantly under fire.

The chief service rendered by the Royal Indian Marine, however, has been in connection with **Marine transport work**. The Royal Indian Marine furnished base Transport staffs for Bombay, Karachi, Calcutta, Rangoon and Madras, as well as overseas staffs for Egypt, France, Mesopotamia and East Africa. The fitting out of ships as Transports for the conveyance of Troops, animals, stores, etc., from India to the different theatres of War overseas and *vice versa*, the loading and unloading of ships, and the several duties connected therewith were also carried out by the Royal Indian Marine. The number of vessels taken up and fitted out in connection with the despatch of the first lot of troops from India numbered over 260, but this did not finish the task allotted to the Royal Indian Marine, as after the despatch of troops, the necessary sea-transport for the carriage of reinforcements to the theatres of War had to be arranged for. The number of troops, animals, and stores, conveyed by these ships is recorded in the Military Department of Government, but the mere details of numbers scarcely conveys any idea of the sustained effort which the movement of these large numbers involved, and the work that was necessary to keep the

vessels in a state of repair and efficiency, all of which fell on the Royal Indian Marine.

Neither the capacity of the two Royal Indian Marine Dockyards at Bombay and Calcutta, nor the personnel of the Royal Indian Marine, which was just sufficient for carrying on its functions during normal times, and perhaps in minor expeditions, could be expected to cope with the large amount of responsible work detailed above, and to carry it out expeditiously, and at the same time efficiently. The administrative staff of the Royal Indian Marine, however, rose to the occasion, and by engaging a large number of extra personnel, and with the help of the Royal Engineer's Department Railways, and the Shipping Companies, performed the stupendous task with great credit to the Service, and to the benefit of the Empire.

Prize Ships.—On the outbreak of War, enemy vessels which were in Eastern Ports were seized and placed under the administration of the Director of the Royal Indian Marine. The number of vessels seized was 23, and this fleet represented a tonnage of over 1,00,000 and a value of over one million pounds sterling. The arrangement for the employment of this fleet was not an easy task. The enemy crew had to be replaced and the ships manned and fitted as expeditiously as possible. Though great difficulties were experienced, this was accomplished without any loss of time and the vessels were detailed for different duties. Very little is known to the public outside of the use which has been made of these Prizes. The valuable services rendered by this Fleet, and the important part it has played in the operations of the War, cannot be too highly spoken of. Besides the general Transport Service, they have performed duties as Colliers, Depot Ships, Prison Ships, Convalescent and Hospital Ships. It will be interesting to note that ships of the Bombay Prize Steamship Section were the first German Prizes to be utilised in the whole of the Empire. In order to relieve the congestion of cargo at Indian Ports due in a great measure to the removal of private vessels from Indian Trade for Imperial Transport Work, the Prize Ships for some time were also employed commercially. The Prize Ship Fleet has also sustained together with the shipping of the world its quota of losses due to enemy action, though fortunately the casualties in the personnel have been very few. The officers, engineers, and crew of the Merchant Service by whom the vessels are manned have maintained the best traditions of the Services to which they belong, by their devotion to duty. Many of them have earned an honourable mention in the official despatches.

River Transport.—In addition to the fitting out of vessels, arranging for their despatch and for the Transport Staff, the management of Prize Steam Ships, etc., the Royal Indian Marine Service was called upon to provide River Transport for the advance of the British Force in Mesopotamia, and also to organise a River Transport Service in that country. The difficulties encountered in obtaining suitable river craft in India capable of navigating the Tigris and Euphrates are well known and need not be recapitulated. As, however, the

demand was insistent such vessels as most nearly approximated to the required dimensions were taken up in India and despatched in tow to Mesopotamia. The despatch of this huge flotilla, which numbered over 800 vessels and barges, over a distance varying between 1,600 to 3,000 miles was a big undertaking and was not carried through without loss, owing to the frail nature of many of the craft which were unfitted to face sea conditions. With these craft as they arrived, a River Service was organised by the Royal Indian Marine, and when the conduct of operations was taken over by the War Office in August, 1916, they found a river transport service in existence, the efficiency of which their Officers have frequently recognised. India, however, continued to be the base of supply of troops and stores for Mesopotamia, and the fact that the War Office took over the operations, did not therefore relieve the strain on the Royal Indian Marine Services, whose work in carrying for tonnage, personnel, for ships, transport staff, etc., continued. The actual numbers of craft taken up and despatched to Mesopotamia were 1,093, including River Steamers, Tugs, Launches, Barges, Motor Boats of every size and description. The Royal Indian Marine also transferred 213 Officers (38 Permanent, 175 Temporary) to the War Office for service in Mesopotamia, when the latter assumed charge of the operations.

Work of the Dockyards.—Such is a brief record of the services rendered by the Royal Indian Marine Service to the Empire in this great war, but the record cannot be considered even partially complete, without special reference to the work of the Dockyards. These two establishments have been of inestimable value during the war. Besides undertaking the survey and fitting out of numbers of transports, the plans for fitting out by private firms of the remainder were all prepared by the Dockyard Officers, and their completion supervised by them. The immense flotilla for Mesopotamia nearly all passed through Dockyard hands, where they were docked, repaired and prepared for their sea voyage. Almost of greater importance are the repairs and overhaul of the East Indies Naval Squadron which is almost entirely dependent on Bombay Dockyard, for its repairs and stores. The fitting out of the **mine-sweeping** Flotilla was another of its energies and latterly the building of six Trawlers for the same work has been undertaken. In addition a considerable number of Barges, Oil flats, steam launches and Boats have been built for Mesopotamia.

In consequence of the discovery that an enemy vessel had laid mines in Eastern Waters the Royal Indian Marine was called upon in February, 1917, to organise a Patrol and Mine-sweeping Service round the coast of India. Royal Indian Marine and Merchant Vessel were fitted up and utilised for the purpose. They were manned by Royal Indian Marine and Merchant Service personnel, but for certain purposes were placed under the orders of the Commander-in-Chief, East Indies, in April 1918.

In addition to this and the Examination Service, the Royal Indian Marine supplied the personnel for a Patrol Service in the Bay of

Bengal and on the Burma Coast to deal with the threat of the importation of arms into India. This Service remained in active employ until the danger was considered at an end.

Mention was made in Parliament of the good services rendered by the Royal Indian Marine in the War, and a large number of Royal Indian Marine Officers have been the recipients of honours for meritorious services, and both, they and other Royal Indian Marine personnel have several times been mentioned in despatches. The services of Warrant Officers and Crews have also been recognised by Government, by the grant of medals and in different other ways. 21 Officers, 9 Warrant Officers, and nearly 300 ratings have given their life in this War.

The numbers of Officers and Warrant Officers who have been the recipient of honours or been mentioned in despatches are as follows :—

* On Special Service.

In addition to the above are 39 launches composed of special service launches; target towing tugs, powder boats, military service launches, etc.

Dockyards.

There are two Royal Indian Marine Dockyards at Bombay and at Calcutta, the former being the more important. There are 5 graving docks and a wet basin at Bombay, together with factories which enables the whole of the repairs for the ships of the East India Squadron of the Royal Navy and for the ships of the Royal Indian Marine and local Governments to be carried out, and tugs, lightships, pilot schooners, launches, etc., constructed.

PRINCIPAL OFFICERS, BOMBAY DOCK YARD.

R. I. M. Officers.

Superintendent, Comdr. C. A. Scott, D.S.O., R.I.M.

Inspector of Machinery, Engr.-Capt. C. F. Laslett, M.B.E.

CIVILIAN OFFICERS.

Chief Constructor, Mr. E. P. Newnham.

Constructor, Mr. W. J. Kenshett.

PRINCIPAL OFFICERS, CALCUTTA DOCKYARD.

R. I. M. Officers.

Staff Officer, Commander R. G. Strong, R.I.M.

Inspector of Machinery, Engr.-Lt. Comdr. A. B. Collings, R.I.M.

CIVIL OFFICERS.

Constructor, Mr. D. H. North.

Appointments.

In addition to the regular appointments in the ships of the Royal Indian Marine, and in

the R. I. M. Dockyards, the following appointments under local Governments are held by officers in the Royal Indian Marine:—

BOMBAY.

Port Officer, Assistant Port Officer, 1st Engineer and Shipwright Surveyor and 2nd and 3rd Engineers and Shipwright Surveyors to the Government of Bombay.

CALCUTTA.

Port Officer, Deputy Port Officer and Assistant Port Officer, 1st, 2nd and 3rd Engineers and Shipwright Surveyors to the Government of Bengal.

BURMA.

Principal Port Officer, Burma; First Assistant Port Officer, Rangoon. Engineer and Shipwright Surveyor to Government of Burma.

Assistant. Do. do. do. do.

Port Officer, Akyab, Moulmein and Bassein. Marine Transport Officer, Mandalay, and Superintending Engineer, Mandalay.

MADRAS.

Presidency Port Officer and Deputy Conservator of the Port.

CHITTAGONG.

Port Officer, and Engineer and Shipwright Surveyor.

ADEN.—Port Officer.

KARACHI.—Port Officer.

PORT BLAIR.—Engineer and Harbour Master.

Finance.

The Indian rupee has touched two shillings and five pence*. The British sovereign, which commanded fifteen rupees little more than a year ago, is now worth only ten rupees—rather less as a matter of fact. To those who were involved in the desperate struggle of the Government of India, beginning with the closing of the Mints in 1893, to raise the rupee to one shilling and four pence and to keep it from falling below that ratio, the rise of the Indian Exchanges is a portent of great significance. There is a tendency to regard it as merely the expression of the rise in silver, which from an average of say 26*d.* an ounce has swollen to 78*d.* But this is one of those half truths almost more misleading than untruths. The economic force underlying the rise in the exchange is that India has during the war developed an amazing money power. The country, which before the war was the suppliant of London for a few beggarly millions of capital a year, has now £106 millions invested in British securities. The Mackay Committee reported that the maximum amount of capital, British and Indian, which could be raised for the Indian railways each year was £12½ millions, and even this figure was reached only by proposing an illegitimate raid on the fund created to safeguard against the depreciation of the rupee. In the 1919-1920 Indian Budget provision is made for a capital expenditure of £17½ millions on the railways besides an expenditure on renewals from revenue which brings the total of £24½ millions, without coming to London for a penny.

Increased Money Power.—We may consider for a moment the evidences of this increased money power before analysing the causes which have led to it and the problems which it creates. The revenues of India have risen from £80 millions in 1914-15 to £125 millions, in 1918-19. Part of this expansion is due to increased taxation. Thus in successive War Budgets the general tariff has been raised from 5% to 7½%; export duties imposed on tea and jute, and more recently on hides; the income tax revised and graded (with simultaneously a great measure of relief to assesses with small incomes); a higher salt duty and a railway surtax levied; and a 50% excess profits tax imposed. But at the same time there has been a steady expansion in the ordinary revenue and a solid development in the profits on the railways. The country is now reaping the benefit of the wise policy pursued by Government in the face of great discouragement, and the railways contributed last year £6.9 millions to the general revenues of the State. The Indian debt is relatively insignificant. Before the war the debt of India was almost entirely represented by railways and irrigation works, the normal revenue of

which was in excess of the interest on the whole debt, including the interest on the small unproductive debt. At the end of September 1918 the Indian debt amounted to £370 millions, or about £1.10.0 per head of the population. Even after India's contribution of £100 millions to the cost of the war, which added at a stroke over 30 per cent. to the national debt, the revenue from productive expenditure exceeded the total interest charged by 33 per cent. Had it not been for this contribution, the ordinary debt would have been extinguished in 1917; in March 1918 the amount of the ordinary debt outstanding was £11 millions less than the contribution itself. If a valuation were made of the national assets to-day, it is not unfair to say that they would not fall far short of, even if they did not equal, the total amount of the national indebtedness.

Evidences of Strength.—These evidences lie on the surface; there are others less conspicuous, but none the less significant. In common with the rest of the world, the Paper Currency Reserve has vastly expanded during the war. But whereas other countries have issued and are issuing enormous masses of paper money against the general credit of the State, the Indian Note Issue is secured, except as to a small sum against metal or first class securities. The increased money power of the country is still more strongly reflected in the ease with which large capital issues are now made. In 1914 the Finance Member succeeded in floating a £4 million Government Loan, the largest official borrowing in one year in the financial history of India. In 1917 and 1918, the exigencies of the war forced on India a much more ambitious loan programme, and the country readily responded. The 1917 loan yielded £35½ millions, and the 1918 loan £38 millions. So free was the supply of money that, with skilled official management these large sums were taken off the market without any disturbance of the ordinary machinery of credit.

In the matter of private enterprise the change is no less marked. Few, outside the small circles of those directly interested, have any conception of the enormous financial difficulties in which the indigenous manufacturing industries of India grew. The ordinary machinery was for the promoter of a mill or a factory to put up what money he could himself, and then almost beg from his friends just a sufficiency of capital to furnish credit for the balance of the capital cost. Most Indian enterprises were established with a small fixed capital and a large capital debt, either in the form of borrowings from depositors or the banks, in the expectation of liquidating these debts out of profits. The wealthiest promoter considered

* The study of Indian figures is complicated by the state of the Exchanges. Indian accounts are presented partly in rupees, partly in sterling. In all official papers, rupees are converted into sterling at the official rate, 15 to 1. At this rate a lakh of rupees represents £6,666, and a crore £666,666. But the rupee having risen to two shillings and then to two shillings and five pence the conversion rate is altered. At two shillings a lakh of rupees represents £10,000, and a crore £1,000,000.

himself fortunate if he raised a hundred thousand pounds for a promising venture. The Tata Iron and Steel proposition and the Tata Hydro-Electric Scheme—the first scheme to harness the prodigious rainfall of the Western Ghats—were hawked round the city of London in vain, because no one dreamed that the requisite capital would be forthcoming in India. The flotation of these schemes, with Indian capital and under Indian management, was the turning point in Indian industrial enterprise. Indian capitalists now think in millions where they blenched at the mention of a hundred thousand pounds. In the financial boom which is passing over India, and in particular over Bombay, new flotations are reported to have aggregated £60 millions. There is, of course, a large element of speculation in these flotations, but behind them is a very solid basis of prosperity, immediate and prospective. In no respect is this revolution—for it amounts to nothing less—in the economic situation of India more marked than in the increased resistance of the people to famine. Until quite recent times, say ten years, Indian budgeting was, as a Finance Minister described it, "a gamble in rain." When the rain failed, the whole social structure of a people, 70% of whom are still dependent on agriculture for their means of livelihood, was shaken to its foundations. None who lived through the famines of 1896-97, and 1899-1900, and the lean years which followed, can ever forget the tragedy of those awful times. Since 1900 the famine-resisting power of the country has steadily grown. In 1918, for example, the rainfall was 19% in defect, the highest deficiency since 1899. But whereas in 1899 the failure of the rains brought no fewer than 4,500,000 souls on the mercy of the State for their daily bread, in 1918-19 the total number of recipients of State was slightly under 600,000. There has been a further and equally remarkable change. The earlier famines were not food famines but money famines; there was always enough food in the country to go round, the problem was to find a substitute for the earning power destroyed by the absence of rain and to transport the food to the areas in need of it. The shortage in 1918-19 was less of money than of food; the country was short of stocks owing to the large exports to Great Britain and Allied countries, and to the armies in the fields. For the first time it was necessary for Government to import food—wheat from Australia—on a large scale. The extension of irrigation, the growth of manufacturing industry and the money which has poured into the country in payment for its produce at high prices have had the effect of increasing the resisting power of the people in a remarkable degree.

Causes of the changes.—What is the cause of these extraordinary changes, where, if they are understood—they are only dimly appreciated even in India itself—they have taken the world by surprise? They are in large part the normal and gradual evolution of Indian economic conditions; they have been forced to the front in the economic hothouse of the war. In the main they are the fruit of the rise in the value of almost every variety of agricultural produce. In normal years India has a large surplus of wheat, rice, cotton, jute, oil-seeds and hides and skins to export. These are in world demand

at high and rising prices. Take for instance a single great staple like cotton. The value of the cotton exported has risen from £7.5 millions in 1899 to £28.4 millions in 1917-1918. What is true of cotton is true in greater or less degree of all other staples. Simultaneously there has been a marked increase in the area under irrigation. In 1901, when Lord Curzon appointed a Commission to formulate a definite irrigation policy, the area watered by the great State works was 18½ million acres; in 1916-17 it was 26 million acres, and the value of the crops raised £60 millions. Nor is this all. There has been a great increase in the area under private irrigation—tanks and wells—and in the Native States, where Mysore and Gwalior have set an inspiring example. Some day justice will be done to the work of the great engineers in the Punjab, where millions of acres of desolate waste have been converted into wheat lands of amazing fertility; where the waters of the Jhelum in the North have been carried through mountains and across rivers to reclaim the arid tracts of the Lower Bari Doab; and where a Province with a poor and congested population has been converted into a region of great agricultural prosperity, one-third of which is protected against any failure of the rains. Cast in a less heroic mould, but not less beneficial in its results, is the chain of works in Western India, which are storing the abundant rainfall of the hills and spilling it in the region of uncertain rainfall, preserving for ever from the effects of drought districts of which it used to be truly said that they expect a famine once in every three years—and get it. There has been a corresponding development in the manufacturing power of India. Next to agriculture, the greatest industry is the manufacture of cotton yarn and cloth. In 1900 the spindles in India numbered 4,945,783 and the looms 40,124; on August 31st, 1917 the figures were 6,738,697, and 114,621, whilst the average number of hands employed had risen from 161,189 to 276,771. The employes in the Jute mills increased from 114,200 to 262,600. In the same period other branches of industry have been opened up. A substantial beginning has been made with the all-important iron and steel industry; when the works actually in hand are complete the production of finished steel will be 1,250,000 tons per annum; cement is being manufactured in considerable quantities; and scores of new manufacturing enterprises are being promoted. These are conditions which produced a balance of trade in favour of India of £260 millions in the five years ended 1914. All these forces were stimulated during the war. Even under control, the prices of all agricultural products swelled to dazzling proportions. The reduction or cessation of foreign competition induced an insatiable demand for Indian manufactures. The jute trade was the first to feel the stimulus and it is officially estimated that the profits on the industry from 1914 to 1917 were just about of £20 millions. The cotton trade responded more slowly to the artificial heat of war, and it was not until 1917 that the tide turned. Now it is on the flood tide of roaring prosperity. Moreover the effect of trade conditions was accentuated by the very heavy expenditure in India on behalf of the Home Government for food and military ser-

vices, which aggregated £200 millions. There is one further important factor to be noted. In normal years the net balance of trade in favour of India is largely liquidated by imports of gold and silver. But during the war the free movement of gold and silver was by successive stages reduced and ultimately prohibited. During the war period, whilst the balance of trade in favour of India was approximately the same, the imports of the precious metals declined by two-thirds. The remainder of the balance of trade, and the expenditure in India on behalf of the British Government has not been paid for in cash or by a British Government loan in India, but by credits abroad by Government. This explains why such very heavy Indian balances are held in London—Treasury £8.7, millions, Paper Currency Reserve (securities) £54.9 millions, and Special Reserve £6.9 millions, the whole amounting with the Gold standard Revenue on the 31st March to £106 millions.

Currency Difficulties.—These conditions, whilst indicating the steady rise of India into a money power, have brought their own problems in their train. The greatest of them, to use the words of the recent Finance Member, is to get Indian Currency habits back to a sounder basis. The determination to finance the balance of trade in favour of India, and the balance of expenditure for the Imperial Government in India by Government credits abroad has raised a serious crop of Currency and Exchange difficulties. Despite the most prodigious coining in the history of the world—between August 1st, 1914 and March 31st, 1918 over 270 million ounces of silver passed into circulation—the provision of coin did not equal the demand. In May 1918 India hovered on the brink of inconvertibility and the facilities for the encashment of Notes were so reduced that over wide areas the Note went to a discount. Inconvertibility was staved off only by the acquisition of 200,000 ounces of the silver dollar reserve held in the United States. The prodigious Indian demand is one of the factors which has induced the rise in silver from 26*d.* to 68*d.* per ounce. Despite these enormous purchases of silver the metallic backing of the Note issue has diminished during the war period from 78% to 36%. The great aim must be to wean India from this excessive dependence on the precious metals, which is not only embarrassing but exceedingly wasteful. The first and most obvious measure is the extension of the banking organisation, which is miserably inadequate. In all India at the present time there are only about ninety head offices of banks and some three hundred branches. The proportion of towns with a population of over 10,000, in which banks and their branches are situated, is only 20 per cent. In 23 per cent. of the 70 towns with a population of over 50,000, there are no banks at all. In hundreds of busy centres in India there are no reliable banking facilities; cases have been reported where persons of means have actually paid for the custody of their money. It is often argued that the better mobilisation of Indian credit would still have the balance of trade to be adjusted in the precious metals. That is not so. With her wealth effectively organised, India would be in a position enormously to expand her demand for

manufactured goods, either under the auspices of the State for works like railway and irrigation development, or through joint stock companies for machinery to develop her industries; to buy back her foreign debt; and even to invest abroad. The next step is to increase confidence in the Note issue by strengthening the metallic backing to the Paper Currency. The signs are encouraging; amid the many disturbances of the war the net Note circulation has risen enormously; the gross circulation of one rupee Notes, under very unfavourable circumstances, from their first issue in December 1917 reached Rs. 1051 lakhs in March 31st, 1919. Further, measures must be taken to return the £54.9 millions of the Paper Currency Reserve, now held in London chiefly in the form of British Treasury Bills, to India, either as gold, or in the shape of a British Government loan in India. Finally, the standard of value, based on the one and four penny rupee, the goal of our currency policy from 1903 to 1918, must be restored, and security extended to nascent industries by conferring on the Government of India the full measure fiscal freedom which the country so insistently demands.

Future Demands.—One subsidiary point needs to be made clear. Viewing the financial and economic position of India to-day, especially her comparative freedom from unproductive debt, many will say, many are saying, that she has not contributed her share towards the common burdens of the war. Such remarks are based on ignorance. If India had only remained tranquil she would have rendered immense services to the Empire. She not only remained tranquil, despite the artful seductions of our enemies, but she did all she was asked to do and more. Her troops served in every fighting zone, from Flanders to Shantung. She cheerfully undertook a contribution of £145 millions towards the cost of the war. That may seem a meagre sum in comparison with the £8,000 millions of British war debt; it is not a small sum for a country where, according to the last official estimate, the average annual income is only Rs. 30 per head of the population. The favourable financial position of India is the fruit of skilful and conservative finance in the past. Has not that finance been too conservative? Let us look at the state of those agencies which are the foundations of national well-being. Only 6 per cent. of the Indian population is literate; whilst numerically the position in regard to higher and secondary education is not unsatisfactory, the state of primary education is deplorable. The expenditure on education from all sources is less than £8 millions, or 7½*d.* per head of the population. India has now reached a stage when the progressive forces are arrested by illiteracy. The standard of sanitation, urban and rural, is deplorably low. The country is consequently susceptible to fearful and devastating epidemics. The contribution of India to the war then was not a contribution from a superfluity, but was diverted from stark necessities. All the revenue which India can develop for the next generation—and more—will be required to educate, house, and provide healthy surroundings for her people; any growth of revenue which may accrue ought to be supplemented by loans in order to quicken the pace.

Twelve Years' Finance.

We may now turn to the financial results of the last twelve years in pounds sterling.

—	Revenue.	Expenditure.	Surplus.
	£	£	£
1908-9 ..	69,800,000	73,500,000	*3,700,000

* Deficit.

Provincial and Imperial—At this stage one point should be made clear. Study of the figures often reveals a baffling discrepancy between "Imperial" and "Imperial"-cum-Provincial balances. This arises from the intermingling of Provincial with Imperial finance. During the halcyon years when large surpluses accrued to the treasury from the opium surpluses and the general prosperity of the country, the Government did not reduce taxation, but devoted these surpluses in part to the extinction of floating debt and the avoidance of further debt by financing public works from revenue and in part to large grants to the Local Governments for ameliorative works, chiefly in improving education and sanitation. But the spending of this money involved long preparation, with the result that the Local Government accumulated very large balances in excess of the normal. Further, owing to the establishment of a regime of strict official economy, the Provinces have expanded their balances out of current revenues.

First War Budget.—These factors reflected in the Budget of 1914-15—the Indian financial year closes on March 31st—produced a deficit of £4,959,000. The most rigid economy failed to balance the Budget estimates for 1915-16 by £3,833,000. The Government had therefore to decide whether they would meet the actual and prospective deficits by borrowing or by the imposition of fresh taxation. They speculated on the assumption that the war would be over before the close of the year, and decided to meet the deficits by temporary and permanent borrowing. For this they had justification. In the past, it has been the practice of the Government of India to use their surpluses largely for the avoidance of debt for the construction of reproductive works, and at the same time to meet any deficit not by temporary borrowing,

but by additional taxation; it was therefore only an act of justice to meet what was expected to be a temporary war deficit by borrowing. Government therefore proposed to continue the loan of £7 millions from the Gold Standard Reserve, to renew the £7 millions of floating debt in London, to borrow £3 millions in India and £6½ millions in London. In these ways they expected to maintain a fair scale of expenditure and a reasonable outlay on reproductive works without recourse to fresh taxation.

Second War Budget.—The Budget of 1915-16 having been based on the assumption that the war would be over before the close of the financial year, it was obvious that fresh taxation would be necessary to meet the conditions arising out of the prolongation of hostilities. Moreover there were certain adverse circumstances in the year. The monsoon rains were not good. The Customs revenue showed a certain decline. The railway receipts were good; this has now become an important head in the Indian Budget, whereas in past years the railways did not pay interest charges; the larger revenue arose in part from a brisk internal trade and in part from the substitution of rail-borne for sea-borne coal from Bengal to the chief consuming centres. The borrowing programme was interrupted. In the Budget, the Secretary of State calculated on borrowing £6½ millions; in practice he raised only £3.1 millions. Rigid economy was exercised in the capital programme; for instance the railway budget was reduced from £8 millions to £4.9 millions, and the expenditure on irrigation was cut down from £1.1 million to £.9 million. The military expenditure was also much heavier than was anticipated. Whilst therefore the budgetted revenue rose from £80.4 millions to £82.62 millions and the expenditure from £84.435 millions to £85.264 millions, the deficit was £2,644 millions. On a cautious estimate of revenue and expenditure with the existing scale of taxation the close of the financial year 1916-17—March 31st, 1917—would have found the State with a further deficit of £2.96 millions. Reference has been made to the fact that in India in time of crisis the State is a lender rather than a borrower; also to the fact that there was a large temporary debt—£7 millions in London and a like sum in India. It was therefore of the first importance to impose new taxation and to discharge as much temporary debt as possible.

The New Taxes.—The new taxes took the general form of an addition to the tariff. It is explained in the section on Customs (*q. v.*) that the Indian tariff is one for revenue purposes, that it is based on a general import duty of five per cent. with a special tariff of three and a half per cent. on cotton piece-goods and a large free list. The Budget raised the general tariff to seven and a half per cent., except in the case of sugar, which was raised to ten per cent. The free list was also reduced and special tariffs arranged for wines and spirits and tobacco. To this general rule, however, one important exception was made: the import duty on piece-goods stood at the old figure of three and a half per cent. These additions were estimated to produce £410,000. Export duties were also imposed on two flourishing staples, tea to the extent of Rs. 1-8-0 per 100 lbs., raw

jute Rs. 2-4-0 per bale of 400 lbs., equivalent to five per cent., and in the case of manufactured jute Rs. 10 per ton on sacking and Rs. 16 per ton on Hessians. The whole yield from the revision of the tariff was put at £2·1 millions. The salt tax had been steadily reduced from Rs. 2-8-0 per maund of 82 lbs. to Re. 1; as this has always been reckoned a war tax, an addition of four annas a maund to the duty was made, estimated to yield £600,000. The income-tax was also revised and further graduated. Under the old schedule incomes of Rs. 1,000 and under were exempt. Incomes above that figure paid either four or five pies in the rupee; roughly speaking the income-tax may be taken as five pies in the rupee or six pence in the pound. The new proposals left all incomes of Rs. 5,000 and under untouched. Incomes of Rs. 5,000 to Rs. 9,999 were charged six pies or seven pence halfpenny in the pound; incomes of Rs. 10,000 to Rs. 24,999, nine pies in the rupee or elevenpence farthing in the pound; and incomes of Rs. 25,000 and upwards one anna in the rupee or one and three pence in the pound. Profits on companies were charged the anna rate.

Financial Effect.—To sum up the financial effect of the proposals above explained, Government aimed at an additional revenue of—

- (a) £2,150,000 from Customs and consequential changes in the excise duties on liquors.
- (b) £600,000 by an enhancement of the duty on Salt.
- (c) £900,000 by an increase under Income Tax.

Or in all a little over £3·6 millions as against an estimated imperial deficit of £2·6 millions. This left an Imperial surplus of £1,052,000 which, though somewhat less than aimed at in the years just preceding the war, supplied a useful and much needed source of strength against contingencies.

Third War Budget.—The second war budget anticipated a revenue of £ 86·5 millions, an expenditure of £ 86 millions, leaving a surplus of £ 473 million; the revenue actually received was £ 96·7 millions, the expenditure was £89·4 millions, leaving a surplus of £ 7·2 millions. The agricultural year was an exceptionally good one; despite the inevitable restrictions on trade, there was a considerable recovery; and these conditions were reflected in the revenue. Nearly half the expansion was due to a phenomenal increase of over £4 millions from railways. The more favourable trade and economic conditions, coupled with the removal of competition from the coastwise traffic, caused the railway receipts to attain an unprecedented figure. The new taxes imposed in the Budget were estimated to yield £ 3·6 millions; the actual yield was £ 1,200,000, more of which £ 200,000, occurred under salt, £ 650,000, under customs, and £ 350,000, under income tax. The greater part of the increased expenditure was under military charges. On capital account it was estimated that there would be an expenditure of £ 6·6 millions, including £ 2 millions for the discharge of debt; the capital expenditure was £ 15·8 millions, mainly due to increasing the discharge of debt from £ 2 millions

to £ 11·6 millions. The Budget for 1917-18 provided for a revenue of £ 98·8 millions, an expenditure of £ 98·819 millions, leaving a surplus of £ 0·032 million. To appreciate these figures we must turn to what was the dominating feature of the Third War Budget namely India's contribution to the War.

India's contribution to the war.—The Finance Member explained that the Government of India had been taken to task for not contributing more liberally to the cost of the war. Section 22 of the Government of India Act forbids the application of the revenues of India, to defraying the expenses of any military operations carried on beyond her external frontiers, otherwise than for repelling or preventing actual invasion, without the specific approval of both Houses of Parliament. By special resolution of Parliament India had paid the ordinary charges of the troops employed out of India, and up to the end of the year India has contributed in this manner a sum of £ 11½ millions, to which would be added in the ordinary course of the year 1917-18 a sum of £ 4 millions. But the Government of India had always felt that if their circumstances warranted it they should take up the question of making a further direct contribution towards the struggle and at the beginning of January the Viceroy addressed the Secretary of State a telegram offering to accept an ultimate total special contribution of £ 100 millions to the war. This would involve an annual payment of £ 6 millions in interest and sinking fund charges. On the existing basis of taxation the Budget was estimated to produce a surplus of £ 2½ millions; but it was necessary to provide £ 3 millions for interest and sinking fund charges, so another £ 3 millions would have to be raised by taxation.

The new Taxes.—The natural manner of raising the bulk of this additional sum was the imposition of an excess profits tax; but this was put aside, both because of the absence of the necessary administrative machinery, and because the charge was a permanent one, which would continue after the excess profits due to the war had ceased to operate. It was therefore proposed to establish a super-tax. The rate of income tax established in the Budget of 1916-17 ran on a graduated scale of four pies in the rupee to one anna, which last sum was made payable on incomes of Rs. 25,000, and over. The ordinary rate of income tax was maintained. In explaining his proposals in detail the Finance Member said:—

“The super-tax will begin in respect of income exceeding Rs. 50,000 and will then be levied in an ascending scale as shown below:—

For every rupee of the first Rs. 50,000 of the excess, *i.e.*, between Rs. 50,000 and 1 lakh. 1 anna per rupee.

For every rupee of the next Rs. 50,000 of the excess, *i.e.*, between Rs. 1 and 1½ lakhs. 1½ annas per rupee.

For every rupee of the next Rs. 50,000 of the excess, *i.e.*, between Rs. 1½ and 2 lakhs. 2 annas per rupee.

For every rupee of the next Rs. 50,000 of the excess, *i.e.*, between Rs. 2 and 2½ lakhs. 2½ annas per rupee.

For every rupee of remainder of the excess, *i.e.*, on everything over Rs. 2½ lakhs. 3 annas per rupee.

"These rates will be in addition to the one anna income tax, so that a person possessing an income exceeding Rs. 2½ lakhs will pay in all a rate of 4 annas per rupee (equivalent to 5s. in the pound) on that excess; while as regards each half lakh making up the first Rs. 2½ lakhs he will pay rates varying from 1 anna (*i.e.*, ordinary income tax alone) on the first to 3½ annas on the last. He is still favourably situated as compared with the wealthy taxpayer in England whose ordinary income tax would reach 5s. in the pound, while the super-tax might extend to anything up to 3s. 6d.

"The materials for an estimate of the probable yield of the super-tax are not as adequate as we should have wished owing to the fact that under the existing Act the profits of companies and interest on securities are assessed to income-tax at the source without reference to their ultimate destination, so that we have no particulars of their distribution between people who will in future be liable to the super-tax and those who will not be liable. On such information, however, as we can obtain we take the probable yield at £ 1,350,000.

"The next source from which we propose to raise revenue is the export tax on jute. This was imposed in the current year at the rate of Rs. 2-4-0 per bale of 400 lbs. in the case of raw jute, with a special rate of 10 annas per bale on cuttings; and as regards manufactured jute at Rs. 10 per ton on 'sackings' and Rs. 16 on 'hessians.' Having regard to India's monopolist position in respect of jute production, which enables taxation to be normally passed on to the consumer, we propose to double the rates abovementioned and thus to obtain an additional revenue of £ 500,000.

"The taxation already described will yield us in all £ 1,850,000. The way in which we propose to make the bulk of the remaining provision required is one which will, I think, be received with satisfaction in this Council and in the country generally, while the incidence of the tax will be of much more general application than that of the imposts above described. It will be remembered that in introducing the Financial Statement for the current year, I said that we had been anxious to raise the duty on imported cotton goods, while leaving the cotton excise duty, which has formed the subject of such widespread criticism in this country, unenhanced, subject to the possibility of its being altogether abolished when financial circumstances are more favourable. But His Majesty's Government held that in the then circumstances such a course would be undesirable, and decided to leave the cotton duties question to be considered later on 'in connection with the general fiscal policy which may be thought best for the Empire and the share, military and financial, that has been taken by India in the present struggle'. To-day I am able to announce that in view of the taxation required to make our war contribution worthy of India and of the place we desire her to hold in the Empire, His Majesty's Government have now given their consent to our raising the

import duty on cotton goods from 3½ per cent. as it now is, to 7½ per cent, which is our present general tariff rate. The cotton excise duty will remain at 3½ per cent. There can be no question of our doing away with an impost which is estimated to produce about £ 320,000 next year at a time when we have to impose extra taxation. By this means we estimate that we can get an additional £1 million. I am sure that the action of His Majesty's Government, following as it does on their recent association of India with the special Imperial Conference called in connection with the war and the measures to be taken thereafter, will meet with the greatest appreciation in India.

"Finally, we have decided to impose, as a war measure, a surcharge on railway goods traffic at the rate of one pie a maund on coal, coke and firewood and two pies a maund on other articles. We have advisedly taken a low uniform rate so as to avoid, as far as possible, the necessity for special adjustments in regard to short distances or particular classes of traffic. Some details in respect of this taxation are still under consideration, but the action necessary in connection with its imposition will be taken as soon as possible. The yield is estimated approximately at £½ million, and we thus obtain the amount that we require to finance our War contribution, and leave ourselves with a surplus £130,000, which is little enough having regard to the circumstances of the time."

Fourth War Budget.—The fourth war budget presented fewer features of special interest, and it contained no surprises, save the pleasant one that when everyone was expecting an increase in taxation none was found necessary. As is shown above, the estimated revenue was £98.8 millions; it amounted to £110.4: the estimated expenditure was £98.8 millions; it amounted to £102.3: the estimated surplus was £.038 million: it amounted to £ 8 millions. With this substantial sum in hand the Finance Member found himself able to meet the whole of his estimated revenue expenditure without imposing any additional taxation. The principal contributors to the increased revenue were railways, salt, income-tax, and customs; the larger expenditure was almost entirely on military expenses. The chief feature in the financial history of the year was in the section of the Budget which is called Ways and Means, and which deals with the capital account. The ordinary transactions under this head are between twenty and thirty millions sterling; owing to the very heavy expenditure in India on account of the Home Government they amounted in the previous year to £111 millions. This tremendous sum, for India, was met by the proceeds of the war loan £36½ millions; revenue £31½ millions; Treasury Bills £30 millions; coinage £ 13 millions; and investments in London on behalf of the Paper Currency Reserve £ 8.7 millions. The Ways and Means section also constituted the principal problem of the Budget of 1918-19. The sum which had to be met was put down at £78 millions, which it was proposed to meet as to £22.1 from revenue; £20 from borrowing in India; £13 inspecie for coinage; £16 from further investments on behalf of the Paper Currency Reserve; and £5 millions from balances.

The details of the budget are set out in the following table. As the manner in which the great heads of income like land revenue, railways, irrigation and customs are realised is described in separate articles (*q. v.*) they need not detain us here:—

	Accounts, 1917-1918.	Revised Estimate; 1918-1919.	Budget Estimate; 1919-1920.
REVENUE.			
Principal Heads of Revenue—			
	£	£	£

Fifth War Budget.—The fifth war budget was presented after the conclusion of the Armistice, and consequently after the termination of hostilities. Indeed it was placed before India shortly before the actual signature of peace. Nevertheless it was a war budget, and the war will continue to dominate Indian finance for at least another year. It had another and very unwelcome feature. Reference has been made to the great influence of the rains on a country where seventy per cent of the population is still dependent on agriculture for its means of livelihood. During the earlier war years the seasons were in good; in 1918 the rains failed over a large portion of the country, and were nineteen per cent. in defect on the whole. This is the heaviest deficiency since the great famine of 1899-1900. Although the resisting power of India to famine has greatly increased owing to the spread of irrigation and the store of money accumulated owing to the high prices of all kinds of agricultural produce, such a shock seriously

affects the finances. Further dislocations were caused by the interference to trade caused by the sudden cessation of hostilities and the undertaking by the Indian Government to bear the cost of the additional troops required for the defence of India to the extent of forty-five millions sterling, spread over three years. Nevertheless even under these strains the finances of the country showed great resiliency. The budgeted revenue was £109 millions, the actuals were £121 millions; the budgeted expenditure was £106 millions; the actuals were £121 millions; the estimated surplus was £2.5 millions; the deficit was £4.3 millions. This deficit, caused by the additional military burden imposed, was met by the imposition of an Excess Profits tax amounting to fifty per cent. For the ensuing year the estimated revenue is £123 millions, the estimated expenditure £122 millions, and the estimated surplus £863,000.

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strictly theoretical grounds, exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlement in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1795 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras.

Temporary Settlements.

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district is subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The

duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition, 1911):—"He has to determine the amount of the Government demand, and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officer's proceedings, and to much greater rapidity in the completion of the Settlements. All the work of the settlement officer is liable to the supervision of superior officers, the assessments proposed by him require the sanction of the Government before they become finally binding; and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the settlement officer to make a record of every right which may form the subject of future dispute, whether affecting the interests of the State or of the people. The intention is to alter nothing, but to maintain and place on record that which exists."

The Two Tenures.

Under the Temporary Settlement land tenures fall into two classes—peasant-holdings and landlord-holdings, or *Ryotwari* and *Zemindari* tenures. Broadly speaking, the difference between the two in a fiscal sense is that in *Ryotwari* tracts the *ryot* or cultivator pays the revenue direct; in *Zemindari* tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras,

Bombay, Burma and Assam, ryotwari tenure is on an individual basis, and the Government enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the ensuing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by "unearned increment." The Government, however, may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue.

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary Settlements, 50 per cent. of the rental in the case of *Zemindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent. and only rarely is the proportion of one-half the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge varies greatly. About sixteen years ago the Government of India were invited in an influential signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted:—(1) In *Zemindari* tracts progressive moderation is the key-note of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess; (2) in the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords; (3) in *Ryotwari* tracts

the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome; (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(a) large enhancements of revenue, when they occur, to be imposed progressively and gradually, and not *per saltum*; (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people; (c) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act, passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land, to interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money-lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces, and it has been called for more than once in Bengal, where under the Permanent Settlement (in the words of the Resolution quoted above), "so far from being generously treated by the *Zemindars*, the Bengal cultivator was rack-rented, impoverished, and oppressed."

Government and Cultivator.

While the Government thus interferes between landlord and tenant in the interests of the latter, its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records or Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12, it is stated:—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual; whereas under a *Zemindari* or kindred system the State would have gained nothing, however much cultivation had extended throughout

the whole of 30 years' leases." On the other hand, the system is of advantage to the *ryots* in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress suspensions and remissions are freely granted after proper inquiry.

The amount of gross revenue raised on the land is estimated in 1918-19 at £22,653,100 out of a total from all sources in the same year of £123,190,800. This compares very favourably with the £34,000,000 of land revenue recorded as having been raised annually from a smaller

empire by Aurangzebe.

The literature of the subject is considerable. The following should be consulted by readers who require fuller information:—"Land Revenue Policy of the Indian Government," 1902 (Superintendent of Government Printing); Baden Powell's "Land Systems of British India"; Sir John Strachey's "India, its Administration and Progress, 1911," (Macmillan & Co.); M. Joseph Challey's "Administrative Problems of British India" (Macmillan & Co., 1910), and the Annual Administration Reports of the respective Provincial Government.

EXCISE.

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp, drugs, toddy and opium. It is a commonplace amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit; fermented palm juice; beer made from grain; country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the Mhowra flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed, and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still-head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete. There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right; and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system amongst those peoples had to be worked very cautiously. Gradually, as the Administration began to be consolidated, the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries, thus enabling Government to perfect its control by narrowing the limits of supervision;

and to regularize its taxation by imposing a direct still-head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of liquor and its disposal subsequent to its leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems.

The Out-Still System may be taken to include all systems prior in order of development to the imposition of Still-head duty. Briefly stated the stages of development have been—First: farms of large tracts; Second: farms of smaller areas; Third: farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area; Fourth: farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the key note lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still-head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture

of spirit for supply to a district is disposed of by tender, the rate of still-head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Since the issue of the report of the Excise Committee, 1905-06, no less than 213,000 square miles of territory were transferred from the out-still to the distilling system. In 1905-06 39 per cent. of the total excise area and 28 per cent. of the population of that area were served by out-stills, the proportions in 1912-13 were only 15 and 8 per cent. respectively.

The incidence of the total revenue derived from country distillery spirits per proof gallon during the quinquennium 1908-09 to 1912-13 was as follows:—

1908-09	Rs. 5.52
1909-10	5.72
1910-11	5.49
1911-12	5.84
1912-13	6.05

The incidence of revenue per proof gallon for the year 1915-16 was Rs. 7.45. It was highest in the Punjab, *viz.*, Rs. 12.52 and lowest in the N. W. Frontier Province, *viz.*, Rs. 2.85.

In the last year the incidence was highest in Berar 7.24 and lowest in Behar and Orissa 3.28. The average consumption of country spirits per 100 of the population in the distillery areas during the above period was as follows:—

1908-09	Gallons L. P. 4.43
1909-10	4.11
1910-11	4.40
1911-12	4.52
1912-13	4.75

In 1912-13 it was highest in Bombay 15.22 and lowest in Bengal 2.13.

In 1915-16 the average consumption of country spirit per 100 of population was 5.40 gallons L. P. It was highest in the Panjab, *viz.*, 16.96 and lowest in Burmah 7.68.

SALT.

The salt revenue was inherited by the British Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply; rock salt from the Salt range and Kohat Mines in the Punjab; brine salt from the Sambhar Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch; and sea salt factories in Bombay, Madras and at the mouth of the Indus.

Sap of the date, palmyra, and coconut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandies and whiskies, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption. The uniform fee of 4 annas 6 pies per gallon is levied all over India at the time of issue.

Foreign liquor is subject to an import duty at the tariff rates, the most important of which is Rs. 11-4-0 per proof gallon on spirit and 4 annas 6 pies per gallon on beer. It can only be sold under a license.

Since the war Brandy and Whisky are manufactured in considerable quantities at Baroda.

The base used is the Mhowra flower. It is drunk in big towns as a substitute for German spirit, and is excised at tariff rates.

DRUGS.—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant charas, or the resinous matter which forms an active drug when collected separately; and bhang, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction.

OPIMUM.—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills; but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops.

The opium revenue in 1919-20 is estimated at £3,056,200, and the Excise revenue at £12,133,300.

The Salt Range mines contains an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 45 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Baragara salt. In Bombay and Madras sea water is let into shallow pans on the sea-coast and eva-

porated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengal render the manufacture of sea salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Liverpool, Germany, Aden, Bombay and Madras.

Broadly, one-half of the indigenous salt is manufactured by Government Agency, and the remainder under license and excise systems. In the Punjab and Rajputana the salt manufactories are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufactories are under the supervision of Local Governments. Special treaties with

Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaun, on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs. 2-8 per maund of 82 lbs. In 1903, it was reduced to Rs. 2; in 1905 to Rs. 1-8-0; in 1907 to Re. 1 and in 1916 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent. between 1903-1908. To illustrate the growth of consumption, in 1902-03, with a tax of Rs. 2-8-0 per maund, the revenue was £5,586,068, for 1919-20 with a duty of Re. 1-4-0, the estimated revenue is £3,914,300.

CUSTOMS.

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent.; in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent., but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills, induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were reimposed, yarns and cotton fabrics being excluded. Continued financial stringency brought piece-goods within the scope of the tariff, and after various expedients the demands of Lancashire were satisfied by a general duty of 3½ per cent. on all woven goods—an import duty on goods by sea, an excise duty on goods produced in the country. The products of the hand-looms are excluded. These excise duties are intensely unpopular in India, for reasons set out in the special article dealing with the subject. In 1910-11, in order to meet the deficit threatened by the loss of the revenue on opium exported to China, the silver duty was raised from 5 per cent. to 4d. an ounce, and higher duties levied on petroleum, tobacco, wines, spirits, and beer. These were estimated to produce £1 million annually.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war. The general import tariff, which had been at the rate of 5 per cent. *ad valorem* since 1894 was raised to 7½ per cent. *ad valorem*, except in the case of sugar; as India is the largest producer of sugar in the world the import duty on this staple was fixed at 10 per cent. There was also a material curtailment of the free list. The principal article of trade which was not touched was cotton manufactures. For the past twenty years the position has been that cotton twists and yarns of all kinds are free of duty while a duty at the rate of 3½ per cent. is imposed on woven goods of all kinds whether imported or manufactured in Indian mills. The Budget left the position as it stood. The Government of India would have

been glad to see the tariff raised to 5 per cent. without any corresponding alteration of the excise, but were over-ruled by the Cabinet on the ground that this controversial matter must come up for discussion after the war. Finally the Budget imposed export duties on tea and jute. In the case of tea the duty was fixed at Re. 1-8-0 per 100 lbs.; in the case of jute the export duty on raw jute was fixed at Rs. 2-4-0 per bale of 400 lbs., approximately equivalent to an *ad valorem* duty of 5 per cent.; manufactured jute was charged at the rate of Rs. 10 per ton on sacking and Rs. 16 per ton on Hessians.

The Customs Tariff was further materially modified in the Budget for 1917-18. In the previous year an export duty on jute was imposed at the rate of Rs. 2-4-0 per bale of 400 lbs. in the case of raw jute and Rs. 10 per ton on sackings, and Rs. 16 per ton on Hessians; these rates were doubled, with a view to obtaining an additional revenue of £500,000. The import duty on cotton goods was raised from 3½ per cent. to 7½ per cent. without any alteration in the Excise, which remained at 3½ per cent. This change was expected to produce an additional revenue of £1,000,000. The question of the Excise was left untouched, for the reason, amongst others, that the Government could not possibly forego the revenue of £320,000, which it was expected to produce. With these changes in operation the revenue from Customs in 1918-19 is estimated at £13,352,400.

The Customs Department is administered by an Imperial Customs Service responsible to the Imperial Government in the Department of Commerce and Industry, but acting through the Local Governments. The senior Collectors are Covenanted Civilians specially chosen for this duty; the subordinates are recruited in India and in England (Customs Tariff q. v.)

Income Tax.

The income tax was first imposed in India in 1860, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent. or a little more than 9½ d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in

the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five pies in the rupee, or about 6½d. in the pound; on incomes between 500 and 2,000 rupees at the rate of four pies in the rupee or about 5d. in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions. All existing exemptions were left untouched and no alteration was made in the taxation of persons whose incomes, official or private, were less than Rs. 5,000 per annum. In the case of incomes which exceeded the sum of Rs. 5,000 per annum the tax was enhanced in the following way:—

(1) Incomes from Rs. 5,000 to Rs. 9,999 pay 6 pies in the rupee, or 7½d. per pound.

(2) Incomes from Rs. 10,000 to Rs. 24,999 pay 9 pies in the rupee, or 11½d. in the pound.

(3) Incomes of Rs. 25,000 and upwards pay 1 anna in the rupee, which is equivalent to 1s. 3d. in the pound.

Profits of companies are assessed at the 1 anna rate; but this is subject to abatement or exemption, to individual shareholders who can show that their total income is such as to warrant a lower rate of taxation or none at all. Thus a shareholder whose income is less than

Rs. 1,000 per annum from all sources obtains a refund of the entire tax previously recovered on his dividends; a man whose total income is Rs. 5,000 obtains a refund of the amount recovered in excess of the 6 pie rate; and so on.

In the Budget of 1917-18 the income tax was left untouched; but there was imposed a super-tax.

The super-tax begins in respect of income exceeding Rs. 50,000 and is levied on the following scale:—

For every rupee of the first Rs. 50,000 of the excess, *i.e.*, between Rs. 50,000 and 1 lakh: 1 anna per rupee.

For every rupee of the next Rs. 50,000 of the excess, *i.e.*, between 1 and 1½ lakhs: 1½ annas per rupee.

For every rupee of the next Rs. 50,000 of the excess, *i.e.*, between 1½ and 2 lakhs: 2 annas in the rupee.

For every rupee of the next Rs. 50,000 of the excess, *i.e.*, between 2 and 2½ lakhs: 2½ annas per rupee.

For every rupee of the next Rs. 50,000 of the excess, *i.e.*, on everything over 2½ lakhs: 3 annas per rupee.

These rates are, of course, in addition to the standard income tax at the rate of 1 anna in the rupee. The maximum income tax levied on this scale amounted to five shillings in the pound, income tax and super-tax combined.

The total yield of the income tax in the current year is estimated at £13,521,500.

THE DEBT.

On 30th September 1919, the national debt of India was 568 crores. This figure represents less than Rs. 24 per head of India's population; when compared with the public revenues, which in 1918-19 amounted to about 183 crores, constitutes a national indebtedness which, in comparison with the national resources, is very much smaller than that of most other nations. The reason why India is in this favourable position is mainly the care with which, in the long years of peace preceding the great war, her

outlay was restricted to her available means, whereby the accumulation of wasteful and unproductive debt was avoided. At the commencement of the war India found herself in a position when almost the whole of her debt represented productive outlay on railways and irrigation, normally yielding a return considerably in excess of the interest which she had to pay on the amount borrowed, including the interest on the small amount of debt which could be described as unproductive.

Productive Debt.—The following table shows the amount of the national debt of India, both productive and non-productive, from time to time:—

[IN CRORES OF RUPEES.]

	Ordinary Debt.	PRODUCTIVE DEBT.			Total of debt.
		Railways.	Irrigation.	Total.	
On 31st March—					
1893	97·5	136·5	28·9	165·4	262·9
1898	105·0	159·0	32·5	191·5	296·5
1903	88·7	192·1	37·2	229·3	318·0
1908	56·1	266·6	44·8	311·4	367·5
1913	37·5	317·7	56·4	374·1	411·6
1914	19·2	333·0	59·1	392·1	411·3
1915	3·3	349·8	61·6	411·4	414·7
1916	3·0	351·6	63·6	415·2	418·2
1917	10·5	353·6	64·9	418·5	429·0
1918	132·5	358·8	65·9	424·7	557·2
1919	129·9	365·5	66·7	432·2	562·1

On the 31st March 1914, out of a total debt of 411 crores, only 19 crores represented ordinary or unproductive debt. The annual interest on the latter was only a crore, and on the productive debt about 13 crores, so that India's total interest charges then amounted to about 14 crores. On the other hand, railways and irrigation works, which had been financed from the productive debt, yielded in that year a return of nearly 23 crores, which left a margin of 9 crores of clear profit to the country, after meeting the interest charges on the entire debt. Even after the contribution of £100 millions to the cost of the war which India made in 1917, and which added over 30 per cent. to the national debt, the revenue from railways and irrigation amounted in the year 1918-19 to 33 crores, so that the revenue from productive expenditure amounted to 133 per cent. of the total interest charges. Had it not been for India's contribution of 150 crores to the expenses of the war the ordinary debt would have been completely wiped out in 1917, and the amount of the ordinary debt outstanding on 31st March 1919, namely, 129·9 crores was thus actually less than the amount of that contribution.

Financial Strength.—These are not the only facts which show the strength of India's financial position. The interest on her public

debt is not only secured by the revenue from railways and irrigation works which were directly financed by borrowing, but is a charge on the public revenues as a whole. The following table shows the total revenue and expenditure of India (including the revenue and expenditure of the provinces) during the past six years.

		IN CRORES OF RUPEES.	
		Revenue.	Expenditure.
1912-13	130	119
1913-14	128	125
1914-15	122	128
1915-16	127	128
1916-17	147	132
1917-18	169	154
1918-19	183	186

Form of Debt.—The existing rupee loans are of two kinds:—

(1) Those which Government has undertaken not to repay before a certain fixed date, but which are repayable at the option of Government at any time after that date, after giving notice.

(2) Those which Government has undertaken to repay either (a) on a certain fixed date, or (b) not earlier than a certain fixed and not later than another fixed date.

The following are the rupee loans now in existence:—

(a) NON-TERMINABLE LOANS.

1	2	3	4
Name of loan.	Half-yearly date of payment of interest.	Conditions of repayment. (Unless otherwise stated, repayment will be at par.)	Amount outstanding on Sept. 30th, 1919.
			Rs.
1. 3½ per cent. loan of 1842-43..	1st February and 1st August.	} Repayable at the option of Government after three months' notice.	20,90,58,000
2. 3½ per cent. loan of 1854-55.	30th June and 31st December.		29,41,74,000
3. 3½ per cent. loan of 1865 ..	1st May and 1st November.		33,95,17,000
4. 3½ per cent. loan of 1879 ..	16th January and 16th July.		3,65,84,000
5. 3 per cent. loan of 1896-97.	30th June and 31st December.		6,65,54,000
6. 3½ per cent. loan of 1900-01..	30th June and 31st December		Repayable not before 30th December 1920, and thereafter at the option of Government after three months' notice.
TOTAL ..			1,25,70,30,000

(b) TERMINABLE LOANS.

Name of loan.	Half-yearly date of payment of interest.	Conditions of repayment.	Amount outstanding on Sept. 30th, 1919.
			Rs.
1. 4 per cent. Terminable Loan of 1915-16.	31st May and 30th November.	Repayable not before 30th November 1920 and not later than 30th November 1923.	4,99,86,000
2. 4 per cent. Conversion Loan of 1916-17.	1st April and 1st October.	Repayable not before 1st October 1931 and not later than 1st October 1936.	9,90,07,000
Indian War Loan 1917.	3. 5 per cent. War Loan, 1929-47.	15th February and 15th August.	25,08,02,000
	4. 5½ per cent. War Bonds, 1920.*	15th February and 15th August.	19,18,02,000
	5. 5½ per cent. War Bonds, 1922.*	15th February and 15th August.	11,32,91,000
Indian War Loan 1918.	6. 5½ per cent. War Bonds, 1921.*†	15th March and 15th September.	24,79,20,000
	7. 5½ per cent. War Bonds, 1923.*†	15th March and 15th September.	2,15,22,000
	8. 5½ per cent. War Bonds, 1925.*†	15th March and 15th September.	4,17,72,000
	9. 5½ per cent. War Bonds, 1928.*†	15th March and 15th September.	25,18,63,000
	10. 5 per cent. Loan, 1945-55.*	15th April and 15th October.	Repayable at par not earlier than 15th October 1945 and not later than 15th October 1955.
TOTAL ..			1,48,07,96,000

N.B. *—The interest on the loans marked* is exempt from income-tax, but not from super-tax.

† These Bonds will be accepted at par during their currency, as the equivalent of cash for the purpose of subscription to any future long term loan, whatever its rate of interest may be.

There are also still in existence a few special loans, such as certain railway loans taken up by three Indian Chiefs, and a special 4 per cent. loan taken up by the Maharaja of Gwalior in 1887.

Sterling Debt.—Besides the rupee loans, the national debt of India consists of some £172 millions of sterling debt. In former years India was obliged to depend to a large extent on her borrowings in London to finance her expenditure on railways and irrigation, and the present sterling debt represents such of those loans as are still outstanding:—

(1) India $3\frac{1}{2}$ per cent. stock, of which the amount outstanding on 30th Sept. 1919 was about £90 millions;

(2) India 3 per cent. stock, of which the amount outstanding on that date was about £65 millions;

(3) India $2\frac{1}{2}$ per cent. stock, of which the amount outstanding on that date was about £11½ millions.

The remainder of the sterling debt is made up of certain railway debenture stocks, of which the amounts in each case are comparatively small, together with so much of India's contribution of £100 millions as has not been liquidated from the proceeds of the War Loans of 1917 and 1918; the amount of sterling debt outstanding on this account on the 30th September 1919 was about £22 millions representing the liability accepted by India for a corresponding amount of British War Loan.

Nature of Securities.—The three main forms in which the rupee debt is held are:—(i) *Stock* or, as it is sometimes called *Book Debt*; (ii) *Bearer Bonds*; (iii) *Promissory Notes*.

(i) When debt is held in the form of *Stock*, the owner is given a certificate to the effect that he has been registered in the books of the Public Debt Office as the proprietor of a certain amount of Government stock. This certificate is known as a *Stock Certificate*, and it is by that name that this form of debt is generally known.

(ii) A *Bearer Bond* certifies that the bearer is entitled to a certain sum of rupees in respect of the loan to which the bond relates.

(iii) A *Promissory Note* contains a promise by the Governor General in Council, on behalf of the Secretary of State for India, to pay a certain person a specified sum either on a specified date or after certain notice (according to

the terms of the particular loan to which the promissory note relates), and to pay interest thereon at a certain rate half-yearly on certain specified dates.

Each of the above three forms of security is convertible by the holder into either of the other two.

Other Government Securities.—*Treasury Bills and Post Office Cash Certificates* are also forms of Government securities.

Treasury Bills, when issued, are in respect of temporary borrowing by the Government of India, and usually have a currency of from three to twelve months. They are sold at a discount, and are paid at maturity at their full face value, the difference representing the yield on the investment. The lowest denomination issued is for Rs. 5,000. Their sale and payment at maturity are managed by the Presidency Banks.

Cash Certificates.—*Post Office Cash Certificates* are specially intended to facilitate the investment of small amounts and to encourage saving among people of small incomes. They have a currency of five years, at the expiry of which they will be repaid. The profit to the investor consists in the fact that they are sold for an amount less than the face value, thus, cash certificates of denominations of Rs. 10, Rs. 20, Rs. 50, Rs. 100, and Rs. 500 can at present be obtained on payment of Rs. 7-12, Rs. 15-8, Rs. 38-12, Rs. 77-8 and Rs. 387-8 respectively. The maximum amount for which certificates may be held by any one person is Rs. 10,000 face value. The special attraction of these Cash Certificates is that the investor's money is not necessarily locked up for the full term of five years. He can, if he wishes, obtain payment at any time during the currency of the certificate, and he will then receive an amount which, according to the time he has held the certificate, gradually increases at compound interest from the original purchase price up to the full face value of the certificate at the end of five years. In the case of the Cash Certificates issued in connection with the Indian War Loans, the yield to the investor ranges from 4 per cent. a year, if he presents it for payment after having held it for one year only, to $5\frac{1}{2}$ per cent. a year if he holds it for the full five years. The investor's profit is not subject to income-tax. These certificates are for sale all the year round and can be obtained at any Post Office which does savings bank business, and payment of the amount due can also be obtained at any such office.

AMOUNT OF THE RUPEE AND STERLING DEBT and of the INTEREST thereon; annual INCREASE or REDUCTION of the DEBT; and the PROPORTION of the RUPEE DEBT held in LONDON, from 1820-21 to 1916-17.

	Registered debt in India.	Registered debt in London.	Interest payable.			Amount borrowed and paid off each year (Borrowed +; paid off—)		Proportion of the registered rupee debt held in London on 31st March.

Total ..	5,604,700	6,048,500

THE INDIAN MINTS.

The quantity of **silver coinage** carried out at the Mints during the year 1918-19, constitutes a new record, the total nominal value of the Government of India coinage alone being Rs. 52,05,35,309 as compared with Rs. 30,77,07,326, the corresponding figure for 1916-17, which had hitherto been the heaviest coinage recorded. The details of the silver coinage executed at the two mints for the Government of India during 1918-19 are given in the statement below:—

	CALCUTTA.	BOMBAY.	TOTAL.
	Value in Rupees.	Value in Rupees.	Value in Rupees.
Rupees	26,04,00,000	24,06,06,326	50,10,06,326
Half-rupees	17,22,876	51,62,333	68,85,209
Quarter-rupees	1,26,43,774	1,26,43,774
TOTAL ..	27,47,66,650	24,57,68,659	52,05,35,309
TOTAL for 1917-1918 ..	9,91,62,854	13,95,44,433	23,87,07,287

Uncurrent coins of the nominal value of Rs. 55,43,733 were received at the two Mints for recoinage during the year. Apart from those, the coinage was from purchased silver, a considerable portion of which consisted of

American dollars and other silver made over by the United States under the Pittman Act. The demand for fractional silver increased largely and the coinage of half and quarter rupees during the year was exceptionally heavy.

In addition the following **subsidiary silver coinage** was executed at the Bombay Mint during the year on behalf of other Governments:—

Denomination of coin.	Tale.	Outturn Value in standard tolas.	Government on whose behalf the coinage was executed.
Straits 10 cents	8,700,284	8,77,700	Straits Govern-ment.
Straits 5 cents	3,210,329	1,60,894	
Egyptian ten piastres	90,001	98,168	Egyptian Govern-ment.
Egyptian five piastres	180,007	98,190	
Egyptian two piastres	1,600,036	3,49,363	

Nickel one anna pieces of the nominal value of Rs. 50,43,279 were coined at the Bombay Mint against Rs. 36,29,167 worth minted in the previous year. Of the new nickel two-anna coins as many as 85,990,658 pieces of the nominal value of Rs. 1,07,48,832, were turned out at the two Mints as compared with Rs. 36,75,945 the value of nickel and silver coins of the same denomination coined during the previous year. In addition to these, 872,069 nickel five millieme pieces valued at Rs. 67,040 were struck at the Bombay Mint on behalf of the Egyptian Government.

The **bronze coinage** was as usual carried out entirely at the Calcutta Mint and consisted of pice, half pice and pie-pieces of the aggregate value of Rs. 20,10,600 as compared with Rs. 16,03,600 in 1917-18. The Calcutta Mint

also coined Rs. 52,500 worth of copper cents for the Straits Government and Rs. 1,20,450 worth of bronze pennies and half pennies for the Australian Commonwealth.

The **Indian denominations** with their British equivalents are:—

Pie	= 1/12 penny.
Pice (3 pies)	= 1 farthing.
Anna (12 pies)	= 1 penny.
Rupee (16 annas)	= 1s. 4d.

A lakh (lac) is 100,000 rupees and a crore is 100 lakhs.

The denominations of currency notes in circulation are 1, 2½, 5, 10, 50, 100, 500, 1,000, and 10,000 rupees.

HISTORY OF THE COINAGE.

The Indian mints were closed to the un-restricted coinage of silver for the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopal and Kashmir, the currency of those States was replaced by Gov-

ernment rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees; but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for it mainly with the gold accumulated in the Paper Currency Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910

including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities, the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways. The Gold Standard Reserve was called into action before the year 1907-08 was out. Exchange turned against India, and in March 1908, the Government of India offered bills on the Secretary of State up to half a million sterling, while the Secretary of State sold £1,000,000 Consols in order to meet such demands. During April to August, further sterling bills were sold for a total amount of £8,053,000. On a representation by the Government of India, the Secretary of State agreed to defer the application of coinage profits to railway construction until the sterling assets of the Gold Standard Reserve amounted to £25,000,000. On the outbreak of the war in August 1914 the Reserve was drawn upon to meet the demands for sterling remittances, and Government offer to sell £1,000,000 of Bills weekly. The extent of these rates is shown on pp. 191, 192.

Gold.

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918, in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the **Royal Mint at Bombay**. It stated:—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or otherwise and (b) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Altogether 2,109,703 pieces of these

new coins of the nominal value of Rs. 3,16,45,545, were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918, and 1,295,372 sovereigns were coined during the year.

Act XXII of 1899, passed on the 15th September 1899, provided that gold coin (sovereign and half-sovereigns) shall be a legal tender in payment or on account at the rate of fifteen rupees for one sovereign.

Silver.

The weight and fineness of the silver coins are:—

	FINE SILVER.	ALLOY.	TOTAL.
--	grains.	grains.	grains.
Rupee	165	15	180
Half-rupee	82½	7½	90
Quarter-rupee or 4-anna piece	41¼	3¾	45
Eighth of a rupee or 2-anna piece	20½	1¾	22½

One rupee = 165 grains of fine silver.

One shilling = 80¼ grains of fine silver.

One rupee = shillings 2·0439.

Copper and Bronze.

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835, and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows:—

	Grains troy.
Double pice, or half-anna	200
Pice or quarter-anna	100
Half-pice or one-eighth of an anna	50
Pic, being one-third of a pice or one-twelfth of an anna	33½

The weight and dimensions of bronze coins are as follows:—

	Standard weight in grains troy.	Diameter in millimetres.
Pice	75	25·4
Half-pice	37½	21·15
Pic	25	17·45

Nickel.

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issue. The notification also prescribed the design of the coin, which has a waved edge with twelve scollops, the greatest diameter of the coin being 21 millimetres, and its least diameter 19·8 millimetres. The desirability of issuing a half anna nickel coin was considered by the Government of India in 1909, but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18.

The Paper Currency.

Under Acts VI of 1839, III of 1840, and IX of 1843, the Presidency Banks of Bengal, Bombay, and Madras were authorised to issue notes payable on demand, but the issue of the notes was practically limited to the three cities of Calcutta, Bombay, and Madras. These Acts were repealed, on the 1st March 1862, by Act XIX of 1861, providing for the issue of a paper currency through a Government Department, by means of notes of the Government of India payable to bearer on demand. Since then no banks have been allowed to issue notes in India.

Act II of 1910 amended and consolidated the law on the subject. By it, a note of the value of five, ten, or fifty rupees, as well as a note of any other denominational value which the Governor General in Council may, by notification in the *Gazette of India*, so specify, was declared to be a "universal currency note," that is, legal tender throughout British India and encashable at any office of issue in British India; the then existing sub-circles of Cawnpore, Lahore, Karachi, and Calicut were abolished, and the first three of these constituted separate circles of issue in addition to Calcutta, Madras, Bombay, and Rangoon. At the same time, by a notification issued under the Act, the further issue of 20-rupee notes was discontinued. By another notification issued in 1911 under section 2 of the same Act a currency note of the denominational value of one hundred rupees was declared to be a "universal currency note."

Department of Paper Currency.

The function of this department is to issue, without any limits, promissory notes (called currency notes) of the Government of India payable to the bearer on demand, of the denominations of Rs. 1, 2/8, 5, 10, 50, 100, 500, 1,000 and 10,000, the issue being made in exchange for rupees or half rupees or for gold coin, which is legal tender, from any Paper Currency office or agency, and for gold bullion and gold coin, which is not legal tender, from circle offices on the requisition of the Comptroller General.

Supply and issue of Currency Notes.

Currency notes are supplied by the Secretary of State through the Bank of England on an indent from the Head Commissioner. The Head Commissioner or Commissioners supply Currency Agents with all the notes required for the purposes of the Paper Currency Act. Every such note, other than a "universal" note, bears upon it the name of the place from which it is issued and every note is impressed with the signature of the Head Commissioner or of a Commissioner or Deputy Commissioner.

The officers in charge of the circles of issue are authorised to issue, from the office or offices established in their circles, currency notes in exchange for the amount thereof (1) in rupees or half-rupees or in gold coin which is legal tender under the Indian Coinage Act; or in rupees made under the Native Coinage Act, IX of 1876, and (2) on the requisition of the Comptroller General, to all treasuries, in gold coin which is not legal tender under the Coinage Act or gold bullion at the rate of one Government rupee for 7-53344 grains troy of fine gold. Currency

notes can also be issued against gold coin of bullion or silver bullion or sterling securities held by the Secretary of State for India in Council.

Notes when legal tender.

Every note is a legal tender in its own circle (except by Government at the office of issue) for the amount expressed in that note; that is to say, whenever a note forms the integral sum or a portion of any payment, either to Government on account of a revenue or other claim, or to any body corporate or person in British India, it is a legal-tender. Five, ten, fifty and hundred rupee notes are legal tender throughout British India.

Notes of higher denominations than five, ten, fifty and hundred rupees are payable only at the office or offices of issue of the town from which they have been issued. In ordinary circumstances every Government treasury, of which there are about 250 in British India, cashes or exchanges notes if it can do so without inconvenience; and when this cannot be done conveniently for large sums, small sums can generally be exchanged for travellers.

The whole amount of currency notes in circulation is secured by a reserve of gold and silver coin or bullion and securities of the Government of India or of the United Kingdom.

The Currency and the War.

The main features of the Indian currency situation during the years of war have been indicated in previous issues of *The Indian Year Book*. All that remains here is to summarise them and indicate so far as is possible the actual present position. It was always anticipated that in time of crisis the chief difficulty which the Government of India would have to meet would be a demand for sterling remittance. This was so far justified that on the outbreak of hostilities there was a demand for Sterling Bills on London, which were issued after brief delay. There was also a rush on the Currency offices for the encashment of Notes, which was soon stemmed, and a heavy withdrawal of deposits from the Post Office Savings Banks. These disturbances were temporary and India recovered from the shock of war with surprising rapidity. Thereafter the chief difficulty which had to be faced in India was not a demand for Sterling Remittance, but for Rupee Remittance and silver coin. The causes underlying this unexpected demand may be briefly indicated. They were a large balance of trade in favour of India, arising from the demand for Indian products and small shipments of manufactured goods from the United Kingdom and the Allied States; a very heavy expenditure in India on behalf of the United Kingdom for war material and services, which were financed by Notes in India secured against British Treasury Bills; and the establishment of an embargo on the free movement of the precious metals to India, amounting in the case of gold to virtual prohibition. The result was an insatiable demand for silver coin as the only means of satisfying the hereditary demand of the Indian for some form of bullion in which to invest his savings. The demand for rupees was so prodigious that the ordinary

silver supplies could not satisfy it; after the country had been brought to the verge of inconvertibility large supplies were received from the United States through the surrender of a considerable amount of the dollar reserve. Moreover the Indian demand for silver, coupled with a larger demand from all other countries, induced a rapid rise in the price of the metal. Before the war the price of silver was approximately 26*d.* an ounce; under the stimulus of war conditions it rose to 78*d.* an ounce. The Indian exchanges rose in response, and from one and fourpence, the goal of Indian currency policy since 1893, the rupee rose by successive stages to two shillings and five pence. There was an insistent demand that these vexed questions should be subjected to an authoritative examination, with a view to re-establishing if possible fixity of exchange, and for this purpose a committee was appointed. It sat in London throughout the greater part of 1919 and reported at the end of the year, and the report is summarised elsewhere.

THE CURRENCY COMMITTEE:—The personnel of the Committee is:—

Sir Henry Babington Smith (Chairman), Lord Chalmers, Sir Marshall F. Reid, Sir James B. Brunyate, Mr. F. C. Goodenough, Sir C. Addis, Sir C. Needham, Mr. M. M. Gubbay (Controller of Currency, representing the Government of India), Sir Bernard Hunter, Mr. Dadiba Merwanji Dalal (Bombay), and Mr. Thomas McMorran (Messrs. Duncan Brothers, Calcutta).

The terms of reference are as follows:—

“To examine the effect of the war on the Indian exchange and currency system and practice, and upon the position of the Indian note issue, and to consider whether, in the light of this experience and of possible future variations in the price of silver, modifications of system or practice may be required; to make recommendations as to such modifications, and generally as to the policy that should be pursued with a view to meeting the requirements of

trade, to maintaining a satisfactory monetary circulation, and to ensuring a stable gold exchange standard.”

The Currency Problem.

The best statement of the Indian Currency problem is contained in an able minute submitted to the Currency Committee by the Calcutta Chamber of Commerce which set out the position as it existed in May 1919. The subsequent developments were a further large increase in the Paper Currency and a rise in Exchange to 2*s.* 5*d.* The main features of this memorandum are reproduced below:—

I.—EFFECTS OF THE WAR:—(a) On Exchange.—The visible effect has been a rise in the exchange value of the rupee from 1/4*d.* to 1/8*d.*, accompanied during the past two years by a reluctance on the part of the Exchange Banks to purchase bills unless the seller of the bills is able to provide, or to earmark, sufficient remittances to balance the purchase. In fact practically throughout this period natural causes have operated which, in the absence of restrictions, would have brought about a still greater rise.

(b) On Note Issue.—The active note circulation has risen from 49·97 crores on 31st March 1914 to 133·59 crores on 31st March 1919. The gross circulation of one rupee notes, which were first issued in December 1917, increased from 32½ lakhs on 31st March 1918 to 1,051½ lakhs on 31st March 1919.

(c) On Metallic Currency.—The absorption of silver coin (rupees and half rupees) during the five years 1914-19 has been 110·39 crores, as compared with 43·91 crores during the five years 1909-14. The absorption of small coin of 4 annas and less has risen from 56 lakhs in 1913-14 to 99 lakhs in 1917-18 and 277 lakhs in 1918-19.

(d) On Treasury Balances and Reserves.—The following is a comparison of the Treasury Balances and the several Reserves held in London on 31st March 1915 and 31st March 1919, the figures for the latter year being provisional.

	At 31st March 1915.	At 31st March 1919.
	£	£
Treasury	7,904,914	8,715,046
Paper Currency Reserve—Securities ..	2,666,666	54,998,953
Gold	5,100,000	82,391
Gold Standard Reserve—Securities ..	13,168,219	29,848,332
Gold	1,258,322
Short Loans	6,015,672
Special Reserve	6,939,612
TOTAL ..	£30,098,121	£106,600,006

Thus India is holding in England balances enormously in excess of her needs.

II.—REASONS FOR THE ABOVE CHANGES:—

(a) *As regards Exchange.*—

(1) *Balance of Trade.*—If we examine the figures of import and export of merchandise for the five pre-war years 1909-1914, and compare these with the corresponding figures for the war years 1914-1919 we find that the excess of exports

in the former case was 391 crores, and in the latter 381 crores, there being thus practically no difference between the two periods. These excesses are in normal times balanced chiefly by imports of gold and silver, by Council Bills and by private remittances.

(2) *Gold and Silver.*—India's private imports of gold have been on a steadily increasing scale, and in 1911-1912 the net imports reached a total of nearly 38 crores.

For the five years 1909-1914 her private net imports of gold amounted to no less than 144 crores, and of silver to 36 crores. Her total private net imports of the precious metals during these years thus amounted to 180 crores as against 55 crores during the following quinquennial period.

As a result of the war, India's imports of gold were almost entirely cut off, owing to the refusal of the gold standard nations to part with their supplies. The imports of gold consequently fell to 39 crores for the 5 years 1914-1919, of which 18 crores were acquired by Government, leaving only 21 crores for private needs, and reducing the yearly average supply to a figure below that of any of the preceding 25 years except famine years.

Unable to obtain gold, India turned to silver, the demand for which became almost insatiable, and in the three years, 1916-1919, she absorbed no less than 107 crores of rupees, an average of 36 crores yearly of a weight of 123 million ounces of fine silver, or considerably more than half of the maximum annual production of the world, which has now been reduced owing to internal trouble in Mexico and the increased cost of production in other parts of the world. At the same time the demand for silver for

coinage purposes increased all over the world, all influences combined resulting in an increase of price from 24*d.* in August 1914 to 55*d.* in September 1917. The price then fell to 41½*d.* in October 1917, and remained between that figure and 50*d.* till May 1919, arrangements having been made by the United States Government to supply India with silver from their currency reserve. The exchange value of the rupee had meantime been raised to 1/6*d.* in April 1918, but in May 1919 owing to the withdrawal for the prohibition of export from the United States the price of silver rose suddenly, and as a result it has since been necessary for the Secretary of State to raise his price for Councils to 1/8*d.*

Thus although the visible cause of the rise in exchange is the rise in the price of silver, the main cause is without doubt the refusal of the Gold Standard purchasers of India's produce to pay for this produce in gold, thus compelling the Government of India to import silver in order to meet trade requirements. Nor can it be said that India's demands on this score were unreasonable, for her absorption of the precious metals including gold and silver bullion and coin and rupees, was 224 crores in the years 1909-14 and only 165 crores in the years 1914-19. The following table shows the figures:—

....	Net private imports of gold. crores.	Net private imports of silver. crores.	Total of 1 & 2. crores.	Absorption of rupees. crores.	Total absorption of the precious metals. crores.
1909—14	144	36	180	44	224
1914—19	39	16	55	110	165

(3) *Councils.*—The actual amount of Councils less Reverse Councils available for trade purposes in the five years 1909-14 was £137 million, and in 1914-19 £103 million to which must be added £27 million American credits. Therefore the favourable balance of trade brought about by the impossibility of gold importation has not been corrected by sales of Councils.

(4) *Private remittances.*—In normal years a very large proportion of the profits of British merchants is remitted to England, thus indeed lessening the favourable balance of trade. Whether this has occurred to a normal extent during the five years is open to doubt. Very large profits have been made, and it would appear from the large balances held by successful manufacturing concerns, and from the large sums invested in War Loans and Treasury Bills, that the difficulty of bringing funds from England to India and the high British income tax have encouraged investors in Great Britain to leave their money in India, thus reducing this invisible factor in the reduction of the balance of trade. This point was clearly recognised by Sir James Meston in his introduction to the Financial Statement of 1919-20.

(b) *NOTE ISSUE AND CURRENCY.*—(1) *War Payments.*—The net war transactions by the Indian Government on behalf of the British

Government amounting during the years of war to about £200 million, have ultimately largely been made in notes.

(2) *Prohibited Transport of silver.*—It is probable that the prohibition of the transport of silver by rail has forced payment to be made by notes instead of by rupees. As an instance of this may be given the comparative figures of the notes and rupees remitted by the Bank of Bengal to the jute centres of Dacca, Narain-gunge and Chandpur for the busy season August to October 1913 and 1918—

	Rupees.	Notes.	Total.
1913 ..	6,78,51,000	2,00,000	6,80,51,000
1918 ..	51,70,000	5,66,70,000	6,18,40,000

A further example may be given in the receipts of one of the largest Calcutta exchange banks for the month of March 1914 as compared with March 1919. In 1914 the percentage of notes to total receipts of notes and silver was 86·7 and of silver 13·3; in 1919, the figure for notes was 96·27 and for silver 3·73.

(3) *Disappearance of Rupees.*—It is also probable that Gresham's law has operated in up-country districts, where notes have been at a discount, and the disappearance from circulation of the more valuable silver currency.

has resulted. As a medium of currency, gold has long disappeared.

(4) *Growth of trade.*—It has been estimated that the increase in active circulation of notes and rupees as between the periods 1900-04 and 1914-18 was 71 per cent. For the same periods the growth in the value of external trade was 83 per cent, and to this growth in external trade must be added the great increase in internal movement of such commodities as iron and steel, coal and oil. Figures for 1918-19 are not yet available, but it would appear from the above that the growth of the circulation of currency has, up to 1918, hardly kept pace with the growth in the volume of trade.

(c) AS REGARDS METALLIC COINS—(1) *Difficulty of obtaining gold and silver bullion.*—Without doubt this has been the chief cause of the enormous demand for rupees. The price of a sovereign in Bombay on 19th June 1919 was Rs. 21, whereas for imported sovereigns the Indian Government will only pay Rs. 12-4-6; silver bullion has been scarce, and is somewhat dearer than the rupee. Rupees have therefore been demanded, not only for currency, but for melting and the provision of ornaments.

(2) *Reluctance to buy imports at high prices* has also probably been a contributory cause, and has led to the excess hoarding of rupees, the only form of precious metal obtainable.

(3) *Preference for coin in any form to notes* has led to a great increase in the absorption of smaller silver, nickel and bronze coins.

(d) AS REGARDS TREASURY BALANCES AND RESERVES.—(1) *Heavy transactions in India on account of the Home Government*—

(2) *Lesser payments in the United Kingdom on account of the Indian Government.*—These two causes combined have, in spite of India's contribution to the war, totalling up to 31st March 1919 about £68 millions, brought

about a transfer of funds from India to England of £76 millions as between 1915 and 1919. They are fully explained in the Statements of the Finance Ministers for 1918-19 and 1919-20.

The Note Circulation.

The following table illustrates the increase in the Note circulation as compared with previous years:—

(In lakhs of rupees.)

YEAR.	CIRCULATION ON 31ST MARCH.			Increase in average active circulation.
	Gross.	Net	Active	
1899-1900 ..	28,74	27,04	22,10	
1904-05 ..	39,18	36,30	28,46	+6,84
1909-10 ..	54,41	49,10	39,98	+9,10
1910-11 ..	54,99	48,41	40,17	+1,54
1911-12 ..	61,36	56,17	44,61	+3,14
1912-13 ..	68,98	56,20	47,32	+3,50
1913-14 ..	66,12	58,72	49,97	+1,24
1914-15 ..	61,63	55,65	43,96	-1,20
1915-16 ..	67,73	64,13	53,19	+2,65

THE GOLD STANDARD RESERVE.

The Gold Reserve Fund was first started in the beginning of 1901 when the profits which had accrued from the coinage of rupees from April 1900 amounting to £3 millions were credited to the fund, gradually remitted to England from time to time and there invested in sterling securities. In the following years the demand for rupees for trade requirements necessitated further heavy coinage and the investments held in the Gold Reserve Fund rapidly swelled by the credit of the profits and the interest thereon. The effects of the war have been temporarily to reduce the importance of the Gold Standard Reserve. It is a reserve from which to meet the demand for Sterling Remittance, in the event of the balance of trade turning against India, and the expenses of the Government of India in London in the event of there being no demand for Council Bills. But as has been shown in the article on the Paper Currency Reserve above, the chief feature of the finance of the war has been a demand for rupee remittance, and the accumulation of immense reserves in the Paper Currency in London. These Reserves

overshadow the Gold Standard Reserve, and as they constitute the first line of defence, there is no chance of The Gold Standard Reserve being called upon for many years to come. Moreover the rise in the price of silver leaves no profit on coining, and the Reserve is therefore swollen only by the growth of interest. According to the latest return the position of the Reserve is as follows:—

Details of the balance of the Gold Standard Reserve on the 31st March 1919.

In England —	£
Estimated value on the 31st March 1919 of the Sterling Securities of the nominal value of £30,156,924 (as per details below)	29,729,505
Cash placed by the Secretary of State in Council at short notice	6,015,672
Total	35,745,177

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway; Bombay to Kalyan (33) miles, Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) The East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, now the Oudh and Rohilkund State Railway; (7) the Sind, Punjab and Delhi, now merged in the North Western State Railway; (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent, coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22½ to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions: the result was that by 1869 the deficit on the Railway budget was Rs. 166½ lakhs. Seeking for some more economical method of construction, the Government

secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87), the Southern Maratha (1882), and the Assam-Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted:—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 45 were on the broad gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad gauge 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnai and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessity, but unprofitable outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent, but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantaj, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebate terms being found unattractive in view of the competition of 4 per cent. trustee stocks, they were revised in 1896 to provide for an

absolute guarantee of 3 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent. and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last the requirements of the market were met, and there has since been a mild boom in feeder railway construction and the stock of all the sound companies promoted stands at a substantial premium.

Railway Profits Commence.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £10,858,379. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate, there is no reason to anticipate a further deficit, but every ground for hoping that the railway profits will fill the vacuum in the Indian revenues caused by the cessation of the opium trade with China.

Contracts Revised.

A very important factor in this changed position is the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend, guaranteed at 22½ per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract

to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909; after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest on all capital outlay subsequent to the date of purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counter-balance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad gauge route from Bombay to Sind is needed, but chiefly for strategic purposes. The poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories, keep this scheme in the background. There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further Survey work was undertaken in November 1914, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre gauge systems of Northern and Southern India must also be connected and Karachi given direct broad-gauge connection with Delhi, a project that is now under investigation. But these works are subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden

increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines have altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Incheape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum cannot always be provided.

Government Control.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organisation and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board is outside, but subordinate to the Government of India in which it is represented by the Department of Commerce and Industry. It prepares the railway programme of expenditure and considers the greater questions of policy and economy affecting all the lines. Its administrative duties include the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Two minor changes have taken place since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sits in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the

Board with the Companies, an informal mission was undertaken by Lord Incheape to reconcile differences. The constitution of the Board is now undergoing further inquiry, and the development generally favoured in the establishment of a Railway Member of the Viceroy's Executive Council.

Management.

The Railways managed by Companies have Boards of Directors in London. They are represented in India by an Agent, who has under him a Traffic Manager, a Chief Engineer, a Locomotive Superintendent, a Store-keeper, a Police Superintendent, (who is appointed by Government), and an Auditor. The State Railways are similarly organised.

Clearing House.

Proposals have several times been made for the establishment of a Clearing House but the distances are too great. The work which would ordinarily be done by the Clearing House is done by the Audit Office of each Railway.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and it has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad gauge school was strong, and it was thought advisable to have a broad gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre gauge lines provisional; they were to be converted into broad gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre gauge lines than to convert them to the broad gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre gauge lines were improved and they become a permanent feature in the railway system. Now there is a great metre gauge system north of the Ganges connected with the Rajputana lines and Kathiawar. Another System in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godaverri Railway, cannot be long delayed. All the Burma lines are on the metre gauge. Since the opening of the Barsi line, illustrating the capacity of the two feet six inch gauge; there has been developed a tendency to construct feeders on this rather than on the metre gauge.

STATISTICAL POSITION.

The period covered by the last administration report, 1918-1919, dealt with the close of the war and the first post-war period. This was the time when the railway difficulties were reaching their most acute phase. The demands for military purposes were higher than ever; at the same time the stock of material on which the Railways had been drawing had almost vanished and no new supplies were coming forward. If the war had been prolonged the situation would have grown exceedingly critical. Nevertheless there was a substantial increase both in traffic and in earnings and the fact that the higher traffic was carried with reduced equipment and a depleted staff is high testimony to the general soundness with which the Indian Railways have been managed in the past and the devotion which all ranks showed to duty.

Capital Outlay.—The capital outlay incurred by the Government in the purchase and construction of its railways, including the liability which remains to be discharged by means of Annuity and Sinking Fund payments, amounted at the end of 1918-19 to £370,180,560.

The outlay incurred during 1918-19 was £4,159,870 distributed as follows:—

	Rs.
Open Line Works including	
suspense	5,02,45,046
Rolling-stock	70,69,000
New Lines	50,84,000
Total ..	6,23,98,046
Equivalent at Rs. 15=£ 1 to	£4,159,870

The following diagram shows graphically how these figures compare with those of past years. The distribution of the grant of £17·7 millions (Rs. 2,655 lakhs) which has been sanctioned for the financial year 1919-20 is also added for purposes of comparison:—

The capital expenditure sanctioned for 1919-20 is £ 17.7 millions. This is the largest amount that has ever been allotted to railways in any one year. During the period of the war, the expenditure had to be reduced to the minimum not only for financial reasons, but also because of the difficulty in obtaining the necessary supply of materials. The result has been that the provision of transportation facilities has been unable to keep pace with the growth of traffic, and arrears have now to be made good. In view of the urgent demand, it was considered that rolling-stock equipment should take precedence over other requirements and orders for a large number of engines, coaching stock and goods vehicles have, accordingly, been placed. This stock, when received, will sensibly relieve the situation. In view of the heavy expenditure involved in this portion of the programme, it has not been found possible to provide in this year very liberally for works and this feature of our requirements

will receive special attention next year. For the same reason, it has not been found possible to provide for any new line, though a small provision has been allowed for lines already in progress.

The actual capital outlay on railways which have been financed by private enterprise, such as Branch Lines promoted by Companies, District Board Lines, Indian State Lines, etc., amounted at the end of 1918-19 to Rs. 69,01,14,000. The capital expenditure on such lines during the year was as follows :—

	Rs.
Branch Line Companies' Railways.	27,72,000
District Board Lines	25,000
Indian State Lines	34,48,000
Total	62,45,000

Results of Working.

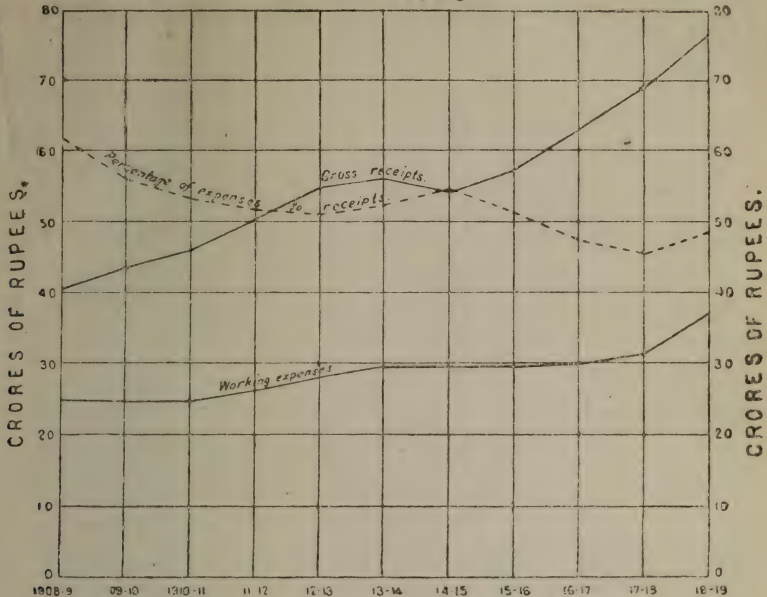

The following table compares the financial results attained in the working of the State Railways during the year 1918-19 with those of previous years (in the case of money the figures are shown in thousands) :—

—	1913-14.	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.
	£	£	£	£	£	£
Capital at charge at end of each year	351,302	361,560	364,853	365,483	366,463	369,213
REVENUE.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Gross traffic receipts.—State Railways	56,31,92	54,15,78	57,26,43	62,94,69	68,92,13	76,25,70
Deduct.—Working Expenses	29,35,91	29,52,87	29,53,00	29,96,86	31,35,81	37,07,67
Net Receipts ..	26,96,01	24,62,91	27,73,43	32,97,83	37,56,32	39,18,03
	£	£	£	£	£	£
Equivalent in sterling Rs. 15=£1	17,973	16,419	18,489	21,086	25,042	26,120
Percentage of return on capital at charge ..	5.12	4.54	5.06	6.02	6.83	7.07

The net working profit from State Railways, after meeting interest and other miscellaneous charges, and certain Annuity and Sinking Fund payments which go to the discharge of debt, amounted in the year 1918-19 to £ 10,858,379.

Expenditure.

The gross receipts and revenue expenditure of the State lines worked by the State and Companies for the past eleven years are compared in the following diagram :—

Receipts.

The receipts during the year 1918-19 amounted to Rs. 76.26 crores or Rs. 7.34 crores more than the actuals of 1917-18. This substantial improvement was attributable mainly to the increase in railway coal traffic, to larger receipts from the carriage of troops and military stores, and to increases in the ordinary passenger and

general merchandise traffic. The working expenses of the year exceeded those of 1917-18 by Rs. 5.72 crores. The increase was due to a larger programme of special repairs and renewals to payment to subordinate staff of railways of temporary increases of pay to the enhanced scales of pay of officers and subordinates sanctioned generally on railways and to the large increase in the train mileage run.

Passenger Traffic.—The numbers of passengers carried and the earnings therefrom on all Indian railways are compared below :—

AV. R. R. AD. MILES 37.7
 INCHARGE PER PASSENGER
 PER MILE, IN PIES 2.44

The increase in the passenger traffic compared with 1917-18 was chiefly due to the larger movements of pilgrims and marriage parties and also of troops, especially drafts and labour parties, and men on war furlough and under demobilisation.

Goods Traffic.—The tonnage of, and earnings from, goods traffic are compared in the following diagram :—

The better results under goods traffic compared with 1917-18 are attributable to the abnormally heavy traffic in rice and other foodgrains to the famine-affected areas. The larger movements of coal also accounts for a substantial increase.

The gross earnings of railways other than State lines, such as District Boards' lines, Indian State lines, etc., during 1918-19 amounted to Rs. 993.37 lakhs, as compared with Rs. 835.24 lakhs in 1917-18, being an increase of

Rs. 158.13 lakhs, and as the working expenses were more by Rs. 77.13 lakhs than the previous year, the net earnings showed an improvement of Rs. 81.00 lakhs having risen from Rs. 414.63 lakhs in 1917-18 to Rs. 495.63 lakhs in 1918-19. These net earnings yielded a return on the capital outlay (Rs. 67.31,76 lakhs) on open lines, that is on mileage earning revenue, of 7.36 per cent. as against 6.28 per cent. in 1917-18.

Mileage.—During the year 1918-19, 335.28 miles of railway were opened to traffic bringing the total mileage open (after allowing for dismantlements, and minor corrections due to realignments, etc.), up to 36,616 miles. The additional mileage was made up as follows :—

	5' 6" gauge.	3' 3½" gauge.	2' 6" gauge.	2' 0" gauge.	Total.
	Miles.	Miles.	Miles.	Miles.	Miles.
State lines worked by the State ..	115.00	115.00
State lines worked by Companies ..	12.32	40.78	53.10
Branch line Companies' railways under guarantee terms, worked by the Branch line Companies	18.25	..	18.25
Branch line Companies' railways under rebate terms, worked by the main line.	54.37	..	54.37
Branch line Companies' railways under guarantee and rebate terms	13.07	13.07
Companies' lines subsidized by the Government of India.	..	5.24	5.24
Unassisted Companies' lines	14.00	14.00
Indian State lines worked by Indian States.	..	14.70	14.70
Indian State lines worked by the main line.	..	14.17	33.38	..	47.55
TOTAL ..	127.32	87.96	106.00	14.00	335.28

Ten Years' Progress.—The progress made during the past ten years is summarised in the following table:—

Gauge.	MILEAGE OPEN AT THE END OF									
	1909.	1910.	1911.	1912	1913-14.	1914-15.	1915-16.	1916-17	1917-18.	1918-19.
5' 6" ..	16,309	16,701	17,016	17,189	17,641	17,827	18,060	18,182	17,876	17,994
3' 3 $\frac{3}{8}$ " ..	13,323	13,530	13,759	14,165	14,389	14,552	14,671	14,806	14,989	15,078
2' 6" ..	1,443	1,436	1,632	1,692	2,174	2,402	2,539	2,683	2,839	2,906
2' 0" ..	415	432	432	438	452	504	563	615	629	638
TOTAL ..	31,490	32,099	32,839	33,484	34,656	35,285	35,833	36,286	36,333	36,616

The decrease in the 5' 6" gauge mileage during the year 1917-18 is due to the dismantling of the whole of the Sutlej Valley railway and small portions of the North Western, East Indian, Madras and Southern Mahratta and Oudh and Rohilkhand Railways, the materials of which were required by Government in connection with the prosecution of the war.

New Works.—The total mileage under construction, or sanctioned for construction, at the close of the year was:—

	5'-6" gauge.	3'-3 $\frac{3}{8}$ " gauge.	2'-6" gauge.	2'-0" gauge.	Total.
	Miles.	Miles.	Miles.	Miles.	Miles.
State lines worked by the State ..	200.13	..	21.99	..	222.12
State lines worked by Companies ..	403.31	79.10	8.43	..	490.84
Branch line Companies' railways under guarantee terms, worked by the Branch line Companies	27.00	..	27.00
Branch line Companies' railways under guarantee terms, worked by the main line	76.10	76.10
Branch line Companies' railways under rebate terms, worked by the main line.	14.30	..	114.16	..	128.46
Unassisted Companies' lines	20.50	..	20.50
District Board lines	91.69	91.69
Indian State lines worked by Indian States	390.96	46.09	57.28	494.33
Indian State lines worked by the main line	153.81	98.45	..	252.2
TOTAL ..	617.74	791.66	336.62	57.28	1,803.30

Work on most of the new lines comprised in this statement was either held entirely in abeyance or could only be proceeded with very slowly as financial considerations and the limitations in the supply of essential materials permitted; in fact the principal activity (and that was very limited) was under lines financed by Branch Line Companies and Indian States. The following paragraphs show the position on some of the more important projects.

Branch Line Companies.—The Branch Line Terms underwent no change during the year. They provide for the grant by the Government of India of financial assistance to private companies furnishing capital for the construction of feeder lines to existing railways in either of the following terms:—

1. A firm guarantee by Government of a return of $3\frac{1}{2}$ per cent. on the paid up share capital of the Branch Line Company.

2. A rebate paid by the parent line from its net earnings from traffic brought to it by the branch, sufficient to make up a dividend of 5 per cent. on the paid up share capital; the liability of the main line being, however, limited to the total of its net earnings from such traffic.

The option is allowed to Companies, under certain circumstances, of raising a portion of their capital under guarantee terms and the remainder under rebate terms. Advantage was recently taken of this option by the Mymensingh-Bhairab Bazaar Railway Company, floated with an authorized capital of Rs. 86 lakhs of which Rs. 23 lakhs were raised under rebate terms and the balance under a guarantee.

In the province of Assam, on account of the relatively less developed state of the country and the difficulty experienced in obtaining capital for private railway enterprises under the ordinary terms, it has been provided that the Local Administration may in approved cases supplement the Imperial guarantee of $3\frac{1}{2}$ per cent. described above by the grant from provincial funds of an additional guarantee for a specified term of years of 1 per cent. on the paid up capital of the Company.

Lines Opened During the year.

Khulna-Bagerhat Railway.—This railway, 19.75 miles in length, on the 2' 6" gauge, commences at Rupsa East, on the left bank of the Rupsa river about two miles below Khulna railway station on the Eastern Bengal Railway, from which point it follows the left bank of the Bhyrab river in an easterly direction until Bagerhat is reached.

The river Bhyrab was formerly the chief means of transport between Khulna, Bagerhat, and Barisal; but it is now silting up and is navigable only at high tide by small boats. The railway will take the place of the river for the transport of goods and passengers between the first mentioned two stations. Steamers make connections with the railway at Rupsa East and Bagerhat. The railway was opened for public traffic on the 10th June 1918.

Samlaya-Timba Railway.—This line, 33.38 miles in length, is an extension of the Dabhoi-Samlaya Railway of His Highness the Gaekwar's Dabhoi Railway System, and was con-

structed to further the development of the Savli Taluka of the Baroda State. It was opened for public traffic on the 1st February 1919 and is being worked by the Bombay, Baroda and Central India Railway Administration.

Arakon Light Railway.—This railway, which is on the 2' 6" gauge and 18.25 miles in length, commences at Buthidaung, on the Kalapanzin river, 65 miles north by river of the Port of Akyab, and runs in a westerly direction crossing the Ledwet Pass at mile 8 by means of a tunnel 645 feet long; from which point it descends till Maungdaw is reached at the 16th mile, the terminus on the Naaf River being $2\frac{1}{2}$ mile further on. It has been constructed with the object, chiefly, of serving the through traffic passing between the steamer services on the two rivers.

The line was opened for public traffic on the 15th February 1919.

Pachora-Jamner Railway.—This line, 34.62 miles in length on the 2' 6" gauge, has been built and will be worked by the Great Indian Peninsula Railway Company for the Pachora-Jamner Railway Company, under the rebate terms of the Branch Line Terms Resolution. The line was opened throughout for public traffic on 24th March 1919.

Private Enterprise.

The construction of branch lines with capital provided by companies floated in India and by District Boards or other local bodies has undergone no change during the year under review.

In view of the altered financial conditions which have followed the war, it is possible that an entire reconsideration of the methods hitherto followed for attracting Indian capital may be necessary.

No concessions were granted during the year either to Companies or to local bodies for the construction of new railways; but following the policy which they had framed before restrictions were imposed, the Railway Board, in order that there might be no undue delay in resuming a full programme of new construction on the return of more normal conditions, have carried on negotiations with Branch Line promoters, as far as possible, short of actual flotation, in regard to projects which were already under consideration before the war or have since been put forward. In accordance with this policy, the Railway Board had under their consideration when the year closed, proposals for the construction of a number of branch railways in all parts of India covering an aggregate mileage of 3,761 and involving a total expenditure of about 14½ millions sterling.

Important Lines Under Construction.

Itarsi Nagpur Railway with a Branch to the Pench Valley Coal Fields.—The whole project, 228 miles in length, will, when completed, form part of a direct through North and South broad gauge connection, but as so far constructed it furnishes an additional outlet for the traffic of the Pench Valley Coal Fields, an important source of coal supply in the difficulties caused by the war.

The project is divided into three sections, viz., Northern, from Itarsi to Amla; Southern, from Amla to Nagpur; and Eastern, from Amla to Parasia (Pench Valley Branch).

The Northern Section, Itarsi to Amla (80.56 miles), was completed and opened for traffic in September 1914.

The Eastern Section, Amla to Parasia (53.86 miles), was opened on the 1st November 1915.

On the Southern Section, Amla to Nagpur (103.74 miles), the work on tunnels and earth-work is in hand only on Division No. 3 (Amla to Pandhurna), the remaining work on this Division and all works on Division No. 4 (Pandhurna to Nagpur) having been postponed till the end of the war.

The construction of the Bombay Overhead Connection involves much heavy work in the heart of the city and will provide an easy rapid communication for traders, passing between the business centre of Bombay in the vicinity of Victoria Terminus across the Great Indian Peninsula Railway Goods Yard at Wadi Bunder to the grain warehouses and cotton market near Mazagaon on the Harbour Branch Railway.

Owing to the difficulty of obtaining girder work it is not possible to say when this line will be opened.

Secunderabad-Gadwal Railway.—The Secunderabad Gadwal Railway which is being constructed by the Nizam's Guaranteed State Railways Company, is the property of His Exalted Highness the Nizam's Government. When completed, it will afford an outlet to the port of Mormugao from the southern parts of the Hyderabad State, and will link up the metre gauge system of that State with the metre gauge sections of the Madras and Southern Mahratta and South Indian Railways.

The first section from Secunderabad to Mahabubnagar, 70.20 miles, was opened throughout to passenger traffic on the 1st October 1916; and the second section Mahabubnagar to Wanaparti Road, 33.10 miles, on the 1st April 1917. Owing to the non-delivery of permanent way material the construction of the remaining section was suspended till the end of the war.

The open sections are being worked by the Nizam's Guaranteed State Railways Company under the terms of an agreement between His Exalted Highness the Nizam's Government and the Company.

Nushki Extension Railway.—This extension of the Quetta-Nushki Railway was started in September 1916. The country passed through is desert but topographically easy, being a series of gentle undulations of sand and shingle merging into stone covered with clay and salty conglomerate.

The first 13 miles of the line, from Nushki to Ahmedwal, was handed over for passenger traffic in April 1919, and the portion from Ahmedwal to Dalbandin, 102 miles, is expected to be opened for passenger traffic during the cold weather of 1919. A further length of 185 miles up to Mirjawa is under construction, railhead having reached that point. There are no works or features of special interest.

Shimoga-Arasalu Railway.—This is a metre gauge line, 26.80 miles in length. It is an extension of the Birur Shimoga Branch of the Mysore State Railways and is the first section of the lines that will be constructed to open up the western portion of the Shimoga District and possibly to connect with a port on the West Coast. Construction was started during February 1919.

New Construction in Indian States.

The progress of new construction in Indian States has also slackened owing partly to the difficulty in obtaining permanent way materials and rolling stock and partly to lack of funds caused by the further large contributions, direct and indirect, which the Indian States have made to the Imperial resources for the conduct of the war. The following new lines were, however, sanctioned during the year under review:—

MYSORE.

Railways.	Length in miles.
1. Shimoga-Arasalu (metre gauge) ..	26.80
2. Kamnangundi-Benkipur (2' 0" gauge) ..	22.96
3. Agasanhadlu-Benkipur (2' 0" gauge) ..	24.74

DHOLPUR.

Dholpur-Rajkhera (2' 6" gauge) ..	22.34
-----------------------------------	-------

The following table gives a complete list of railways which were under construction in Indian States during the year:—

BARODA STATE.

Railways.	Length in miles.
1. Choranda-Koral (2' 6" gauge) ..	11.68
2. Bhoynal Road-Behrari (metre gauge) ..	22.12
3. Motipura-Tankhala (2' 6" gauge) ..	26.29
4. Okhamandal (metre gauge) ..	37.02

BHAVNAGAR.

Savar Kundla-Mahuva with branch to Port Albert Victor (metre gauge) ..	51.30
--	-------

CUTCH.

Anjar-Bachan (2' 6" gauge) ..	23.75
-------------------------------	-------

HYDERABAD.

Wanaparty Road-Gadwal (metre gauge) ..	13.45
--	-------

JAIPUR.

1. Palsana-Sikar (metre gauge) ..	16.80
2. Sikar-Jhunju (metre gauge) ..	39.85

JODHPUR.

Marwar-Sanderao (metre gauge) ..	77.83
----------------------------------	-------

JUNAGAD.

Talala-Una (metre gauge) ..	42.08
-----------------------------	-------

MYSORE.

1. Tadasa-Hebbe (2' 0" gauge) ..	9.58
2. Chickjaur-Chitaldrug (metre gauge) ..	20.90
3. Shimoga-Arasalu (metre gauge) ..	26.80
4. Kamnangundi-Benkipur (2' 0" gauge) ..	22.96
5. Agasanhadlu-Benkipur (2' 0" gauge) ..	24.74

Amongst the Indian States which now own property in the shape of railways are:—

Baroda, Hyderabad, Bhavnagar, Gondal, Porbandar, Jodhpur, Bhopal, Patiala, Morvi, Junagad, Kashmir, Kolhapur, Rajkot, Jetpur, Mysore, Cooch Behar, Gwalior, Mewar, Kotah, Navanagar, Ramppla, Bikaner, Dhrangadra, Parlakimedi, Cambay, Malerkotla, Jind, Cochin, Travancore, Cutch, Jaipur, Mourbhanj, Sangli, Dholpur, and Bahawalpur. The order in which these names are given represents approximately the sequence in which the different States first began to interest themselves in schemes of railway extension.

The total mileage of railways in Indian States open to traffic at the close of the year was 5,090 miles, distributed between the various gauges as under:—

Gauge	Miles.
5' 6" gauge	962
3' 3 3/4" gauge	3,230
2' 6" gauge	596
2' 0" gauge	302

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is constructed on the metre gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company whose contract is terminable in 1921.

Mileage open	970.09.
Capital outlay	18,16,61,000.
Net earnings	20,65,000.
Earnings per cent.	1.15.

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre gauge system at Cawnpore and with the Eastern Bengal State Railway at Khatihar and the Oudh and Rohilkhand Railway at Benares.

Mileage open	2,062.45.
Capital outlay	17,61,41,000.
Net earnings	1,54,94,000.
Earnings per cent.	8.80.

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre gauge from Nagpur to Chhatisgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal fields and for a connection with the Branch or the East Indian Railway at Hariharpur.

Mileage open	2,732.4.
Capital outlay	Rs. 41,98,41,000.
Net earnings	Rs. 3,13,17,000.
Earnings per cent.	7.48.

Bombay Baroda.

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat *via* Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana Malwa metre gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Mileage open	1,578.42.
Capital outlay	28,92,53,000.
Net earnings	3,21,15,000.
Earnings per cent.	11.13.

Burma Railways.

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near future. In reply to a question in the Imperial Legislative Council in 1919, Sir Arthur Anderson said:—"During 1914-15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chitagon and certain stations on the Burma Railways south of Mandalay. A rival route via the Hukong Valley between the northern section of the Assam-Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion, Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect." It was comm. need as a State Railway and transferred in 1896 to a Company under a guarantee.

Mileage open	1,604.98
Capital outlay	21,47,14,000
Net earnings	1,34,67,000.
Earnings per cent.	6.27.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

Mileage open	621.21.
Capital outlay	24,66,88,000.
Net earnings	1,00,99,000.
Earnings per cent.	4.09.

The East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholders by annuities, but leased it again to the company to work under a contract which is terminable in 1919.

Mileage open	2,770.84.
Capital outlay	76,02,93,000.
Net earnings	9,95,01,000.
Earnings per cent.	11.90.

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line *via* Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15½ miles on the Bhor Ghat and 9¼ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

Mileage open	3,335.26.
Capital outlay	72,61,05,000.
Net earnings	5,54,20,000.
Earnings per cent.	7.63.

Madras Railway.

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calicut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the Madras and Southern Mahratta Railway Company. The mileage is 3,169.01.

Mileage open	1,063.11.
Capital outlay	19,35,79,000.
Net earnings	1,89,39,000.
Earnings per cent.	9.78.

The North-Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-

Western State Railway. It is the longest railway in India under one administration.

Mileage open	5,340.95.
Capital outlay	1,00,16,01,000.
Net earnings	6,58,13,000.
Earnings per cent.	6.64.

Oudh and Rohilkhand.

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre gauge systems to the North and those to the South of the Ganges, a third rail was laid between Bhuriwal and Cawnpore. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

Mileage open	1,624.33.
Capital outlay	21,96,19,000.
Net earnings	1,97,17,000.
Earnings per cent.	8.98.

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad gauge line; but was converted after the seventies to the metre gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon *via* Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

Mileage open	449.80.
Capital outlay	7,23,81,000.
Net earnings	68,03,000.
Earnings per cent.	9.40.

The Native States.

The principal Native State Railways are: The Nizam's, constructed by a company under a guarantee from the Hyderabad State; the Kathiawar system of railways, constructed by subscriptions, among the several Chiefs in Kathiawar; the Jodhpur-Bikaner Railway, constructed by the Jodhpur and Bikaner Chiefs; the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State.

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other

about 21 miles across a narrow and shallow strait, the project has again been investigated with the idea of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge", to supersede the ferry steamer service which has been established between these two points.

In 1913, a detailed survey was made by the South Indian Railway Company, and a project has now been prepared. This project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20.05 miles of which 7.19 will be upon the dry land of the various lands, and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram island and Mannar island.

If this method of construction is adopted, it is estimated that the total cost of the causeway and works at the two terminal points, *viz.*—Dhanushkodi and Talaimannar will be approximately 111 lakhs.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The coast route appears to be the favoured one. This would start from Chittagong, which is the terminus and head-quarters of the Assam-Bengal Railway and a seaport for the produce

of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kawkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route is estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route seems to be the cheapest one as it is estimated to cost £3,500,000. This line is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel of 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500ft. aggregate of rise and fall.

It is understood that the construction of this line will constitute one of the first changes on the Railway Budget when normal conditions are restored.

Main results of working of all Indian Railways treated as one system.

* Worked by a Company.

Irrigation.

In the West irrigation is a rare luxury, designed where it exists to increase the productivity of a soil sure of a certain crop under a copious and well distributed rainfall. In great parts of the East, and especially in India, it is a necessity of existence. For in India there are large tracts, such as the deserts of Sind and the South-West Punjab, which are practically rainless; there are others, such as the Deccan plateau, where cultivation is exceedingly precarious, owing to the irregularity of the rainfall and the long intervals when the crops may be exposed to a blazing sun and a desiccating wind; there are some crops, like rice and sugar-cane, which, except in a few highly favoured districts, can only be matured by the aid of irrigation. There are great areas where a single crop, which is called the *khari*, or rain crop, can in normal years be raised by the unassisted rainfall, but where the second crop, the *rabi* or cold weather crop, is largely dependent on irrigation. Inasmuch as in India sixty-five per cent. of the population is still dependent upon agriculture for the means of livelihood, this brief summary indicates the enormous importance of irrigation to the community.

Its Early History.—It is natural, in such conditions, that irrigation in India should have been practised from time immemorial. In the history and imagery of the East, there is no figure more familiar than the well, with primitive means for raising the water, followed to-day much as they were in Bible days. In the early records of the peoples of India, dating back to many years before the Christian era, there are frequent references to the practice of irrigation. Wells have been in use from time immemorial; most of the innumerable tanks in Southern India have been in use for many generations; the practice of drawing off the flood waters of the Indus and its tributaries by means of small inundation canals has been followed from a very early date; and in the submontane districts of Northern India are still to be found the remains of ancient irrigation channels, which have been buried for centuries in the undergrowth of the forests. But in the direction of constructing large and scientific works for the utilisation of the surplus waters of the great river little was done before the advent of British rule, and they are comparatively of recent date.

The State Intervenes.—Irrigation works in India may be divided into three main heads—wells, tanks and canals. The greatest and the most impressive are the canals, and these may arrest attention first, because they constitute one of the most enduring monuments to British rule. They have in British India been constructed by direct State agency. In the early days of modern irrigation, certain works in the Madras Presidency were carried out by a guaranteed company, and the Orissa canal project was commenced through the same agency. Both Companies fell into difficulties, and the system into disfavour; during the Viceroyalty of Lord Lawrence it was decided that all irrigation works which promised a reasonable return on the capital expenditure should be constructed through direct agency and should be constructed by the State from loan funds as productive public works.

The British Inheritance.—The British Government in India inherited a few major irrigation works. One of these was the Grand Anicut—the local term for barrage—stretching across the width of the Cauvery River in Madras. In the Punjab there were a few canals, chiefly inundation—that is above the normal bed of the river and fed from the flood current—constructed by the Muhammedan and Sikh rulers, and owing to its proximity to Delhi, the waters of the Jumna were brought to the neighbourhood of the city by the Mughals. It is doubtful if these works ever irrigated any considerable areas or conferred much benefit on the people, but they suggested the model on which the British engineers worked. In Southern India, Sir Arthur Cotton constructed the upper Anicut across the Coleroon River, so as to secure the full level required for the utilisation of the Grand Anicut across the Cauvery. He also designed the works which, constructed and improved at an outlay of three crores, irrigate more than two million acres in the Godavari and Kistna deltas. In Northern India Sir Probyn Cautley constructed the great Ganges Canal, which takes off from the river near Hardwar, and which in magnitude and boldness of design has not been surpassed by any irrigation work in India or elsewhere. In this way were laid the foundations of the irrigation system in India. The work was gradually pushed forward. In Northern India a great system of canals was constructed, chiefly in the Punjab and the United Provinces. Some of these, like the great Chenab Canal, ought to be classed amongst the wonders of the world. It irrigates nearly two million acres, or about two-fifths of the cultivable area in Egypt, with an ordinary discharge of eleven thousand cubic feet per second, or about six times that of the Thames at Teddington. The Chenab and the Jhelum Canals brought under irrigation great areas of Government waste, and thereby allowed the system of State colonisation, which relieved the congestion on the older villages of the Punjab, and established colonies of over one million of people on what had been the desolate abode of a handful of nomads. In the Bombay Deccan a few protective works were constructed, like Lake Fife and Lake Whiting, drawing their supplies from the Ghats and spilling them over the arid tracts of the Deccan. In Madras there was completed the boldest and most imaginative irrigation work in the world; by the device of constructing a reservoir at Periyar, on the outer slopes of the ghats, and carrying the water by means of a tunnel through the intervening hill, the Madras Government turned the river back on its watershed and poured its waters over fertile lands starved by want of moisture. But these Deccan works did not pay. The cultivators would not use the water in years of good rainfall, and there was not enough to go far in seasons of drought; the inevitable result of such conditions was to concentrate attention upon the remunerative works on the rivers of the Punjab, and to leave protective irrigation to wilt for want of funds.

The Irrigation Commission.—In order to substitute policy for spasmodic effort, the Irrigation Commission was appointed by Lord Curzon's Government in 1901. It made a

detailed survey of the conditions of the country, and produced the report which is the foundation of Indian Irrigation policy to-day. The figures compiled by the Commission illustrate the progress which had been made up to that period. They showed that out of an area of 226 million acres annually under crop in the irrigating provinces of British India, in round numbers 44 million acres, or 19½ per cent. were ordinarily irrigated. Of the total area irrigated 18½ million acres or 42 per cent. was watered by State works (canals and tanks), and 25½ million acres, or 58 per cent. from private works, of which rather more than one half was from wells. During the previous quarter of a century the area irrigated by Government works had been increased by 8 million acres, or by eighty per cent. and the Commission estimated that during the same period the area under private irrigation had increased by at least three million acres or a total addition to the irrigated area in British India of 11 million acres or 33 per cent. Including the Native States the area under irrigation annually within the British Empire was placed at 53 million acres (19 million from canals, 16 million from wells, 10 million from tanks, and 8 million from other sources). The Commission reported that the field for the construction of new works of any magnitude on which the net revenue would exceed the interest charges was limited, being restricted to the Punjab, Sind and parts of Madras—tracts for the most part not liable to famine. They recommended that works of this class should be constructed as fast as possible, not only because they would be profitable investments, but also because they would increase the food supply of the country. Then addressing themselves to the question of famine protection, they worked out a very interesting equation. Taking the district of Sholapur, in the Bombay Deccan, perhaps the most famine-susceptible district in India, they calculated that the cost of famine relief in it was 5 lakhs of rupees a year. From this deduction, and making allowance for the advantage of famine avoidance as compared with famine relief, they said that the State was justified in protecting the land in such a district at a cost of 221 rupees per acre. For the general protection of the Bombay Deccan they recommended canals fed from storage lakes in the Ghats, where the rainfall has never been known to fail even in the driest years. For Madras they recommended the investigation of the old Tungabhadra project, and of a scheme for storage work on the Kistna. They proposed that Government should undertake the construction of protective works for the rice-growing districts of the Central Provinces and the Ken Canal project in Bundelkhand. The Commission further sketched out a rough programme of new major works to be constructed in different parts of India, which would cost not less than 44 crores of rupees and would result in an increase of 6,500,000 acres to the irrigated area. They estimated that the construction of these works would impose a permanent yearly burden of nearly 74 lakhs on the State, through the excess of interest charges on capital cost over the net revenue produced from the works. Against this would have to be set the reduction in the cost of future famines resulting from the construction of the works, which the Commission

put at 31 lakhs per annum. The balance of 43 lakhs would represent the net annual cost of the works to the State, or the price to be paid for the protection from famine which the works would afford, and for all other indirect advantages which might be attributed to them. The principal effect of the Irrigation Commission's report was to substitute policy for spasmodic effort, and the progress since made has been remarkable.

Irrigation Dues.—The charges for irrigation, whether taken in the form of enhanced land revenue or of occupiers' and owners' rates, vary very much, depending on the kind of crop, the quantity of water required for it and the time when it is required, the quality of the soil, the intensity or constancy of the demand, and the value of irrigation in increasing the outturn. In the immediate vicinity of Poona a rate of Rs. 50 an acre is paid for sugarcane. This is quite an exceptional rate, it obtains over only a limited area, and is made practicable only because the cultivators, by high manuring, can raise a crop valued at nearly eight-hundred rupees an acre. On other parts of the Mutha canal the rate varies from Rs. 40 to Rs. 12, and on other canals in the Bombay Deccan from Rs. 25 to Rs. 10 per acre. In Madras the maximum rate for sugarcane is Rs. 10, and in the Punjab it does not exceed Rs. 8-8. The rate charged for rice varies in Madras from Rs. 5 to 2, and in Bengal from Rs. 2-8 to Rs. 1-8 per acre. In both these provinces irrigation is practically confined to rice; in the Punjab, where this crop is not extensively grown, the rate varies from Rs. 7 to Rs. 3-4 per acre. The ordinary rate in the Punjab for wheat, which is the principal crop, varies from Rs. 4-4 to Rs. 3-12, and for fodder crops from Rs. 3 to 2-8 per acre. The average rate realised from major works for irrigation of all kinds is about Rs. 3-8 per acre, the provincial averages being Rs. 1-9 in Sind and Bengal; Rs. 3-4 in the Punjab; Rs. 4-8 in Madras, the United Provinces and the Bombay Deccan. The charges for irrigation may be taken as varying from 10 to 12 per cent. of the value of the crop, except in Bengal and the Bombay Deccan, where the average is little more than six per cent.

Canals and Navigation.—Twenty years ago a great deal was heard about the desirability of constructing navigation canals, either in conjunction with irrigation or for transport, pure and simple. The idea is now exploded. It received a certain stimulus from the unprofitable character of Indian railways, and the handsome earnings of the irrigation works; it received its quietus when the railways turned the corner. Broadly speaking it may be said that navigation and irrigation rights clash; navigation is not only costly, but it cannot be maintained during the season of short supply, except to the detriment of irrigation. Outside the deltaic tracts of Bengal, Orissa, Madras and Sind, navigable canals will never be of much use for the purpose of inland navigation. There is however considerable scope for connecting canals to improve the facilities for navigation on the great river system of Eastern Bengal. This is a question which is now engaging the attention of the Government.

IRRIGATION DURING 1917-18.

The purpose of artificial irrigation is to supplement the rainfall on which the welfare and prosperity of India so largely depends, and consequently the demand for canal irrigation fluctuates considerably with the nature of the monsoon and the intensity of the winter rains. When the rainfall is copious and well distributed there is little demand for artificial irrigation, but, in the event of a failure either of the monsoon or of the winter rains, the canals are taxed to their utmost capacity and the officers responsible are then faced with the difficult task of allotting the available supplies in the most equitable manner, so as to provide for the irrigation of as large an area as possible. These difficulties had not, however, to be faced during the year 1917-18, for the monsoon of 1917 was most propitious and the rainfall abundant, especially during the month of September, which is the most critical period of the agricultural year. During the monsoon period from June to September 1917, the total rainfall in the plains of India was, as a whole, some 17 per cent. in excess of normal, this being the highest excess ever recorded.

The monsoon rainfall of 1917 was thus remarkable for its unusual abundance, especially in north-west and central India, and for the absence of any extensive break, and consequently the areas irrigated by the Government canals were considerably restricted, the heavy and late rainfall permitting the winter crops to be sown largely without the aid of canal water.

Total area irrigated.—During the year the total area irrigated by all classes of works in India, excluding the areas irrigated in the Native States, amounted to nearly 26 million acres or about 40,625 square miles. Towards this area the Productive Works contributed 16,922,000 acres, the Protective Works 97,000 acres, and the Minor Works 8,477,000 acres.

Productive Works.—The area irrigated by productive Works was greatest in the Punjab, here over 7½ million acres were recorded. The Madras Presidency came next with an area of 3½ million acres, while in the United Provinces and Sind, the areas irrigated by the productive Canals amounted to 2,871,000 acres and 1,364,000 acres, respectively. Bihar and Orissa contributed 798,000 acres, the North-West Frontier Province 362,000 acres, and Burma 14,000 acres.

The total capital outlay, direct and indirect at the end of the year on Productive Irrigation works, including those under construction, amounted to nearly 57½ crores. The gross revenue for the year amounted to 701½ lakhs and the working expenses to nearly 216½ lakhs. The net revenue was therefore a little over 485 lakhs which represents a return of 8·40 per cent. on the total capital outlay. This figure indicates the remunerative character of the productive Irrigation Works of India, especially when it is considered that this percentage represents only receipts from water rates and a share of enhanced land revenue, and that no credit is given for the large additional revenues, due directly to the opening up of new tracts by irrigation, which are obtained from the railways and under such heads as stamps,

postage, salt, etc. In the several Presidencies and provinces the return on capital outlay was highest in the Punjab where the canals yielded 11·95 per cent. In Madras, including schemes which have proved unremunerative the percentage of return was 9·95 while in the United Provinces and Sind returns of 8·62 and 6·03 per cent. respectively were realized.

Protective Works.—The total area irrigated by the thirty-six Protective Works in operation amounted to 497,000 acres. Towards this the United Provinces contributed nearly 200,000 acres and Madras nearly 107,000 acres. In the Deccan and Gujarat nearly 70,000 acres were irrigated. In the two other provinces where Protective Works are in operation, 66,000 acres were irrigated in Bihar and Orissa and 54,000 acres in the Central Provinces.

The total capital outlay on works of this class amounted to over 1,012½ lakhs. The net revenue for the year was only a little over one lakh, which is equivalent to 0·10 per cent. on the total capital outlay. This low return is partly due to the fact that the capital account is at present swelled by expenditure on works under construction which have not yet commenced to earn revenue. Many useful and important works of this nature are under construction in Bombay, the United Provinces and the Central Provinces, while in the last named province seven tank schemes, aggregating over 40 lakhs, are in progress. Details of these works will be found in the chapters in Part II of this Review relating to the progress of irrigation in the Province or Administration concerned.

Minor Works are of two kinds. These works are, for purposes of accounting, subdivided into three classes as described below:—

Class I.—Works for which Capital and Revenue Accounts are kept. These are works the estimated capital cost of which exceeds Rs. 50,000 and the revenue from which is expected to cover the total working expenses.

Class II.—Works for which only Revenue Accounts are kept. These are generally works costing less than Rs. 50,000.

Class III.—Works for which neither Capital nor Revenue Accounts are kept. The works of this class consist mainly of small tanks and field embankments, or small drainage schemes to prevent deterioration of land or to effect improvement of land with a view to rendering it fit for cultivation.

121 Minor Works of the first class described above were in operation, 113 being irrigation works and 8 navigation works, the area irrigated by the former amounting to 2,262,000 acres. The total capital outlay on irrigation work of this class at the close of the year was nearly

448 lakhs, and the net revenue amounted to Rs. 35,29,000, representing a return of 7·88 per cent. on capital. On the eighth purely navigation works referred to above, the total capital outlay at the end of 1917-18 amounted to nearly 231 lakhs, a return of 0·42 per cent. being realized. The net revenue realized during 1917-18 from Class I Irrigation and Navigation Works as a whole yielded a return of 5·34 per

cent. on a total capital outlay of about 678½ lakhs. An area of 2,796,000 acres was irrigated by Minor works of Class II while the Class III works effected irrigation to the extent of 3,419,000 acres. The total area irrigated by Minor works of all classes thus amounted to 8,477,000, or just one-third of the total area irrigated during the year by Government canals.

Total cropped area.—A comparison of the acreage of crops matured during 1917-18 by means of Government irrigation systems, with the total area under cultivation in the several provinces is given below :—

Provinces.	Net area cropped.	Area irrigated by Government Irrigation Works.	Percentage of irrigated area to total cropped area.	Capital cost of Government Irrigation Works to end of 1917-18 in lakhs of rupees.	Estimated value of crops raised on areas receiving State irrigation in lakhs of rupees.
	Acres.	Acres.		Rs.	Rs.
Burma	14,668,000	1,448,000	9·9	278	442
Bengal	24,452,000	113,000	0·9	249	57
Bihar and Orissa ..	8,131,000	866,000	1·0	629	395
United Provinces of Agra and Oudh.	35,808,000	3,209,000	9·0	1,259	1,768
Ajmer-Merwara ..	365,000	19,000	5·2	35	7
Punjab	28,253,000	8,600,000	30·4	2,239	3,337
North-West Frontier Province.	2,958,000	362,000	12·2	273	180
Sind	4,000,000	3,507,000	87·7	328	838
Bombay Deccan ..	25,705,000	305,000	1·2	506	242
Central Provinces, (excluding Berar).	19,290,000	145,000	0·8	327	60
Madras	38,821,000	7,359,000	19·0	1,114	2,466
Baluchistan	257,000	17,000	6·6	42	5
Total ..	202,708,000	25,950,000	12·8	7,279	9,797

It will be seen that nearly 13 per cent. of the cropped area is irrigated by Government irrigation works, and that the estimated value of the crops so irrigated in a single year exceeds by 35 per cent. the total capital expended on these works.

Comparisons.—The following table compares the area irrigated by Government works with the average area so irrigated during the previous triennium:—

Province.	PRODUCTIVE.		PROTECTIVE.		MINOR.		TOTAL.	
	1914-15 to 1916-17.	1917-18.	1914-15 to 1916-17.	1917 18.	1914-15 to 1916-17.	1917-18.	1914-15 to 1916-17.	1917-18.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Madras	3,454,548	3,526,831	107,111	106,866	8,717,524	3,725,132	7,279,183	7,358,829
Bombay Deccan	31,870	43,691	76,751	69,970	173,668	190,962	282,289	304,623

TOTAL	16,767,385	16,922,018	448,104	496,962	8,370,925	8,531,494	25,586,114	25,950,474

Canal Colonies.—One of the most interesting developments is the Canal Colonies of the Punjab. In the early eighties the drier districts and waste lands began to receive attention. The Lower Sohag and Para Canals, which take out from the right bank of the Sutlej opposite Fazilka, and the Sidhnai on the left bank of the Ravi above its junction with the Chenab, were constructed between 1883 and 1887 and, besides being immediately successful, they afforded valuable experience in colonization. The Sidhnai Canal, to which the supply is ensured by a needle dam across the river, irrigates some 350,000 acres annually and gives a net return of between 30 and 40 per cent. upon a capital outlay of rather more than 13 lakhs of rupees. The Lower Chenab Canal, for the irrigation of the lower portion of the tract lying between the Chenab and the Ravi rivers, was opened as an inundation canal in 1887, but from the outset it suffered from deposits of silt, and it was realized that without a weir across the river at its head, to ensure its supply, it would be a complete failure. As soon as the supply was assured by the weir, Colonel Jacob, R. E., pressed for the extension of the canal into the large areas of crown waste which were till then lying practically valueless. This extension was sanctioned in 1891 and the colonization of the waste lands then commenced. The Lower Chenab Canal is easily the most productive work in India. It irrigates about $2\frac{1}{2}$ million acres annually and in the year under review produced a net revenue of 128 lakhs of rupees on a capital outlay of 325 lakhs, a return of nearly 40 per cent. The accumulated surplus revenues of this canal, after paying interest charges, amount to no less than 1,388 lakhs of rupees.

Lower Jhelum Canal, 1898-1902.—The Lower Jhelum Canal project was sanctioned in 1888, but work on it was postponed for want of funds till the Lower Chenab Canal had made considerable progress and it was not until 1898 that the work was taken up in earnest. It was opened for irrigation in 1902, although construction was not quite completed.

In the case of both the Lower Chenab and Lower Jhelum Canals, construction and irrigation went on side by side, since the tract being dry and inhospitable, the canals had themselves to bring water for the construction of the masonry works. The canal commands the lower portion of the tract between the Chenab and the Jhelum, and is another extremely lucrative work, irrigating about 800,000 acres annually, and returning over 20 per cent. on an outlay of 162 lakhs of rupees.

The Triple Project.—The Triple Canal Project was commenced in 1905; of its three component parts, the Upper Chenab Canal was opened in 1912, the Lower Bari Doab Canal in 1913, and the Upper Jhelum Canal in 1915. A reference to the map will show that the four rivers, Jhelum, Chenab, Ravi and Sutlej, flow convergingly in a south-westerly direction, the first named being the most northerly. The particular problem confronting the Punjab engineers was the irrigation of the tract between the Sutlej and the Ravi, and since the supply of the latter river was required in its entirety for the existing Upper Bari Doab and Sidhnai canals, a canal from the Sutlej naturally offered the easiest solution. A project for the irrigation of the lower Bari Doab from the Sutlej

was prepared, but, as the result of representations made by Colonel Jacob and Sir J. Wilson, the Irrigation Commission of 1901-02 advised the consideration, in preference to it, of a project to irrigate the Doab by water brought from the river Jhelum across the rivers Chenab and Ravi. Under this project water is carried by the Upper Jhelum Canal from Mangla on the river Jhelum to a point above Khanki, the headworks of the existing Lower Chenab Canal, on the Chenab. This renders it possible, without interference with existing irrigation, to draw off water from the Chenab at Merala, forty miles above Khanki, and to convey it by the Upper Chenab canal to the Ravi at Balloki, crossing the latter river by means of the Balloki level crossing. The water is thus delivered on to the Ravi-Sutlej tract for irrigation by the Lower Bari Doab Canal.

The Frontier.—Equally remarkable results have been achieved on the Frontier. The introduction of irrigation by the Lower Swat Canal has changed completely the character of the tract served. Before the advent of the canal it was uninhabited and practically uninhabitable, covered with thorn bushes and not a tree to be seen. It is now, and was even in 1894, when the completion report was written, dotted throughout with villages occupied by a law-abiding and contented peasantry, and the wildness of thorn has given place to a vast sheet of cultivation, while avenues of trees have sprung up along the roads as well as along the canal and its distributing channels. The state of the tract is in every way a vast contrast to what it was when the surveys for the canal were in progress, at which time no officer was allowed to leave cantonments without himself being armed and being attended by an armed escort.

Indian Soldier Colony.—An area of 171,500 acres has been reserved in the Lower Bari Doab colony for distribution to Indian officers, non-commissioned officers and soldiers who rendered distinguished service in the great war, and the distribution is being made under the orders of the Commander-in-Chief through the agency of the Indian Soldiers' Board on the recommendations of Officers Commanding units who were informed some months ago of the number of reward grants allocated to their units and requested to submit lists of names as soon as possible. These lists when received are forwarded to the Colonization Officer for scrutiny with a view to the substitution of Jangi Inams or cash annuities for land grants in cases where the nominees do not conform to the conditions for which the Punjab Government stipulated in reserving the land. Up to the present, lists of recommendations for about 22,000 acres have been scrutinised by the Colonization Officer and a tentative arrangement has been made for the allotment of villages to soldiers named in the lists, the object held in view being to constitute villages so far as possible of men of the same regiment, caste and district of origin. It is hoped that it will be possible to allot a very considerable proportion of the area reserved in time for Aharis of this year but up-to-date only three grantees have actually been put in possession of their land. Two of these are Indian Officers of the Army Remount Depot with records of the highest distinction and the third is Sergeant-Major Gur-Bachan Singh, late of the 54th Battalion of the Australian Imperial Forces, who had a remarkable career.

WELLS AND TANKS.

So far we have dealt only with the great irrigation schemes. They are essentially exotic, the products of British rule; the real eastern instrument is the well. The most recent figures give thirty per cent. of the irrigated area in India as being under wells. Moreover the well is an extremely efficient instrument of irrigation. When the cultivator has to raise every drop of water which he uses from a varying depth, he is more careful in the use of it; well water exerts at least three times as much duty as canal water. Again, owing to the cost of lifting, it is generally used for high grade crops. It is estimated that well-irrigated lands produce at least one-third more than canal-watered lands. Although the huge areas brought under cultivation by a single canal scheme tend to reduce the disproportion between the two systems, it must be remembered that the spread of canals increases the possibilities of well irrigation by adding, through seepage, to the store of subsoil water and raising the level.

Varieties of Wells.—Wells in India are of every description. They may be just holes in the ground, sunk to subsoil level, used to a year or two and then allowed to fall into decay. These are temporary or *kacha* wells or they may be lined with timber, or with brick or stone. They vary from the *kacha* well costing a few rupees to the masonry well, which will run into thousands, or in the sandy wastes of Bikanir, where the water level is three hundred feet below the surface, to still more. The means of raising the water vary in equal degree. There is the *picottah*, or weighted lever, raising a bucket at the end of a pivoted pole, just as is done on the banks of the Nile. This is rarely used for lifts beyond fifteen feet. For greater lifts bullock power is invariably used. This is generally harnessed to the *mot*, or leather bag, which is passed over a pulley overhanging the well, then raised by bullocks who walk down a ramp of a length approximating to the depth of the well. Sometimes the *mot* is just a leather bag, more often it is a self-acting arrangement, which discharges the water into a sump automatically on reaching the surface. By this means from thirty to forty gallons of water are raised at a time, and in its simplicity, and the ease with which the apparatus can be constructed and repaired by village labour, the *mot* is unsurpassed in efficiency. There is also the Persian wheel, an endless chain of earthenware

pots running round a wheel. Recently attempts have been made, particularly in Madras, to substitute mechanical power, furnished by oil engines, for the bullock. This has been found economical where the water supply is sufficiently large, especially where two or three wells can be linked. Government have systematically encouraged well irrigation by advancing funds for the purpose and exempting wellwatered lands from extra assessment due to improvement. These advances, termed *takavi*, are freely made to approved applicants, the general rate of interest being $6\frac{1}{2}$ per cent. In Madras and Bombay ryots who construct wells, or other works of agricultural improvement, are exempt from enhanced assessment on that account. In other provinces the exemption lasts for specific periods, the term generally being long enough to recoup the owner the capital sunk.

Tanks.—Next to the well, the indigenous instrument of irrigation is the tank. The village or the roadside tank is one of the most conspicuous features in the Indian scene. The Indian tank may be any size. It may vary from a great work like Lakes Fife and Whiting in the Bombay Presidency or the Periyar Lake in Travancore, holding up from four to seven billion cubic feet of water, and spreading their waters through great chains of canal, to the little village tank irrigating ten acres. They date back to a very early stage in Indian civilisation. Some of these works in Madras are of great size, holding from three to four billion cubic feet, with water spreads of nine miles. The inscriptions of two large tanks in the Chingleput district of Madras, which still irrigate from two to four thousand acres are said to be over 1,100 years old. Tank irrigation is practically unknown in the Punjab and in Sind, but it is found in some form or other in all other provinces, including Burma, and finds its highest development in Madras. In the ryotwari tracts of Bombay and Madras all but the smallest tanks are controlled by Government. In the zemindari tracts only the large tanks are State works. According to the latest figures the area irrigated from tanks is about eight million acres, but in many cases the supply is extremely precarious. So far from tanks being a refuge in famine they are often quite useless inasmuch as the rainfall does not suffice to fill them and they remain dry throughout the season.

BUILDINGS AND ROADS.

The Buildings and Roads branch of the Public Works Department embraces all the operations of the Department which are not classed under the special heads of Railways and Irrigation. It includes the extension and maintenance of the road system, the construction and repair of all the buildings required for the proper discharge of the functions of government in all its branches, and a large miscellaneous class of works of public improvement, including lighthouses, harbours, embankments, boat bridges, and ferries, and the water supply and sanitation of towns.

The operations of this branch of the Department are classed primarily under the head of Civil Works, the expenditure on which is chiefly met from provincial resources. The classification of this expenditure for 1914-15 under the various heads is shown in the following table:—

	Central Provinces and Berar.	Burma.	Assam.	Bengal.	Bihar and Orissa.	United Provinces of Agra and Oudh.	Punjab.	North-West Frontier Province.	Madras.	Bombay.	India General.	Total.
Imperial	£ 72,050	£ 49,661	£ 2,533	£ 89,409	£ 26,255	£ 74,920	£ 37,148	£ 208,198	£ 36,842	£ 80,536	£ 230,674	£ 908,226
Provincial*	£ 529,551	£ 775,734	£ 364,270	£ 831,581	£ 664,327	£ 507,741	£ 610,853	..	£ 1,086,986	£ 756,747	..	£ 6,127,790
Total	£ 601,601	£ 825,395	£ 366,803	£ 920,990	£ 690,582	£ 582,661	£ 648,001	£ 208,198	£ 1,123,828	£ 837,283	£ 230,674	£ 7,036,016
<p>* Includes expenditure by the Civil Department in addition to that by the Public Works Department.</p>												
Expenditure by Civil Officers from Imperial Funds											£ 52,995	
Expenditure in England											£ 87,739	
Grand Total											£ 7,176,750	

The extension of local Government in India has thrown a large portion of the smaller class of public works into the hands of the local Boards. Speaking generally, the boards maintain their own establishments, but in the case of any works of unusual difficulty they have recourse to the professional skill of the Public Works Officers.

The School of Oriental Studies.

This School was established by Royal Charter in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, and Customs of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in this country and in our Eastern and African Dominions and with the work of the University of London and its other Schools.

The aims of the School may be summarized briefly as follows: (i) To provide a great University centre for Oriental and African studies and research; (ii) to provide training in Languages, Literature, History, Religions, and Customs, for military and civil officers of Government and for any other persons about to proceed to Africa and the East for commercial or other enterprises.

The School has been created as the outcome of the Reports of two Government Committees, the first a Treasury Departmental Committee presided over by Lord Reay, the second an India Office Departmental Committee presided over by Lord Cromer. The School is intended to provide London with a centre for Oriental teaching adequate to the needs of the metropolis and of the Empire, and one that will remove the reproach that London has hitherto been without an Oriental School comparable to those of Paris, Berlin, and Petrograd.

The initial scheme of teaching of Modern Oriental Languages recommended by Lord Reay's Committee for the School is as follows:

Group I.—NEAR EAST: *Turkish, Arabic and Persian*.—One Professor, two Readers, three Native Assistants.

Group II.—NORTHERN AND EASTERN INDIA: *Hindi and Hindustani and Bengali*.—One Professor, one Reader, two Native Assistants.

Group III.—WESTERN INDIA: *Marathi and Gujarati*.—One Professor, one Reader (or two Readers), two Native Assistants.

Group IV.—SOUTHERN INDIA: *Tamil and Telugu and Kanarese*.—One Professor one Reader, three Native Assistants.

Group V.—FURTHER INDIA, MALAY ARCHIPELAGO, ETC. *Burmese*.—One Reader, one Native Assistant. *Malay*.—One Reader, one Native Assistant.

Group VI.—FAR EAST: *Chinese*.—One Professor, one Native Assistant. *Japanese*.—One Professor, one Native Assistant.

Group VII.—AFRICA: *Swahili*.—One Reader, one Native Assistant. *Hausa*.—One Reader, one Native Assistant.

The Reay Committee further recommended that £1,000 a year should be spent in teaching the following languages or groups of languages, Armenian, Assamese, Panjabi, Tibetan, Pashto, Sinhalese, Siamese, Melanesian languages, Polynesian languages, Amharic, Luganda, Somali, Yoruba, Zulu. The Committee also recommended that provision should be made in the School for the teaching of classical Oriental studies, e.g., Sanskrit and Pali. Not only the languages, but the history, customs, and religions of the peoples who speaks them will be taught in the School.

The Governing Body are negotiating with the University of London for the transfer to the School of the Oriental teaching hitherto provided at University and King's Colleges.

The School possesses noble and adequate buildings, provided for them by Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parliament. The School buildings are quiet, although they are in the heart of the City. They are only two minutes' walk from the termini of the Great Eastern and Central London Railways and from Moorgate Street Station on the Metropolitan Railway, and about six minutes' walk from the Bank of England. The School was formally opened by the King on 23rd February, 1917, and the first Bulletin of the School (price 6s.) was published later in the year.

Finances.—An appeal for an endowment fund was issued in October, 1916, which states that The Berlin School of Oriental Languages had, before the War, an income of £10,000; the income required for the School in London of which the scope is necessarily more extended, is £14,000. Of this sum the School has at present in view an income of about £7,500, including grants from the Imperial Government and the Government of India. The Committee desire to raise an Endowment Fund of £150,000 for this purpose, towards which they have as a result of a preliminary appeal (which was suspended in August, 1914), about £10,000.

Patron, H. M. the King. *Chairman of the Governing Body*, Sir John Hewett. *Honorary Secretary*, P. J. Hartog, Esq., C.I.E.

Trade.

The broad characteristics of the trade of India are familiar to readers of the Indian Year Book. India is chiefly an agricultural country, for seventy-two per cent. of its people are directly dependent on agriculture for their means of livelihood. Consequently the prosperity of the country is largely determined by the character of the monsoon rains. An area which grows larger every year is protected by irrigation, and the extension of these works, with the increased resisting power of the people and the growth of manufacturing industry, is expected to make the people immune from the shock of such famines as those of 1896-97 and 1899-1900. That this faith is well founded is proved by the remarkable strength with which the population have just withstood the acute failure of crops, almost throughout the land, in 1918-19, coming as it did after the country had largely been drained of supplies for the armies and the Allied nations. But many of the irrigation works, such as tanks and wells, depend on the rains, for their replenishment. Consequently the trade of the year is mainly determined by the rains, which decide the export trade and the con-

sequent purchasing power of the people. Another feature which arises from these conditions is that the imports are mainly of manufactured goods and the exports of produce. The imports of manufactures in pre-war days chiefly came from the United Kingdom, whose exporting power was seriously diminished by the diversion of the energies of the people to the war, and has for the time been still further impaired by the industrial confusion in Great Britain following the war. A large part of the export in pre-war days went to the Continent of Europe, and that market was closed by the war. It has not yet been re-opened in a practical sense, but on the other hand a large increase of trade, both import and export, with the United States has taken place. Trade during the past year has also greatly been affected by the famine following the failure of the 1918 monsoon. The main conclusions to be drawn from trade statistics and movements of the past year are indicated in the annual review of Indian trade by the Director of Statistics, Mr. G. Findlay Shirras, from which the following article is mainly drawn.

THE TRADE OF THE YEAR.

From the trade viewpoint the year ending 31st March 1919 was an annus mirabilis. In none of the previous forty-four Reviews was it necessary to chronicle so many events all crowded into the space of a twelvemonth. The year opened with unusual vigour in the production of munitions and in the export of commodities of national importance. A silver crisis, a rise in exchange, a failure of the monsoon over wide areas, a virulent epidemic of influenza, responsible, it is estimated, for a deathroll of six millions, and the Armistice illustrate, if illustration were necessary, the unique diversity of the year. "The current year," said Sir James Meston in presenting the Financial Statement in the Legislative Council last March, has been a period of crisis and dramatic change "The first half of it was marked by great manufacturing energy, high prices, and a great deal of diffused prosperity. When the year opened, the long-threatened German offensive was developing in France, and India was called upon to redouble her efforts to provide men and munitions of war. Then came the cessation of hostilities and the scene completely changed. Military activities could not of course be curtailed all at once, but private trade was very suddenly checked. Astute merchants who had been gambling on protracted fighting and a continuing rise in prices found their calculations upset and Nemesis descended upon much unhealthy speculation, especially in the cloth and share markets of Bombay. By this time also it had unfortunately become evident that considerable areas in Bombay, the United Provinces, and other parts of India would be unable to share in the general rejoicings about peace; for the monsoon had failed badly, scarcity was imminent, and at

the most critical time a fierce epidemic of influenza attacked the whole country, took a very heavy toll of the rural masses, and seriously weakened the agricultural labour power." The value of the overseas trade in merchandise was nearly Rs. 423 crores (£ 282 millions*) as against Rs. 393 crores (£ 262 millions*) in the preceding year and Rs. 370 crores (£ 247 millions) the pre-war average. The year's imports of merchandise, as compared with those of its immediate predecessor, recorded an increase in value of 12 per cent exports of 2 per cent., and re-exports of 60 per cent. As against the pre-war quinquennium, imports increased in value by 16 per cent., exports by 9 per cent., and re-exports by as much as 215 per cent. The decrease in the imports of treasure on private account was mainly due to the shutting off of the imports of gold. On Government account the net imports of treasure considerably increased, due to large imports of silver from the United States under the Pittman Act.

The rise in prices accounted for a part, in some cases a very large part, of the increase in the value of the imports and export of commodities. In order to remove any doubts arising from these figures, it is necessary to calculate how much of the increase or decrease in the value of the imports and exports of each article was due to a rise or fall in price. The quantity of each article imported and exported during the year has, as far as practicable, been valued at the prices prevailing in 1917-18. According to the ordinary trade returns, the imports of merchandise in 1918-19 were valued at Rs. 169 crores, an increase of nearly Rs. 19 crores over 1917-18; but when

* Note.—The conversion rate (Rs. 15=£) has been retained to facilitate comparisons although the rate of sterling exchange has been above 1s. 4d. The average rate of exchange during 1918-19 was 1s.—5544d. per rupee.

the prices of the latter year are applied, the value is reduced to Rs. 140 crores, thus showing an increase in the import trade on account of higher prices of Rs. 29 crores or 20 per cent. If quantity is taken, by comparing the value of the year's trade re-calculated at prices of 1917-18, with the actual value of the trade in 1917-18, the figures show a decrease of over Rs. 10 crores or 6 per cent. in the volume of the import trade. In regard to exports, the actual declared value in 1918-19 was Rs. 239

crores, while the value calculated at the prices of the preceding year was Rs. 196 crores, or, in other words, there was an increase of Rs. 43 crores or 22 per cent. on account of higher prices. The volume of the exports showed a decrease of Rs. 37 crores or 16 per cent. These comparisons, it is unnecessary to emphasise, are with the preceding year, 1917-18, and in the case of exports the comparative failure of the monsoon is unmistakably evident.

Value of Trade.—The declared value of the pre-war quinquennium was as follows:—

trade as compared with the previous year and

Imports and exports of Private Merchandise and of treasure on private account.

PRIVATE MERCHANDISE.	Average of five years 1909-10 to 1913-14. (pre-war average.)	Average of five years 1914-15 to 1918-19 (war average)	1917-18.	1918-19.	Increase (+) or decrease (—) in 1918-19 as compared with the pre-war average.
Imports of Merchandise ..	Rs. 1,45,84,72,000	Rs. 1,47,80,19,000	Rs. 1,50,42,51,000	Rs. 1,69,03,41,000	(per cent.) + 16
Exports of Indian Merchandise ..	2,19,49,73,000	2,15,96,70,000	2,33,43,45,000	2,33,30,76,000	+ 9
Re-exports of Foreign Merchandise ..	4,61,88,000	8,14,15,000	9,12,10,000	14,55,68,000	+ 215
Total private Merchandise.	3,69,96,33,000	3,71,91,04,000	3,92,98,06,000	4,22,89,85,000	+ 14
NET IMPORTS OF TREASURE (PRIVATE).					
Gold (net imports)	28,86,34,000	7,60,76,000	19,93,86,000	(a)-2,48,44,000	—
Silver—					
Imports ..	10,88,25,000	4,56,21,000	2,37,84,000	1,19,47,000	— 89
Exports ..	3,67,34,000	1,76,79,000	1,69,32,000	17,76,000	— 95
„ (net imports)	7,20,91,000	2,79,42,000	68,52,000	1,01,71,000	— 86
Total treasure (net imports).	33,07,25,000	10,40,18,000	20,62,38,000	(a)-1,46,73,000	—

Stores and treasure imported or exported on Government account are excluded from the above table. The values of articles of national importance exported on Government account are however included under private exports

shown above. In view of the large increase in the imports and exports of Government stores, and in the imports of silver on Government account in 1918-19, it may be of interest to set out the figures:—

Imports and exports of Government stores and of treasure on Government account.

	Average of five years 1909-10 to 1913-14.	1917-18.	1918-19.
	Rs.	Rs.	Rs.
Imports of Merchandise	5,82,28,000	13,92,97,000	19,52,83,000
Exports of Indian Merchandise	5,46,000	2,21,72,000	1,24,21,000
Re-exports of Foreign Merchandise	5,83,000	12,21,000	18,60,000
Total Stores	5,93,57,000	16,26,90,000	20,95,64,000
NET IMPORTS OF TREASURE (ON GOVERNMENT ACCOUNT).			
Gold (net imports)	—71,49,000(a)	5,24,00,000	(a)—3,07,94,000
Silver—			
Imports	3,53,09,000	20,29,10,000	67,89,45,000
Exports	1,12,000	1,93,44,000	99,26,000
„ (net imports)	3,51,97,000	18,35,66,000	66,90,19,000
Total treasure (net imports)	2,80,48,000	23,59,66,000	63,82,25,000

Net exports.

Important Changes.—The total value of the exports of jute manufactures in 1918-19 was a record figure—£ 35 millions, as against £ 13 millions in the pre-war period; tea was valued at £ 12 millions as against £ 9 millions, and tanned hides at £ 5 millions as against £ 1 million. There was, however, a decrease in the export of food-grains from £ 30 millions to £ 27 millions. The most noticeable changes, as compared with the pre-war year 1913-14, were the increases in the imports of copra, fuel oil, cocoanut oil, tea, and cigarettes, and

the decreases in cotton goods, railway plant and rolling-stock woollen goods, provisions, metals, motor cars, coal-tar-dyes, kerosine oil, salt, sugar beer, umbrellas, boots and shoes, cement, candles, and sulphuric acid. Under exports there were important increases in jute manufactures, tanned cow hides, rubber, coconut oil, linseed oil, cigarettes, chromite, gram, indigo, and cotton piece goods, while raw cotton, raw jute, oil seeds, coal, raw hides, oilcake, pig iron, wheat and zinc decreased.

Prices.—The average prices of 61 articles of imports based on the declared values increased 27 per cent. over the preceding year, while the average prices of 50 articles of export rose 20 per cent. The increase in average prices in respect of these articles of import and export as compared with the pre-war year was as follows :—

—	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.
Imports	100	126	170	211	268
Exports	100	103	117	125	150

At the end of March 1919, as compared with the corresponding period of 1918, rapeseed showed a rise of no less than 97 per cent., sesamum of 81 per cent., linseed of 61 per cent., food-grains of 56 per cent. (mainly bajra 75 per cent., jawar 69 per cent., rice and gram 55 per cent. each, wheat 34 per cent. and barley 32 per cent.), and raw jute of 32 per cent. As compared with the level of prices of March 1914, raw cotton showed an increase of 109 per cent., sesamum of 78 per cent. and food-grains of 73 per cent. (mainly jawar 129 per cent., bajra 120 per cent., wheat 73 per cent., gram 65 per cent. and rice 36 per cent.), while raw jute decreased by 27 per cent. The index number of wholesale prices in Calcutta at the end of March 1919 was 2 per cent. above the level of March 1918, and 80 per cent. above that at the outbreak of war (end of July 1914). The rise, as compared with the pre-war period, was due to an increase in the prices of imported articles, such as salt, sugar, cotton manufactures, metals, and kerosene oil, and also in some degree to indigo, shellac, raw cotton, and food-grains. Retail prices of the articles of food at the end of March 1919 were 59 per cent.

above the level of prices which ruled immediately before the outbreak of war (end of July 1914). The rise of prices in India was less than that in other countries with the exception of New Zealand, South Africa, and Australia.

The average rates of maritime freights decreased as compared with the preceding year, but were still much above the pre-war level.

Capital.—The upward movement in internal trade and the rich harvest of railway earnings are notable features of the year. Clearing House returns for the five chief ports in 1918 exceeded the high record of the previous year by no less than 55 per cent. and amounted to Rs. 1,396 crores as against Rs. 901 crores in 1917, and Rs. 650 crores in the pre-war year 1913. The total number of new Joint Stock Companies registered in 1918-19 was 292 with an authorised capital of Rs. 21,38 lakhs, as against 276 companies with an authorised capital of Rs. 32,20 lakhs in the preceding year. Cotton mills and coal mining companies accounted for a part of the increase in the total number. Company flotations in the year 1918-19 and in the preceding five years were as follows :—

Authorised Capital in lakhs of rupees.

—	Banking and Loan.	Cotton Mills.	Jute Mills.	Tea planting.	Coal mining.	Others.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
	(lakhs).	(lakhs).	(lakhs).	(lakhs).	(lakhs).	(lakhs).	(lakhs).
1913-14 (pre-war year) ..	6,26	84	56	51	17	58,57	66,91
1914-15	39	47	..	18	27	3,12	4,43
1915-16	32	29	64	29	17	5,49	7,20
1916-17	3,05	92	3,73	1,18	69	7,69	17,26
1917-18	12,51	82	1,00	1,15	66	16,06	32,20
1918-19	43	3,90	..	72	1,00	15,33	21,38

Prices of securities and shares showed an increase in the case of Government securities, banks, coal companies, and flour mills, and a decrease in jute and cotton mills. The fluctuations between 1914 and March 1919 are not without interest and are to be found in the following table :—

Index number of the prices of securities and shares taking the price on the 29th July 1914 as 100.

	29th July 1914.	26th July 1917.	26th March 1918.	27th March 1919.
5 Government securities	100	70	68	74
101 Port Trust and Municipal Debentures ..	100	89	84	84
10 Banks	100	106	112	116
32 Jute Mills (Ordinary)	100	311	467	383
65 Cotton Mills (Ordinary)	100	132	162	157
90 Coal Companies (Ordinary)	100	141	137	162
1 Woollen Mill (Cawnpore—Ordinary)	106	125	125
88 Tea Companies (Ordinary)	100	127	125	123
7 Flour Mills (Ordinary)	100	120	162	180
1 Iron and Steel Company (Tata—Ordinary)	100	332	295	286

During the later part of 1919 the financial situation has taken a totally different complexion as a result of the great amount of surplus money in circulation owing to recent war expenditure and to a consequent fierce outburst of industrial adventure, accompanied by extravagant speculation in shares. Bombay

has been the centre of these developments, but the whole country is effected. The situation was subjected to further disturbance through the continual rise in exchange, which in the first half of December was above 2s. 4d. to the rupee.

THE IMPORT TRADE.

The value of the imports of merchandise in 1918-19 was Rs. 169 crores (£113 millions), an increase of nearly Rs. 19 crores (£13 millions or 12 per cent. over the preceding year. This was also an increase of Rs. 23 crores (£15 millions) or 16 per cent. above the annual average of the five years immediately preceding

the war. The value of the import trade in 1918-19 was the highest recorded, with the exception of the pre-war year 1913-14. The increase in value was due to a rise in prices. The following statement shows the value of the import trade since the beginning of this century :—

<i>Five yearly averages.</i>	<i>Rs. (lakhs.)</i>	<i>Yearly Totals.</i>	<i>Rs. (lakhs.)</i>
Five years ending 1903-04	78,42	Year 1913-14 (pre-war year) ..	1,83,25
.. .. . 1908-09	111,85	.. 1914-15	1,37,93
.. .. . 1913-14 (pre-war average) ..	145,85	.. 1915-16	1,31,99
.. .. . 1918-19 (war average) ..	147,80	.. 1916-17	1,49,63
		.. 1917-18	1,50,42
		.. 1918-19	1,69,03

The noticeable features of the returns as compared with 1917-18 are (1) the large increase of Rs. 4,69 lakhs or 60 per cent. in the value of iron and steel imported, and of Rs. 4,57 lakhs or 106 per cent. in the value of imported cotton twist and yarn; (2) the increase in silk manufactures, raw cotton, wheat, Railway plant and rolling stock, liquors, mineral oil other than kerosene, spices, apparel, machinery, and articles imported by post; and (3) the

decrease in kerosene oil, matches, and timber.

The value of the imports into Bombay increased by no less than Rs. 14 crores or 25 per cent. mainly owing to cotton twist and yarn, and piece-goods. Bengal showed an improvement of Rs. 6 crores, chiefly in metals and manufactures of metals, and Burma of nearly a crore of rupees. In the case of Sind there was a decrease of Rs. 2 crores.

The Foreign Sea-borne Trade of India.

(a) In a decade—1909-10 to 1918-19.

(b) During half a century—1864-65 to 1918-19.

Imports—(Year under review).

1918-19

1909-10 to 1913-14 (PRE-WAR AVERAGE)

Chief Imports:—The chief imports into India were as follows:—

	Annual average of five years 1909-10 to 1913-14.	War average (1914-15 to 1918-19.)	1917-18.	1918-19.
	Rs.	Rs.	Rs.	Rs.
Cotton goods	48,40,85,000	47,43,31,000	52,22,16,000	51,68,85,000
„ yarn	3,77,18,000	4,94,79,000	4,29,52,000	8,86,63,000
Sugar	13,17,58,000	14,70,48,000	15,31,98,000	15,61,36,000
Iron and steel	11,17,45,000	9,61,00,000	7,75,80,000	12,44,99,000
Railway plant and rolling-stock ..	6,10,94,000	3,48,19,000	49,63,000	1,04,35,000
Machinery of all kinds, including belting.	5,80,04,000	5,76,53,000	5,23,50,000	5,85,84,000
Silk, raw and manufactures	3,94,54,000	3,93,14,000	4,02,75,000	4,74,94,000
Chemicals, drugs, etc.	2,12,73,000	3,42,56,000	4,30,10,000	4,21,96,000
Mineral oil	3,72,03,000	4,02,30,000	3,64,07,000	3,61,32,000
Liquors	2,02,46,000	2,36,64,000	2,49,96,000	3,30,21,000
Hardware	3,17,04,000	2,79,47,000	2,71,55,000	3,20,83,000
Paper and pasteboard	1,27,07,000	1,96,48,000	2,31,12,000	2,72,07,000
Salt	79,16,000	1,81,66,000	2,20,08,000	2,33,10,000
Provisions	2,05,10,000	2,14,82,000	1,77,37,000	1,93,81,000
Motor cars and cycles	1,00,64,000	1,11,45,000	72,16,000	38,89,000

Cotton manufactures—The chief features of the year's import trade were a large increase in the quantity of cotton twist and yarn and a correspondingly large decrease in piece-goods. The annual average value of piece-goods imported during the five war years was almost the same as the pre-war quinquennial average, but the quantity imported decreased by 30 per cent. The total

imports of cotton manufactures including twist and yarn were valued at Rs. 61 crores as against Rs. 57 crores in the preceding year, and Rs. 52 crores the pre-war quinquennial average. These imports were 36 per cent. of the value of the total imports in 1918-19, as against 38 per cent. in 1917-18, and 36 per cent. the pre-war average. The chief descriptions of imports were as follows:—

	Average of five years 1909-10 to 1913-14.	War average 1914-15 to 1918-19.	1917-18.	1918-19.
	Rs.	Rs.	Rs.	Rs.
Twist and yarn	3,77,18,000	4,94,79,000	4,29,52,000	8,86,63,000
Piece-goods—				
Grey (unbleached)	21,08,56,000	19,65,42,000	18,43,23,000	23,59,42,000
White (bleached)	11,20,33,000	12,33,43,000	14,20,48,000	13,13,05,000
Coloured, printed or dyed	13,15,47,000	12,41,47,000	16,14,58,000	11,81,94,000
Fents of all descriptions	*	69,79,000	94,21,000	86,18,000
Total piece-goods	45,44,36,000	45,10,11,000	49,72,50,000	49,40,59,000
Hosiery	92,86,000	94,84,000	1,02,52,000	87,28,000
Handkerchiefs and shawls	52,20,000	22,91,000	15,90,000	20,77,000
Thread	36,10,000	49,66,000	61,89,000	58,36,000
Other sorts	1,15,33,000	65,79,000	69,35,000	61,85,000
Total	52,18,03,000	52,38,10,000	56,51,68,000	60,55,48,000

* Separately distinguished from 1912-13.

The value of cotton twist and yarn imported more than doubled, while that of piece-goods was slightly less than in the preceding year.

Cotton yarn.—Twist and yarn were imported to the extent of 38 million lbs, as against the low figure of 19 million lbs. in the preceding year, and 42 million lbs. the pre-war normal. The value of these imports amounted to Rs. 887 lakhs, an increase of 106

per cent. over the preceding year, and of 135 per cent. over the pre-war average. Had the level of prices of 1917-18 prevailed, the value would have been Rs. 843 lakhs. There was thus an increase of Rs. 44 lakhs due to higher prices. The average declared value per lb. rose to Rs. 2-5-3 from Rs. 2-3-5 in the preceding year. The imports of yarn as compared with the production of yarn in the Indian mills were as follows :—

		Imports.	Indian Mills Production.
		lbs.	lbs.
Annual average for the five years	1904-05 to 1908-09 ..	38,573,000	641,776,000
" " " " " "	1909-10 to 1913-14 (Pre-war average) ..	41,791,000	646,754,000
" " " " " "	1914-15 to 1918-19 (War average) ..	34,063,000	666,227,000
	year 1914-15 ..	42,864,000	651,985,000
	" 1915-16 ..	40,427,000	722,425,000
	" 1916-17 ..	29,530,000	681,107,000
	" 1917-18 ..	19,400,000	660,576,000
	" 1918-19 ..	38,095,000	615,040,000

The different counts imported taking the average of the pre-war quinquennium as 100 are shown below :—

		Average of five years 1909-10 to 1913-14.	1917-18.	1918-19.

Important Developments.—The details of counts of twist and yarn imported from abroad and produced in the Indian mills are of interest when placed in juxtaposition.

Imports from abroad and production in the Indian mills of cotton twist and yarn.

Quantity in thousands of lbs.

	Pre-war average (1909-10 to 1913-14).		1917-18.

Total	9,612	27,280	38,095	615,040

The conclusions to be drawn from this table are :—

(1) The imports from abroad of the coarser counts 1s to 20s increased the quantity imported (7,990,000 lbs.) being nearly six times the pre-war average, but the production of these counts in the Indian mills decreased to 402 million lbs. from 446 million lbs. in 1917-18 and 478 million lbs. in the pre-war quinquennium. There was thus in the year under review an increase in imports, but a decrease in production of counts from 1s to 20s as compared with the pre-war period.

(2) In counts 21s to 30s, there was an increase in the imports from nearly one million lbs. in 1917-18 to 2½ million lbs., and also in the production from 184 million lbs. to 189 million lbs. The imports were, however, still 42 per cent. less than the pre-war normal while the production on the other hand was higher by 29 per cent.

(3) The imports of counts 31s to 40s and above, increased to 23 million lbs. from 14 million lbs. in 1917-18, but the production decreased to 24 million lbs. from 30 million lbs. The imports were 23 per cent. below the pre-war average, while the production was 11 per cent. higher. This is of considerable interest.

In regard to the sources of supply of foreign yarn, the feature of the year was the large increase in the imports from Japan and the

decrease in the share of the United Kingdom. Japan supplied over 27 million lbs. or 72 per cent. of the total imports—chiefly counts 16s to 20s and 31s to 50s as against 4 million lbs. or 22 per cent. in the preceding year, and only one per cent. (457,000 lbs.) in the pre-war quinquennium. The increase in the imports of Japanese yarn is especially marked in counts 31s to 40s and 16s to 20s. The imports from the United Kingdom decreased to over 9 million lbs., or only 25 per cent. of the total imports, from 15 million lbs. or 77 per cent. in 1917-18, and 37 million lbs. or 90 per cent. the pre-war average China supplied over a million lbs. as against *nil* in 1917-18.

Cotton piece-goods.—In piece-goods (India's chief import) white goods and coloured goods both decreased in quantity by no less than 43 per cent. Grey goods owing to the large imports from Japan decreased by only 7 per cent. The value of grey goods increased by 28 per cent. to over Rs. 23 crores, while that of white goods decreased by 8 per cent. to Rs. 13 crores, and of coloured goods by 27 per cent. to Rs. 12 crores. The declared value per yard of grey goods rose from 4 annas 9 pies in 1917-18 to 6 annas 6 pies, white goods from 4 annas 6 pies to 7 annas 4 pies, and coloured goods from 6 annas 6 pies to 8 annas 4 pies. The following table shows the proportion of the quantity and value of the different descriptions of cotton piece goods imported during the year under review and the preceding year, the average of the pre-war quinquennium being taken as 100 :—

	Average of five years 1909-10 to 1913-14.		1917-18.		1918-19.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

“ “ “ “ “ 1918-19	583·4	286·6	227·3

(a) Average of two years 1912-13 and 1913-14.

The detailed imports are of interest :—

Imports of piece-goods (in millions of yards).

Grey (unbleached).	Average 1909-10 to 1913-14.	1917-18.	1918-19.
Dhutis, saris and scarves	646·6	398	304·3
Jaconets, madapollams, mulls, etc. ..	128·3	62·7	48·9
Longcloth and shirtings	522·5	122·8	159·6
Sheetings	·6	30·2	53·8
Other sorts	33	11·8	16·8
Total	1,331	625·5	583·4

White (bleached).	Average 1909-10 to 1913-14.	1917-18.	1918-19.
Dhutis, saris, and scarves	70·6	41·0	35·8
Jaconets, madapollams, mulls, etc. ..	208·2	164·8	133·9
Longcloth and shirtings	129·1	113·3	65·9
Nainsooks	199·4	150·2	27·1
Other sorts	47	32·4	23·9
Total	654·3	502·3	286·6

Coloured, printed, or dyed.	Average 1909-10 to 1913-14.	1917-18.	1918-19.
Dhutis, saris, and scarves	95·8	40·5	21·4
Cambries, etc.	102·3	50·8	29·3
Shirtings	105·7	60·8	24·7
Prints and chintz	159·4	100·1	70
Drills and jeans	21	22·8	16·9
Checks, spots, and stripes	11·3	5·3
Twills	26·8	23·5	10·8
Other sorts	120·5	84·9	48·9
Total	631·5	395·6	227·3

In 1918-19 all the principal descriptions of imported cotton piece-goods declined, with the exception of grey longcloth and shirtings and grey sheetings. The most important decreases were in white nainsooks, white longcloth and shirtings, and coloured shirting.

England and Japan.—The share of the United Kingdom in grey goods imported decreased to 64 per cent. from 87 per cent. as will be seen from the following statement :—

Percentage share of the United Kingdom in the imports of piece-goods.

	Five years ending 1913-14.	1916-17	1917-18.	1918-19.
Grey piece-goods	Per cent. 98·8	Per cent. 90	Per cent. 87·2	Per cent. 64·3
White „	98	98·7	98·8	95·9
Coloured „	93·5	88·7	91·8	88·5

Ninety-six per cent. of white goods imported came from the United Kingdom and the remaining four per cent. consisting chiefly of drills, jeans, longcloth, and shirtings, was imported mainly from Japan. In coloured, printed or dyed goods, the share of the United Kingdom decreased to 88 per cent. from 93 per cent. the pre-war average. A table similar to the preceding table brings out the remarkable increase in Japan's share in 1918-19 in the import trade in piece-goods :—

Percentage share of Japan in the imports of piece-goods.

	Five years ending 1913-14.	1916-17.	1917-18.	1918-19.
Grey piece-goods	Per cent. ·2	Per cent. 9	Per cent. 11·7	Per cent. 35·4
White „	·4	·5	3·7
Coloured „	·1	4·8	4·7	9·1

The increase in grey goods from Japan was especially in grey longcloth and shirtings, sheetings, drills and jeans, and jacconets, and in coloured goods, chiefly in flannels and flannelles, drills, jeans, shirtings, and chadars. The shares of the principal countries in the imports of piece-goods were :—The United

Kingdom 77·3 per cent. ; Japan 21·2 per cent. ; the United States 1 per cent. ; Italy ·1 per cent. ; and Holland ·1 per cent.

Cotton hosiery.—Of the total trade valued at Rs. 87 lakhs, imports from Japan amounted to Rs. 74 lakhs. Imports from the United Kingdom were valued at Rs. 9 lakhs.

Sugar.—Next to cotton manufactures, sugar is India's largest import. The following are the chief sources of supply and the receipts from them :—

Imports of sugar (excluding molasses and confectionery).

	Average of five years 1909-10 to 1913-14.	War average 1914-15 to 1918-19.	1917-18.	1918-19.
	Tons.	Tons.	Tons.	Tons.
Java	453,000	367,200	363,700	363,100
Mauritius	128,800	40,700	32,200	77,200
Straits Settlements	1,700	44,400	61,000	62,100
China (including Hongkong)	4,500	5,900	4,300	2,900
Egypt	1,600	1,300	900
Japan	200	5,800	4,500	400
Germany	1,700
Austria Hungary	42,600	4,300
Other countries	1,000	2,400	3,700	100
Total all countries, tons .	633,500	472,300	470,700	5,06,700
Value Rs. (000) ..	12,50,97	14,15,02	15,04,04	15,36,81

Imports were 8 per cent. higher in quantity and only 2 per cent. in value than in the preceding year. Had the level of prices of 1917-18 prevailed, the imports would have been valued at Rs. 16.19 lakhs instead of Rs. 15.37 lakhs. There was, therefore, a decrease of Rs. 82 lakhs due to lower prices. Java sugar (both from Java and the Straits Settlements) was imported to the same extent as in the preceding year, *viz.*, 425,200 tons against 424,700 tons. The imports of Mauritius sugar were 77,200 tons and the quantity was 140 per cent. above that of the preceding year, but still 40 per cent. below the pre-war normal. Nearly 92 per cent. of this sugar was imported into Bombay, and the remainder into Bengal. Imports from Japan, China, Hongkong, and Egypt were below those of last year. There were no imports of beet sugar. The Indian production of cane sugar in 1918-19 was estimated at 2,337,000 tons as against 3,311,000 tons in 1917-18, a decrease of no less than 29 per cent. The total area was 2,820,000 acres as against 2,809,000 acres in 1917-18. Since the war Cuba has outstripped India as the foremost cane sugar producer. Next to Cuba and India comes Java.

Iron and Steel.—Iron and steel are the most important of India's imports after cotton manufactures and sugar. The impossibility of obtaining supplies, together with the resulting high prices and the use of substitutes considerably reduced the imports below the pre-war average. In the year ending 31st March 1919, there was an increase in quantity of 19 per cent. over the preceding year, but the imports (181,400 tons) were still less than one-fourth of the pre-war quinquennial average. The value, on account of higher prices, rose by 60 per cent. to Rs. 12.45 lakhs. The United Kingdom reduced her share of this trade to 42 per cent. from 51 per cent. in 1917-18, while the United States and Japan accounted for 42 and 8 per cent. respectively as against 41 and 3 per cent. In the pre-war quinquennium the shares of these three countries were, the United Kingdom 60 per cent. the United States 3 per cent., and Japan *nil*. Corrugated sheets again decreased to only 2,500 tons in 1917-18, and 175,500 tons, the pre-war average. This is truly a remarkable decrease. The United States for the first time took the lead in the imports of bars and channel with 21,600 tons, while the United Kingdom supplied only 3,500 tons, as against 22,800 tons, the pre-war average imports.

Railway plant and rolling stock.—The total value of the imports in 1918-19 on private and Government account amounted to Rs. 1.68 lakhs, of which Rs. 1.04 lakhs were on private account and Rs. 64 lakhs on Government account. The imports were 70 per cent. above those of the preceding year but were still 81 per cent. below the pre-war quinquennial average. Of the total imports (Rs. 1.68 lakhs), carriages and wagons accounted for Rs. 1.15 lakhs, locomotive engines Rs. 49 lakhs, and materials for construction Rs. 4 lakhs. There was a noticeable increase in the imports of carriages and wagons on private and Government account, while there were no imports of leepers of wood or of steel or iron. The share

of the United Kingdom in the total imports was 95 per cent., Japan 2.5 per cent. and the United States 2.3 per cent.

Other Metals.—Copper was imported to the extent of 2,900 tons against 2,400 tons in the preceding year, and 12,600 tons, the pre-war quinquennial average. Japan had 56 per cent. of the trade, the United Kingdom 19 per cent. and Australia 17 per cent. In the previous year (1917-18) the shares of these three countries were: Japan 80 per cent. the United Kingdom 9 per cent. and Australia 4 per cent. The decrease in the case of Japan was mainly in unwrought tiles, ingots, etc., while she increased her supplies of braziers and sheets, and wire. Australia sent 500 tons of upwrought copper as against 100 tons in the previous year. The imports of brass, bronze, and similar alloys including mixed or yellow metal for sheathing increased to 4,400 tons from 2,900 tons. Over 4,000 tons or 92 per cent. of the total imports came from Japan as against 2,400 tons in 1917-18. Aluminum, zinc, and tin were imported in increased quantities. Lead sheets for tea-chests amounted to 4,400 tons as against 3,200 tons in the preceding year and the increase was mainly due to larger arrivals from the United Kingdom and Ceylon.

Tea-chests, mainly of wood, were valued at Rs. 91 lakhs, as against Rs. 94 lakhs in 1917-18. Japan accounted for nearly 50 per cent. of the total imports against 36 per cent. in the preceding year, and the United Kingdom had 40 per cent. of the trade against 43 per cent. Unsettled Russia was entirely out of the market. In 1917-18, her share in the imports was 14 per cent. of the whole. In the year just ended it was a beggarly half per cent. of the total.

Machinery and Millwork.—The imports of machinery and millwork, including belting, were valued at nearly Rs. 5.86 lakhs, against Rs. 5.23 lakhs in the preceding year. There were noticeable increase in cotton mill machinery (Rs. 49 lakhs), in boilers (Rs. 12 lakhs), and in electrical machinery (Rs. 10 lakhs). Sewing and knitting machines decreased by Rs. 21 lakhs, and jute mill machinery by Rs. 12 lakhs. Cotton mill machinery was valued at Rs. 1.65 lakhs, of which the United Kingdom supplied Rs. 1.36 lakhs, the United States Rs. 16 lakhs, and Japan Rs. 13 lakhs. The share of Bombay was the same as in the preceding year, *viz.*, 91 per cent. Jute mill machinery amounted to Rs. 57 lakhs as against Rs. 69 lakhs in 1917-18. The United Kingdom accounted for over Rs. 54 lakhs as against Rs. 62 lakhs in the preceding year, and Japan only Rs. 2 lakhs against Rs. 5 lakhs. Electrical machinery was imported to the extent of Rs. 39 lakhs, an increase of 35 per cent. over the preceding year. The imports from the United States nearly doubled from Rs. 8 lakhs in 1917-18 to Rs. 16 lakhs in the year under review, while the imports from the United Kingdom increased from Rs. 18 lakhs to Rs. 20 lakhs. The pre-war average imports from the United States were Rs. 2 lakhs and from the United Kingdom Rs. 31 lakhs. The imports from America have, since the war, greatly increased.

Silk.—The quantity of raw silk imported decreased to 1,426,000 lbs. from 1,832,000 lbs. in the preceding year. China and Hongkong

accounted for 87 per cent. of the total imports, but reduced their supplies by 22 per cent.

Chemicals, Drugs, &c.—The total value of imported chemicals decreased by 8 per cent. to Rs. 2,49 lakhs. Carbide of calcium, soda bicarbonate, and acids were imported in larger quantities, while there were decreases in sulphur, aluminous sulphates including alum, ammonia and its salts, bleaching materials, coppers, disinfectants, potassium compounds, caustic soda, and sodium carbonate. The quantity of sulphur imported was less than half of the preceding year's imports and amounted to 4,800 tons. The decrease was due to smaller shipments from Japan which supplied almost the entire quantity of the imports in the year under review. There were practically no imports of sulphuric acid (only two tons). The pre-war requirements (five-yearly average) were 3,100 tons. The United Kingdom accounted for 63 per cent. of the total value of chemicals imported, Japan 24 per cent.

and the United States nearly 6 per cent. In the pre-war year the shares of these countries were—the United Kingdom 75 per cent., Japan 1·5 per cent. and the United States '3 per cent.

Drugs and medicines were valued at nearly Rs. 1,47 lakhs as against Rs. 1,33 lakhs in the preceding year. There was a considerable increase in the imports of quinine salts (on private and Government account) from Java. The total imports from all sources increased to 161,000 lbs. (94,000 lbs. on private account and 67,000 lbs. on Government account) from 67,000 lbs. in the preceding year.

Mineral Oil.—The main features in regard to the imports from abroad of mineral oil in the year under review were:—(1) the large increase in the imports of fuel oil; (2) the increase in lubricating oils; and (3) the heavy decrease in the imports of kerosene oil. The following table shows the statistics of imports of the different descriptions of mineral oil:—

Imports of Mineral Oil from foreign countries (i.e., excluding Burma).

	Average of five pre-war years 1909-10 to 1913-14.	1914-15 to 1918-19 War average.	1917-18.	1918-19.
Fuel Oil	Gallons. 8,130,000	Gallons. 16,697,000	Gallons. 15,309,000	Gallons. 27,598,000
Kerosene—				
In bulk	50,860,000	40,431,000	26,477,000	7,455,000
„ tins	16,049,000	8,102,000	4,907,000	5,300,000
TOTAL KEROSENE ..	66,909,000	48,533,000	31,384,000	12,755,000
Lubricating Oil	13,522,000	16,595,000	15,375,000	19,077,000
Benzine, benzol, petrol, etc. ..	131,000	97,000	366,000
Paints, solutions & compositions.	2,000	3,000	5,000
Other kinds	2,271,000	906,000	363,000	1,006,000
TOTAL MINERAL OIL ..	90,965,000	82,831,000	62,797,000	60,441,000

The total imports were 60 million gallons or nearly 4 per cent. less than those in the preceding year, and 34 per cent. less than the pre-war average. The quantity of kerosene imported from abroad, chiefly owing to freight difficulties and high prices, decreased to 12½ million gallons, an amount which was actually below one-fifth of the pre-war imports. On the other hand, the coastwise exports from Burma increased to 117 million gallons from 107 million gallons in 1917-18. Prices were higher than in the preceding year. In fact, had the prices of the preceding year prevailed the value of the imports from abroad would have been Rs. 87 lakhs instead of Rs. 1,06 lakhs. American oil was imported to the extent of 10 million gallons only, as against 23 million gallons in 1917-18, and 42 million gallons, the pre-war average. Fuel oil increased to 27½ million gallons from 15 million gallons owing to the larger imports from Persia which now supplies three-fourths of the total imports. Lubricating oils were received in larger quantities from Borneo and America. There were practically no imports from abroad

of benzine, benzol, petrol, and other motor spirit (only 60 gallons against the record imports of 366,000 gallons in 1917-18 and 37,000 gallons in 1913-14). The coastwise exports of petrol, benzine, and other motor spirit from Burma to other parts of India increased to 8,453,000 gallons from 5,188,000 gallons in 1917-18.

Liquors.—There was a noticeable increase in the imports of rum, brandy, and still wines other than port. The imports of ale and beer, whisky, champagne, and port decreased. The total quantity of all liquors imported was 3,568,000 gallons, an increase of nearly 4 per cent. over the preceding year. The pre-war average imports were in the neighbourhood of 6,400,000 gallons. Over 50 per cent. of the imports in 1918-19 consisted of ale, beer, and porter, 41 per cent. of spirit, and 8 per cent. of wines. 1,801,000 gallons of ale, beer, and porter were imported, as against 1,858,000 gallons in 1917-18 and 4,405,000 gallons, the pre-war average. Japan again considerably increased her supplies and for the second time had the largest share of the trade. Sixty

per cent. of the total quantity imported came from that country, as against 48 per cent. in the preceding year. The imports from the United Kingdom were 33 per cent. as against 45 per cent. in the previous year. America increased her supplies, while the imports of Australian beer decreased. The imports of Dutch beer were quite insignificant. The value of imported beer increased by 32 per cent. to Rs. 69 lakhs, but had the prices of 1917-18 prevailed, the value would have been Rs. 53 lakhs. In other words, there was an increase of Rs. 16 lakhs due to higher prices. The production of Indian breweries in 1918 was 3,214,000 gallons, an increase of 32 per cent. as compared with the preceding year. In the

pre-war year Indian breweries produced only 3,654,000 gallons. The quantity of whisky imported decreased to 532,000 gallons from 656,000 gallons in 1917-18. The United Kingdom had 98 per cent. of this trade as in the two previous years. The value of these imports increased by 14 per cent. to Rs. 1,03 lakhs. Brandy was imported to the extent of 258,000 gallons, an increase of 30,000 gallons over 1917-18. France, with 188,000 gallons, was the principal source of supply, followed by the United Kingdom (59,000 gallons), Natal (6,000 gallons), and Holland (4,000 gallons). Wines amounted to 277,000 gallons as against 215,000 gallons in 1917-18.

Hardware, etc.—The principal features in the trade in hardware were an increase in the imports of agricultural implements and other implements and tools, and a decrease in enamelled ironware and metal lamps. The total value of the imports increased by Rs. 49 lakhs or 18 per cent. to Rs. 3,21 lakhs. The percentage shares of the chief exporting countries were as follows:—

	Average of five pre-war years 1909-10 to 1913-14.	1917-18.	1918-19.
	Per cent.	Per cent.	Per cent.
United Kingdom	59	41	36
United States	7	28	31
Japan	1	25	29
Other countries	33	6	4
TOTAL	100	100	100

America and Japan have considerably increased their exports since the outbreak of war. The value of agricultural implements rose by Rs. 7 lakhs to nearly Rs. 19 lakhs, and of builder's hardware by a lakh of rupees to over Rs. 19 lakhs. Japan increased her exports of implements and tools which were valued at Rs. 10 lakhs as against Rs. 62,000 in 1917-18, and Rs. 60 only in the pre-war year 1913-14. The imports of enamelled ironware decreased by 40 per cent. to Rs. 11 lakhs, mainly owing to the decrease in the imports from Japan. Only 800,000 metal lamps were imported as

against 1,144,000 in 1917-18, and 4,662,000 in the pre-war year. The United States supplied 85 per cent. as against 80 per cent. in the preceding year, and Japan 9 per cent. as against 16 per cent. The value of cutlery imported was Rs. 19 lakhs as against Rs. 16 lakhs in 1917-18. The United Kingdom exported 43 per cent., the United States 32 per cent., Japan 23 per cent. The imports of electroplatedware increased to Rs. 4 lakhs from nearly Rs. 3 lakhs in the preceding year, and the main source of supply was, as usual, the United Kingdom.

Paper and paste-board.—The value of the total imports of paper and pasteboard was Rs. 2,72 lakhs, as against Rs. 2,31 lakhs in the preceding year, and Rs. 1,27 lakhs, the pre-war quinquennium average. There has been a noticeable diversion of trade since the outbreak of war as will be seen from the following table:—

Percentage shares in the total imports of paper and pasteboard.

	Average of five years (1909-10 to 1913-14).	1917-18.	1918-19.
	Per cent.	Per cent.	Per cent.
United Kingdom	57.8	26.8	20.0
Japan	4	25.5	25.6
United States	1.0	8.7	22.0
Norway	3.5	20.0	22.0
Sweden	3.1	13.0	
Germany	17.2
Austria-Hungary	8.6
Other countries	8.4	6.0	4.9
	100	100	100

An examination of the above table shows :—

(1) With the disappearance of Germany and Austria-Hungary from the Indian market, the imports from Japan, the United States and Norway have considerably increased, the most important feature of the year under review being the increase in the share of the United States from 8·7 per cent. in 1917-18 to 22 per cent.

(2) The United Kingdom has considerably reduced her exports to India on account of the war, and her share decreased to 20 per cent. from 58 per cent. in the pre-war period.

Wood pulp was imported to the extent of 2,100 tons as against 3,600 tons in 1917-18. Steps have been taken to develop the bamboo pulp industry on a large scale in India including Burma. One large paper mill company, for example, is proceeding at once to the erection of a mill in Burma, which will turn out 10,000 tons per annum. Hitherto the pulp industry has been confined mainly to the temperate zones, as for example to Scandinavia and Sweden. Such experiments will be watched with interest.

Salt.—The quantity of salt imported from abroad (420,800 tons) was 25 per cent. above that of the preceding year, but 23 per cent. below the pre-war normal. The main feature of the trade was the increase in the imports from Egypt (Port Said). Fifty per cent. of the total quantity imported came from Egypt, as against 36 per cent. in the

preceding year, and only 12 per cent. the pre-war average. The United Kingdom more than doubled her shipments, but the quantity (39,900 tons) was still only one-fourth of the pre-war imports. Aden and Spanish salt was imported in smaller quantities.

Provisions.—There were increases in the imports of farinaceous and patent foods, bacon, hams, cocoa, chocolate, and jams and jellies, but on the other hand, quite noticeable decreases in biscuits, cakes, condensed and preserved milk, and also cheese. The total value of provisions imported amounted to nearly, Rs. 1,94 lakhs, as against Rs. 1,77 lakhs in the preceding year, and Rs. 2,05, lakhs, the pre-war quinquennial average. Had the level of prices of 1917-18 prevailed, the value would have been Rs. 1,79 lakhs or there was an increase of Rs. 15 lakhs due to higher prices. Nearly 32 per cent. of the total value was accounted for by canned and bottled provisions, 26 per cent. by farinaceous and patent foods, and 15 per cent. by condensed or preserved milk. The quantity of canned and bottled provisions imported (4,100 tons) was almost the same as in the preceding year. The increase in farinaceous and patent foods was mainly due to larger arrivals from the Straits Settlements in the form of sago, sagoflour, etc. The quantity of biscuits imported was only one-twelfth of the pre-war quinquennial average. The noticeable feature of this trade was the increase in the share of Japan from 34 to 48 per cent. and the decrease in that of Australia from 52 to 37 per cent.

Motor cars and Motor cycles.—The number of motor cars imported in the year under review was only 400, or less than one-seventh of the number imported in the pre-war year 1913-14. The embargo on the imports of motor cars and motor cycles was removed on 14th December, 1918, and the imports during the last four months of the year (December to March) after the armistice were 344 cars as against only 56 cars in the first eight months. The following table shows the number of cars imported since the pre-war year 1913-14 :—

Number of Motor Cars imported.

	From United Kingdom.	From United States.	From other countries.	Total.
1913-14 (pre-war year)	1,669	868	343	2,880
War average (five years) 1914-15 to 1918-19	537	1,681	99	2,317
1914-15	1,350	510	145	2,005
1915-16	787	2,136	198	3,121
1916-17	489	4,169	120	4,778
1917-18	39	1,222	21	1,282
1918-19	21	368	11	400

Ninety-two per cent. of the total imports came from the United States, as against 95 per cent. in the preceding year, while the United Kingdom sent only 21 cars or 5 per cent. The number of motor cars registered in India at the end of March 1919 was 19,385, while that of motor cycles 8,058. Only 8 motor wagons were imported, as against 15 in the preceding

year, and 76 in the pre-war year. Tyres for motor cars and motor cycles decreased in number to 92,428 from 94,658 in the preceding year, mainly due to the smaller imports from Italy and the United States. The United Kingdom, however, increased her supplies to 60,000 from 44,000.

The above figures as to the motor trading only for the year ended 31st March 1919, is interesting to supplement them with statistics for the period April—September, 1919, which have just officially been published. During the six months mentioned the number of cars imported was 3,202, valued at Rs. 90 lakhs, against only 34 valued at Rs. 1½ lakhs

in the corresponding period of last year, when there was an embargo. Of these 3,200 cars, 3,039 were from the United States, 130 from the United Kingdom, four from Italy and one from France. Bombay imported 1,572. Calcutta, 938; Madras 329; Burma, 229; and Karachi 134.

Other articles.—Of the other articles of import not analysed in this chapter the more important are enumerated below:—

	Annual average of five years 1909-10 to 1913-14.	War average 1914-15 to 1918-19.	1917-18.	1918-19.
	Rs.	Rs.	Rs.	Rs.
Woolen manufactures	1,54,72,000	1,96,93,000	1,90,14,000	2,40,92,000
Woolen manufactures	3,08,38,000	1,81,70,000	2,09,72,000	2,17,42,000

Articles imported by post ..	1,69,59,000	2,77,82,000	3,08,87,000	4,96,85,000

THE EXPORT TRADE.

The value of the exports of Indian merchandise in 1918-19 was Rs. 239 crores (£ 159 millions). This was an increase of Rs. 6 crores (£4 millions) or 2 per cent. over the preceding year, and of Rs. 20 crores (£13 millions) or 9 per cent. over the annual average of the five years immediately preceding the war. The value of the export trade was the highest recorded, with the exception of the two pre-war years 1912-13 and 1913-14. The increase in value was due to a rise in prices as already explained. The following statement shows the value of the export trade since the beginning of this century —

	Rs. (lakhs).
Five yearly averages.	
Average of five years ending 1903-04	121,31
" " " " " 1908-09	161,84
" " " " " 1913-14 (pre-war average)	219,50
" " " " " 1918-19 war average	215,96
Yearly totals.	
Year 1913-14 (pre-war year)	244,20
" 1914-15	177,48
" 1915-16	192,53
" 1916-17	237,07
" 1917-18	233,44
" 1918-19	239,31

The noticeable features of the returns are (1) the large decrease of Rs. 14 crores in the value of foodgrains exported; (2) a decrease to the extent of Rs. 12 crores in the exports of raw cotton; (3) the surprisingly large increase of Rs. 10 crores in the value of jute manufactures exported; (4) the recovery of Rs. 6 crores in last year's low exports of raw jute; and (5) the increases in the value of seeds (Rs. 3 crores), raw and tanned skins (Rs. 3 crores), tanned hides (Rs. 2 crores), raw wool (Re. 1 crore), and oils (Re. 1 crore).

India's six chief exports, in order of importance in 1918-19, were: jute, raw and manufactured; cotton, raw and manufactured; grain, pulse, and flour; hides and skins raw and tanned; tea; and seeds. Raw and manufactured jute was the principal export in the year under review, as was cotton in the preceding year. Manufactured jute by itself was the chief export of the year, reaching the record total of Rs. 52 crores, and exceeding the export of raw and manufactured cotton taken together by Rs. 7 crores. An examination of the trade returns for the past thirty years shows that on seventeen occasions, the chief export was raw and manufactured (chiefly raw) cotton, on seven occasions raw and manufactured jute, and on six occasions food grains.

Exports, Imports, and net Exports of private merchandise during the ten years ending 1918-19.

EXPORTS.

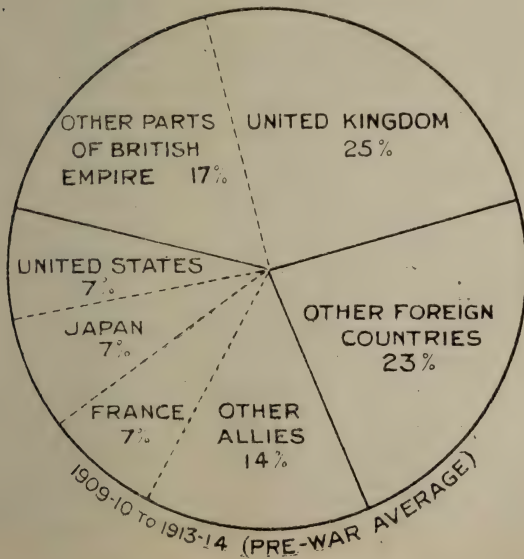

IMPORTS.

NET EXPORTS.

Exports—(Year under review).

The value of the export trade of Bengal increased by Rs. 18 crores or 21 per cent. which was mainly due to the larger exports of raw jute and seeds and also, be it noted, to the increase in the price of manufactured jute. Bombay showed a decrease of Rs. 10 crores, chiefly in raw cotton and wheat, and Sind of Rs. 9 crores in food grains, especially wheat and barley. There was an improvement of Rs. 4 crores in the case of Burma and of Rs. 3 crores in the case of Madras. These figures bring out in a somewhat suggestive way the unique prosperity of Calcutta's export trade during the year ending March 1919.

Jute and Jute Manufactures.—The total value of raw jute exported was Rs. 13 crores and of manufactured jute Rs. 52 crores. The combined value (Rs. 65 crores) was the highest recorded. This represented 27 per cent. of the total value of the export of Indian merchandise as compared with 21 per cent. in 1917-18, and 19 per cent. in the pre-war quinquennium. Jute manufactures alone accounted for 22 per cent. of the total exports of the year as against 9 per cent. in the pre-war quinquennium. The following table shows the values of raw and manufactured jute exported during the last two years and in the pre-war period :—

	Average of five years 1909-10 to 1913-14.	1917-18.	1918-19.
	Rs. (lakhs).	Rs. (lakhs).	Rs. (lakhs).
Jute, raw	22,20	6,45	12,72
„ manufactures.. .. .	20,25	42,84	52,65
Total ..	42,45	49,29	65,37

The value of raw jute exported nearly doubled, while that of jute manufactures was 23 per cent. above that of the preceding year. Bengal accounted for over 99 per cent. of these exports.

Raw Jute.—The total quantity exported was 398,100 tons or 2,229,600 bales of 400 lbs. each. The exports were 43 per cent. above the abnormally low exports of the preceding year, and 48 per cent. below the pre-war normal. During the first eight months of the year the quantity exported showed an increase of no

less than 80 per cent. and amounted to 261,900 tons, as against 146,000 tons in the corresponding period of the previous year. In the later months, December to March, after the armistice there was an increase of only 3 per cent. over the corresponding period of the previous year. The value of the year's exports was Rs. 12,72 lakhs, an increase of 97 per cent. over the preceding year. Had the prices of 1917-18 prevailed, the value would have been Rs. 9,24 lakhs, or there was an increase of Rs. 3,48 lakhs on account of higher prices.

Jute Manufactures.—Jute manufactures were for the second time India's chief export. There was a decrease in the quantity exported but a large increase in value on account of higher prices. The total weight of jute manufactures exported was 681,600 tons, a decrease of 5 per cent. as compared with the preceding year, while the value of these exports increased by 23 per cent. to Rs. 52 crores, a record figure. The appended table shows the details of the different descriptions of jute manufactures exported :—

Exports of Jute Manufactures.

	Average of five years 1909-10 to 1913-14.	1917-18.	1918-19.
	Number of bags exported	339,122,000	758,391,000
Weight „ „ tons.	325,700†	406,900	382,500

Total value of Jute manufactures ..	20,24,87,000	42,84,31,000	52,65,22,000

† Figures of exports during 1913-14. Pre-war average figures are not available.

(a) The exports from Bengal which are included in these figures amounted to 677,100 tons or over 99 per cent. of the total exports.

The United Kingdom took 135 millions of bags, or 23 per cent. of the total number exported as against 303 millions or 40 per cent. in the preceding year. Of the other principal importing countries, France, Italy, Siam, China, Japan, the West Indies, and the Argentine Republic also took less, while there were larger exports

to Australia, New Zealand, Egypt, Indo-China, Peru, and Java. Shipments of gunny cloth to the United Kingdom and the Argentine Republic increased, but the United States, Canada, France, and Australia imported smaller quantities.

The above figures include shipments on Government account which are shown in the following table :—

Shipments on Government account.

		Bags (millions).	Cloth (million yards).
1915-16	297	35
1916-17	385	135
1917-18	391	205
1918-19	221	269
Total	..	1,294	644

The coastwise exports of gunny bags increased in the year under review.

Cotton and Cotton Manufactures.—The value of raw cotton exported during the year was Rs. 31 crores and that of cotton manufactures Rs. 14 crores. The combined value was 19 per cent. below the value of the preceding year, but slightly above the pre-war average. The figures are shown in the following table :—

	Cotton, raw. Crores of Rs.	Cotton manufactures, including twist. Crores of Rs.	TOTAL. Crores of Rs.
Average of five years 1909-10 to 1913-14 (pre-war average).	33	11	44
Average of five years 1914-15 to 1918-19 (war average).	33	12	45
Year 1916-17	36	14	50
„ 1917-18	43	13	56
„ 1918-19	31	14	45

Raw Cotton.—The quantity of raw cotton exported abroad in 1918-19 was only 183,950 tons or 1,030,100 bales of 400 lbs. each. We have to go back to 1900-01 to find such low exports. There was a decrease of 50 per cent. in quantity as compared with the preceding year, and of 57 per cent. as compared with the pre-war quinquennium. Before the war the British Empire had 6 per cent. of this trade, the Allies 69 per cent. of which Japan took 42 per cent. and enemy countries 22 per cent. In the year under review the share of the British Empire was 9 per cent. and the Allies 90 per cent. of which Japan had 76 per cent. Had the prices of 1917-18 prevailed, the value of the exports would have been Rs. 21,47 lakhs, instead of Rs. 30,98 lakhs, or in other words, there was an increase of Rs. 9,51 lakhs due to higher prices. The wholesale price of Broach cotton per candy of 784 lbs. at Bombay was no less than Rs. 711 at the beginning of the year, and rose to Rs. 915 in August. There was a fall in the later months of the year, and the average for the year was Rs. 692 as against Rs. 507 in the preceding year and Rs. 303, the pre-war average. The 1918-19 crop was estimated to yield 3,671,000 bales of

400 lbs. each as against 3,998,000 bales in 1917-18, a decrease of 8 per cent.

Cotton manufactures.—In regard to Indian piece-goods, exports and production were above the pre-war average, but less than in the preceding year. In twist and yarn, however, there was a decrease both as regards exports and production as compared with 1917-18 and also with the pre-war normal.

Cotton yarn.—The production was 615 million lbs., a decrease of 7 per cent. as compared with 1917-18, and of 5 per cent. as compared with the pre-war average. The reduction in exports was much greater than the decrease in production. The total quantity shipped (nearly 64 million lbs.) was 47 per cent. below the preceding year, and 67 per cent. below the pre-war average. Counts 1s to 20s were 60 million lbs. or 95 per cent. of the total. Most of principal consuming countries took less yarn, the remarkable decrease in the case of China being from 102 million lbs. in 1917-18 to 49 million lbs. in the year under review or 52 per cent. This fact may be ascribed to the comparatively cheap Japanese yarn which has for some years established itself in China.

Cotton piece-goods.—The exports of Indian made piece-goods (149 million yards) were 65 per cent. above the pre-war average, but 21 per cent. below the preceding year. The exports of piece-goods compared with the imports were relatively small. The exports, for example, were only 7 per cent. of the imports from Lancashire. The value of the exports, notwithstanding a decrease in quantity, increased from Rs. 5,54 lakhs in 1917-18 to Rs. 6,45 lakhs on account of higher prices. Had the prices of the preceding year prevailed, the value would have been Rs. 4,43 lakhs. There was, therefore, an increase of Rs. 2,02 lakhs due to a higher range of prices. The exports were as follows :—

	Average of five years 1909-10 to 1913-14.	1917-18.	1918-19.
	Yards.	Yards.	Yards.
Grey	47,414,000	76,378,000	52,416,000
White	422,000	2,433,000	3,275,000
Coloured	42,384,000	110,639,000	93,397,000
Total yards ..	90,220,000	189,450,000	149,088,000
Value in Rs. ..	2,08,95,000	5,53,82,000	6,45,26,000

The following table shows the descriptions of cotton goods produced and exported :—

Production in the Indian mills.

Other sorts	12.2	26.6	19.2
Total ..	44.2	78.8	55.7
COLOURED PIECE-GOODS ..	45.0	110.6	93.4
Total piece-goods ..	89.2	189.4	149.1

The production of piece-goods in the year under review was 345 million yards (or 31 per cent.) above the pre-war average, but 163 million yards (or 10 per cent.) less than that of the previous year. Persia, Egypt, and Siam took less, while the Straits, East Africa, and Ceylon took more. The exports to Mesopotamia and Aden were the same as in the previous year.

Seventy-nine per cent. of the total quantity of piece-goods exported was shipped from Bombay, as against 84 per cent. in 1917-18. The share of Madras was 20 per cent. as against 16 per cent. in the previous year. In the pre-war quinquennium Bombay had 71 per cent. of the trade and Madras 27 per cent.

Grain, pulse, and flour.—The main feature of the export trade in foodgrains during the first half of the year was the continued necessity of supplementing the food supply of the United Kingdom and of the Allies in Europe. This explains the very heavy exports of rice in the first part of the year and also the unusually large exports of Burma beans. With the failure of the monsoon in the middle of the year the trade was entirely changed. The Allies were well on

the road to victory, and the prohibition of the exports of foodgrains to conserve the Indian food supply was thus possible without seriously prejudicing the Allies' cause. After November 1918, exports were almost entirely restricted to countries with considerable Indian populations which are accustomed to rely on India for their food supply. The result was that, whereas in the first six months of the year 1,253,000 tons of rice were shipped from India to other countries, an increase of 66 per cent. as compared with the corresponding period of the previous year, the exports during the last six months were only 764,000 tons, a decrease of 35 per cent. as compared with the corresponding date of the previous year. The exports of wheat amounted to 30,000 tons only in the last half of the year, a decrease of 92 per cent. as compared with the same period in the previous year. Shipments of gram, beans, barley, and other foodgrains were also similarly curtailed. The total exports of all foodgrains in the last six months showed a decrease of no less than 53 per cent. as compared with the corresponding period of the previous year.

The details of the exports are shown in the appended table :—

	Average of five years 1909-10 to 1913-14. (pre-war average.)	Average of five years 1914-15 to 1918-19 (war average.)	1917-18.	1918-19.

" flour	55,000	57,100	71,600	39,900
Other—				282,200
Gram	132,000	140,700	327,100	
Beans	158,900	151,000	229,700	78,900
Lentils				29,800
Other sorts				50,600
Barley	226,800	197,900	358,700	226,300
Guar and bajra	41,100	40,800	15,300	5,400
Rice	(a)	27,000	91,000	13,800
Other kinds	49,400	1,600	1,200	700
Total tons	4,410,900	3,141,200	4,513,700	3,247,900
Value Rs.	45,81,11,000	37,41,68,000	53,66,02,000	40,07,13,000

The exports of foodgrains (3,247,900 tons) increased by no less than 28 per cent. as compared with the preceding year, and by 26 per cent. as compared with the pre-war average. The value of these exports was Rs. 40 crores, a decrease of 25 per cent. as compared with the preceding year. Had the level of prices in 1917-18 prevailed, the value would have been Rs. 37 crores. There was thus an increase

of Rs. 3 crores due to higher prices. The statistics given above do not include purchases made by Government on military account and shipped on Government or chartered vessels. In the year under review, the total exports of foodgrains on military account, which are not included in the above figures, were 306,800 tons as against 366,500 tons in the preceding year.

(a) Included with other kinds.

Rice.—The exports of rice abroad in 1918-19 amounted to 2,018,000 tons, 4 per cent. above the preceding year, but 16 per cent. below the pre-war quinquennial average. The value of these exports was Rs. 22.96 lakhs as against Rs. 20.66 lakhs in 1917-18. Burma increased her exports by 112,000 tons or 7 per cent. Her share in the total quantity exports was 80 per cent. as against 77 per cent. in 1917-18. The exports from Bengal more than doubled, but the quantity was still 59 per cent. below the pre-war average. Ship-

ments from the other maritime provinces, e.g., Bombay, Sind, and Madras, decreased. Burma exported coastwise 798,000 tons of rice, an increase of 59 per cent over the preceding year, and of 108 per cent. over the pre-war average, inspite of the severe shortage of tonnage. The exports to Bombay increased by more than 141 per cent. to 370,000 tons and those to Madras (193,800 tons) nearly trebled, while Bengal took 24 per cent. less. The exports of paddy slightly increased.

Wheat.—The quantity of wheat exported in 1918-19 was only 476,100 tons, a decrease of 67 per cent. as compared with the preceding year, and of 64 per cent. as compared with the pre-war normal. The wheat harvest of 1918 was good, but the failure of the monsoon in 1918 considerably reduced the exportable surplus, and the exports, especially in the later months of the year, were very small as is clearly seen from the following table :—

	Pre-war average 1909-10 to 1913-14.	1915-16.	1916-17.	1917-18.	1918-19.
	Tons.	Tons.	Tons.	Tons.	Tons.
April to August ..	797,200	642,900	166,100	897,900	398,700
September to March ..	510,800	10,000	582,800	556,500	77,400
Total ..	1,308,000	652,900	748,900	1,454,400	476,100

The value of the total exports amounted to Rs. 6.75 lakhs as against Rs. 19.00 lakhs in 1917-18. If the prices of the preceding year had prevailed, the value would have been Rs. 6.19 lakhs, or in other words there was an increase of Rs. 56 lakhs due to higher prices. Arrangements were made during the year through the Royal Wheat Commission for considerable purchases of Australian wheat to relieve the famine situation in India and consignments began to arrive in the latter part of the year. Over 55,000 tons of Australian wheat were imported in March, 105,000 tons in April, and 6,900 tons in May 1919.

The shipments of wheat flour on private account were 30,900 tons, as against 71,600 tons in 1917-18, and 55,000 tons in the pre-war quinquennium.

Hides and skins.—The main feature in the year's trade in hides and skins was the further leap upwards in the exports of tanned hides which synchronised with a decrease in raw hides, owing to the prohibition which was in force up to the beginning of April 1919. The quantity of raw hides exported was 19,100 tons. Seventy-four per cent. of these exports was raw cowhides which decreased to 14,200 tons, from 15,900 tons in 1917-18, and 37,200 tons in the pre-war year 1913-14. The decrease in exports is accounted for by the prohibition which existed on certain classes of raw hides until April, 1919, and partly by the great increase in the tanning of cowhides in India for army purposes, and partly by the great scarcity and cost of freight which limited the export of inferior quality of hides. The largest shipments were to the United Kingdom (8,600 tons and to Italy (4,700 tons).

The exports of raw skins were 25,000 tons an increase of 12 per cent. over the previous year. Nearly three-fourths of the total export went to the United States.

Tanned hides were exported to the extent of 25,500 tons, an increase of 39 per cent. as against the preceding year, and of more than 180 per cent. above the pre-war quinquennial average. Almost the entire quantity (99.6 per cent.) was shipped to the United Kingdom.

Tea.—The exports of Indian tea in 1918-19 were 324 million lbs., a decrease of 10 per cent. as compared with the preceding year, but 21 per cent. above the pre-war average. The estimated outturn in India in 1918, based on returns received in this Department, is 381 million lbs. as against 371 million lbs. in 1917. The exports to the United Kingdom (282 million lbs.) were 87 per cent. of the total exports of tea. The shipments were mainly for the Ministry of Food and the War Office.

In addition to the exports by sea about 2,982,000 lbs. of Indian tea were exported across the land frontier, of which 1,752,000 lbs. were green and 1,230,000 lbs. were black. The exports were mainly to Afghanistan and Persia. The imports of tea across the frontier amounted to 5,903,000 lbs. of which 5,814,000 lbs. were black. Nearly 95 per cent. of the imports was from the Shan States. The imports of tea into India by sea from foreign countries increased in the year under review to 11,146,000 lbs. from 9,666,000 lbs. in 1917-18, due chiefly to larger imports of black tea from Ceylon. Foreign tea is blended in Calcutta under bond with Indian tea for export abroad, and in 1918-19, 890,300 lbs. were blended and exported to the United States, Chile, Peru, and Ecuador.

The balance of tea left in the country for consumption, as estimated by deducting net exports (*i. e.*, exports *minus* imports) and stocks left at the end of the year, from the production *plus* stocks from the previous year, was 53 million lbs. in 1918-19 as against 42 million lbs. in the preceding year, and 22 million lbs. in the pre-war year 1913-14.

Oil-seeds.—The principal features of the year were:—(1) a decrease in the exports of groundnuts, copra, sesamum, and castor;

(2) a very noticeable increase in the exports of linseed and rapeseed; and (3) a large increase in the share of the United Kingdom in the total trade. The total quantity exported was 487,700 tons, only one-third of the pre-war quinquennial average. There was, however, an increase of 7 per cent. as compared with the preceding year. The value of these exports increased by 36 per cent. to Rs. 11,22 lakhs. Had the prices of the preceding year prevailed the value would have been Rs. 8,74 lakhs.

The diversion of the trade since the outbreak of war is illustrated by the following statement which shows the percentage shares of the chief consuming countries:—

	Average of five years 1909-10 to 1913-14.	1917-18.	1918-19.
United Kingdom	31	50	73
France	27.7	17	10
Italy	4.1	2	5
Belgium	16.3
Germany	12.2
Straits Settlements	13	2
United States	2.3	4	2
Others	6.4	14	8
	100	100	100

The increase in the share of the United Kingdom was mainly due to larger exports of linseed, castor, and rapeseed, while smaller exports of groundnuts accounted for the decrease in the share of the Straits Settlements. The share of Bombay in the total quantity of seeds exported was 46 per cent., of Bengal nearly 30 per cent. of Sind 19 per cent. and of Madras 5 per cent.

Raw wool.—The quantity of raw wool exported abroad was 47 million lbs. as against 43 million lbs. in the preceding year. These figures relate to wool produced in India and do not include wool brought across the frontier and subsequently exported abroad by sea. Seventy-four per cent. of the total exports went from Bombay, and 26 per cent. from Karachi.

Other articles.—Of the other articles not analysed in this chapter, the more important articles are enumerated below:—

	Average of five years 1909-10 to 1913-14.	1917-18.	1918-19.

(a) Included in others.

Re-exports.—The total value of the exports of foreign merchandise, that is, re-exports, was Rs. 14,55 lakhs, an increase of Rs. 5,43 lakhs or 60 per cent. over the preceding year. The following statement shows the value of the re-exports trade in the last two years as compared with the pre-war quinquennial average:—

Average of five years ending ..		Rg.
1913-14 ..	4,61,88,000	
Year .. 1917-18 ..	9,12,10,000	
„ .. 1918-19 ..	14,55,68,000	

The share of Bombay was 72 per cent. and that of Karachi was 19 per cent. The main features of the year's trade were: (1) the large increase in cotton twist and yarn, and piece-goods; and (2) the increase in raw wool, silk goods, apparel, tea, hardware, and articles by post. The quantity of cotton piece-goods re-exported (114 million yards) was 76 per

cent. above the pre-war average. Asiatic Turkey (Mesopotamia), Persia, Aden, and East Africa considerably increased their imports, while Egypt, Ceylon, and the Straits Settlements took less than in 1917-18. The re-exports of wool, *i.e.*, wool brought across the land frontier and subsequently exported abroad by sea, were 15,662,000 lbs. as against 12,817,000 lbs. in 1917-18, and 8,580,000 lbs. the pre-war average. The entire quantity was shipped to the United Kingdom. Ninety-eight per cent. of the shipments was made from Karachi, and 2 per cent. from Bombay.

The percentage shares of the principal countries in the total re-export trade are given below: the pre-war quinquennial averages are in brackets: the United Kingdom 16 (27); Persia 20 (14); Asiatic Turkey (mainly Mesopotamia) 23 (5); Aden 9 (4); and East Africa 7 (11).

THE DIRECTION OF TRADE.

The main features of the direction of India's trade in the year ended 31st March 1919 were: (1) an increase in the imports from Japan (Rs. 15 crores), and from the United States (Rs. 4 crores) (2) an increase in the exports to the United Kingdom (Rs. 10 crores), to the United States (Rs. 3 crores), and to Asiatic Turkey (mainly Mesopotamia) (Rs. 4 crores); and (3) a decrease in the imports from the United Kingdom (Rs. 5 crores). The following table illustrates the changes that have taken place in the direction of trade in 1918-19, as compared with the previous year and the pre-war quinquennium:—

	IMPORTS.			EXPORTS.			TOTAL TRADE.		
	Pre-war average	1917-18	1918-19	Pre-war average	1917-18	1918-19	Pre-war average	1917-18	1918-19
	Share per cent.	Share per cent.	Share per cent.	Share per cent.	Share per cent.	Share per cent.	Share per cent.	Share per cent.	Share per cent.
United Kingdom ..	63	54	46	25	26	28	40	37	35
British Possessions .	7	10	12	17	27	24	13	20	19
Total British Empire	70	64	58	42	53	52	53	57	54

Total value of trade in thousands of £.	97,231	100,283	112,689	149,411	161,704	169,240	246,642	261,987	281,929
Total value of trade in lakhs of Rs. ..	1,45,85	1,50,42	1,69,03	2,24,12	2,42,56	2,53,86	3,69,97	3,92,98	4,22,89

Total Trade.—The British Empire had 54 per cent. of the total trade, as compared with 53 per cent. in the pre-war period, while the Allies increased their share from 26 per cent. to 34 per cent. The place of enemy countries, which had 11 per cent. of the total trade before the war, has been taken mainly by the Allies (Japan and the United States). A glance at the table will show that the Allies trade increased by as much as 8 per cent., while that

of the British Empire increased by only 1 per cent. and neutrals by 2 per cent.

The Import Trade.—In the import trade the outstanding feature was the decrease in the share of the British Empire from 70 per cent. in the pre-war period to 58 per cent., on account of the decrease in the imports from the United Kingdom which was engaged tooth and nail on the production of munitions of war. The share of other parts of the British Empire

increased and that of the Allies nearly trebled, thanks to Japan and the United States. The share of neutrals remained unchanged. Nearly 9 per cent. of the imports in the pre-war quinquennium came from enemy countries, and their place has been taken by Japan and also by the United States.

The Export Trade—There have been, as is not surprising, noteworthy changes in the direction of the export trade since the outbreak of war. The British Empire which

took only 42 per cent. of the exports in the pre-war period, increased its share to 52 per cent. The share of countries other than those of the British Empire decreased to a corresponding extent (10 per cent.) from 58 to 48 per cent. Enemy countries had nearly 14 per cent. of the exports before the war, chiefly raw materials for their industries, e.g., raw jute, raw cotton, oil seeds, and raw hides and skins. Their place has been taken almost entirely by the British Empire.

The percentage shares of the more important countries in the trade of India in 1918-19, as compared with the previous year and the pre-war quinquennium, are set out below :—

Percentage shares of principal countries in the imports, and exports, and total trade of India.

	IMPORTS.			EXPORTS.			TOTAL TRADE.		
	Pre-war average.	1917-18	1918-19	Pre-war average.	1917-18	1918-19	Pre-war average.	1917-18	1918-19

TOTAL	100	100	100	100	100	100	100	100	100

The main facts that emerge from an examination of the above table in regard to countries other than the United Kingdom are briefly these: (1) the remarkable growth in the trade with Japan and the United States since the outbreak of war, (2) the large increase in the exports to Egypt as a result of shipment "for orders," (3) the increase in the trade with Ceylon, Australia, the Straits Settlements, and Asiatic Turkey (Mesopotamia), and (4) the decrease in the exports to France.

Next to the United Kingdom, Japan held the premier place in the import trade of India, and the second place in the export trade, being surpassed in this respect only by the United States. The value of the imports from Japan exceeded Rs. 33 crores in 1918-19, as against Rs. 18 crores in the preceding year, and Rs. 3½ crores in the pre-war period. Cotton manufactures showed the largest increase, and accounted for nearly 51 per cent. of the imports as against 28 per cent. in the preceding year. The following table shows

the rapid increase in the imports of piece-goods from Japan since the outbreak of war :—

Imports of Cotton piece-goods from Japan.

	Grey (unbleached) yards.	White (bleached) yards.	Coloured, printed or dyed yards.
Average of five years 1909-10 to 1913-14.	2,559,000	48,000	521,000
Year 1914-15	15,265,000	68,000	709,000
“ 1915-16	34,852,000	901,000	3,349,000
“ 1916-17	75,621,000	2,558,000	21,937,000
“ 1917-18	73,278,000	2,602,000	18,676,000
“ 1918-19	206,838,000	10,484,000	20,806,000

Over 238 million yards of piece-goods were imported from Japan in 1918-19, as against 94 million yards in 1917-18 and only 3 million yards, the pre-war average. Other important increases were in apparel, metals, woollen manufactures, hardware, beer, tea-chests, paper and pasteboard, machinery and mill-work, chemicals, especially alum, aluminous sulphates, and carbide of calcium, haberdashery and millinery, and cement, while there were decreases in sugar and camphor. The imports of matches and glass and glassware, although less than those in the preceding year, were much above the pre-war normal. Besides cotton piece-goods, matches, and glass and glassware referred to above, there have been noticeable increases since the outbreak of war in the imports from Japan of paper and pasteboard, chemicals, paints and hardware, tea-chests, woollen goods, beer, electrical appliances, cement, stationery, toys, brushes and brooms, zinc, brass, bronze and similar alloys, wood pulp, and starch and farina. The value of the exports to Japan (Rs. 29 crores) was 14 per cent. below the preceding year, but 75 per cent. above the pre-war average. Raw cotton accounted for 80 per cent. of the value of total exports. There was, however, a decrease of 46 per cent. in the shipments of raw cotton in the year under review. Other important variations were an increase in the

exports of rice, opium, shellac, and tanned skins, and a decrease in pig iron and rapeseed. The value of gunny bags exported increased, but the quantity was less than that of the preceding year.

The total value of the trade with the United States was Rs. 49 crores, an increase of 17 per cent. over 1917-18 and of no less than 131 per cent. over the pre-war average. Imports were valued at Rs. 16 crores, and exports at Rs. 33 crores. Metals (chiefly iron and steel) and mineral oil accounted for 49 per cent. of the import trade. The quantity of iron and steel imported (49,000 tons) was 140 per cent. above the pre-war average, although 12 per cent. below the preceding year. There was a further decrease in the imports of mineral oil from 34 million gallons to 23 million gallons. The imports of hardware, instruments (chiefly electrical), machinery, and provisions increased while cotton piece-goods and especially motor cars decreased. In exports, raw and manufactured jute, raw hides and skins, and shellac accounted for 92 per cent. of the total value as against 86 per cent. in the preceding year. The quantity of gunny cloth exported decreased to 639 million yards, while the value increased to Rs. 20 crores on account of considerably higher prices. Other important variations were a decrease in raw jute, raw hides, shellac, and tea, and an increase in raw skins.

FRONTIER TRADE.

The total value of the frontier trade again increased in the year under review and amounted to Rs. 31 crores, an increase of 10 per cent. over the previous year's record figure of Rs. 28 crores, and of 63 per cent. over the pre-war quinquennial average. The value of this trade is only 6 per cent. of the total value of the sea-borne trade in 1918-19, and the following table shows the total trade, inclusive of both merchandise and treasure :—

Merchandise and Treasure.

	IMPORTS.	EXPORTS.	TOTAL.
	Rs.	Rs.	Rs.
Average of five years 1909-10 to 1913-14 (pre-war average)	10,30,83,000	8,59,28,000	18,90,11,000
Average of five years 1914-15 to 1918-19 (war average) ..	13,38,68,000	11,49,62,000	24,88,30,000
Year 1917-18	14,77,90,000	13,26,43,000	28,04,33,000
“ 1918-19	15,94,37,000	14,87,57,000	30,81,94,000

The registration of the trade, as noted on page 30 of the previous year's review, includes much that is not in reality frontier trade. The trade, for example, of the Shan States (which are part of Burma) should not be treated as trans-frontier trade.

The quantity of raw wool imported across the frontier (nearly 298 million lbs.) was almost the same as in the preceding year.

CUSTOMS REVENUE.

The rates of customs duty on imported articles remained unchanged, as did also the duties on exports, viz., those on jute, rice, and tea. The total gross sea and land customs revenue (excluding salt revenue) reached the record figure of Rs. 18,25 lakhs, an increase of no less than Rs. 8,41 lakhs or 85 per cent. over the pre-war quinquennial average and of Rs. 1,70 lakhs or 10 per cent. over 1917-18. The import duties contributed Rs. 12,57 lakhs or 69 per cent. of the total revenue collected; export duties Rs. 3,69 lakhs or 20 per cent., the excise duty on cotton manufactures Rs. 1,43 lakhs or 8 per cent., and that on motor spirit Rs. 34

lakhs or 2 per cent. Land Customs and Miscellaneous yielded approximately Rs. 22 lakhs or one per cent. This last item includes the cess on the export of indigo (Rs. 48,000) which has been levied since April 1918 with a view to the provision of funds for promoting research in the interests of the indigo industry. The tea cess collected by Government on behalf of the tea industry amounted to Rs. 4½ lakhs in 1918-19. The jute cess, which was introduced in 1912 for the benefit of the Calcutta Improvement Trust, realised Rs. 8 lakhs in the year under review.

SHIPPING.

The net register tonnage of vessels including native craft that entered and cleared with cargoes and in ballast during the year was 10,480,000 tons as against 10,868,000 tons in 1917-18, and 16,216,000 tons, the pre-war quinquennial average. This illustrates the effect of the Great War on shipping so far as India is concerned. Of the total tonnage entered and cleared during 1918-19, steamers constituted 96

per cent. (10,028,000 tons), and sailing vessels (Indian and foreign) only 4 per cent. (452,000 tons). The average tonnage per steamer in the year under review was 1,936 against 1,868 in 1917-18 and 2,582, the pre-war average. Here again is another instance of the effect of war on shipping. The following statement shows the clearances of vessels, with cargoes and in ballast, engaged in overseas trade:—

Tonnage clearances with cargoes and in ballast.

	Average of five years, 1909-10 to 1913-14 (Pre-war period).		Average of five years, 1914-15 to 1918-19 (War period).		1917-18.		1918-19.	
	Tons.	p. c.	Tons.	p. c.	Tons.	p. c.	Tons.	p. c.
British ships (including British Indian)	6,412,000	(79)	4,588,000	(78)	3,990,000	(71)	3,609,000	(69)
Foreign ships	1,688,000	(21)	1,325,000	(22)	1,628,000	(29)	1,617,000	(31)
Total ..	8,100,000	(100)	5,913,000	(100)	5,618,000	(100)	5,226,000	(100)

It will be seen from the above table that the clearances in 1918-19 fell by 35 per cent. as compared with the pre-war quinquennium and by 7 per cent. as compared with the previous year. The share of British ships decreased while that of foreign ships increased. These figures, however, exclude a large number of Government vessels and hired transports.

GOLD AND SILVER (COIN AND BULLION).

A special feature of the year was the large imports of silver on Government account from the United States under the Pittman Act of Congress of 23rd April 1918, the objects of which were, to quote the preamble of the Act, "To conserve the gold supply of the United States; to permit the settlement in silver of trade balances adverse to the United States; to provide silver for subsidiary coinage and for commercial use; to assist foreign governments at war with the enemies of the United States; and for the above purposes to stabilise the price and encourage the production of silver." The Act provided "that the Secretary of the Treasury is hereby authorised from time to time to melt or break up

and to sell as bullion not in excess of three hundred and fifty million standard silver dollars now or hereafter held in the Treasury of the United States." Out of 270 million fine ounces, the equivalent of 350 million dollars in fine silver, the share of India was 200 million fine ounces. Shipments under the Act began to arrive by the end of May 1918, and the total quantity had arrived by July 1919.

In regard to the prohibition on the imports of treasure, the Gold (Import) Act XXII of 1917 for the acquisition by Government of gold imported into British India was in force during the year, and also the Finance Department Notification No. 1571-F., dated the 11th July 1917, which prohibited the import of

silver into India except in the case of (a) current silver coin of the Government of India, (b) silver coin or bullion imported on Government account, and (c) silver coin or bullion imported under license.

Gold.—The imports of gold on private account showed a remarkable decrease in the year under review, and the exports were also less than those of the preceding year. There was actually a net export on private account valued at Rs. 2,48 lakhs (£1,656,000), as against a net import of Rs. 19,94 lakhs (£13,292,000) in 1917-18, and of Rs. 28,86 lakhs (£19,242,000), the pre-war average. These figures take into account the imports and exports of gold bullion into and from Bombay on behalf of the Bank of England. Exports of gold bullion on behalf of the Bank of England were valued at £1,671,000 in 1918-19, as against £2,486,000 in 1917-18. No gold was imported on behalf of the Bank in 1918-19 as against £1,472,000 in 1917-18. These are excluded from the table relating to the Balance of Trade referred to on page 30. Such gold was not in settlement of India's trade balance, but was merely imported, refined, and warehoused in Bombay on behalf of the Bank. On Government account also, there was a net export valued at Rs. 3,08 lakhs (£2,053,000), as against a net import of Rs. 5,24 lakhs (£3,493,000) in 1917-18. The average annual net imports of gold on private and Government account during the five war years ended 1918-19 were nearly Rs. 8 crores (£5 millions) as against Rs. 28 crores (£19 millions), the annual average in the pre-war quinquennium. The

absorption of gold coin and bullion in 1918-19 was Rs. 9,53 lakhs (£6,351,000) as against Rs. 15,33 lakhs (£10,221,000) in the preceding year. During the last quinquennium, that is from 1914-15 to 1918-19, India has absorbed £37 million worth of gold as against £90 millions in the five pre-war years ended 1913-14.

Silver.—The principal feature was, as already noted, the large imports of Pittman Act silver. The price of bar silver per ounce in London on the 2nd April 1918 was 45½*d.* The highest price during the year was 50*d.* on the 28th March 1919. The price on 1st April 1919 was 49 ¹³/₁₆*d.* The total imports of silver on Government account were 237 million ounces, valued at Rs. 68 crores. The value was more than thrice that of the previous year, and 19 times the pre-war average. The principal sources of supply were the United States (Rs. 50 crores), Hongkong* (Rs. 13 crores) China (Rs. 1 crore), and Australia (Rs. 2½ crores). Smaller exports to Asiatic Turkey (Mesopotamia) mainly accounted for the decrease in the exports on Government account from nearly Rs. 2 crores in 1917-18 to Rs. 1 crore in 1918-19. The total net imports of the white metal into India in 1918-19 were 122 per cent. of the world's production as against 26 per cent., the annual average in the pre-war quinquennium. With this increase in demand, there was a decrease in the world's production of silver in the same period by 19 per cent. These astonishing figures speak for themselves and are such as to leave the imagination gasping.

THE BALANCE OF TRADE.

The main features of the trade of the year are set out below :—

India's Balance of Trade.

	Pre-war average. (£1,000)	War average (£1,000)	Preceding year. (£1,000)	Year under review. (£1,000)
(1) Gross exports private merchandise	149,411	149,405	161,703	169,242
(2) Gross imports— " "	97,232	98,534	100,283	112,689
(3) Net exports— " "	52,179	50,871	61,420	56,553
(4) Imports of Treasure and funds (private account)	52,464	27,294	49,830	15,651
(a) Net imports of Gold	19,242	5,204	14,306	15
(b) " " " Silver	4,806	1,992	971	38
(c) " " " Treasure	24,048	7,196	15,277	53
" " " Government				
Securities. (a)	878	454	737	—291
(d) Council Drafts (Net)	27,538	19,644	33,816	15,889
Balance of trade in favour of India		23,577	11,590	40,902
" " " against India	285			

* The shipping documents showed Hongkong as the country of consignment, but it is very probable that practically all the 13 crores were shipped mainly from San Francisco, and possibly to some extent from Shanghai, but were transhipped at Hongkong into a steamer for Calcutta. Hongkong itself is not a silver market.

(a) Including interest.

The main characteristic of the table is the new high record balance of trade in favour of India to the extent of nearly £41 million sterling. It will be noted that the rate of conversion has been taken at Rs. 15 to the £ as Section 11 of the Indian Coinage Act of 1906 (Act III of 1906) is still in force. If, however, we take the average rate of exchange of the year, the favourable trade balance increases to £45 million sterling.

From this unprecedented favourable balance should be deducted £11,000,000 representing rupee credits for the Federal Reserve Board in part payment for American silver. In banking parlance these credits are known as

"Federal Reserve Board credits" or merely "Federal credits." † If these credits are allowed for, the high balance of trade in favour of India is (at the rate of Rs. 15 to the £1) practically the same as the previous record, *viz.*, that for the year ending 31st March 1917. It may, however, be mentioned that the rupee credits given to the Federal Reserve Board added to the net Council remittances do not exhaust the various channels by which trade could remit funds to India through Government. For example, fairly large payments were made to a Bank at Bombay on account of East Africa, and similarly large payments have been made in Bombay on account of the Imperial Bank of Persia.

ABSORPTION OF GOLD (both coin and bullion) IN INDIA.

(In thousands of £ sterling.)

	AVERAGE OF 5 YEARS ENDING							1909-10.
	1878-79.	1883-84.	1888-89.	1893-94.	1898-99.	1903-04.	1908-09.

8. Net absorption (i.e., 5—7) ..	18,127	18,073	20,807	22,806	18,027	12,047	3,585	5,393	10,221
9. Progressive total of additions to stock ..	158,414	185,827	210,767	228,613	184,770	236,046	237,673	242,748	262,770
10. Net progressive absorption ..	151,927	170,000	190,807	213,613	172,029	225,660	229,245	234,638	244,859

Note.—The figures in this table have been revised. The quinquennial average figures are inserted only for comparative purposes. The progressive total of additions to stock (item 9) and net progressive absorption (item 10) are calculated on the annual figures and are not based on these averages. Item 9 is the sum of the yearly figures in item 5 and item 10 the sum of the yearly figures in item 8.

(a) Excludes gold imported and exported on behalf of the Bank of England.

(b) Temporarily discontinued.

COMMERCIAL INTELLIGENCE SYSTEM.

The Commercial Intelligence Department, India, was founded in 1905 under the control of a Director General of Commercial Intelligence. Its primary object was the supply to the public of such information as would stimulate Indian trade development. Since April, 1914, the compilation and issue of official statistics of India have been carried out by the Department of Statistics, India, under the control of a Director of Statistics.

As now constituted the Department serves the purpose of a Central Bureau at which information on subjects of commercial interest is collected and disseminated to the public, and from which replies are posted to enquiries by business men on commercial matters. It is situated at 1, Council House Street, Calcutta, the headquarters of the Director-General. The information collected by the Department and intended for general publication is printed in its weekly official organ, the "Indian Trade Journal." The principal features of the "Journal" are (a) information as to Tariff Changes in the United Kingdom and elsewhere which affect Indian interests, (b) Summaries of the leading features of consular and other trade reports, (c) Abstracts of the proceedings of the various Chambers of Commerce in India, (d) Abstracts of crop reports and forecasts. (e) Government orders, *communiqués* and other notices affecting trade, and (f) anonymous enquiries for securing trade introductions. It also contains analyses of Indian trade statistics.

A Commercial Museum has been permanently organised as a part of the Commercial Intelligence Department with the object of bringing together purchasers and suppliers of Indian manufactures. It thus supplements the existing resources of the Department as a bureau of information, and stimulates the development of the natural resources of the country. The Museum contains samples of such goods of Indian manufacture as have been received for exhibi-

tion together with information as to prices and the names of the manufacturers and commercial agents. The exhibits have been carefully grouped and catalogued. Order books are available in which orders may be registered direct with the manufacturers or their respective commercial agents. An Enquiry Office is attached to the Museum, which is also located at 1, Council House Street, Calcutta, and is open on week days from 10-30 a.m. to 5-30 p.m. and on Saturdays from 10-30 a.m. to 2-30 p.m. *Admission Free.*

Department of Statistics.—This was originally created in 1895 and in 1914 was re-created and re-organised. It is officially under the Department of Commerce and Industry but compiles and publishes reports and returns under the orders of other executive departments.

It is divided into two main divisions, each under a Superintendent. The first division consists of six sections and the second division of four sections.

Section I, the Registry Section, deals with the receipt and issue of letters, pay, pensions, distributions of publications, record and library; Section II deals with Prices, Rate Lists and Freights; Section III with Wage Statistics; Section IV, Judicial, Administrative, Educational and Vital Statistics; Section V. Rail and River Borne Trade; Section VI, Statistics relating to the Inland and Frontier trade of Bengal; Section VII, perhaps the most important section in the whole Department, the Sea-borne Trade section, which compiles the All India Sea-borne Trade Returns including Coasting Trade, Treasure, Shipping, and Customs duties; Section VIII deals with Frontier Trade; Section IX with the Agricultural Returns, Crop Forecasts, Cotton Press Returns, etc; Section X deals with Commercial and Financial Statistics.

Director of Statistics:—G. Findlay Shirras, 1, Council Street, Calcutta.

ADULTERATION OF PRODUCE.

In August 1917 the Department of Commerce and Industry, Government of India, issued a long memorandum to Chambers of Commerce in India on the subject of the adulteration of Indian produce. This memorandum said:—Cotton is still watered; jute is still watered; groundnuts, hides, indigo, oils are freely adulterated; this at least is common knowledge. It is unnecessary to dilate on the loss to Indian trade which this practice of adulteration must involve, but it appears to the Government of India to be specially important at the present time to endeavour to focus attention on the matter. It seems reasonable to suppose that the present war will be followed by a period of keen competition among industrial nations for materials of all descriptions and for products which India should be in a specially favourable position to supply. But it cannot be expected

that India will be able to capture and retain the extended markets which should fall to her share, if steps are not taken to effect a radical improvement in the reputation which, the Government of India fear, some of her products have only too justly merited.

Attitude of Government.—After reviewing the facts concerning the adulteration of wheat, cotton, jute, leather, hemp, and bees' wax the memorandum continued:—It will be seen from the preceding sketch of previous discussions on this subject that the Government of India have been consistently opposed to any attempt to meet the evil by legislative measures. They have held the view that any such measures would be extremely difficult to carry into effect, would seriously hamper trade, and would probably, in any case, prove ineffectual as a practical remedy.

They have maintained the opinion that the proper agency for dealing with these abuses is the trade itself, and that no intervention on the part of Government is desirable. To these views they are still inclined to adhere. At the same time, they would welcome any suggestions on the subject, and would be glad to co-operate, if further discussion should show that any action on their part is at once feasible and desirable. It seems to them, however, more probable that the situation could be most satisfactorily dealt with without any intervention on the part of Government. If the leading exporting firms of any particular commodity in India would arrange with their leading buyers that the latter should insist on freedom from adulteration, an improvement could probably be more readily effected by this means than by any action on the part of Government. This would seem to be the most fruitful line of attack, but it has also been suggested that Chambers of Commerce in India might organise some system of certifying to the purity of products before export. This suggestion seems worthy of consideration.

Adulteration of Ghee.—In the autumn of 1917, considerable feeling was evoked in Calcutta by the practice of adulterating ghee. For instance, a panchayat of Marwaris excommunicated five ghee dealers, in one case two partners were excommunicated for one year and ordered to pay Rs. 1,00,000 towards the purchasing of grazing ground for cattle. In another case a father and son were fined Rs. 25,000 and in other cases the fines ranged from Rs. 500 to Rs. 1,000. Feeling waxed so strong that a deputation asked the Governor to move the Government of India to pass an ordinance, pending legislation, penalising both the adulteration of ghee and the selling or stocking of adulterated ghee. Shortly afterwards an Emergency Bill was introduced, by Sir

S. P. Sinha, in the Bengal Legislative Council, to amend the Calcutta Municipal Act, with special reference to ghee adulteration. Sir Satyendra, in introducing the Bill, said that the existing law had failed to check the practice of adulterating ghee and selling adulterated ghee in Calcutta. In view of the evils resulting from widespread adulteration it was considered necessary that more stringent measures should be taken to provide for the purity of the article and to penalise the manufacture, storage, and sale of ghee that was adulterated. In this Bill a definition for adulteration had been introduced by which ghee must not consist of any article which was not extracted from milk. The penalty imposed under the Bill for offences ranged from a fine of Rs. 200 to Rs. 1,000. The Bill was taken up for consideration after suspending the rules of business and passed.

Burma Ghee Adulteration Act.—In Burma a similar Bill was passed in October, 1917, when the mover of the Bill explained that all that the Bill proposed was to ensure that a purchaser who desires to obtain ghee should be entitled to receive an article which was derived exclusively from milk. If purchaser desired a cheaper substitute, the Bill did not prevent him from obtaining it. It did, however, prevent him from receiving such substitute under the impression he was purchasing ghee. It was not anticipated that the Bill would effect any dislocation of any established trade. It would be necessary for manufacturers and dealers of mixtures which had hitherto been sold under the name of ghee to arrange to sell such mixture under distinctive names in order that the customer might be fully aware he was not purchasing ghee. If such names were speedily adopted, the evils resulting from the sale of these mixtures as ghee would be prevented without any loss or dislocation of industry.

THE CIVIL VETERINARY DEPARTMENT.

To the Civil Veterinary Department, which originated in 1892 as an expansion of the military horse-breeding department, is entrusted the performance or supervision of all official veterinary work in India, other than that of the Army. Its duties fall under the main heads of cattle disease and cattle breeding, horse and mule breeding, and educational work in veterinary colleges.

In 1905 and the following years both the superior and the subordinate establishments were considerably increased; but the strength of the subordinate staff in most provinces was still

far short of the sanctioned establishment, the demand for veterinary graduates being greater than the supply, and the European staff remained small in proportion to the volume of work calling for attention. The post of Inspector-General, Civil Veterinary Department, was abolished with effect from the 1st April 1912, the duties being transferred partly to local Governments and partly to the Agricultural Adviser to the Government of India. Of late years small veterinary departments, modelled on the Civil Veterinary Department, were started in several native states.

INDIAN COTTON DUTIES ACT.

The origin of this fiscal measure dates back to 1894 when the embarrassment caused to the finances of India by the fall in exchange drove the Government of India to the necessity of adopting measures to increase their sources of revenue. Among these measures was the re-imposition of the Customs Tariff which had been in force prior to 1882 subject, however, to this difference that cotton yarns and fabrics, which had formerly been subjected to an import duty, were in 1894, excluded from the list of dutiable articles. This partial re-imposition of import duties had been recommended by the Herschell Commission which, in reporting in 1893 on the currency question, had favoured this method of adding to the revenue as being the least likely to excite opposition. In point of fact, however, this recommendation which was carried into effect in the Indian Tariff Act of March 1894 gave rise to very marked opposition. In support of their policy the Government appealed to the Resolutions passed in 1877 and reaffirmed in 1879 by the House of Commons, the first of which had condemned the levy of import duties on cotton fabrics imported into India as "being contrary to sound commercial policy," while the latter called upon the Government of India to effect "the complete abolition of these duties as being unjust alike to the Indian consumer and to the English producer." It was, however, an open secret that the decision to exclude from the list of dutiable articles cotton yarns and fabrics was not the decision of the Government of India but that of the Secretary of State. It was pertinently pointed out that the volume of trade in cotton goods and yarns then represented nearly one-half of the total imports from abroad, and that the exemption of these important commodities single other important commodities when practically every single other commodity was being subjected to an import duty could not be justified on its merits as a sound fiscal measure, much less when it was an admitted fact that the Budget would still show a deficit.

Excise Duties Imposed.—The opposition to this measure, though it failed to secure its rejection in the Legislative Council, was strong enough to induce the Secretary of State to reconsider the matter. Yielding to the united representations of the Government of India and of Indian public opinion, His Majesty's Government eventually agreed to the re-imposition of import duties on cotton yarns and fabrics provided that it could be shown that such a measure was necessitated by the position of Indian finances, and that it was combined with an Excise duty which would deprive the import tax of any protective character. Accordingly in December 1894, consequent on the further deterioration in the financial position, two bills were introduced in the Legislative Council. The first of these subjected cotton yarns and fabrics to the general import duty of 5 per cent. *ad valorem*. The second imposed an Excise duty on all cotton yarns of 20's and above produced by Mills in British India. In introducing this latter Bill the then Finance Minister, Sir James Westland, was careful to explain that the policy underlying its provisions had

been imposed on the Government of India by the Secretary of State in pursuance of the Resolution of the House of Commons quoted above. The provisions of this particular Bill are of little interest. From the first it was recognised that they were unpractical, Lancashire and Indian spinners disagreed as to the point at which the line should be drawn exempting Indian yarns from the Excise Duty. Practical difficulties were pointed out by Indian spinners as to the impossibility of spinning precisely to a particular count. From the Lancashire point of view it was contended that the Bill offered facilities for evasion while it was admitted that under the system adopted in the Bill, the taxation of Indian and Lancashire products was not being carried out on a similar basis.

Act of 1896.—The Act was in fact doomed to be short-lived, and in December 1895 the Government of India were compelled to re-consider the whole position and to introduce an entirely new measure which became law in January 1896 as the Indian Cotton Duties Act II of 1896. This measure proceeded from two conclusions, namely, that no attempt should be made to obtain any duty from yarns whether imported or locally manufactured, and that an equal rate of duty should be applied to all woven goods whether imported or of Indian origin. With the object of conciliating the opposition, the rate of duty was fixed at $3\frac{1}{2}$ per cent. as opposed to the general rate of Customs duty of 5 per cent. The main provisions of the Act provided that the assessment for the purposes of collecting the Excise duty should be based on returns submitted by the mill-owners; and that provision should be made for a rebate in the case of woven goods exported out of India. No control beyond a requirement that statistical returns should be furnished was attempted in respect of spinning mills. On the other hand certain concessions in the matter of import duty on Mill stores were made by executive order so as to place Indian Mills on a footing more or less equal to their Lancashire competitors.

Criticisms of the Measure.—It is not possible within the limits of the present article to do more than summarise the criticisms with which this measure was received in India. Much of the opposition was based on grounds of a transient character; as for instance that the Indian industry was then in a state of continued depression and that it had been hard hit, particularly in respect of its export trade, by the currency legislation, and by the uncertainty as to the fiscal policy of Government. In some quarters objection was offered to the exemption of yarn, which it was alleged, would place the Indian hand weaving industry at an advantage with the Indian power weaving industry. But the hostility to this measure, as also to the earlier measures already described, clearly proceeded from the feeling that the policy of the Government of India and of the Secretary of State had been dictated by Lancashire, and that the action of Lancashire was due not so much to the fact that there was any real competition between Indian and Manchester goods, but to a desire to handicap the Indian industry

whose progress was already causing uneasiness to Lancashire interests. It was argued that the imports from Lancashire were practically all of the higher counts, which, for climatic and other reasons, Indian mills could not produce; that in any case the advantage to the Indian millowner of the import duty was inconsiderable and was counterbalanced by certain drawbacks, arising from the inferiority of Indian labour, which could not be overcome; and that this advantage, such as it was, could scarcely be said to have a protective character, in view of the higher cost of initial equipment in the case of an Indian mill which has to import its machinery, and of working expenses consequent on the scarcity of skilled labour and on the necessity of importing stores required in the production of cloth. Finally, from the standpoint of the consumer, very severe criticism was directed against the reduction, in favour of imported cotton goods, of the general rate of duty from 5 per cent. to $3\frac{1}{2}$ per cent. on the ground that the effect of the legislation would relieve the richer classes who were consumers of the finer Manchester fabrics and impose new taxation on the poorer classes whose requirements were met by the Indian mills.

New Factors in the Situation.—Since the passing of this measure into law the policy of the Government of India in this respect has frequently been the subject of attack in the press and in the Legislative Councils while it has also formed the subject of continued representations by the industrial interests affected and political organizations. In more recent years the agitation in favour of the abolition of the Excise duties has been revived by the growth in England of a strong body of public opinion in opposition to the policy of Free Trade. Advantage has been taken of this new phase in English economic thought to press on behalf of India the acceptance of a policy of Protection and the removal of the Excise duties is now claimed by the opponents to this measure as a necessary corollary of the application to the British Empire of the principles associated with the name of Mr. Chamberlain. A new factor in the situation which has strengthened the position of those who are in opposition to the Excise duties is to be found in the severe competition which Indian mills have to face in China as well as in India from the Japanese industry. The Japanese market was lost to India in the early years of this century. More recently, however, Japan has entered as a competitor with India into the China market, while within the last few years it has pushed its advantage as against the Indian millowner in the Indian market itself. Again it is claimed that the recent enhancement of the silver duty has materially affected the position of the Indian spinner who relied on the China market. On two occasions within the last five years the question of Excise duties has come prominently to the front as a result of debates in the Viceroy's Council. The official attitude is firmly based on the position

that the Excise duties stand and fall with the import duties. Against such an attitude all arguments based either on the advantages of a Protectionist as opposed to a Free Trade policy or on the handicap to which the present system exposes the Indian millowner can, of course, make no head way. The Government of India are confronted with a heavy recurring loss in their revenues as a result of the abolition of the opium traffic.

Policy of 1917.—The policy of Government towards the Cotton Duties underwent a further development in 1917. In the budget of that year provision was made for interest and sinking fund charges on £ 100 millions, the contribution of India towards the cost of the war. This demanded in addition to the natural increase in the revenues fresh taxation to the extent of £ 3 millions per annum. Amongst the expedients adopted to produce this revenue was the raising of the import duty on cotton goods from $3\frac{1}{2}$ per cent to $7\frac{1}{2}$ per cent, which is the general tariff rate. At the same time the cotton excise duty was fixed to remain at the previous figure of $3\frac{1}{4}$ per cent, thus giving the indigenous industry a slight protection to the extent of 4 per cent. The question of the abolition of the Excise entirely had to be dismissed from consideration in view of the demands upon the exchequer, as it was estimated to produce in 1917-18 £ 320,000. By means of the increase in the tariff on Cotton Duties the Finance Member estimated to produce an additional £ 1 million per annum. The proposal was received with immense satisfaction in India as a step towards the righting of what is almost everywhere regarded as a reverse economic wrong. It aroused very vehement protests in Lancashire where the cotton industry organised its political vote and brought great pressure to bear upon the Secretary of State to withdraw the measure. Mr. Austen Chamberlain, the then Secretary of State for India, stood firm and with the Government at his back refused to budge an inch from the position which he had taken up in supporting the Government of India in this matter. There were anxious moments in the House of Commons when the Labour Party joining with the Irish Nationalists and the Lancashire vote mobilised its forces against the Government especially as the attitude of Mr. Asquith and his following was obscure. In the end Mr. Asquith gave his support to the Government policy on the understanding that this, in common with all other fiscal issues, would be reconsidered at the end of the war. With this support, the Bill was carried through the House of Commons by a large majority. Whatever may be the influence of this slight protective duty in the future it cannot possibly affect the Lancashire industry at the present time. The dominant factor governing the imports of cotton is not its price but freight and prices have scared to such heights that a four per cent. protective duty cannot possibly influence the volume of Lancashire trade whilst these conditions prevail.

THE INDIAN COTTON COMMITTEE.

A resolution issued by the Government of India in September 1917 announced the appointment of a Committee to examine the possibilities of increasing the cultivation of long-stapled cotton in India, of improving existing methods of ginning and marketing cotton, of preventing adulteration, damping and mixing, of improving the accuracy of the cotton forecasts and, generally, of making the statistical information published by Government of greater utility to the cotton trade. The Committee were also directed to submit recommendations in regard to the staff required and the organization necessary for the development of the cultivation of long-stapled cotton in tracts which they considered suitable for that purpose.

Personnel.—The Committee consisted of the following:—Mr. J. MacKenna, C.I.E., I.C.S., Agricultural Adviser to the Government of India, President. Mr. N. N. Wadia, C.I.E., Ex-Chairman, Bombay Mill Owners' Association, Mr. F. Hodgkinson, Member of the Council of the British Cotton Growing Association, Mr. H. F. Ashton, Executive Engineer, Punjab, Mr. G. S. Henderson, Imperial Agriculturist, and Mr. W. Roberts, Principal, Lyallpur Agricultural College, Members. Mr. F. Noyce, I.C.S., Secretary.

The **Report** of the Committee, which was issued in April, 1919, opens with an introductory chapter which gives an outline of the general position in regard to the world's supply of cotton which led to the appointment of the Committee. To this chapter is appended a tabular statement showing the trade and botanical classification of every variety of cotton grown in India with its length of staple and ginning percentage, the tract in which the variety is grown and its estimated area and outturn in a normal season. It is explained that cotton of which the staple is three quarters of an inch or over is regarded as long staple cotton for the purposes of Bombay, whilst, for the purposes of the Lancashire mills, long staple cotton must be a "commercial inch" in length, the actual measurement being somewhat less, and rather over seven-eighths of an inch. The Committee conclude that, so far as separate figures are available, of the 4,728,000 bales of cotton produced by India in a normal season, 726,000 fall within the Lancashire definition of long staple cotton and an additional 478,000 bales within the Bombay definition.

Division of the Report.—The Report proper is divided into two parts, the first of which is devoted to the agricultural and irrigational aspects of the problems with which the Committee dealt and the second to their commercial aspect. The first part is again divided into chapters in which the cotton growing Provinces and Native States are dealt with separately and ends with some general recommendations regarding agricultural work on cotton. The second part contains four chapters only, one on general commercial questions, more especially the question of preventing malpractices in ginning and pressing factories, one on cotton forecasts and statistics, one in which the establish-

ment of an East Indian Cotton Association in Bombay is recommended, and one in which the formation of a Central Cotton Committee to act as a link between the Agricultural Department and the trade is advocated.

Agricultural Problems.—The Report emphasizes that, of the methods by which an improvement in the quality and an increase in the outturn of Indian cotton can be secured, botanical work is the most important and reveals the success of the efforts the Agricultural Department has already made in this direction. In the Punjab, the United Provinces, the Central Provinces, Madras and the Broach, Kumpta-Dharwar and Khandesh tracts of Bombay, it has already evolved strains of cotton superior to the indigenous varieties either in staple, yield or ginning percentage (that is, the percentage of lint to the total outturn of lint and seed) and sometimes in all three. In the Central Provinces, where there were, at the time the Report was written, about 700,000 acres under the short-stapled *roseum* variety, the improvement has been in yield and ginning percentage, in the Punjab where there were 276,000 acres under "Punjab American" cotton in 1917-18, the improvement has been in staple and ginning percentage, whilst, in the Tinnevely tract in Madras with 220,000 acres under the improved variety evolved by the Agricultural Department and known as *Karunganni*, the improvement has been in yield, staple and ginning percentage. It is in these three tracts that the Agricultural Department has achieved its most striking successes in evolving superior strains of cotton. In the Broach and Kumpta-Dharwar tracts, its superior strains have made much less headway, partly owing to the lack of a suitable organisation to push them and partly to the fact that Broach and *Kumpta* cotton are varieties which are possessed of very stable characteristics and it is, therefore, difficult to secure anything in the nature of a recognizable improvement in them. This is also the case in the "Westerns" tract in Madras. The two improved strains which the Agricultural Department has put out in this and the adjacent "Northerns" tract have not proved sufficiently superior to the local cottons to justify their being persevered with. A fresh start has recently been made with two other selections, No. 25 in the case of Westerns and No. 14 in the case of Northerns, and the Committee recommend that these should be given an exhaustive trial. In the Broach tract, where the incursion of the short-stapled cotton known as *goghari* is proving a serious menace to the reputation of Broach cotton, they recommend that the Agricultural Department should endeavour to evolve a type of Broach cotton as superior to *goghari* in staple as is the present Broach cotton when grown pure and superior to it in yield and ginning percentage. They do not consider that the very short-stapled variety of *neglectum* cotton known as *roseum* in the Central Provinces and Khandesh and "Alizah white-flowered cotton" in the United Provinces should represent the end of the Agricultural Department's efforts to improve the indigenous varieties in those tracts and desire that further attempts

should be made to evolve a superior variety of *neglectum* or *inbicum* cotton or a cross between them which can compete successfully with the superior shorter-stapled varieties in the matter of profit to the cultivator. For the Punjab, they recommend further trials with the varieties of American cotton known as 230 F. and 285 F. which are superior in staple, though not at present in yield and ginning percentage, to the 4 F. variety of which the Punjab American crop now almost entirely consists. These recommendations apply to tracts in which much botanical work has already been done, but there are large tracts which have been left practically untouched botanically. Hyderabad, which produces about one-seventh of the cotton grown in India, is one of these. Others are the Cocanada tract in Madras and the Dholleras tract in Bombay. Very little botanical work has been done on the indigenous cottons in the Punjab, on Cambodia in Madras or on the cottons of Burma. The Committee, therefore, recommend that botanical work in these tracts should be taken up at once and in earnest. They also recommend that the important work on cotton breeding, initiated by Mr. Leake at Cawnpore, should be further developed.

An increase in the outturn of cotton can be secured not only by an improvement in the variety grown but also by improvements in agricultural practice. The Report points out that the outturn of cleaned cotton to the acre in India is only 85 pounds, whereas in the United States it is 200 pounds, and that improvements in agricultural practice should very considerably reduce this difference. Detailed recommendations are made for each Province and Native State, the most important improvements advocated being the spread of the practice of sowing in lines and of interculture and the working out of suitable rotations including, wherever possible, heavy yielding leguminous fodder crops.

As regards the organization of the Agricultural Department, the Committee recommend a large increase in the number of seed farms in order to permit of the control of the selection and distribution of pure seed by the Department in the manner best suited to the local conditions of each tract. They consider that the demonstration of the usefulness of improved agricultural implements and of the advantages resulting from the use of manures and from good cultivation should ordinarily be carried out on the lands of selected cultivators, but that, where the establishment of large demonstration farms is considered desirable, an accurate profit and loss account should be maintained. As for the assistance to be given by the Agricultural Department to the cultivator in getting a better price for a superior product, the Committee recommend an extension of the system of auction sales of unginned cotton which have proved so successful in spreading the 4 F. variety of American cotton in the Punjab. They consider, however, that the Agricultural Department should not, in any one case, attempt to deal with more than 60,000 maunds of cotton, which would give it control over sufficient seed for 400,000 acres. After that, the sales should be handed over to other agencies but the Department would still be called upon for advice and assistance in regard

to such matters as grading, classification, and the settlement of disputes. The additions to the staff of the Agricultural Department recommended by the Committee for all these purposes, in addition to nine Botanists, an Entomologist for the United Provinces and an Imperial Mycologist, are one Director of Agriculture for Sind, thirteen Deputy Directors of Agriculture belonging to the Indian Agricultural Service and three Assistant Directors who would be members of the Provincial Agricultural Service. For Native States, the additions proposed are two Directors of Agriculture, two Deputy Directors and one Botanist. Both in British territory and in Native States, the subordinate staff would be increased proportionately.

Irrigational Problems—The possibilities of the extension of the cultivation of long staple cotton under irrigation in the cotton growing Provinces of North India—the Punjab, the North-West Frontier Province, the United Provinces and Sind—are examined in great detail in the Report. The Committee are very emphatically of opinion that Sind holds out greater possibilities than any other part of India for the growth of superior cotton and strongly recommend that the project for constructing a barrage across the Indus at Sukkur, which would ensure a perennial water supply to some 4½ million acres of land in that Province, should be carried out immediately. They estimate that this would mean an area of 660,000 acres under cotton, of which two-thirds should be cotton of longer staple than any at present grown in India and at least 1½ inches in length.

In the Punjab, the Committee anticipate a total of 465,000 acres under American cotton on existing canals in the course of two or three years, an increase of 139,000 acres on the area in 1917, and a further addition of 200,000 acres if three large projects, the Sutlej River Project, the Haveli Project and the Sind Sagar Doab Project, are carried out. Messrs. Wadia and Hodgkinson, however, hold that no irrigation project in the Punjab which may affect the supply of water in the Indus should be undertaken until the Sukkur Barrage Project has been carried out or until a decision that it should be abandoned has been arrived at. In the United Provinces, the Committee consider that the area under the Cawnpore American variety might increase from 2,000 acres to 135,000 acres under the Ganges and Agra Canals, provided a sufficiently high premium for it can be assured. They hold that there are some small possibilities for Punjab American in the North-West Frontier Province, for Cambodia in the east of the Central Provinces and for Cambodia or Upland Georgian on lands which formerly grew poppy in Central India. The cultivation of Cambodia under wells should spread in Madras. A thorough investigation of the possibilities of tube wells and of pump irrigation in the Punjab and the United Provinces is recommended. Broadly speaking, therefore, the extension of irrigation means the cultivation of more American cotton as, in the Peninsula, where the longer stapled indigenous varieties are grown, cotton is not irrigated except in the case of Cambodia under wells in Madras. The only recommendation in the Report in regard to the indigenous varieties under irrigation is that liberal Government loans (*takavi*) should be granted

for the construction of wells in North Gujarat where greatly increased yields have been obtained under such conditions.

Commercial Problems.—The main problem dealt with by the Committee in the second part of the Report is that of securing to the cultivation an adequate price for the pure or superior varieties of cotton grown as the outcome of the recommendations in the first part. With this object, the Committee recommend the establishment in other parts of India of open markets on the Berar system in which the purchaser of cotton should be able to see exactly what he is buying and to pay for it accordingly. The cotton tracts of the Bombay Presidency except Sind, and of the Madras Presidency except the Coconada tract and the Punjab Canal Colonies are considered specially suitable for the establishment of such markets. Other measures proposed are the publication of cotton prices in up-country markets in a way which would enable the cultivator to realise their true significance, an extension of the activities of co-operative sale societies and the standardization of weights on the basis of a cotton maund of 28 pounds, which would prevent the cultivator from being cheated by unscrupulous middlemen. More important than any of these recommendations is the proposal that all ginning and pressing factories should be licensed. The Report states that the malpractices from which the cultivator and the village money lender are responsible are of minor importance compared with those which are carried on in these factories and that it is in them that the bulk of the adulteration, mixing and damping, which have so injuriously affected the reputation of Indian Cotton, takes place. It is, therefore, recommended that all ginning factories to be erected hereafter should conform to the plan for a model factory published with the Report and that all ginning and pressing factories already in existence should be required to conform to the conditions laid down regarding the provision of sufficiently wide platforms for unginced cotton and lint, the paving of press houses and of the compounds of ginning factories, the maintenance of machinery in proper order, the submission of returns, the use of standard weights, the disposal of seed and so on. A preliminary to the issue of licenses would be the assignment to all factories of distinctive numbers and marks, which would enable the cotton dealt with by them to be traced. Licenses would only be issued to factories which conformed to the published plan or were brought up to the standard laid down and would be withdrawn for breach of the conditions mentioned above or on proof of such malpractices as damping, mixing, or adulteration. Complaints would be made by the sufferers and would be investigated by Committees on which the cotton trade would be adequately represented. In order still further to prevent the adulteration or mixing of waste or short staple cotton with long staple cotton, it is recommended that the transport of cotton waste by rail except from one spinning or weaving mill to another or to a port of shipment such as Bombay should be entirely prohibited as well as the transport by sea from one port to another. The transport by rail of cotton either ginned, or unginced, loose or in bales, would also be prohibited except to *bona fide* consumers such

as spinning or weaving mills or to ports for disposal there or shipment outside India. In cases in which this course would involve hardship transport under license is suggested.

Statistical Information.—The most important recommendations in regard to the improvement of cotton forecasts are that measures should be taken to impress upon the primary reporting agencies the meaning of the term 'normal' and its equivalent in annas, that the yield of cotton should invariably be reported in terms of unginced cotton, the necessary conversion into terms of ginned cotton and of the anna estimate into American notation being made in the office of the Provincial Director of Agriculture, that special care should be taken in estimating the outturn of cotton when grown with other crops and that more use should be made of non-official agencies such as large firms, large and small landholders and ginning factories. The Committee consider that a 'twelve-anna' crop should everywhere be regarded as representing a normal crop unless there are special reasons to the contrary. They also recommend that the work of submitting estimates of outturn should everywhere be handed over to the Agricultural Department as soon as possible and that the results obtained on Government farms should be utilized more largely than at present, especially for purposes of comparison with previous years and for ascertaining ginning percentages. They hold that the submission of returns of cotton ginned and pressed by ginning and pressing factories should be made compulsory by legislation, the penalty for failure being the withdrawal of the license of the factory.

Establishment of a Central Cotton Trade Association.—The Committee suggest not only the better organization of the Agricultural Department but also of the Cotton Trade. The way in which this is to be secured is by the establishment of a Central Cotton Trade Association in Bombay, to be known as the East India Cotton Association which, as far as the control of the cotton trade is concerned, will take the place of the seven distinct bodies representing different branches of the trade which were in existence at the time the Report was written and still exist, though the functions of two of the most important of them, the Bombay Cotton Trade Association and the Bombay Cotton Exchange, are at present exercised by the Cotton Contracts Board. It is intended that the East India Cotton Association should be the permanent successor of the latter. Mr. N. N. Wadia, a member of the Committee, was entrusted with the duty of drawing up a suitable scheme for the latter. This he did in consultation with the Directors of the Liverpool Cotton Association and Mr. N. S. Glazebrooke, Ex-Chairman of the Bombay Cotton Trade Association, and the scheme is at present under the consideration of the Government of India.

Establishment of a Central Cotton Committee.—Finally, the Committee make provision for much closer connexion between the Agricultural Department and the Cotton Trade. They point out the evils which have resulted in the past from the ignorance of the Agricultural Department and the trade of what the other was doing. It is proposed that the Central

Cotton Committee to which all connected with cotton, whether agriculturally or commercially, will be able to turn to for advice or assistance, should consist of about twenty members. The nine official members would be the Agricultural Adviser to the Government of India, who would be President, six agricultural experts working on cotton from the six great cotton growing Provinces, the Director General of Commercial Intelligence, and the Director of Statistics. The remaining members, with the exception of a representative of the Co-operative Department, who might be either an official or a non-official, would represent Chambers of Commerce and similar bodies and would also include a representative of Lancashire. The functions of the Committee would be almost entirely advisory but its advice would carry very great weight. It would be of special importance in connexion with legislation proposed on any matters connected with cotton, which would invariably be referred to it, and also in regard to the working of the system of licensing ginning and pressing factories. The penalty of the withdrawal of the license of an offending factory would only be inflicted upon its recommendation. It would assist the Provincial Agricultural Departments in obtaining authoritative valuations of new varieties of cotton and in getting accurate spinning tests carried out. For this purpose a Technologist would be added to its staff. The Committee would work to a large extent through

Provincial and Local Sub-Committees whose constitution would be similar to its own though they would be on a smaller scale. Great stress is laid on the necessity of obtaining a Secretary of first class organizing ability.

Cost of the proposals.—The cost of the additions to the staff of the Agricultural Department proposed by the Committee is estimated at Rs. 14 lakhs per annum. An annual grant of at least Rs. 2 lakhs per annum for the Central Cotton Committee is recommended in addition to this. It is suggested that funds might be provided, if considered desirable, by the imposition of a case of eight annas a bale on all cotton used in the mills in India or exported.

Action taken on the Report.—In a Resolution, dated August 2nd, 1919, the Government of India, whilst with a few exceptions, leaving to the discretion of Local Governments the adoption of the recommendations of the first part of the Report, desired them to lose no time in considering the recommendations in respect of additional appointments in the Agricultural Department. The Government of India stated that they were undertaking a detailed examination of the recommendations in the second part and that precedence would be given to the proposals for the formation of a Central Cotton Committee and to those for licensing ginning and pressing factories.

(For Cotton Cloth Control q. v.).

Banking.

Of the three Presidency Banks the Bank of Bengal which commenced business in the year 1806 is by far the oldest. It was followed by the Bank of Bombay in 1840 and by the Bank of Madras in 1843. A scheme is now under consideration to amalgamate the three Presidency Banks into an Imperial Bank.

To commence with and for some considerable time thereafter Government had a very large interest in all three Banks, holding as they did a large proportion of the share capital and having the right to nominate a number of the Directors. It was decided however in 1876 that this connection should cease and Government holding of shares was accordingly realised in that year and the right to be represented on the Directorates was given up at the same time. Government are still entitled, however, to audit the Banks' accounts at any time if they deem this necessary, to call for any information touching the affairs of the Banks and the production of any documents relative thereto, and may also require the publication of such statements of assets and liabilities at such intervals and in such form and manner as may be thought fit. The Banks' Agreements with Government are usually arranged for a period of ten years at a time and now-a-days provide for the most part for the carrying on at the head offices and branches of the ordinary banking business of Government in India and for the management and conduct in the three Presidency towns of the Government loans. The management of the Government Savings Bank was at one time entrusted to the Bank, but this was handed over to the Post Office in the year 1896.

Paper Currency.

The Banks had the right to issue currency notes until the year 1862; but in that year this privilege was withdrawn and to compensate the Banks for being deprived of this right, Government decided to deposit the whole of their balances at the Presidency towns with the Banks. This practice held good until the year 1876, when the Reserve Treasuries were formed; but since that year Government balances, which are all payable at call, have only been maintained at a figure sufficient to meet the demands of Government and sufficient also to compensate the Banks in part for the work of keeping the accounts. There are signs however that Government intend to adopt a more liberal policy in future in regard to the balances they maintain with the Presidency Banks. There is no definite undertaking on the part of Government to keep any balance with the Banks either at the head offices or branches; but there is a stipulation that in the event of the balance at the head office of each Bank falling below a certain stated figure, which varies in the case of each Bank, Government will pay interest on the deficit.

In order to assist Government in their attempts to encourage the use of currency notes throughout India the Banks have recently undertaken to issue and encash on behalf of

Government universal Currency notes for the public freely at most of their Branches and in consideration of their having undertaken this work Government have, it is understood, agreed to maintain certain minimum balances, at such Branches so long as they are entrusted with this work.

Government Deposits.

The following statement shows the Government deposits with each Bank at various periods during the last 40 years or so:—

General Banking Business.

This is regulated by the Presidency Banks Act, 1876, under which Act all three Banks are now working. The various descriptions of business which the Banks may transact are clearly laid down in Sec. 36 of the Act, and it is expressly provided in Sec. 37 that the Banks shall not transact any kind of banking business other than those sanctioned in Sec. 36. Briefly stated the main classes of business which the Banks may engage in are as follows:—

- (1) Investing of money in any securities of the Government of India or of the United Kingdom of Great Britain and Ireland, the stock or debentures of, or shares in Railways bearing a Government guarantee in respect of interest and the debentures and securities of any Municipal body or Port Trust in India or of the Bombay Improvement Trust and the altering, converting and transposing of such investments.
- (2) Advancing of money against any of the securities specified above or against bullion or other goods which or the

documents of title to which are deposited with or assigned to the Bank as security.

- (3) Advancing of money against accepted bills of Exchange and promissory notes.
- (4) Drawing, discounting, buying and selling of bills of exchange and other negotiable securities payable in India or Ceylon.
- (5) Receiving deposits.
- (6) Receiving securities for safe custody and realisation of interest, &c., from constituents of the Bank.
- (7) Buying and selling of gold and silver, whether coined or uncoined.
- (8) Transacting pecuniary agency business on commission.

The principal restrictions placed on the business of the Banks are as follows :—

- (1) The drawing, discounting, buying and selling of bills of exchange and other negotiable securities is *confined* to bills and securities payable in India and Ceylon.
- (2) Borrowing of money is only permitted in India.
- (3) Loans or advances upon mortgage of in any other manner upon the security

of any immovable property or the documents of title relating thereto is expressly prohibited.

- (4) The amount which may be advanced to any individual or partnership by way of discount or on personal security is limited to an amount prescribed in the Bye-Laws of the Banks, such Bye-Laws having previously been approved by Government.
- (5) Loans or advances cannot be granted for a longer period than six months at a time.
- (6) Discounts cannot be made or advances on personal security be given, unless such discounts or advances carry with them the several responsibilities of at least two persons or firms unconnected with each other in general partnership.

Various representations have been made to Government by the Banks to have certain of these restrictions withdrawn, particularly those referred to under Nos. 1 and 2, which latter effectually prevent the Banks from doing anything in the nature of exchange business and from having access to the London money market for borrowing purposes. The Government of India were prepared to meet the Banks wishes in the above connection to a great extent in the year 1903; but the Secretary of State did not approve of the Government proposals, and they were finally negated in 1906.

Government Deposits.

The proportions which Government deposits have borne from time to time to the total Capital Reserve and deposit of the three Banks are shown below :—

In Lakhs of Rupees.

—	1 Capital.	2 Reserve.	3 Government deposits.	4 Other deposits.	Proportion of Government deposits to 1, 2, 3 & 4.
31st December.					
1891	350	97	297	1412	13·7 per cent.
1896	350	158	299	1292	14·2 "
1901	360	213	340	1463	14·3 "
1906	360	279	307	2745	8·3 "
1907	360	294	335	2811	8·8 "

1917	375	363	771	6771	9·3 "
1918	375	340	864	5097	12·9 "

The Banks have also the management of the debt of a number of the Municipalities, Port Trusts and Improvement Trusts throughout India.

Government policy in regard to the disposal of their surplus treasury balances in India has been strongly criticised at various times during the last thirty years or so, and it has been argued that the high rates of interest which are so common a feature in India when the crops come to be marketed are to a very large extent due to Government action in withdrawing money from the market when it is most needed and locking it up in the Reserve Treasuries. This question was considered at some length by the Royal Commission on Indian Finance and Currency *q. v.* which arrived at the conclusion that the present methods of dealing with the balances were open to criticism. The Commission further stated that the most obvious remedy would be to close the Reserve Treasuries and place the whole of the Government balances in the Presidency towns with the Presidency Banks; but their final recommendation in this connection was that Govern-

ment should make loans from their balances to the Presidency Banks—such loans to be within the absolute discretion of Government and to be granted only on good security and for short periods. It is not known how far the Government of India are prepared to accept the Commission's recommendation in this respect.

The question of the establishment of a State Bank was considered at some length by the Commission and a considerable mass of evidence was taken on this point. The opinions offered were however very conflicting, and although a draft scheme for such a Bank was drawn up by two of the Members of the Commission, the Commission as a whole finally came to the conclusion that they were not in a position to make recommendations one way or the other on the question of a State Bank. The whole question will no doubt receive full consideration after the war.

Recent Progress.

The following statements shew the progress made by the three Banks within recent years :—
In Lakhs of Rupees.

Chandpore, Serajunge and Bombay (Agency).

Bombay—

Byculla, Mandvi and Sandhurst Road, Ahmedabad, Ahmedabad City (Sub Branch), Akola, Amraoti, Broach, Hyderabad (Sind), Indore, Jalgaon, Karachi, Poona, Quetta, Rajkot, Sholapur, Sukkur and Surat.

BANK OF MADRAS.

Alleppy, Bangalore, Bellary, Bimlipatam, Calicut, Coconada, Cochin, Coimbatore, Colombo, Guntur, Madura, Mangalore, Masulipatam, Negapatam, Ootacamund, Salem, Tellicherry Trichinopoly, Trivandrum and Tuticorin.

Out Stations.

Bezwada, Erode, Narsapur, Rajahmundry and Vizianagram.

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the Continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far each Bank has secured deposits in India but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

TOTAL DEPOSITS OF ALL EXCHANGE BANKS
SECURED IN INDIA.
In Lakhs of Rupees.

1895	1030

1917	5337

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most

part by Branches outside of India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the expert finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated 31st December 1917 of the undernoted Banks will give some idea of this.

LIABILITY ON BILLS OF EXCHANGE RE-DISCOUNTED AND STILL CURRENT.

	£
Chartered, Bank of India Australia and China.	3,942,000
Eastern Bank, Ld.	569,000
Hongkong and Shanghai Banking Corporation.	5,475,000
Mercantile Bank of India, Ld.	2,245,000
National Bank of India, Ld.	2,838,000
	<u>15,069,000</u>

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The following is a statement of the position of the various Exchange Banks carrying on business in India as at 31st December 1918.

In Thousands of £.

	Capital.	Reserve.	Deposits.	Cash and Investment.
Chartered Bank of India Austria & China.	1200	2000	33777	9499
Comptoir National D' Escompte de Paris.	8000	1740	80908	12756
Eastern Bank, Ld.	600	90	5784	2312
Hongkong & Shanghai Banking	1500	3600	34117	11436
Imperial Bank of Persia	650	320	1789	4760
International Banking Corpn.	650	1162	11958	4198
Mercantile Bank of India	562	700	12370	3710
National Bank of India, Ld.	1000	1350	27517	7953
National Bank of South Africa	2965	1050	40321	13461
Russo Asiatic Bank (1915)	4745	2500	48200	11260
Yokohama Specie Bank	4200	2765	54617	25603
Sumitomo Bank	2250	450	26998	6625
Bank of Taiwan	2500	653	42807	12855

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

- (1) Proceeds of import bills as they mature.
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver bullion.
- (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was

of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

The public have for the time being lost much of their confidence in this class of Bank and deposits to a very large extent have been withdrawn and it is feared that a large portion of the money has gone back into hoards. This is very unfortunate as many of the Banks, particularly the older established concerns, have always been recognised as being conducted on safe and prudent lines.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets :—

In Lakhs of Rupees.

	Capital.	Reserve.	Deposits.	Cash and Investments.
Allahabad Bank, Ld.	30	41	724	222
Alliance Bank of Simla, Ld.	88	50	1272	557
Bank of Baroda, Ld.	20	11	204	74
Bank of India, Ld.	50	13	675	237
Bank of Mysore, Ld.	10	3	74	27
Central Bank of India, Ld.	33	11	773	403
Madras Bank, Ld.	10	2	29	10
Karachi Bank, Ld.	2	..	7	1
National Financing and Commission Corporation, Ld.	10	1	63	27
Oudh Commercial Bank, Ld.	5	3	7	1
Punjab National Bank, Ld.	16	13	223	109
Tata Industrial Bank, Ld.	75	583	235

The principal Banks which have gone into liquidation during the last three or four years are given below along with a Statement of their Capital Reserve and deposits as at the date of the latest available Balance Sheets :—

In Lakhs of Rupees.

	Capital.	Reserve.	Deposits.
Bank of Upper India (1912)	10	9	191

Russo-Asiatic Bank	64, Old Broad St., E. C. 2.
International Banking Corporation	36, Bishop's Gate, E. C. 2.

NATIVE PRIVATE BANKERS AND SHROFFS.

Native private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct, and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A Shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondie broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondie usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to

meet out of their own money, and it is at this point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, *viz.*, (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shewn that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or $1\frac{1}{2}\%$, is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their head Offices for the most part in Bikanir and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Each Presidency Bank fixes its own Bank rate, and the current rate of each Bank determines to a great extent the rates for all important classes of business within the Bank's sphere of influence. The rates in the three Presidencies are not always uniform, but it seldom happens that a difference of more than 1% exists, more particularly as regards Bombay and Bengal, which seem to be in closer touch with each other than appears to be the case with Madras.

The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate; but this does not always apply and in the monsoon months, when the Bank rate is sometimes nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shews the average Bank rate of each Bank since 1881:—

Year.	Bank of Bombay.			Bank of Bengal.			Bank of Madras.		
	1st Half-year.	2nd Half-year.	Yearly average.	1st Half-year.	2nd Half-year.	Yearly average.	1st Half-year.	2nd Half-year.	Yearly average.

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, and Karachi, and of these the first two are by far the most important. The members at these places consist of the Presidency Banks, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Presidency Bank at each of the places mentioned and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members

and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below:—

Total amount of Cheques Cleared Annually.

In lakhs of Rupees.

—	Calcutta.	Bombay.	Madras.	Karachi.	Total.

Agriculture.

As crops depend on the existence of plant food and moisture in the soil so the character of the agriculture of a country depends largely on its soil and climate. It is true that geographical situation, the character of the people and other considerations have their influence which is not inconsiderable, but the limitations imposed by the nature of the soil and above all by the climate tend to the production of a certain class of agriculture under a certain given set of conditions.

The climate of India, while varying to some extent in degree, in most respects is remarkably similar in character throughout the country. The main factors in common are the monsoon, the dry winter and early summer months, and the intense heat from March till October. These have the effect of dividing the year into two agricultural seasons, the *Kharif* or Monsoon and the *Rabi* or Winter Season each bearing its own distinctive crops. From early June till October abundant rains fall over the greater part of the continent while the winter months are generally dry although North-Western India benefits from showers in December and January. The distribution of the rainfall throughout the year, which is of considerable importance to agriculture, is none too favourable, but is not quite so bad as is often represented. The rainfall is greatest at what would otherwise be the hottest time of the year, *viz.*, mid-summer and when it is most needed. It should be remembered that in a hot country intermittent showers are practically valueless as evaporation is very rapid. The distribution of rainfall such as is common in England, for example, would be of little use to Indian soils.

Soil.—For the purpose of soil classification India may be conveniently divided into two main areas in (1) The Indo-Gangetic plains, (2) Central and Southern India. The physical features of these two divisions are essentially different. The Indo-Gangetic plains (including the Punjab, Sind, the United Provinces, Bengal, Bihar and Assam) form large level stretches of alluvium of great depth. The top soil varies in texture from sand to clay, the greater part being a light loam, porous in texture, easily worked, and naturally fertile. The great depth of the alluvium tends to keep down the soil temperature. Central and Southern India on the other hand consist of hills and valleys. The higher uplands are too hot and too near the rock to be suitable for agriculture which is mainly practised in the valleys where the soil is deeper and cooler and moisture more plentiful. The main difference between the soils of the two tracts is in texture and while the greater part of the land in Northern India is porous and easily cultivated, and moist near to the surface large stretches in Southern and Central India consist of an intractable soil called the Deccan trap, sticky in the rains, hard and crumbly in the dry weather and holding its moisture at lower levels.

Agricultural Capital and Equipment.—India is a country of small holdings and the vast majority of the people cultivate patches varying in size from one to eight acres. Large holdings are practically unknown, and are mainly

confined to European planters. Farming is carried on with a minimum of capital, there being practically no outlay on fencing, buildings, or implements. The accumulation of capital is prohibited by the occurrence of famine and the high rate of interest and extravagance of expenditure in marriage celebrations. The organization of co-operative credit which has been taken in hand by Government and which has already proved successful in many provinces will undoubtedly lead to an increase in Agricultural capital.

Equipment.—For power the ryat depends chiefly on cattle which, as a rule, are light and active but possess little hauling power. The necessary till for crops is brought about by frequency of ploughings, the result being that the soil is seldom tilled as it should be. This is not due in any way to want of knowledge on the part of the people but through want of proper equipment. The Indian Agriculturist, as a rule, possesses an intimate knowledge of the essentials of his own business, and fails through lack of ways and means.

Implements are made of wood although ploughs are usually tipped with iron points and there is a great similarity in their shape and general design. The levelling beam is used throughout the greater part of the country in preference to the harrow and roller; and throughout Northern India the plough and the levelling beam are the only implements possessed by the ordinary cultivator.

In the heavier soils of the Deccan trap a cultivating implement consisting of a single blade, resembling in shape a Dutch hoe, is much used. Seed drills and drill hoes are in use in parts of Bombay and Madras but throughout the greater part of the country the seed is either broadcasted or ploughed in. Hand implements consist of various sizes of hoes, the best known of which are the *kodal* or spade with a blade set at an angle towards the labourer who does not use his feet in digging, and the *khurpi* or small hand hoe. Of harvesting machinery there is none, grain is separated either by treading out with oxen or beating out by hand, and winnowing by the agency of the wind.

Cultivation.—Cultivation at its best is distinctly good but in the greater part of the country it has plenty of room for improvement. As in any other country success in agriculture varies greatly with the character of the people, depending largely as it does on thrift and industry. In most places considering the large population cultivation is none too good. Agriculture suffers through lack of organization and equipment. Owing to the necessity of protection against thieves, in most parts the people live in villages, many of them at considerable distances from their land. Again, holdings, small though they are, have been sub-divided without any regard for convenience. Preparatory tillage generally consists of repeated ploughings, followed as seed time approaches by harrowings with the levelling beam. The *Rabi* crops generally receive a more thorough cultivation than the *Kharif*, a finer seed bed being necessary owing to the dryness of the growing season. Manure is

AGRICULTURAL PRODUCE.

The following table shows the area under the principal crops, in British India, and their territorial distribution, for 1917-18. The cropped area is always greater than the area of cultivated land, owing to double cropping. The figures represent acres:—

Province.	Rice.	Wheat.	Barley.	Other Food Grains and Pulses.	Total Food Grains and Pulses.	Oilseeds.	Sugar.	Cotton.	Jute.	Total cropped Area.	Net cropped Area after deducting Area cropped more than once.

generally applied to *Kharif* crops. Seeding is either done broadcast or by drilling behind a wooden plough or drill. Thinning and spacing are not nearly so well done as they might be, and intercultivation is generally too superficial. Harvesting is done by sickle where the crops are cut whole, and there is little waste involved. On the whole the methods of the ryats if carried out thoroughly would be quite satisfactory, but it is doubtful if this could be done with the number of cattle at his disposal.

Irrigation is necessary over the greater part of the country owing to insufficient rainfall and the vagaries of the monsoon. Canal irrigation has been greatly extended over the Punjab, Sind, United Provinces and Madras through Government canals which, in addition to securing the crops over existing cultivated land have converted large desert tracts into fertile areas. The Punjab and parts of the United Provinces are naturally well suited to canal irrigation owing to the frequency of their rivers. The water is generally taken off at a point a little distance from where the rivers leave the hills and is conducted to the arid plains below. The main canal splits up into diverging branches, which again subdivide up into distributaries from which the village channels receive their supplies. Water rates are levied on the matured areas of crops, Government thus bearing a part of the loss in case of failure. Much of the land is supplied by what is termed flow irrigation, *i.e.*, the land is directly commanded by the canal water, but a great deal has to be lifted from one to three feet the canal running in such cases below the level of the land. Rates for lift irrigation are, of course, lower than those for flow.

Irrigation canals are generally classed into (1) perennial and (2) inundation canals. Perennial canals, which give supplies in all seasons generally have their headworks near the hills, thus commanding a great range of country. Farther from the hills, owing to the very gradual slope of the land and the lowness of the rivers in the cold weather, perennial irrigation is difficult and inundation canals are resorted to. These canals only give irrigation when the rivers are high. As a rule, in Northern India they begin to flow when the rivers rise owing to the melting of the snow on the hills in May and dry up in September.

Irrigation from Wells.—About one-quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has, however, greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

Tank irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) and distributed during the drier seasons of the year. The system of distribution is the same as that by canal.

Manures.—Feeding of animals for slaughter being practically unknown in India, the amount of farm yard manure generally available in other countries from this source

thus does not exist. This is partially if not entirely made up for by the large numbers required for tillage and the amount of cows and buffaloes kept for milk. Unfortunately fuel is very scarce and a greater part of the dung of animals has to be used for burning. Most of the trash from crops is used up for the same purpose and the net return of organic matter to the soil is thus insignificant. In some parts cakes of oil seed are used as manures for valuable crops like tea and sugarcane but in the greater part of the country the only manure applied is the balance of farm yard manure available after fuel supplies have been satisfied. Farm yard manure is particularly effective and its value is thoroughly appreciated but the people have much to learn in the way of storage of bulky manures and the conservation of urine.

Rice.—A reference to the crop statistics shows that rice is the most extensively grown crop in India, although it preponderates in the wetter parts of the country, *viz.*, in Bengal, Bihar and Burma and Madras. The crop requires for its proper maturing a moist climate with well assured rainfall. The cultivated varieties are numerous, differing greatly in quality and in suitability for various conditions of soil and climate, and the people possess an intimate acquaintance with those grown in their own localities. The better qualities are sown in seed beds and transplanted in the monsoon. Broadcasted rice is grown generally in lowlying areas and is sown before the monsoon as it must make a good start before the floods arrive. Deep water rices grow quickly and to a great height and are generally able to keep pace with the rise in water level.

For transplanted rice the soil is generally prepared after the arrival of the monsoon and is worked in a puddle before the seedlings are transplanted. The land is laid out into small areas with raised partitions to regulate the distribution of the water supply. The seedlings are planted in small bunches containing from 4 to 6 plants each and are simply dibbled into the mud at distances of 6 to 12 inches apart. Where available, irrigation water is given at frequent intervals and the fields are kept more or less under water until the crop begins to show signs of ripening.

Wheat.—Wheat is grown widely throughout Northern India as a winter crop, the United Provinces and the Punjab supplying about two-thirds of the total area, and probably three quarters of the total outturn in India. The majority of the varieties grown belong to the Species *Triticum Vulgare*, Indian wheats are generally white, red and amber coloured and are mostly classed as soft from a commercial point of view. The grains are generally plump and well filled but the samples are spoiled through mixtures of various qualities. Indian wheat is generally adulterated to some extent with barley and largely with dirt from the threshing floor and although there is a good demand in England and the Continent for the surplus produce, prices compare unfavourably with those obtained for Canadian and Australian produce. The crop is generally grown after a summer fallow and, except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon.

Rains in January and February are generally beneficial but an excess of rainfall in these months usually produces rust with a diminution of the yield. On irrigated land 2 to 4 waterings are generally given. The crop is generally harvested in March and April and the threshing and winnowing go on up till the end of May. In good years the surplus crop is bought up at once by exporters and no time is lost in putting it on the European market as other supplies are at that time of year scarce. In years of famines the local price is generally sufficiently high to restrict exports.

The Millets.—These constitute one of the most important group of crops in the country, supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality, height and suitability to various climatic and soil conditions. Perhaps the two best known varieties are Jowar (*Sorghum vulgare*) tall growing with a large open head, and Bajra with a close rat-tail head and thin stem. Generally speaking the jowars require better land than the bajras and the distribution of the two crops follows the quality of the soil. Neither for jowar nor bajra is manure applied and cultivation is not so thorough as for wheat, the main objective being to produce a fine seed bed. As the crop is generally sown in the beginning of the monsoon it requires to be thoroughly weeded. It is often grown mixed with the summer pulses and other crops in which case thin seedlings are resorted to. The subsidiary crops are harvested as they ripen either before the millet is harvested or afterwards. The produce is consumed in the country.

Pulses are commonly grown throughout India and the grain forms one of the chief foods of the people. Most kinds do well but are subject to failure or shortage of yield owing to a variety of circumstances among which rain at the time of flowering appears to be one of the most important. They are therefore more suitable to grow as mixed crops especially with cereals, and are generally grown as such. Being deep rooted and practically independent of a Nitrogen supply in the soil they withstand drought and form a good alternation in a cereal rotation. The chief crops under this heading are gram, mash, mung and moth, gram forming the main winter pulse crop while the others are grown in the summer. The pulses grow best on land which has had a good deep cultivation. A fine seed bed is not necessary. For gram especially the soil should be loose and well aerated. Indian pulses are not largely exported although they are used to some extent in Europe as food for dairy cows.

Cotton is one of the chief exports from India and the crop is widely grown in the drier parts of the country. The lint from Indian cotton is generally speaking short and coarse in fibre and unsuited for English mills. Japan and the Continent are the chief buyers. The crop is grown during the summer months and requires a deep moist soil and light rainfall for its proper growth. Rain immediately after sowing or during the flowering period is injurious. In parts of Central and Southern India the seed is sown in lines and the crop receives careful attention but over

Northern India it is sown broadcast (often mixed with other crops) and from the date of sowing till the time of picking is practically left to itself. The average yield, which does not amount to more than 400 lbs. per acre of seed cotton, could doubtless be greatly increased by better cultivation.

Sugarcane.—Although India is not naturally suited for sugarcane growing, some 3½ millions of acres are annually sown. The crop is mostly grown in the submontane tracts of Northern India. The common varieties are thin and hard, yielding a low percentage of juice of fair quality. In India white sugar is not made by the grower who simply boils down the juice and does not remove the molasses. The product called gur or gul is generally sold and consumed as such, although in some parts a certain amount of sugar-making is carried on. The profits, however, are small owing to the cheapness of imported sugar and there appears to be some danger to the crop if the present taste for gur were to die out. The question has been taken up by Government and a cane-breeding station has been recently opened near Coimbatore in Madras with the object of raising seedling canes and otherwise improving the supply of cane sets. A number of sugar factories of a modern type have been set up within recent years in Bihar and the United Provinces. The chief difficulty seems to be the obtaining of a sufficiently large supply of canes to offset the heavy capital charges of the undertakings.

Oilseeds.—The crops classified under this heading are chiefly sesamum, linseed and the cruciferous oilseeds (rape, mustard, etc.). Although oilseeds are subject to great fluctuation in price and the crops themselves are more or less precarious by nature—they cover an immense area.

Linseed requires a deep and moist soil and is thus grown chiefly in Bengal, Bihar, the United Provinces and the Central Provinces. The crop is grown for seed and not for fibre and the common varieties are of a much shorter habit of growth than those of Europe. The yield varies greatly from practically nothing up to 500 or 600 lbs. of seed per acre. The seed is mainly exported whole but a certain amount of oil pressing is done in the country.

Sesamum (or Gingelly) is grown mostly in Peninsular India as an autumn or winter crop. The seed is mostly exported.

The Cruciferous Oilseeds form an important group of crops in Northern India where they grow freely and attain a fair state of development. They are one of the most useful crops in the rotation. They occupy the land for a few months only, and owing to their dense growth leave the soil clean and in good condition after their removal. A number of varieties are grown differing from each other in habit of growth, time of ripening, and size and quality of seed. The best known are rape, toria, and sarson. The crop is generally sown in September or early October and harvested from December to February. The crop is subject to the attack of aphid (green fly) at the time of flowering and sometimes suffers considerable damage from this pest. The seed

‡ Return of production discontinued.

is very subject to injury from rain and great care has to be taken in the drying. The produce is largely exported whole, but there is a considerable amount of local oil-pressing—the cake being in demand for feeding purposes.

Jute.—Two varieties of the plant are cultivated as a crop, *Capsularis* and *Olitorius*. Jute growing is confined almost entirely to Eastern Bengal, in the Ganges-Brahmaputra Delta. The crop requires a rich moist soil. Owing to river inundation this part of India receives a considerable alluvial deposit every year and the land is thus able to sustain this exhausting crop without manure. The crop is rather delicate when young, but once established requires no attention, and grows to a great height (10 to 11 feet). Before ripening the crop is cut and rotted in water. After about three weeks submersion the fibre is removed by washing and beating. At the present high range of prices jute may be considered to be the best paying crop in India.

Tobacco is grown here and there all over the country chiefly, however, in Bengal, Bihar, Bombay, Madras and Burma. Of two varieties cultivated *Nicotiana Tabacum* is by far the most common. Maximum crops are obtained on deep and moist alluvium soils and a high standard of cultivation including liberal manuring is necessary. The crop is only suited to small holdings where labour is plentiful as the attention necessary for its proper cultivation is very great. The seed is germinated in seed beds and the young plants are transplanted when a few inches high, great care being taken to shield them from the sun. The crop is very carefully weeded and hoed. It is topped after attaining a height of, say, 2 ft., and all suckers are removed. The crop ripens from February onwards and is cut just before the leaves are become brittle. By varying the degree of fermentation of the leaves different qualities of tobacco are obtained. A black tobacco is

required for *Hooka* smoking and this is the most common product but a certain amount of yellow leaf is grown for cigar making.

Live-stock consist mainly of cattle, buffaloes and goats, horses not being used for agricultural purposes. Sheep are of secondary importance.

For draught purposes cattle are in more general use than buffaloes especially in the drier parts of the country, but buffaloes are very largely used in the low lying rice tracts. For dairying buffaloes are perhaps more profitable than cows as they give richer milk and more of it: but they require more feeding. The poorer people depend largely on the milk of goats of which there are an enormous number throughout India. Cattle breeding is carried on mainly in the non-cultivated tracts in Central and Southern India, Southern Punjab and Rajputana, where distinct breeds with definite characters have been preserved. The best known draught breeds are Hansi, Nellore, Amritmehal, Gujrat, Malvi, and the finest milk cows are the Sahiwal (Punjab) Gir (Kathiawar) and Sind. Owing, however, to the encroachment of cultivation on the grazing areas well-bred cattle are becoming scarce, and some of the breeds are threatened with extinction. Efforts to improve the quality of the cattle in the non-breeding districts by the use of selected bulls have hitherto been frustrated by the promiscuous breeding which goes on in the villages.

Dairying.—Though little noticed, dairying forms a very large indigenous industry throughout India. The best known products are native butter (ghee) and cheese (dahi). During recent years a considerable trade in tinned butter has sprung up in Gujrat (Bombay Presidency). While pure ghee and milk can be procured in the villages, in the towns dairy products can scarcely be bought unadulterated.

AGRICULTURAL PROGRESS.

The Agricultural Departments in India as they now exist may be said to be a creation of the last ten years. There have for a good many years past been experimental farms, under official control, in various parts of India, but they were in the past to a large extent in the hands of amateurs, and the work of the Agricultural Departments, with which all the major provinces were provided by about 1884, was in the main confined to the simplification of revenue settlement procedure and the improvement of the land records system. In 1901 the appointment of an Inspector-General of Agriculture gave the Imperial Agricultural Department for the first time an expert head, and placed the Government of India in a position to enlarge the scope of their own operations and to co-ordinate the work being done on independent lines in various provinces. At that time the staff attached to the Government of India consisted of an Agricultural Chemist and a Cryptogamic Botanist, while trained Deputy Directors of Agriculture were employed only in Madras, Bombay and the United Province and the Economic Botanist in Madras was the only provincial representative of the more specialised type of appointments. Within the next few years a number of new appointments

were made, so that by March 1905 there were altogether 20 sanctioned agricultural posts; of these seven were Imperial, including a number of specialist appointments attached to the Agricultural Research Institute and College, the establishment of which at Pusa in Bengal was sanctioned in 1903. A great impetus was given to the development of the Agricultural Departments by the decision of the Government of India in 1905 to set apart a sum of 20 lakhs (£133,000) a year for the development of agricultural experiment, research, demonstration and instruction. Their ultimate aim, as then expressed, was the establishment of an experimental farm in each large tract of country in which the agricultural conditions are approximately homogeneous, to be supplemented by numerous small demonstration farms; the creation of an agricultural college teaching up to a three years' course in each of the larger provinces; and the provision of an expert staff in connection with these colleges for purposes of research as well as education. The eventual cost, it was recognised, would largely exceed 20 lakhs a year. The Pusa Research Institute and College alone has cost nearly £150,000 including equipment. A part of the cost was met from a sum of £30,000 placed at Lord Curzon's dis-

* A British District in Central India.

posal by Mr. Phipps, an American visitor to India. This example of munificence has recently been followed by Sir Sassoon J. David, who placed the sum of £53,300 at the disposal of the Government of Bombay for the establishment of vernacular agricultural schools and the improvement of agricultural methods, in commemoration of the visit of Their Imperial Majesties to India.

Record of Progress.

At the beginning of 1912 there were over 40 posts in the Indian Agricultural Service, besides that of Inspector-General, which was abolished at the end of the year 1911-12, the rapid advance of the provincial departments having rendered its continuance unnecessary. The officers serving directly under the Government of India included the Director of the Pusa Institute, who was also Principal of the Agricultural College, a cotton specialist, two mycologists, three entomologists, two agricultural chemists, and an economic botanist. Some of these were supernumerary officers undergoing training. The provincial agricultural departments vary in strength. Generally speaking, each of the larger provinces has at least a Deputy-Director of Agriculture (most provinces have two), an Agricultural Chemist, and an Economic Botanist. In several provinces the principalship of the Agricultural College is a separate appointment and among the remaining officers are a fibre expert in Eastern Bengal and Assam, and a "scientific officer for planting industries in Southern India" in Madras. The Government of Madras have also a mycologist and an entomologist of their own. The posts so far referred to have hitherto necessarily been filled almost exclusively by the appointment of trained specialists from the United Kingdom. There are also in the various provinces a considerable number of locally appointed Assistant Professors (in the Agricultural Colleges), Assistant Agriculturists and Entomologists, Agricultural Inspectors, Superintendents of Farms, etc., and subordinate officers. It is an essential part of the scheme adopted that facilities for the best agricultural training shall be made available in India, in order that the country may become self-supporting, so far as possible, in regard to the scientific development of agricultural methods on lines suited to local conditions. Provincial agricultural colleges, which are also research stations, have within the last few years been established in Madras, Bombay, Bengal, the United Provinces, the Punjab and the Central Provinces. The Central College at Pusa is intended to provide for more advanced training, and gives also short practical courses in subjects not at present taught in the provincial colleges. The Provincial Directors of Agriculture have so far been selected from the ranks of the Indian Civil Service, and they still in some provinces have other functions besides the supervision of the Agricultural Department: but in all the larger provinces except the United Provinces the appointment of Director of Agriculture has since 1905 been separated from that of Director of Land Records.

Machinery.

The rapid extension in India in recent years of the use of machinery in connection with agriculture and irrigation has created a de-

mand for expert assistance to meet which Agricultural Engineers have since the end of the period under review been appointed in Bombay and the United Provinces to advise cultivators as to engines, pumps, threshing machinery, etc. An important advance in the direction of bringing the provincial agricultural departments more closely into touch with one another was made in 1905 by the creation of the Board of Agriculture. The Board, which includes the Imperial and provincial experts, meets annually to discuss the programme of agricultural work, and agricultural questions generally, and makes recommendations which are submitted to the Government of India for consideration.

Work of the Departments.

The work of the Agricultural Department has two main aspects. On the one hand, by experiment and research, improved methods or crops are developed, or the means of combating a pest are worked out; on the other hand, ascertained improvements must be demonstrated and introduced as far as possible into the practice of the Indian cultivator. There is an essential difference, between agricultural departments in the East and in the West in that, whereas the latter have arisen to meet the spontaneous demands of the cultivators of the soil, the former are entirely the creation of a government anxious to give all the assistance it can to its agricultural subjects. The demand for improved agriculture has not in India, except in special cases, come from the cultivator, and it is necessary for the Department to put forth every effort, first to ascertain the needs of the cultivators and then to demonstrate how they can most effectively be met. It is only a few years since work on modern lines was commenced by the reorganised agricultural departments, and, in the first place, a great deal of spade work had to be performed.

Cotton.

Cotton from the first received much of the attention of the new departments. Very striking results have already been achieved, and more particularly with Cambodia and other exotic varieties. The second line of improvement is the separation and selection of indigenous varieties. In Madras the efforts of the Agricultural Department have resulted in the spread of the local improved variety called *Karungany* in the Tinnevely District and white-seeded Tellapathi cotton in Kurnool both of these varieties having been selected from among the mixtures ordinarily grown in the districts. A system of seed distribution was gradually built up, and now, after five or six years' work, there is a vast area under *Karungany*. The Department supplies pure seed to contract seed growers and buys the seed-cotton from these men, gins it, and arranges the distribution of seed through village depots. In Bombay, two have been selected as the best out of many hybrids and pure line cottons bred and tried for many years on the Surat farm. They give a distinct advantage both in quantity and quality over the ordinary local cotton, and promise to sell at rates 5 per cent. higher. In another part of the province arrangements are being made to distribute on a large scale seed of another improved form, which can be grown, it is estimated, over 1,300,000 acres. In the Southern Maratha Country, Broach

* Includes the area irrigated at both harvests.

† Includes 35,900 acres for which details are not available.

cotton, introduced by the Department, is gaining favour. There is said to be scope for 250,000 acres, and the increased profit to the cultivator is estimated at £1 or more per acre. In the Central Provinces also, two indigenous varieties have been selected. In the United Provinces seed of a superior variety is being distributed. **Wheat** also has been the subject of prolonged experiments. One of the first results of the investigations carried out at Pusa, was the demonstration of the fact that varieties with milling and baking qualities similar to those of the best wheats on the English market could be grown to perfection in Bihar. By the application of modern methods of selection and hybridisation these high grain qualities were successfully combined with high yielding power, rust-resistance, and strong straw.

Another crop with which considerable success has been attained is **Ground-nut**, the cultivation of which had at the beginning of the decade fallen off, owing partly to the prevalence of a fungoid disease and partly to deficient rainfall. Exotic varieties with a better yield have been introduced in Bombay, and in Burma cultivation has advanced with extraordinary rapidity.

A Press note issued by the Government of Bombay in 1917 details the result of investigations with reference to the value of ground-nut cake as a relatively cheap article of food. It states that with the introduction of certain improvements in the method of oil expression a cake can be obtained, which conforms to a definite standard of purity. This standard is reached without any serious financial outlay on the part of the oil mill owner and with his existing machinery. This standard article has been called *nutramine* both for the sake of simplification of description, and also to indicate its origin and nutritive value. By the improved process, all objections to the ground-nut as an article of food are removed and having obtained a good flour, the possibilities of utilizing it are almost unlimited.

TEN YEARS' PROGRESS.

In 1915, Mr. James Mackenna, I.C.S., Director of Agriculture in Burma, published a brochure in which he reviewed the progress in Agriculture in India in the last ten years. In this, reviewing the effects of the work of the new Agricultural Departments, he said:—

The Agricultural Departments are now regarded as an integral and important part of the administration. The few European and Indian workers of 1905—158 in all—now number 866. Their labours are concentrated and co-ordinated: they now work on general schemes of development. Farms and demonstration plots, formerly scattered and disconnected, have increased from 35 to 374, and work on them is concentrated on the main problems, and not dissipated as used to be the case over a number of subsidiary and unimportant enquiries.

“As a result the Department can claim credit for a great advance in general agricultural practice. Cultural and manurial problems have in many cases been solved. Local machines have been improved and adapted, or better implements introduced. Real and substantial work has been done on the improvement of such important crops as wheat, cotton, rice, sugarcane and tobacco. The general principles of

The preparation of nutramine biscuits has so far been attended with success and everyone who has sampled them has expressed satisfaction. Bread made with nutramine flour alone is apt to be heavy unless eggs are used as recommended in the previous paper. Using a mixture of nutramine and wheat flour in the ratio of 1 to 4 good results are obtained for both bread and biscuits. On the whole such a mixture is preferable, although very palatable biscuits can be made from nutramine alone.

Another success of marked importance achieved by the efforts of the provincial agricultural departments is the introduction of **agricultural implements and machinery** suited to the conditions of different provinces. Information and assistance in regard to the choice of implements suitable for various conditions has, under present circumstances, to be interpreted and brought home to Indian cultivators by a more direct agency than business firms, and the agricultural departments have therefore to do a good deal of this work. They have succeeded already in introducing various kinds of implements in different parts of the country. Every assistance is given in the use and repair of implements recommended. Up to the present, the departments perform to a certain extent the functions of dealers in implements, but it is becoming difficult to control the work as the area covered by the introductions is gradually becoming large, and a need for the development of co-operative societies is felt. In Bombay, the Department has introduced ploughs of various patterns and is selling a larger number each year. In some provinces iron ploughs are becoming very popular. The possibilities of improved harrows, cultivators, and clod-crushers are also receiving attention.

Cotton Staples:—A small commission, under the chairmanship of Mr. J. MacKenna, I. C. S., is now taking evidence in India on the general question of improving the staple and marketing of the Indian cotton crop.

crop improvement have naturally been dealt with first; but given more men and more money all the crops of India will be taken up.

“Money spent on agriculture is a good investment, but material results are difficult to gauge. Many factors have to be considered. A whole industry threatened by destruction may be saved by the discovery and application of preventive and protective methods. The treatment of the palm industry and areca-nut industry of Madras and the protection of the potato crop of Patna are illustrations of this kind. Again, there are the direct gains following the introduction of new or improved crops, implements, well-boring and improved methods of cultivation. We may, at a conservative estimate, claim that the increase to the value of the agricultural products of India as a result of the labours of its Agricultural Departments is already about 3½ crores of rupees annually, or over £2,300,000. This is the result of only ten years' work, and it must be remembered that every year will show a progressive increase. On the debit side we have an annual expenditure on agriculture which has risen from Rs. 8,81,124 or £58,742 in 1904-05 to Rs. 51,30,652 or £342,043 in 1913-14.”

(b) Includes 342,173 acres in the Agra Province for which details are not available.

The following is a summary of the various **crop forecasts** relating to the season 1918-19 issued by the Department of Statistics, India, up to June 1919:—

Crop.	Tracts comprised in the figures and percentage of total Indian crop represented by them.	Estimated Area.	Per cent. of preceding year (100=final figure of preceding year).	Estimated outturn.	Per cent. of preceding year (100=final figure of preceding year.)
		Acres.			
Sugarcane	U. P., Punjab, Bihar and Orissa, Bengal, Madras, Bombay and Sind*, Assam, N.-W. F. Province and C. P., and Berar (99·1 per cent. of total sugarcane area of British India).	2,820,000	100	2,337,000 tons.	71
Sesamum	U. P., C. P. and Berar, Madras, Bombay and Sind*, Bengal, Bihar and Orissa, Punjab, Ajmer-Merwara and Hyderabad (76 per cent. of the total Sesamum area of British India).	3,501,000	82	258,000 tons.	68
Cotton	All cotton-growing tracts	20,497,000	81	3,671,000 bales.	92
Indigo	All indigo-growing tracts	300,700	42	44,100 cwts.	50
Groundnut	Madras, Bombay* and Burma (99·2 per cent. of total groundnut area of British India).	1,312,000	68	499,000 tons.	45
Rice	Bengal, Bihar and Orissa, Madras, Burma, U. P., Assam, C. P. and Berar, Bombay, Sind*, and Coorg. (99 per cent. of total rice area of British India).	75,864,000	95	23,822,000 tons.	66
Jute †	Bengal, Bihar and Orissa, and Assam (100 per cent. of the total Jute area in India).	2,497,214	91·3	7,009,060 bales.	78·4
Rape and Mustard.	U. P., Bengal, Punjab, Bihar and Orissa, Assam, Bombay and Sind*, N.-W. Frontier and Hyderabad. (98·6 per cent. of total rape and mustard area in British India).	4,833,000	68	758,000 tons.	66
Linseed	C. P. and Berar, U. P., Bihar and Orissa, Bengal, Bombay* Punjab and Hyderabad (98·9) per cent. of total linseed area in British India).	1,972,000	52	229,000	45
Wheat	Punjab, *U. P., C. P., and Berar,* Bombay and Sind*, Bihar and Orissa, N.-W. F. Province, Bengal, Delhi, Ajmer-Merwara, Central India, Hyderabad, Rajputana and Mysore (98·6 per cent. of total wheat area in India).	23,566,000	66	7,407,000 tons.	75

* Including Indian States.

† Issued by the Director of Agriculture, Bengal,

Meteorology.

The meteorology of India like that of other countries is largely a result of its geographical position. The great land area of Asia to the northward and the enormous sea expanse of the Indian Ocean to the southward are determining factors in settling its principal meteorological features. When the Northern Hemisphere is turned away from the sun, in the northern winter, Central Asia becomes an area of intense cold. The meteorological conditions of the temperate zone are pushed southward and we have over the northern provinces of India the westerly winds and eastward moving cyclonic storms of temperate regions, while, when the Northern Hemisphere is turned towards the sun, Southern Asia becomes a super-heated region drawing towards it an immense current of air which carries with it the enormous volume of water vapour which it has picked up in the course of its long passage over the wide expanse of the Indian Ocean, so that at one season of the year parts of India are deluged with rain and at another persistent dry weather prevails.

Monsoons.—The all-important fact in the meteorology of India is the alternation of the seasons known as the summer and winter monsoons. During the winter monsoon the winds are of continental origin and hence, dry, fine weather, clear skies, low humidity and little air movement are the characteristic features of this season. The summer rains cease in the provinces of the North-West Frontier Province and the Punjab about the middle of September after which cool westerly and northerly winds set in over that area and the weather becomes fresh and pleasant. These fine weather conditions extend slowly eastward and southward so that by the middle of October, they embrace all parts of the country except the southern half of the Peninsula, and by the end of the year have extended to the whole of the Indian land and sea area, the rains withdrawing to the Equatorial Belt. Thus the characteristics of the cold weather from October to February over India are:—Westerly winds of the temperate zone over the extreme north of India; to the south of these the north-east winds of the winter monsoon or perhaps more properly the north-east Trades and a gradually extending area of fine weather which, as the season progresses, finally embraces the whole Indian land and sea area. Two exceptions to these fine weather conditions exist during this period, *viz.*, the Madras coast and the north-west of India. In the former region the north-east winds which set in over the Bay of Bengal in October coalesce with the damp winds of the retreating summer monsoon, which current curves round over the Bay of Bengal, and, blowing directly on to the Madras coast gives to that region the wettest and most disturbed weather of the whole year, for while the total rainfall for the four months June to September, *i.e.*, the summer monsoon, at the Madras Observatory amounts to 15.36 inches the total rainfall for the three months October to December amounts to 29.48 inches. The other region in which the weather is unsettled, during this period of generally settled conditions, is North-west India. This region during January, February and part of March is traversed by

a succession of shallow storms from the westward. The number and character of these storms vary very largely from year to year and in some years no storms at all are recorded. In normal years, however, in Northern India periods of fine weather alternate with periods of disturbed weather (occurring during the passage of these storms) and light to moderate and even heavy rain occurs. In the case of Peshawar the total rainfall for the four months, December to March, amounts to 5.26 inches while the total fall for the four months, June to September, is 4.78 inches, showing that the rainfall of the winter is, absolutely, greater in this region than that of the summer monsoon. These two periods of subsidiary "rains" are of the greatest economic importance. The fall in Madras is, as shown above, of considerable actual amount, while that of North-west India though small in absolute amount is of the greatest consequence as on it largely depend the grain and wheat crops of Northern India.

Spring Months.—March to May and part of June form a period of rapid continuous increase of temperature and decrease of barometric pressure throughout India. During this period there occurs a steady transference northward of the area of greatest heat. In March the maximum temperatures, slightly exceeding 100°, occur in the Deccan; in April the area of maximum temperature, between 100° and 105°, lies over the south of the Central Provinces and Gujarat; in May maximum temperatures, varying between 105° and 110°, prevail over the greater part of the interior of the country while in June the highest mean maximum temperatures exceeding 110° occur in the Indus Valley near Jacobabad. Temperatures exceeding 120° have been recorded over a wide area including Sind, Rajputana; the West and South Punjab and the west of the United Provinces, but the highest temperature hitherto recorded is 126° registered at Jacobabad on June 12th, 1897. During this period of rising temperature and diminishing barometric pressure, great alterations take place in the air movements over India, including the disappearance of the north-east winds of the winter monsoon, and the air circulation over India and its adjacent seas, becomes a local circulation, characterised by strong hot winds down the river valleys of Northern India and increasing land and sea winds in the coast regions. These land and sea winds, as they become stronger and more extensive, initiate large contrasts of temperature and humidity which result in the production of violent local storms. These take the forms of dust storms in the dry plains of Northern India and of thunder and hailstorms in regions where there is inter-action between damp sea winds and dry winds from the interior. These storms are frequently accompanied with winds of excessive force, heavy hail and torrential rain and are on that account very destructive.

By the time the area of greatest heat has been established over North-west India, in the last week of May or first of June, India has become the seat of low barometric pressures relatively to the adjacent seas and the whole character of the weather changes. During

the hot weather period, discussed above, the winds and weather are mainly determined by local conditions. Between the Equator and Lat. 30° or 35° south the wind circulation is that of the south-east trades, that is to say from about Lat. 30° - 35° south a wind from south-east blows over the surface of the sea up to about the equator. Here the air rises into the upper strata to flow back again at a considerable elevation to the Southern Tropic or beyond. To the north of this circulation, i.e., between the Equator and Lat. 20° to 25° North, there exists a light unsteady circulation, the remains of the north-east trades, that is to say about Lat. 20° North there is a north-east wind which blows southward till it reaches the thermal equator where side by side with the south-east Trades mentioned above, the air rises into the upper strata of the atmosphere. Still further to the northward and in the immediate neighbourhood of land there are the circulations due to the land and sea breezes which are attributable to the difference in the heating effect of the sun's rays over land and sea. It is now necessary to trace the changes which occur and lead up to the establishment of the south-west monsoon period. The sun at this time is progressing slowly northward towards the northern Tropic. Hence the thermal equator is also progressing northward and with it the area of ascent of the south-east trades circulation. Thus the south-east trade winds cross the equator and advance further and further northward, as the thermal equator and area of ascent follows the sun in its northern progress. At the same time the temperature over India increases rapidly and barometric pressure diminishes, owing to the air rising and being transferred to neighbouring cooler regions—more especially the sea areas. Thus we have the southern Trades circulation extending northward and the local land and sea circulation extending southward until about the beginning of June the light unsteady interfering circulation over the Arabian Sea finally breaks up, the immense circulation of the south-east Trades, with its cool, moisture laden winds rushes forward, becomes linked on to the local circulation proceeding between the Indian land area and the adjacent seas and India is invaded by oceanic conditions—the **south-west monsoon** proper. This is the most important season of the year as upon it depends the prosperity of at least five-sixths of the people of India.

When this current is fully established a continuous air movement extends over the Indian Ocean, the Indian seas and the Indian land area from Lat. 30° S. to Lat. 30° N. the southern half being the south-east trades and the northern half the south-west monsoon. The most important fact about it is that it is a continuous horizontal air movement passing over an extensive oceanic area where steady evaporation is constantly in progress so that where the current enters the Indian seas and flows over the Indian land it is highly charged with aqueous vapours.

The Current enters the Indian seas quite at the commencement of June and in the course of the succeeding two weeks spreads over the Arabian Sea and Bay of Bengal up to their

extreme northern limits. It advances over India from these two seas. The Arabian sea current blows on to the west coast and sweeping over the Western Ghats prevails more or less exclusively over the Peninsula, Central India, Rajputana and north Bombay. The Bay of Bengal current blows directly up the Bay. One portion is directed towards Burma, East Bengal and Assam while another portion curves to south at the head of the Bay and over Bengal, and then meeting with the barrier of the Himalayas curves still further and blows as a south-easterly and easterly wind right up the Gangetic plain. The south-west monsoon continues for three and a half to four months, viz., from the beginning of June to the middle or end of September. During its prevalence more or less general though far from continuous rain prevails throughout India the principal features of the rainfall distribution being as follows. The greater portion of the Arabian Sea current, the total volume of which is probably three times as great as that of the Bengal current, blows directly on to the west coast districts. Here it meets an almost continuous hill range, is forced into ascent and gives heavy rain alike to the coast districts and to the hilly range, the total averaging about 100 inches most of which falls in four months. The current after parting with most of its moisture advances across the Peninsula giving occasional uncertain rain to the Deccan and passes out into the Bay where it coalesces with the local current. The northern portion of the current blowing across the Gujarat, Kathiawar and Sind coasts gives a certain amount of rain to the coast districts and frequent showers to the Aravalli Hill range but very little to Western Rajputana, and passing onward gives moderate to heavy rain in the Eastern Punjab, Eastern Rajputana and the North-west Himalayas. In this region the current meets and mixes with the monsoon current from the Bay.

The monsoon current over the southern half of the Bay of Bengal blows from south-west and is thus directed towards the Tenasserim hills and up the valley of the Irrawady to which it gives very heavy to heavy rain. That portion of this current which advances sufficiently far northward to blow over Bengal and Assam gives very heavy rain to the low-lying districts of East Bengal and immediately thereafter coming under the influence of the Assam Hills is forced upwards and gives excessive rain (perhaps the heaviest in the world) to the southern face of these hills. The remaining portion of the Bay current advances from the southward over Bengal, is then deflected westward by the barrier of the Himalayas and gives general rain over the Gangetic plain and almost daily rain over the lower ranges of the Himalayas from Sikhim to Kashmir.

To the south of this easterly wind of the Bay current and to the north of the westerly wind of the Arabian Sea current there exists a debatable area running roughly from Hissar in the Punjab through Agra, Allahabad and part of Chota Nagpur to Orissa, where neither current of the monsoon prevails. In this area the rainfall is uncertain and would probably

be light, but that the storms from the Bay of Bengal exhibit a marked tendency to advance along this track and to give it heavy falls of occasional rain.

The Total Rainfall of the monsoon period (June to September) is 100 inches over part of the west coast, the amount diminishes eastward, is below 20 inches over a large part of the centre and east of the Peninsula and is only 5 inches in South Madras; it is over 100 inches on the Tenasserim and South Burma coast and decreases to 20 inches in Upper Burma; it is over 100 in the north Assam Valley and diminishes steadily westward and is only 5 inches in the Indus Valley.

The month to month distribution for the whole of India is:—

May	2·6	inches
June	8·3	„
July	11·9	„
August	10·5	„
September	7·2	„
October	3·2	„

Cyclonic storms and cyclones are an almost invariable feature of the monsoon period. In the Arabian Sea they ordinarily form at the commencement and end of the season, viz., May and November, but in the Bay they form a constantly recurring feature of the monsoon season. The following gives the total number of storms recorded during the period 1877 to 1901 and shows the monthly distribution:—

	Jan.	Feb.	Mar.	Apl.	May	June
Bay of Bengal	1	4	13	28
	July	Aug.	Sep.	Oct.	Nov.	Dec.
Bay of Bengal	41	36	45	34	22	8
	Jan.	Feb.	Mar.	Apl.	May	June
Arabian Sea	2	15	

	July	Aug.	Sep.	Oct.	Nov.	Dec.
Arabian Sea	2	..	1	1	5	..

The preceding paragraphs give an account of the normal procession of the seasons throughout India during the year, but it must be remembered, that every year produces **variations from the normal**, and that in some years these variations are very large. This is more particularly the case with the discontinuous element rainfall. The most important variations in this element which may occur are:—

- (1) Delay in the commencement of the rains over a large part of the country, this being most frequent in North Bombay and North-west India.
- (2) A prolonged break in July or August or both.
- (3) Early termination of the rains, which may occur in any part of the country.
- (4) The determination throughout the monsoon period of more rain than usual to one part and less than usual to another part of the country. Examples of this occur every year.

About the middle of September fine and fresh weather begins to appear in the extreme north-west of India. This area of fine weather and dry winds extends eastward and southward, the area of rainy weather at the same time contracting till by the end of October the rainy area has retreated to Madras and the south of the Peninsula and by the end of December has disappeared from the Indian region, fine clear weather prevailing throughout. This procession with the numerous variations and modifications which are inseparable from meteorological conditions repeats itself year after year.

(For monsoon of 1919, see page 304).

MONSOON OF 1919.

Though the conditions which initially obtained about the end of May were by no means promising the progress of the monsoon during the year was on the whole normal. The rainfall gathered on the plains of India from June to October was 42·5 inches against the normal fall of 41·1 inches, indicating an excess of 3 per cent. This is in marked contrast with the remarkable failure of the rains of the preceding year, which left a defect of 21 per cent.

Initially, the S. W. current appeared generally to be below its normal strength. This was specially apparent in the Arabian Sea branch, which feeds Western India. The monsoon carried by this branch of the current appeared in the Peninsula about the normal date, while the relatively stronger Bay branch, influenced by the timely and concurrent rise of a storm in the Bay, was accelerated in its advent and carried the monsoon rains into north-east India fully a week before the usual normal date. Good rain was gathered up to about the middle of the month of June, after which a longish break supervened, and it was quite late in the month when some useful rain was received in Gujarat, Kathiawar and South, Rajputana. The total fall for the month, over the whole of India, was 8·7 inches, which was 0·4 inch in excess of the normal.

The monsoon continued fairly active during the early part of the month of July, but its effects were in the main confined to an unusual extent to north-east India and the central parts of the country. Later, however, the conditions of distribution became extremely favourable, in all directions and good rain was gathered in north-west India, where it was sorely needed. These conditions affected practically all parts of the country and the total rain registered during the month was 12·2 inches, being 0·3 inch in excess of the normal. In August both branches of the S. W. current were kept extremely active by the influence of successive Bay storms, six of which arose one after another during the month, and though practically the whole country except small tracts towards the extreme east and south had a fair share of this copious precipitation, much of the rain-

fall was in the main concentrated along the tracks of the paths of the storms from Orissa to Gujarat. The total rain over the plains of India for the month was 12·5 inches, against the normal of 10·5 inches for the month giving an excess of 19 per cent. During September, though conditions remained fairly favourable, considerable decrease in the activity of both the currents ensued, and in the altered distribution of conditions the Peninsula being favourably placed it gathered more than its normal share of the precipitation at the expense of Northern and Central India. The fall during the month was 6·3 inches only against the normal of 7·2 inches.

In its recession, which prolonged in duration on the whole, the monsoon gave good rain practically over the whole country during the first week in October, and by the middle of the month the activity of the receding monsoon was mainly restricted to the south of the Peninsula and Burma. The current was however weaker than usual during the month, the total rain registered during the month being 2·8 inches, against the normal of 3·2 inches.

The run of the season on the whole was normal. The notable feature of the year was the rise of 10 Bay storms—2 in June, 1 in July, 6 in August, and 1 in September, which undoubtedly much influenced the favourable course of the monsoon. Two of these storms need special mention. One of these developing in the Bay crossed the Orissa coast on the 1st August and travelling in its usual north-westerly course, caused an exceedingly heavy downpour in the neighbourhood of Mount Abu and Deesa, as much as 23 inches being recorded in 48 hours at the former station and 12 inches at the latter. The storm which developed in the Bay west of the Andamans on the 22nd September crossed the coast on the 24th and reached Dacca on the 25th September. Though small in extent it was concentrated in intensity in the centre and caused great damage to life and property along its track in Eastern Bengal.

The following tables give details of the rainfall in the several divisions, and the condition of weekly rainfall from June to October in the provinces and sub-divisions:—

DIVISION.	RAINFALL JUNE TO OCTOBER 1919.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales, but during the last year of the war they averaged 978,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprece-

dent outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £ 92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available, 1918-19, the total area in all the territories reported on was computed at 20,497,000 acres which is 46,91,000 acres or nearly 19 per cent. below the revised figures of last year. The total estimated outturn was 36,71,000 bales of 400 lbs. which is 8 per cent. below the revised yield of last year. To this figure may be added some 1,000 bales estimated as the production in Native States in Bihar and Orissa which make no return.

Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact, but they indicate the distribution of the crop :—

Provinces and States.	1918-19 (Provisional estimates.)	
	Area (acres).	Yield (bales.)
Bombay (including Indian States)	5,036,000	573,000
Central Provinces and Berar	4,211,000	789,000
Madras (including Indian States)	3,118,000	633,000
Punjab (including Indian States)	1,541,000	493,000
United Provinces (including Indian States)	863,000	175,000
Sind (including Indian States)	299,000	108,000
Burma	347,000	78,000
Bengal (including Indian States)	73,600	32,000
Bihar and Orissa (a)	79,000	17,000
North-West Frontier Province	39,000	10,000
Assam	33,000	12,000
Ajmer-Merwara	30,000	14,000
Hyderabad	2,406,000	350,000
Central India	1,233,000	216,000
Baroda	815,000	35,000
Rajputana	250,000	55,000
Mysore	124,000	31,000
Total	20,497,000	3,671,000

The distribution of the export trade is indicated in the appended table.

Exports of Cotton.—A portion of the Indian crops of the season 1917-18 and a portion of the crop of the season 1918-19 came into statistical consideration in the exports during the year 1918-19. The exports amounted to 3½ million cwts. valued at Rs. 31 crores against 7½ million cwts. valued at Rs. 42½ crores in 1917-18. This represents 35·81 per cent. of the total value of raw materials exported from India and 12·94 per cent. of the total exports. The exports shewed a decrease of nearly 49·65 per cent. in quantity and decrease of 27·36 in value. The average declared value per unit rose from Rs. 58 to 84 or by 44·82 per cent. on the total decrease of Rs. 11½ crores. The distribution of the trade is shown below. The United Kingdom and Japan had larger receipts during the war period as compared with those in the earlier period. The principal purchasers of cotton

other than Japan are in normal years Germany, Belgium, Italy, Austria-Hungary and France.

	Exports of Raw Cotton.		
	1916-17. Cwts.	1917-18. Cwts.	1918-19. Cwts.
United Kingdom	825,198	1,137,455	276,166
Russia	27,674	42,611
France	270,890	160,438	36,435
Spain	254,677	12,443	2,450
Italy	966,391	553,298	440,788
Indo-China	19,372	32,559	36,243
China	349,242	115,575	54,046
Japan	6,153,531	5,187,705	2,797,491
United States of America	14,420	31,530	8,569
Other Countries	30,907	34,491	26,813
Total	8,912,302	7,308,105	3,679,001

(a) Excluding Indian States for which the yield is roughly estimated at 1,000 bales.

Bombay is the great centre of the cotton trade. The **principal varieties** are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Coimbatores and Tinnevellys. The best of these is Tinnevely. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to leaven the

whole outturn, which still consists for the most part of a short-staple early maturing variety, suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter, with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months, April to March, in each of the past three years:—

	1916-17.	1917-18.	1918-19.
BRITISH INDIA.			
Bombay	482,147,956	468,972,125	427,638,345
Madras	44,187,107	43,092,929	42,787,344
Bengal	28,568,029	32,881,688	32,507,148
United Provinces	46,177,251	39,473,169	34,390,651
Ajmer-Merwara	2,576,103	1,816,864	2,056,504
Punjab	3,749,852	3,909,431	3,919,719

Central Provinces and Berar	34,337,717	33,466,316	34,279,946
TOTAL ..	644,446,901	626,800,510	580,560,714
FOREIGN TERRITORY.			
Native States of Indore, Mysore, Baroda, Nandgaon, Bhavnagar, Hyderabad (b), Wadhwan, Gwalior (Ujjain) and Pondicherry (a)	36,660,330	33,775,105	34,470,750
GRAND TOTAL ..	681,107,231	660,575,615	615,040,464

(a) Including the production of one mill only.

(b) One mill in Hyderabad did not work for a month.

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 74 per cent. of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras produced about 6 per cent. and 7 per cent. respectively, while Bengal and the Central Provinces produced 5·1 and 5·2 per cent. Elsewhere the production is as yet very limited.

BOMBAY SPINNERS.

Here is a detailed statement of the quantity (in pounds) and the counts; or numbers; of yarn spun in Bombay island :—

-----	1916-17.	1917-18.	1918-19.

TOTAL ..	681,107,231	660,575,615	615,040,464

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin

higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply, to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India, and the Bombay Presidency produces nearly 87 per cent. of the cloth woven in India. The United Provinces produces 2·4 per cent., the Central Provinces 3·8 per cent. and Madras about 2·5 per cent. Grey and Bleached goods represent nearly 70 per cent. of the whole production.

ANALYSIS OF WOVEN GOODS.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States :—

	1916-17.	1917-18.	1918-19.
Grey and Bleached piece-goods—			
Pounds	274,851,443	268,772,199	257,839,998
Yards	1,136,170,373	1,141,021,562	1,076,711,011
Coloured piece-goods—			
Pounds	98,351,965	106,751,853	85,601,778
Yards	441,962,416	473,104,896	374,015,149
Grey and coloured goods other than piece-goods—			
Pounds	3,113,286	3,639,423	3,743,704
Dozens	660,384	706,251	721,172
Hosiery—			
Pounds	409,790	349,373	260,968
Dozens	256,576	215,221	148,696
Miscellaneous—			
Pounds	959,679	1,638,317	1,826,837
Cotton goods mixed with silk or wool—			
Pounds	42,653	253,004	307,165
Total—			
Pounds	377,728,816	381,404,169	349,580,450
Yards	1,578,132,789	1,614,126,458	1,450,726,160
Dozens	896,960	921,472	869,868

BOMBAY WOVEN GOODS.

The output of woven goods during the three years in the Bombay Presidency was as follows. (The weight in pounds represents the weight of all woven goods; the measure in yards represents the equivalent of the weight of the grey and coloured piece-goods.)

	1916-17.	1917-18.	1918-19.
Pounds	305,178,667	309,110,604	275,801,034
Yards	1,318,810,176	1,361,080,711	1,197,421,958
Dozens	731,539	761,503	746,471

The grand totals for all India are as follows :—

	1916-17.	1917-18.	1918-19.
Pounds	377,728,816	381,404,169	349,580,450
Yards	1,578,132,789	1,614,126,458	1,450,726,160
Dozens	896,960	921,472	869,868

Progress of the Mill Industry.

The following statement shows the progress of the Mill Industry in the whole of India.

Year ending 30th June	Number of Mills.	Number of Spindles.	Number of Looms.	Average No. of Hands Employed Daily.	Approximate Quantity of Cotton Consumed.	
					Cwts.	Bales of 392 lbs.

* Year ending 31st August.

Earnings of Labour.

In 1917 wages in the Bombay cotton industry were increased by ten per cent. to meet the higher cost of food. They were raised a further ten per cent. in 1919. We give the average wages, it being understood that the Bombay rate is at least ten per cent. higher.

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 3,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-loom.—The pioneer's example was followed by Mr. George Henderson of that ilk and firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Manufacturing Co., Ltd." Four other mills followed in succession—Gouripore, Serajunge, and India Jute Mills.

"From 1868 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply

coined money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Fort Gloster, Budge Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Belliaghatta-Barnagore branch mill), Rustomjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs. Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatty, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kanknarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started:—the Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajunge), and the Kinninn. A lull of four years witnessed large extensions to the existing mills, after which came the following series of new

mills, besides further heavy extensions—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook.

Progress of the Industry.

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shews **quinquennial aver-**

ages from the earliest year for which complete information is available with actuals for the last three years; and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100. It will be seen that the number of looms and spindles in operation and that of persons employed have increased to a very much larger extent than either the number of mills at work or the amount of capital employed:—

	Number of mills at work.	Authorised Capital (in lakhs of Rs.)	Number (in thousands) of		
			Persons employed.	Looms.	Spindles.
1879-80 to 1883-84 ..	21 (100)	270·7 (100)	38·8 (100)	5·5 (100)	88 (100)
1884-85 to 1888-89 ..	24 (114)	341·6 (126)	52·7 (136)	7 (127)	138·4 (157)
1889-90 to 1893-94 ..	26 (124)	402·6 (149)	64·3 (166)	8·3 (151)	172·6 (196)
1894-95 to 1898-99 ..	31 (148)	522·1 (193)	86·7 (223)	11·7 (213)	244·8 (278)
1899-1900 to 1903-04 ..	36 (171)	680 (251)	114·2 (294)	16·2 (295)	334·6 (380)
1904-05 to 1908-09 ..	46 (219)	960 (355)	165 (425)	24·8 (451)	510·5 (580)
1909-10 to 1913-14 ..	60 (286)	1,209 (443)	208·4 (537)	33·5 (609)	691·8 (786)
1914-15 ..	70 (333)	1,394·3 (515)	238·3 (614)	38·4 (698)	795·5 (904)
1915-16 ..	70 (333)	1,322·6 (488)	254·1 (655)	39·9 (725)	812·4 (923)
1916-17 ..	74 (352)	1,395·5 (516)	262·6 (677)	39·7 (722)	824·3 (937)
1917-18 ..	76 (362)	1,423·5 (528)	266· (686)	40·6 (738)	834 (948)

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods:—

	Jute manufactures.		Value in lakhs of Rs.
	Gunny bags in millions of number.	Gunny cloths in millions of yards.	
1879-80 to 1883-84	54·9 (100)	4·4 (100)	124·9 (100)
1884-85 to 1888-89	77 (140)	15·4 (350)	162·9 (130)
1889-90 to 1893-94	111·5 (203)	41 (932)	289·3 (232)
1894-95 to 1898-99	171·2 (312)	182 (4,136)	518 (415)
1899-1900 to 1903-04	206·5 (376)	427·2 (9,709)	826·5 (662)
1904-05 to 1908-09	257·8 (469)	698 (15,864)	1,442·7 (1,154)
1909-10 to 1913-14	339·1 (618)	970 (2,045)	2,024·8 (1,621)
1914-15	397·6 (724)	1,057·3 (24,030)	2,582 (2,067)
1915-16	794·1 (1447)	1,192·3 (27,098)	3,797·8 (3,041)
1916-17	805·1 (1,466)	1,230·9 (27,975)	4,167·2 (3,336)
1917-18	758·4 (1,381)	1,196·8 (27,200)	4,284·3 (3,430)

Up to the last quinquennium the exports of raw jute were marked by increases from year to year though the improvement was not so rapid as in the case of manufactures. A slight decrease in the exports occurred in 1909-10 as compared with the figures for the preceding quinquennial period and a further decline in 1910-11, but a marked recovery was achieved in 1911-12 which was accentuated in 1912-13 :-

Jute, raw, in millions of cwt.	
1879-80 to 1883-84	7.5 (100)
1884-85 to 1888-89	8.9 (119)
1889-90 to 1893-94	10 (133)
1894-95 to 1898-99	12.3 (164)
1899-1900 to 1903-04	12.7 (169)
1904-05 to 1908-09	15.09 (201)
1909-10	14.6 (195)
1910-11	12.7 (169)
1911-12	16.2 (216)
1912-13	17.5 (233)
1913-14	15.4 (205)
1914-15	10.1 (135)
1915-16	12 (160)
1916-17	10.8 (144)
1917-18	5.6 (74)

per bale respectively. In 1910-11 the price rose again to Rs. 41-8-0, to Rs. 51-4-0 in 1911-12 and further to Rs. 76-12-0 in 1913-14. The following are the quinquennial average prices per bale (400 pounds) of ordinary jute calculated from the prices current published by the Bengal Chamber of Commerce:

	Price of jute, ordinary, per bale of 400 lbs.	
	Rs.	a. p.
1879-80 to 1883-84	23	8 0 (100)
1884-85 to 1888-89	23	3 2 (99)
1889-90 to 1893-94	32	6 5 (138)
1894-95 to 1898-99	30	12 0 (131)
1899-1900 to 1903-04	32	1 7 (137)
1904-05 to 1908-09	44	13 6 (191)
1909-10	31	0 0 (132)
1910-11	41	8 0 (177)
1911-12	51	4 0 (218)
1912-13	54	12 0 (233)
1913-14	76	12 0 (327)
1914-15	54	8 0 (232)
1915-16	48	4 0 (205)
1916-17	50	12 0 (216)
1917-18	38	8 0 (164)

The total quantity of jute manufactures exported by sea from Calcutta during the official year ending 31st March 1918 was 716,000 tons as against 784,800 tons in the preceding year 1916-17 and 603,500 tons in the pre-war year 1913-14. In 1917-18 gunny bags contributed 404,000 tons and gunny cloth 307,000 tons as against 461,800 tons and 317,800 tons, respectively in the preceding year (1916-17) and 324,300 tons and 275,100 tons respectively in the pre-war year (1913-14). The total value of jute manufactures exported during the year 1917-18 was £28 millions as against £27 millions in the preceding year and £19 millions in the pre-war year (1913-14).

The average prices of gunny cloth have been as follows :-

	Price of Hessian cloth 10½ oz. 40" per 100 yds.	
	Rs.	a. p.
1879-80 to 1883-84	10	7 11 (100)
1884-85 to 1888-89	8	0 7 (77)
1889-90 to 1893-94	10	6 6 (99)
1894-95 to 1898-99	9	11 8 (93)
1899-1900 to 1903-04	10	2 10 (97)
1904-05 to 1908-09	11	14 1 (112)
1909-10	9	3 6 (88)
1910-11	9	5 6 (89)
1911-12	11	14 0 (113)
1912-13	16	6 0 (156)
1913-14	17	0 0 (162)
1914-15	12	4 0 (117)
1915-16	20	10 0 (197)
1916-17	17	6 0 (166)
1917-18	33	8 0 (319)

The price of raw jute reached a very high point in 1906-07, the rate being Rs. 65 per bale; in 1907-08 it dropped to Rs. 42 per bale, and the fall was accentuated in 1908-09 and 1909-10, the price having declined to 36.4 and Rs. 31

The 1919 crop.—The final figures of outturn for the three provinces work out as follows :-

PROVINCE.	BALES.		Difference.
	1919.	1918.	
Bengal (including Cooch Behar)	7,637,630	*6,392,137	+1,245,493
Bihar and Orissa (including Nepal)	554,070	*398,742	+155,328
Assam	294,534	*228,209	+66,325
Total	8,486,234	7,019,088	+1,467,146

PROVINCE.	AREA IN ACRES.		Difference.
	1919.	1918.	
Bengal (including Cooch Behar)	2,498,145	2,249,026	+249,119
Bihar and Orissa	* 203,430	149,256	+54,174
Assam	* 120,000	102,100	+17,900
Total	2,821,575	2,500,382	+321,193

* Revised.

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that, in spite of the constant opening up of new markets, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The officials of the Association are:—

Chairman: The Hon. Mr. A. R. Murray, C.B.E.

Members of Committee: The Hon. Mr. R. V. Mansell, O.B.E., Mr. P. W. Newton, Mr. J. Bell Robertson and Mr. G. F. Rose.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion, backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

An Association, styled the **Calcutta Jute Dealers Association**, has lately been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balers and brokers of jute for sale to the jute

mills in and around Calcutta. Committee:—Mr. Geo. Morgan, *Chairman*, Members:—Messrs. G. S. Alexander, D. P. How, P. E. Suttie, M. Morrison, and J. More.

Effects of the War.—The official review of the Trade of India in 1916-17 says:—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,629 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent. above that of the previous year, *viz.*, 1,490,000 tons or 8,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent. below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly *via* Dunkirk), Russia (*via* Vladivostok) and Brazil took greater quantities. There were, of course, no exports to enemy countries which, took more than 27 per cent. in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

Jute Manufactures.—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs. 241 lakhs of which Rs. 163 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased, and bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 74 mills at work throughout the year with 39,697 looms and 824,315 spindles. The number of persons employed was 262,552. There were no difficulties as regards the supply of labour. Four new mills came into existence. It is improbable that these, with one exception, can begin manufacturing to any extent until after the war.

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the **Decan hemp plant** (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft. to 12 ft. long, of an exceptionally light colour, well cleaned, and of good strength. It was valued at £18 per ton with Bimlipatam jute at £12 10s., and Bengal first mark jute at

£17 per ton. Deccan hemp has been grown fairly extensively in Bombay, the Central Provinces, and Madras, where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance:—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties, it is thought, in the preparation of the hemp crops of Russia and Hungary, and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held; but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price.

Profits of Bengal Jute Mills.

An estimate of the profits of the Bengal jute mills during the first half of 1918 has been made in the Department of Statistics from a detailed analysis of the published accounts of 36 jute mill companies (including one sterling company registered in the United Kingdom) whose accounts were closed during the half year. It

is interesting to note how sterling companies are being transformed into rupee companies. From 1914 to 1916 there were 9 sterling companies (including one French company working at Chandernagore); three of these were transformed in 1917 into rupee companies under the Indian Act. There are thus 6 sterling companies now working in Bengal of which one is, as stated above, dealt with in the statistics for the first half of 1918. The other five companies which close their accounts in the second half of the year will be dealt with in the next statement, that is, for the latter half of 1918. The compilation of the data has been made uniform as far as practicable, and the 36 mills have been regarded as one mill. In all cases the profits have been shown after deduction of Indian income tax and super tax, because the amount of tax paid was not always shown separately in the Balance Sheets but lumped with other items of expenditure under the head of "Manufacturing and other expenses." In the case of the sterling company the British income tax and the British excess profits duty have been deducted as well as the Indian income tax and super tax. The profits are shown before and after deduction of interest on debentures. Some companies have paid off their debentures, others are in the process of doing so, while others again have created debenture redemption funds out of surplus profits. Debenture interest is not shown separately in all the published accounts but the amounts have been ascertained as correctly as possible. No allowance has been made for depreciation as no uniform practice of writing off depreciation is followed by jute mills in Bengal. Their suits are summarised below as compared with the pre-war profits and the profits since the outbreak of war.

YEAR.	Number of Cos. whose accounts were closed during each half year.	Profits before deduction of interest on debentures.	Interest on debentures.	Net profits (subject to depreciation).	Ratio of net profits (Col. 5) to total paid up capital.	
1	2	3	4	5	6	
		Rs. (1000)	Rs. (1000)	Rs. (1000)		
1915..	First half ..	31	1,70,45	10,07	1,60,38	58
	Second half ..	38	5,52,60	13,74	5,38,86	
1916..	First half ..	32	3,94,99	19,25	3,84,74	75
	Second half ..	39	5,51,39	12,88	5,38,51	
1917..	First half ..	34	2,66,78	9,59	2,57,19	49
	Second half ..	40	4,00,35	11,74	3,88,61	
1918..	First half (pre-war).	36	7,28,00	9,50	7,18,50	73*
	Second half ..			Dis continued.		
1919..	First half ..			Dis continued.		

* This ratio has been calculated on the profits of only the first half of 1918.

It will be seen from the above statement that the profits during the first half of 1918 have surpassed all previous records.

THE WOOL INDUSTRY.

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—The quantity of raw wool imported across the frontier in 1918-19 was nearly 28 million lbs. The imports of Tibetan wool were 9 million lbs. or 4 per cent. below the preceding year, but 66 per cent. above the pre-war average. The imports from Afghanistan (16 million lbs.) increased by 7 per cent. as compared with the previous year and 34 per cent. as compared with the pre-war average. Exports of raw wool from India amounted in 1918-19 to 47,376,000 lbs. and exports of carpets to 944,000 lbs., the whole being valued at Rs. 5,56,80,000.

Production in India.—The production of wool in India is estimated at 60 million lbs. the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of carpet wools, and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep, particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly, having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short."

Mill manufacture.—The number of woollen mills at work in British India in 1902 was three, with an authorised capital of Rs. 38,50,000, and employing 23,800 spindles and 624 looms. The number of persons employed

in the industry then was 2,559, and the quantity of woollen goods produced 2,148,000 lbs. At the end of 1917 the number of mills had risen to five, with an authorised capital of Rs. 2,56,50,000 employing 39,608 spindles and 1,155 looms. The weight of goods produced then was 9,744,264 lbs. and the number of persons employed 7,824. With regard to Indian States, there was one mill in Mysore in 1903 with a capital of Rs. 6,00,000, employing 1,430 spindles and 45 looms. The quantity of goods produced was 1,136,000 lbs. and the number of persons employed 297. In 1907 there was still only the one mill working in an Indian State—the authorised capital had been increased to Rs. 15,00,000, the quantity of goods produced to 1,724,087 lbs., and the number of persons employed to 563. Three of the mills manufacture all classes of woollen and worsted goods, the remainder manufacturing blankets only. The existence of these mills in India proved of great service to Government in the meeting of war requirements, and they were all employed to their fullest capacity in supplying army demands for greatcoat cloth, serges, putties, flannels, blankets and hosiery. Their total capacity, however, was not sufficient to meet the full requirements of the army, and consequently their supplies had to be supplemented by large imports from home. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breeds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself. A number of new woollen mills was projected in Bombay in 1919.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Bibliography.—Notes on wool in India. By A. H. Silver and J. K. Mchta. Govt. Press, Calcutta: 1919.

Hydro-Electric Development.

India promises to be one of the leading countries of the world in regard to the development of hydro-electric power and great strides in this direction have already been made. India not only specially lends itself to projects of the kind, but peremptorily demands them. Cheap motive power is one of the secrets of successful industrial development and the favourable initial conditions caused by the war, the enthusiasm for industrial development which has seized nearly all classes of educated Indians, and the special attention which the circumstances of the war have compelled Government to direct towards the scientific utilisation of Indian natural resources all point to a rapid growth of industrial enterprise in all parts of India within the next few years. Indeed, the process, for which sound foundations had been laid before the war, is now rapidly under way. India is severely handicapped compared with other lands as regards the generation of power by the consumption of fuel, coal or oil. These commodities are all difficult to obtain, and costly in India except in a few favoured areas. Coal supplies, for example, are chiefly centred in Bengal and Chota Nagpur and the cost of transport is heavy. Water power and its transmission by electricity offer, on the other hand, immense possibilities, both as regards the quantity available and the cheapness at which the power can be rendered, in all parts of India.

Water power schemes, pure and simple, are generally difficult in India, because the power needs to be continuous, while the rainfall is only during a small portion of the year. Perennial rivers with sufficient water throughout the year are practically non-existent in India. Water, therefore, must be stored for use during the dry season. Favourable sites for this exist in many parts in the mountainous and hilly regions where the heaviest rainfalls occur and the progress already made in utilising such opportunities by the electrical transmission of power affords high encouragement for the future. Further, hydro-electric schemes can frequently be associated with important irrigation projects, the water being first used to drive the turbines at the generating stations and then distributed over the fields. Water, as was pointed out in an interesting paper on the subject presented to the Indian Industrial Commission of 1916-18 by Mr. R. B. Jonyer, C.I.E., M. Inst. C.E., lately in the Irrigation Branch of the Bombay Public Works Department and now engaged in the Tata's Hydro-Electric Works in Western India, "can be stored in this country at a third or a quarter of the cost which there would be in other countries. This is not merely on account of the cheaper labour, which would be the chief reason in an earthen dam, but in masonry or concrete dams. It is also because we do not use cement, which, for some reason not well-known to me, is generally deemed essential elsewhere, though it cannot really be so suitable."

The Industrial Commission emphasized the necessity for a Hydrographic Survey of India. On this recommendation the Government of India in 1918 appointed the late Mr. G. T. Barlow, C.I.E., then Chief Engineer, Irrigation Branch, United Provinces, to undertake the work, associating with him Mr. J. W. Meares, M.I.C.E., Electrical Adviser to the Government of India. Mr. Barlow died, but Mr. Meares issued a preliminary report in September, 1919, summarising the present state of knowledge of the problem in India and outlining a programme of investigation to be undertaken in the course of the inquiry. Mr. Meares showed that industries in India now absorb over a million horse power, of which only some 285,000 h. p. is supplied by electricity from steam, oil or water. The water power so far actually in sight amounts to 1½ million horse-power, but this excludes practically all the great rivers, which are at present uninvestigated. Thus the minimum flow of the seven great rivers eastward from the Indus is stated to be capable of giving not less than three million horse-power for every thousand feet of fall from the Himalayas, while similar considerations apply to rivers in other parts. Some doubt is expressed as to the estimate of seven million horse-power in the Irrawaddy and Chindwin rivers, given in the report of the London Conjoint Board of Scientific Studies.

The Report points out that the Bombay Presidency holds a unique position owing to its great existing and projected schemes at Lonavla, the Andhra Valley, the Nila Mula and the Koyna Valley and has the still greater advantage of possessing a firm ready to develop its resources.

Bombay Hydro-Electric Works.

The greatest water-power undertakings in India—and in some respects the greatest in the world—are the Tata hydro-electric schemes recently brought to fruition, and constantly undergoing expansion, for the supply of power in the city of Bombay. Bombay is after London the most populous city in the British Empire and it is the largest manufacturing town in Asia. Its cotton mills and other factories use over 100,000 horse power of mechanical energy and until a year or two ago this was almost entirely provided by steam, generated by coal coming from a distance—mostly Bengal. The Tata Hydro-Electric Power Scheme, now an accomplished fact, marked one of the big steps forward made by India in the history of its industrial development. It was the product of the fertile brain of Mr. David Gostling, one of the well known characters of Bombay, a little over a decade ago. The exceptional position of the Western Ghats, which rise 2,000 feet from sea-level within a very short distance of the Arabian Sea, and force the monsoon as it sweeps to land, to break into torrential rain at the mountain passes was taken full advantage of, and the table lands behind the Ghats form a magnificent catchment area to conserve this

heavy rainfall in. Mr. Gostling pressed the scheme on the attention of Mr. Jamsetji Tata for years, and with perseverance collected data which he laid before that pioneer of the larger industries in India. He summoned the aid of experts from England to investigate the plan. The scheme was fully considered for six long years. Meanwhile both Mr. J. N. Tata and Mr. David Gostling passed away, but the sons of the former continued the work of their father and on Mr. Gostling's death, Mr. R. B. Joyner's aid was sought to work out the Hydraulic side of the undertaking.

The scheme completed, a syndicate secured the license from Government and an endeavour was made to enlist the support of financiers of England who tried to impose terms which were not acceptable. Meanwhile, the attention of Sir George Clarke (now Lord Sydenham), then Governor of Bombay, and an engineer of distinction himself, was drawn to the scheme. The interest shown by him drew the attention of Indian Chiefs in the Presidency of Bombay and outside it to its possibilities, funds flowed in and a company with an initial capital of 1,75,00,000 Rupees was started.

The hydro-electric engineering works in connection with the project are situated at and about Lonavla above the Bor Ghat. The rainfall is stored in three lakes at Lonavla, Walwhan and Shirawta, whence it is conveyed in masonry canals to the forebay or receiving reservoir. The power-house is at Khopoli, at the foot of the Ghats, whither the stored water is conveyed through pipes, the fall being one of 1,725 feet. In falling from this height the water develops a pressure of 750 lbs. per square inch and with this force drives the turbines or water wheels. The scheme was originally restricted to 30,000 Electrical horse power, but the Company, in view of the increasing demand for power from the Bombay mills, decided to extend the works by building the Shirawta Dam and issued further Shares bringing the capital to Rs. 3,00,00,000, the capacity of the scheme being increased to more than 40,000 electrical horse power. Issued Capital 7 per cent. Preference 8,735 shares fully paid and Ordinary 18,000, out of which 10,000 are fully paid and 8,000 new shares, on which Rs. 400 have been called up. There is also a Debenture Loan of Rs. 85 lakhs. The works were formally opened by H. E. the Governor of Bombay on the 8th February 1915. At present there are altogether 36 mills with motors of the aggregate B. H. P. of 40,000 in service. In addition to the cotton and flour mills which have contracted to take supply from the Company for a period of ten years, the Company have entered into a contract with the Bombay Electric Supply and Tramways Company, Limited, for energy required by them for two of their sub-stations and the necessary plant for one of these has been ordered. There remain many prospective buyers of electrical energy and the completion of the Company's full scheme will not suffice for all such demands. Besides the Bombay cotton mills, which alone would require about 100,000 horse power, there are, for instance, tramways, with possibilities of suburban extensions. The probable future demand is roughly estimated at about 160,000 H. P.

Investigations with a view to developing the electrical supply led to the discovery of a highly promising water storage site in the valley of the Andhra River, situated near the present lakes. A scheme was prepared, to be carried out by a separate company and providing for holding up the Andhra River by a Dam, about a third of a mile long and 192 feet high, at Tokerwadi. This dam will hold up a lake nearly twelve miles long, the further end of which approached the brink of the Ghats at Khand. Here, a tunnel, a mile and a quarter long, will carry the water to the surge chamber, whence it will enter the pipes for a vertical drop of about 1,750 feet to the generating station at Bhivpuri, about 17 miles from the generating station at Khopoli. The scheme is designed to yield 100,000 horse power in its full development. A new company to operate the scheme was formed on the 31st August 1916, with an initial capital of Rs. 2,10,00,000, divided into 160,000 Ordinary shares of Rs. 1,000 each and 5,000 Preference shares of Rs. 1,000 each, this being the Andhra Valley Power Supply Company, Limited. This Company will pay annually to the Tata Hydro-Electric Power Supply Company 15 per cent. upon the profits (after making certain deductions), or a sum of Rs. 50,000, whichever shall be the larger sum, the intention being that the new company shall pay annually to the Tata Hydro-Electric Power Supply Company a minimum sum of Rs. 50,000. The areas intended to be supplied by this Company are the town and island of Bombay and the Suburban Municipalities of Bandra and Kurla. The Hydraulic Works consisting of the Dam, the Tunnel and the Pipe Lines, are already well in hand and have shown three seasons' satisfactory progress. Contracts for machinery have been satisfactorily entered into with manufacturers of repute. It is estimated that supply of power will commence next year.

Just as the Andhra project has been developed as a northward extension of the original scheme, so a southward development is now being carried out under the name of the Nila-Mula scheme, the name arising from the fact that the valleys of the Nila and Mula rivers are being dammed for the conservation of water for it. A company entitled The Tata Power Co., Ltd., was floated in the autumn of 1919 for the purpose, having a capital of Rs. 9 crores, divided into 30,000 7½% cumulative preference shares of Rs. 1,000 each and 60,000 shares of Rs. 1,000 each, the first and present issue being of 10,000 preference shares and 35,000 ordinary shares. One lake will be formed and from it water will be conducted direct through a short tunnel to a pipe descent to a turbine power house 1,750 feet below the forebay. The head of water will suffice to generate 150,000 horse power and the length of the transmission line to Bombay will be 70 miles. Half of the scheme, *i. e.*, for the supply of 75,000 h. p., will first be completed and is expected to come into operation in about four years.

Nearly 100 miles southward of this Messrs. Tata propose to erect two dams in the huge valley of the Koyna river, partly to supply power to Bombay and partly to develop a great assembly of electro-chemical industries near the power installation. The preliminary

investigations for this scheme are still proceeding. The catchment area for the lake will be 346 square miles and there will be a total storage after the rains of 112,600 million cubic feet, which will be sufficient to supply a normal load of 350,000 horse power for 8,000 hours per year. The preliminary estimates provided for a capital of Rs. 8·10 lakhs to carry out the scheme.

Mysore Installation.

The first hydro-electric scheme undertaken in India or, indeed, in the East, was that on the River Cauvery, in Mysore State, which was inaugurated, with generating works at Sivasamudram, in 1902. The Cauvery rises in the British district of Coorg, and flows right across Mysore. The first object with which the installation was undertaken was the supply of power to the goldfields at Kolar. These are 92 miles distant from Sivasamudram and for a long time this was the longest electrical power transmission line in the world. Current is also sent to Bangalore, 59 miles away, where it is used for both industrial and lighting purposes.

The initial undertaking has constantly been expanded since its inauguration, so that its total capacity, which was at first 6,000 horse power, is now approximately 25,000 h.p. This is the maximum obtainable with the water which the Cauvery affords and, therefore, with the number of consumers, large and small, rapidly increasing, the necessity of a completely new installation elsewhere, to be operated in parallel with or separately from that at Sivasamudram, has been recognised. Two projects offer themselves. The first would involve the use of the River Shimsha, a tributary of the Cauvery which has natural falls, and the second, known as the Mekadatu project, would have its power house on the Cauvery, 25 miles down-river from Sivasamudram and just within the borders of Mysore State, adjacent to the Madras Presidency. The head of water available at Sivasamudram is 400 feet, that on the Shimsha 618 feet net, which would generate 39,500 e. h. p. At Mekadatu the Cauvery runs in rapids and a dam and a channel 20,000 feet long with a 22½ feet bed would be necessary. There would be three generating units, each giving an output of 4,000 e. h. p. Future extensions yielding an additional 8,000 h. p. could be made. The progressive spirit which has marked the management of the works since their inception now

characterises the manner in which the problem of further extensions are being considered.

Works in Kashmir.

A scheme of much importance from its size, but more interesting because of the developments that may be expected from it than for the part which its current supply already plays in the life of the countryside, is one installed a few years ago by the Kashmir Durbar, utilising the River Jhelum, near Baramulla, which lies thirty-four miles north-west of Srinagar. The head-works of the Jhelum power installation are situated six and a half miles from the power house and the main connection between the two is a great timber flume. These works and the forebay at the delivery end of the flume have a capacity for carrying water sufficient for the generation of 20,000 electrical horse power. Four pipes 600 feet long lead from the forebay to the power house, and from forebay to water-wheel there is an effective head of 395 feet. There are four vertical waterwheels, each coupled on the same shaft to a 1,000 k.w., 3-phase, 2,300 volt, 25-period generator running at 500 r.p.m., and each unit is capable of taking a 25 per cent. overload, which the generator end is guaranteed to maintain with safety for two hours. The power house is of sufficient capacity to allow of 15,000 k.w. generating plant being installed within it. Two transmission lines run side by side as far as Baramulla, 21 miles distant, at which point one terminates. The other continues to Srinagar, a further 34 miles. The installation at Baramulla was originally utilised for three floating dredgers and two floating derricks, for dredging the river and draining the swampy countryside and rendering it available for cultivation, but these operations have temporarily been curtailed, so that only one dredger is now in operation. The lighting of Baramulla has been taken in hand with satisfactory results and it is expected that the lighting demand will rapidly increase and that a small demand for power will soon spring up. At Srinagar, the line terminates at the State silk factory, where current is supplied not only for driving machinery and for lighting, but for heating. The greater part of Srinagar city is now electrically lighted and during the past year a motor load of over 100 k.w. has been connected with the mains, motors being hired out to consumers by the Electrical Department. This step was taken with a view to educating the people in the use of electric power and it has been entirely successful.

Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-tropical races of the Silkworm were introduced. But the trade gradually declined for the following reasons:—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal, are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that *Bombyx mori*, possibly obtained from China, has been reared for centuries. The caprice of fashion has, from time to time, powerfully modified the Indian silk trade. The special properties of the *korah* silk were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of hand-reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

Mulberry-feeding worms.—Sir George Watt states that in no other country does the necessity exist so pressing as in India to treat the subject of silk and the silk industries under two sections, *viz.*, Bombycidae, the domesticated or mulberry-feeding silk worms; and Saturniidae, the wild or non-mulberry-feeding worms. In India the mulberry worm (*Bombyx Mori*) has been systematically reared for many centuries, there being six chief forms of it. In the temperate tracts of India various forms of *Morus alba*, (the mulberry of the European silk-producing countries), are grown specially as food for the silkworm. This is the case in many parts of the plains of Northern India, Baluchistan, Afghanistan, Kashmir, and along the Himalaya at altitudes up to 11,000 feet. The other species even more largely grown for the Indian silkworm is *M. Indica* of which there are many distinctive varieties or races. This is the most common mulberry of Bengal and Assam, as also of the Nilgiri hills.

India has three well-known purely indigenous silkworms: the *tasar*, the *muga* and the *eri*. The first is widely distributed on the lower hills, more especially these of the great central tableland, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on the laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the *muga* silk is the most interesting and attractive, and the cocoon can be reeled readily. The *eri* silk, on the other hand, is so extremely

difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results.—Numerous experiments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms, while improvement in the quality of the cocoons will be obtained by rearing various races, pure and cross bred.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machinery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses, sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs. 3,000 a year to the Tata farm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts, encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Simla under the auspices of the Salvation Army. The Lieut. Governor of the Punjab has permitted the school to be called after his name, and the Punjab Government is making a grant of Rs. 2,000 this year towards the expenses. Sir Dorabji Tata has also made a donation of Rs. 1,000. The Bengal Silk Committee under the guidance of some French experts have conducted cross-breeding experiments with a view to establish a multivoltine hybrid of European quality. There is a Government sericultural farm at Berhampore, where, it is said, a pure white multi-voltine of silk worm is reared. The results of the Bengal Committee's labours may be summed up as follows: the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision, and to establish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a *Bulletin* (No. 48 of 1915) entitled "First Report on the Experiments carried out at Pusa to improve the Mulberry Silk Industry." In a short Prefatory note Mr. Bainbrigge Fletcher (Imperial Entomo-

logist) explains that the object of the Bulletin is to place on record some of the more important experiments which were commenced at Pusa in the year 1910 and have since been carried on in the endeavour to fix a superior multivoltine race of the Mulberry Silkworm which would not degenerate and which would yield silk better both in quality and outturn than that supplied by the multivoltine races which are reared at present.

Central Nurseries.—The report of the Agricultural Department, Bengal, for the year ending June 30, 1913, gives an account of a scheme which has been devised with the object of reclaiming the silk industry. The aim of the scheme is gradually to establish throughout the silk districts a sufficient number of central nurseries with rearing houses and thus enable the whole of the seed cocoons required in the province to be supplied under Government supervision. It is believed that this is the only really effective method of dealing with the problem. A number of the existing smaller nurseries were closed during 1913 and others are being converted into enlarged and improved central nurseries with rearing houses complete. The ultimate success of the scheme depends largely on the willingness of the rearers to pay an adequate price for pure seed.

A pamphlet was published in 1915, by Mr. M. N. De, Sericultural Assistant at Pusa, which contains practical hints on improved methods which are recommended to be used for reeling mulberry silk in Bengal and other silk producing districts. It has been found that, by the

provision of two small pulleys to the ordinary Bengal type of reeling machine, superior thread can be obtained, the cost of the extra apparatus is merely nominal (five or six annas per machine), whilst the suitability of the machine for cottage workers is maintained. By attention to such simple points as the stifling and storage of cocoons and the temperature and quality of the water used in the reeling pans, great improvements can be effected in most silk centres in Bengal and other districts.

Exports of Silk.—As a result of the war the trade has shown in some degree signs of revival from its decadent condition, both as regards its volume and value. The value of exports during 1915-16 improved by Rs. 12 lakhs to Rs. 27½ lakhs, of which raw silk accounted for Rs. 24 lakhs. In 1916-17 the total exports rose to Rs. 54½ lakhs.

The export of silk manufactures in 1917-18 was valued at Rs. 3,39,000.

Imperial Silk Specialist.—At the end of 1915 it was decided that the first step to be taken to revive the silk industry should be the employment of a qualified expert who, after a careful study of the conditions not only in India but in other silk-producing countries, will formulate recommendations for the consideration of Government. With the approval of the Secretary of State, Mr. H. Maxwell Lefroy, formerly Imperial Entomologist and now Professor at the Imperial College of Science and Technology, South Kensington, was appointed to the temporary post of Imperial Silk Specialist.

Indigo.

Indigo dyes are obtained from the Indigofera, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was shipped from the Western Presidency and procured from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led to the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one

of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the madder dye of Europe, then the safflower, the lac and the *al* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural *versus* synthetic indigo. (See Watt's "Commercial Products of India.") In February 1915 a conference was held at Delhi when the possibility of assisting the natural

indigo industry was considered from three points of view—agricultural, research and commercial. The agricultural or botanical side of the question is fully discussed by Mr. and Mrs. Howard of Pusa in Bulletins Nos. 51 and 54 of the Agricultural Research Institute. Other aspects of the question were fully examined last year in the Agricultural Journal of India by Mr. W. A. Davis, Indigo Research Chemist to the Government of India. An **Indigo Cess Bill** was passed in the Imperial Legislative Council in 1918. It provides for a cess on indigo exported from India for the scientific investigation of the methods of cultivation and manufacture of indigo, the proceeds of the cess being received and expended by Government.

Decline of the Industry.—Since synthetic indigo was put upon the market, in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war. The figures for the last few years may be contrasted with those for the five years ending in 1897, in which the area under indigo averaged 2,400 square miles and the value of the exports over £3,000,000 a year.

—	Area under Indigo.	Quantity Exported.	Value of Exports.
	Acres.	Cwts.	£
1901-02 ..	791,000	89,750	1,234,837
1902-03 ..	646,000	65,377	803,738
1903-04 ..	707,000	60,410	717,468
1904-05 ..	477,000	49,252	556,405
1905-06 ..	384,000	31,186	390,918
1906-07 ..	421,000	35,102	466,985
1907-08 ..	394,000	32,490	424,849
1908-09 ..	284,000	24,946	326,986
1909-10 ..	289,000	18,061	234,544
1910-11 ..	276,000	16,939	223,529

—	Area under Indigo.	Quantity Exported.	Value of Exports.
	Acres.	Cwts.	£
1911-12 ..	271,000	19,155	250,535
1912-13 ..	220,000	11,857	147,000
1913-14 ..	176,000	10,939	142,000
1914-15 ..	148,400	17,142	599,940
1915-16 ..	314,300	41,942	1,385,428
1916-17 ..	756,400	33,500	1,383,000

Present Position.—The crop is most important in Bihar and Madras; in the Punjab and United Provinces it now occupies little over 100 square miles altogether. In Bengal the crop is largely raised by British planters, in the other provinces chiefly by native cultivators. Scientific research work on questions connected with cultivation and manufacture has been carried out by the Bihar Planters' Association, with the aid of a grant from Government since 1897.

In 1918-19 the production of indigo was estimated at 44,100 cwts. as against 88,300 the preceding year, but the exports (32,700 cwts.) were 112 per cent. above the pre-war average. The average declared value decreased from Rs. 492 per cwt. in 1917-18 to Rs. 382 per cwt.

Crop Forecast.—The Director of Statistics in his final memorandum on the crop of 1919-20 states that the total area is estimated at 233,800 acres, which is 21 per cent. below the finally revised area (296,200 acres) of last year. The total yield of dye is estimated at 37,100 cwts. as against 43,800 cwts. the finally revised estimate of last year, or a decrease of 15 per cent. The season has been generally favourable except in parts of Madras, and the condition of the crop on the whole is reported to be fair.

Details for the provinces are given below:—

Province.	Area.		Yield.		Average yield per acre.	
	1919-20.	1918-19.	1919-20.	1918-19.	1919-20.	1918-19.
	Acres.	Acres.	cwts.	cwts.	lbs.	lbs.
Madras	88,300	149,100	18,500	28,800	23	22
United Provinces	48,800	49,100	4,500	3,800	10	9
Bihar and Orissa	57,100	64,200	8,200	6,300	16	11
Punjab	19,800	16,500	3,600	3,000	20	20
Bombay and Sind (including Indian States)	8,100	7,200	1,400	1,100	19	17
Bengal	11,700	10,100	900	800	9	9
Total	233,800	296,200	37,100	43,800	18	17

Tea.

Tea cultivation in India is chiefly in Assam, Bengal and Southern India, the cultivation elsewhere being comparatively unimportant. The latest available official general statistics are those for the year 1918. (The statistics of production deal, for seasonal reasons, with the calendar year 1918 and those of trade with the official fiscal year 1917-18.) They show a total area of 678,500 acres under tea, 2 more than in 1915. Of this area, 625,800 acres were plucked in 1918. The total number of plantations was 4,246 against 4,209 in 1917. The area under cultivation has increased in the last 10 years by 27 per cent, and the production by 56 per cent. The average production per acre for the whole of India, excluding Burma (where the produce of the tea gardens is almost wholly converted into wet pickled tea, which is eaten as a condiment) was 609 lbs. in 1918 as compared with 606 lbs. in 1917.

Area and Production.

The total area under tea was divided between the different Provinces as follows:—

Assam—	Acres.
Brahmaputra Valley	254,754
Surma Valley (Cachar and Sylhet).	151,197
Total, Assam	405,951
Bengal	169,108
Bihar and Orissa (Chota Nagpur) ..	2,178
United Provinces	7,987
Punjab	7,508
Madras	38,528
Travancore and Cochin	44,458
Burma	2,815
Grand Total	678,533

The total production in 1918 was 368,582,688 lbs. against 371,296,338 lbs. in the preceding year divided between the different parts of India as follows:—

	Lbs.
Assam	253,270,093
Bengal	89,983,561
Bihar & Orissa	323,864
United Provinces	2,234,760
Punjab	1,388,729
Madras	10,518,373
Travancore & Cochin	22,629,250
Burma	110,345
Total	380,458,975

Features of the Trade.

The quantity exported in 1918-19 was 326 million lbs., a decrease of 35 million lbs., or 10 per cent, on the figure for the preceding year, which was the highest on record.

The main features of the year's exports were: (1) an increase in the exports to the United Kingdom, Asiatic Turkey (mainly Mesopotamia),

and Persia; (2) the complete cessation of exports to Russia; and (3) the great decrease in the exports to the United States and Canada. Shipments to the United Kingdom increased by 15 million lbs. to 282 million lbs. There were no direct exports to Russia, and China which re-exports Indian tea to Russia also took less. The shipments to France, however, more than doubled from 720,000 lbs. in 1917-18 to 1,695,000 lbs. in 1918-19. The total exports to Europe, excluding the United Kingdom, showed a decrease of 7,341,000 lbs, as compared with the year 1917-18, mainly on account of the cessation of exports to Russia. The shipments to the African countries, especially to Egypt, Cape Colony, and Natal, were much less than the record exports of the previous year. The total quantity exported was 3,400,000 lbs. as against 11,442,000 lbs. in 1917-18.

Of the American countries the direct shipments to Canada and the United States decreased to 3 million lbs. from the record figures of 42 million lbs. in 1917-18. Exports to Chile, however, considerably increased (by 2½ million lbs.) as compared with the preceding year (1917-18). The total exports to America amounted to 8 million lbs. as against 44 million lbs. in 1917-18.

In Asia, the best customers of Indian tea are China, Ceylon, Persia, Arabia, and Asiatic Turkey (mainly Mesopotamia). Arabia took 1¼ million lbs. in the year under review, as against 2 million lbs. in the preceding year. The trade with China, which consists almost entirely of tea dust exported to Hankow for the manufacture of brick tea for the Russian market, decreased from 3 million lbs. to 621,000 lbs. The exports to Persia increased from 3 million lbs. to 8 million lbs., and those to Asiatic Turkey (Mesopotamia) from 2 million to 8 million lbs., as compared with the previous year. The total exports by sea to the Asiatic countries increased by four million lbs.

Australia, New Zealand, and the Fiji Islands took 7,397,000 lbs., or 3,379,000 lbs. less than in 1917-18. Exports by land were twice those of the previous year. The bulk of the exports by land goes to Afghanistan and other countries beyond the north-western frontier. If the exports both by sea and by land are taken together, the net decrease in 1918-19 was nearly 34 million lbs. or 9 per cent. The difficulties in obtaining tonnage were the controlling factor on the trade of the year.

The Director of Statistics, India, in a review of the present position and prospects of the tea industry says they appear to be more promising than two years ago. The duty (1s. per lb.) on empire grown tea has been reduced by 2d. in the United Kingdom from June 1919 and a similar concession is expected in other parts of the British Dominions, where tea is not in the free list. On the other hand, Indian tea will be faced with a serious competition in the outside markets inasmuch as a large quantity of foreign tea will be ousted from the United Kingdom. Thus the struggle for markets is expected to be keener than ever in the near future.

EXPORTS AND PRICES.

The following table shows the quantity of Tea exported by sea and by land to Foreign Countries from India, Ceylon, and China, in the years 1896-97 to 1918-19, with variations in index numbers, taking the figure of 1896-97 as 100 :—

—	India.		Ceylon *		CHINA †			
					Black and green.		Brick, tablet & dust.	
	lbs.		lbs.		lbs.		lbs.	
1896-97 ..	150,421,245	[100]	110,095,194	[100]	161,538,933	[100]	78,567,333	[100]
1897-98 ..	152,344,905	[101]	114,460,318	[104]	137,097,600	[85]	75,731,867	[98]
1898-99 ..	158,539,488	[105]	122,395,518	[111]	147,967,200	[92]	68,017,067	[87]

1917-18 ..	360,623,768	[240]	195,231,592	[177]	89,115,333	[55]	10,445,866	[139]
1918-19 ..	326,645,780	[217]	180,817,744	[164]	43,422,933	[27]	10,445,866	[13]

* The figures for years previous to 1905-06 relate to the calendar year as it has been found impossible to procure complete data for the official year.

† For calendar year.

The following statement illustrates the variations in prices of Indian tea sold at auction sales in Calcutta and in declared values of exports by sea in 1888-89 and the six years ending 1918-19, the average price of 1901-02 to 1910-11 being taken as 100 in each case. The figures represent the average of the prices per pound of tea from all districts at each sale :—

Year.	Average price of Indian tea.		Average declared value of Exports by Sea.	
	Price.	Variation.	Price.	Variation.
	As. p.		As. p.	
1888-89	8 2	136	8 8	124
1913-14	7 9	129	8 3	118
1914-15	7 7	126	8 3	118
1915-16	8 11	149	9 5	135
1916-17	8 8	144	9 2	131
1917-18	7 3	121	7 10	112
1918-19	8 0	133	8 9	125

The following table shows the quantity of tea, green and black, produced, exported available for consumption in India during the years 1914-15 to 1918-19 (the figures in the last column being calculated after adding stocks left from previous year and left at end of year) :—

	Production.	Net exports.	Available balance.
	lbs.	lbs.	lbs.
1914-15	313,301,411	293,685,389	19,611,022
1915-16	372,202,674	330,520,736	31,105,038
1916-17	370,313,559	283,345,512	38,968,047
1917-18	371,296,338	346,676,007	42,120,331
1918-19	380,458,975	312,017,339	50,441,636

Coffee.

The history of the introduction of coffee into India is very obscure. Most writers agree that it was brought to Mysore some two centuries ago by a Mahomedan pilgrim named Baba Budan, who, on his return from Mecca, brought seven seeds with him. This tradition is so universally believed in by the inhabitants of the greater part of South India, that there seems every chance of its being founded on fact. About the beginning of the 19th century there is no doubt coffee had found its way to India, and in 1823 a charter was granted to Fort Gloster, near Calcutta, authorising it to become a cotton mill, a coffee plantation and a rum distillery. Some of the coffee trees planted in fulfilment of that charter are supposed to be still alive, and about the same time coffee was successfully grown in the Botanic Gardens, Calcutta; but the industry of coffee planting nowhere found an abiding place on the plains of India but migrated to the hills of South India, in Mysore more especially, and thus into the very region where tradition affirms it had been introduced two centuries previously.

The first systematic plantation was apparently Mr. Cannon's near Chikmuglur. This was established in 1830. It is supposed, however, that Major Bevan may have actually grown coffee on the Wynad at a slightly earlier date and that Mr. Cockburn's Shevaroy plantation bears the same date as Mr. Cannon's. In 1840 Mr. Glasson formed a plantation at Manantoddy, and in 1846 plantations were organised on the Nilgiri hills.

The Position of the Industry.—The reported area under coffee has shown a continuous diminution since 1896.

It is reported that in some of the coffee-growing districts coffee is giving way to tea, or where the altitude is not prohibitive, to rubber. The advent of large supplies of cheap

Brazilian coffees in the markets of Europe has, by bringing down prices, no doubt injured the coffee industry of India very seriously; but the following figures of export trade show no marked change in the position since 1902, except in the last three years:—

				Cwts.
1902-03	269,165
1903-04	291,254
1904-05	329,647
1905-06	360,182
1906-07	228,094
1907-08	244,234
1908-09	302,022
1909-10	232,645
1910-11	272,249
1911-12	241,085
1912-13	267,000
1913-14	260,000
1914-15	290,000
1915-16	177,000
1916-17	198,000
1917-18	196,000
1918-19	219,000

The exports to the United Kingdom have in the last few years fallen off considerably, there has been a great diminution in the trade with France, but exports to other Continental countries have shown some increase. No estimate of the quantity of coffee consumed in India can be given.

The Forests.

The necessity of protecting the vast forest areas in India and Burma was first recognised in the Madras Presidency nearly a century ago, when steps were taken to protect on a limited scale the more valuable areas in the Anamalis, while in December 1886 Doctor Cleghorn was appointed the first Conservator of Forests in that Presidency. It was not, however, until 1856 that Lord Dalhousie laid down a definite policy with the object of affording more widespread protection to the vast areas of valuable forest in British India. The action taken by the Supreme Government came none too soon, for already in many localities the wanton hacking by the local population and even more so by timber contractors, had reduced the forests to a state from which they could not be expected to recover for many years, even under the strictest protection.

Recruitment of the Staff.

In order to introduce a system of conservative management on scientific lines it was of first importance to collect a staff of trained foresters, and as no forest training college existed at that period in England, the Government of India, as a commencement, enlisted the services of three German Forest Officers. The first of these to come to India was the late Sir Detrich Brandis, K.C.I.E., F.R.S. and it was to his extraordinary energy and abilities that a sound foundation was originally laid to the scientific management of the State forests. Soon after his arrival in India, the staff was materially strengthened by the recruitment of officers from the Indian Army. In 1869 the first batch of technically-trained English forest officers joined the service, having received their training either in Germany or in France, and this system of continental training remained in force until 1876, after which the training was carried on entirely at the National Forest school of Nancy. The first batch of Cooper's Hill trained foresters arrived in India in 1887 and the last in 1907, after which date the training took place at Oxford University, and later also at the Universities of Cambridge, Edinburgh and Dublin. In this way the Government of India have been able to collect by degrees a highly trained staff of men to carry on the administration of their State forests. The total strength of the Imperial Establishment at the present time is 237, of whom 29 are administrative officers and 219 Executive officers, among the latter are included Instructors and Research Officers who are employed at the Forest Research Institute, Dehra Dun.

In order to keep pace with the recruitment of the superior staff, a Forest School was opened in 1878 at Dehra Dun for the training of Forest Rangers. Recently this School has been converted into a College and the instruction extended to include a course for training men for the Provincial Services. Besides the Forest College at Dehra two new Rangers' Schools have been established, one at Pynmana in Burma and the other at Coimbatore in Madras. Besides this nearly every Province has estab-

lished a local Forest School for the training of the lower subordinate establishment.

Area of State Forests.

The forests belonging to the State covered in 1917-18, 251,512 square miles, or nearly one-quarter of the whole of India and Burma. Of this 101,233 square miles are Reserved Forests, 8,750 square miles Protected Forests and 141,527 square miles Unclassed forests, by far the greater portion of the latter class occurring in Burma. The distribution of these areas is by no means uniform, the majority being found in Burma, Assam, Northern Bengal and along the foot of and extending into the Himalayas from the Nepal frontier westward through the United Provinces and the Punjab. In the Gangetic valley, in the plains of the Punjab, in Sind and Rajputana few forests occur except along the rivers; nor does one come across large wooded tracts until one enters the Central Provinces and the Godavari catchment area. From there southward in the Satpuras and throughout the North and South Deccan there exist well distributed areas of forests, though generally not in large blocks, while on the Western Ghats, in the Nilgiris and Anamalis, are found some of the finest teak forests of India proper. The East Coast of India is fairly well stocked with forest growth, especially in the Godavari basin, to the west of Cuttack and Puri and again in the Sundarbans, while the Andaman Isles are densely wooded.

Revenue, Expenditure and Outturn.

The gross Revenue from State forests in 1917-18 amounted to Rs. 4,09,69,257, while the expenditure stood at Rs. 2,11,57,063, giving a net revenue of Rs. 1,98,12,194. The total outturn of timber and fuel in that year amounted to 328½ million cubic feet, The bamboos removed were valued at 15½ lakhs of rupees, while the total revenue derived from wood was 323 lakhs of rupees and from Minor Products 33 lakhs of rupees.

From the above figures it will be readily understood that not only is the revenue realised by the State considerable but that the handling of such large amounts of Forest Produce requires a competent staff of officers.

Management.

The system under which the State forests are managed varies in different Provinces. In all cases, however, the aim of the Forest Department has been to introduce Working Plans for their forests, based on European systems of management. The system most usually adopted in India, especially for working the valuable teak and sal forests, is the Selection System, in other words maintaining an equal distribution of all age classes throughout the forest. In a few cases such as in deodar and other coniferous forests and also in a few instances in sal forests, the Uniform Method or a system by which trees of more or less uniform age are grouped together has been applied and the method of mere intense

management may come into more general use in the future, as a greater number of trained officers become available. In many cases, owing to the destruction of the forests in the past, it has only been possible to prescribe Improvement Felling, though in time a more regular system of working will be introduced. The forests which are destined to supply small building timber and fuel to the local population are generally worked by either the Coppice with Standard or Pure Coppice methods, according to the state and composition of the forest, while certain areas have been put aside for the formation of Fuel and Fodder Reserves or as grazing areas.

Forest Surveys.

The preparations of maps for the State Forests is undertaken by the Great Trigonometrical Survey Department. The area for which detailed surveys have been prepared was roughly 85,605 square miles in 1917-18, to which figure yearly additions are being made. As soon as possible after the compilation of detailed maps, Working Plans are prepared for the forest, and up to 1917-18 about 60,724 square miles of Forests have been dealt with.

Method of Extraction.

Once the forests have been organized and plans of working prepared by an officer put on special duty for the purpose, it remains for the executive officers to arrange for the exploitation of the trees, according to the provisions of the sanctioned plans. This work is carried out in various ways in different localities. Sometimes it is done departmentally, as for instance in certain divisions on the West Coast and also in three or four of the western Pegu Yoma divisions, in Burma. This system which had to be adopted by the Department when work was first commenced and contractors could not be obtained, has now generally been replaced by a system of giving leases to work the forests or by selling the annual coupes standing to contractors. In the case of the valuable teak forests of Burma the system of granting leases for a period of from 10 to 20 years has generally been adopted and has been found to work satisfactorily, the trees for felling being marked by the Forest Department. In other provinces this system has been adopted on a more restricted scale, and in India proper the custom of holding annual sales and selling the trees standing has been found more convenient and profitable. The right to collect Minor Produce is generally put up for auction, which gives the highest bidder the right to collect the produce from the forest for a given period, generally one year. In order to meet the requirements of the local population a system of issuing permits is in force, the permit being issued free to right or privilege holders and on payment of a low fee to other persons. This enables agriculturists to obtain their requirements as to fuel, building timber and grass, etc., without delay and without having to pay enhanced rates to a middleman. The right to grazing is dealt with in the same way.

Important Timbers.

The forests of British India contain a vast number of trees and woody plants, in fact a far greater number than is generally realized

by the public. For instance the number of tree species is about 2,500, while the number of woody shrubs and climbers is not far short of that total. Of all Indian species of timber teak stands first, both in quality and as to the amount annually exported from the State forests. Sál comes next in importance and is obtained in the greatest quantities from the United Provinces and Nepal, while a very considerable amount is also available from Bengal, the Central Provinces, Assam and the Feudatory States of Orissa. Of other species of nearly equal importance is deodar the timber of which is extensively used in construction and as railway sleepers; sandalwood, sissoo and blackwood, the last two timbers being highly prized for building purposes and furniture making; the sundri-wood of the Sundarbans and Bassein, used in boat and carriage building; Andaman and Burman Padauk, used for the construction of gun carriages, furniture and railway carriages; the Pyinkado of Burma, used in building and one of the first sleeper woods in the world; the Red Sandars of Madras, babul, the iron eng wood of Burma, all used for building and for a variety of other purposes and Khair from which "Cutch" is obtained. A great variety of other useful timbers could be mentioned of nearly equal importance to the above, which go to supply the requirements of the enormous population of the Indian Empire.

Minor Forest Products.

Turning now to Minor Forest Products, the most important come under the main heads, fibres, and flosses, grasses, distillation products, oil seeds, tan and dyes, gums and resins, rubber, drugs and spices, edible products; bamboos, canes, and animal and miscellaneous products. The number is very large, while some of them are of considerable economic importance, so much so that they realized nearly 137 lakhs of rupees in 1917-18. It is not possible to do more than to mention one or two of the most important of these commodities, as for instance myrabolams for tanning. Cutch is of even greater importance, being produced chiefly in Burma and the United Provinces though also prepared on a more limited scale elsewhere. Another equally well known product is lac, produced chiefly in Sind and the Central Provinces, which besides being used locally, is annually exported in the form of shellac. Of other Minor Forest Products which deserve mention are rosha and lemon oils; gum kino, babul gum, gurjan oil, thitsi damar and rubber, which are classed as exuded products; sabal grass for papermaking and munj grass for fibre and thatching; mohwa seed yielding a valuable oil, sandal and agar wood oil and the essential oils obtained from them; simul floss used for stuffing pillows; kamella powder and lac dye used for dyeing; podophyllum resin, cassia bark, cardamoms, pepper and strychnine, come under the head of drugs and spices; and a variety of other products often of considerable local values.

From what has been said above it will be seen that the Minor Products obtained from the Indian forests play by no means a small part in the economy and commerce of the country.

The statement below relating to **Exports of Forest Products** is taken from the "Annual Return of Statistics relating to Forest Administration in British India" for 1917-18, recently issued:—

Articles of Forest Produce.	Quantity in Tons of 20 cwt. in the case of teak and other timbers, cubic tons.		Valuation at Port of shipment in 1917-18.	
	Average of 5 years 1912-13 to 1916-17.	In 1917-18.	Total.	Per Ton.
Caoutchouc raw	1,851	3,763	Rs. 1,62,19,334	Rs. 4,310
Lac { Button	1,046	138	4,24,229	3,074
{ Shell	16,023	14,484	3,59,14,763	2,480
{ Stick, seed and other kinds ..	2,258	1,499	14,39,042	960

" 1913-14			4,54,25,118	

(a) Quantity (whether by weight or measurement) is not recorded.

FOREST INDUSTRIES.

In a brochure published in 1917 the Government officially reviewed their work and indicated the scope of its development and its potentialities. The most interesting part of this memorandum was that which summarised the development of Indian forest industries. First amongst these was placed the Indian pine resin industry. In this it was stated that from very small beginnings in the United Provinces and later in the Punjab the industry has grown until for the year ending 30th June 1916, the annual resin collection in the United Provinces and the Punjab amounted to 69,980 maunds net (2,592 tons), the operations covering 62,000 acres of forest with 2,141,000 blazes or channels in work giving employment to at least 2,400 operatives. The gross revenue was Rs. 5,04,249, the gross trading account profit Rs. 1,73,892 and the net trad-

ing account profit Rs. 1,46,794, while the invested capital stood at Rs. 1,61,905. The possibilities of development of the pine industry are considerable.

Next in regard to paper it was pointed out that the present demand is supplied by the mills in India to a small extent. Of the total demand the Indian paper mills produced in normal times about 25,000 tons which during the war has risen nearly to 30,000 tons. The imports of paper and paste board in India in 1914-15 amounted to 51,390 tons valued at £ 709,372 or including note paper at a total of £ 879,298. The demand for paper in India may therefore be put at about 75,000 tons per annum of which India supplies one-third. In the matter of paper pulp India imports 13,250 tons. The most important raw material used in India is Sabaibhabar or baid

grass, which is obtained from the forests of Bengal, Chhota Nagpore, Orissa, Nepal and the United Provinces. The enormous supplies of bamboos and elephant grass available could be utilised for the manufacture of the 50,000 tons of paper and pasteboard which India now imports annually.

Another promising forest industry is matches. The difficulties under which the industry labours is that imported matches are very cheap. Great difficulties had been experienced in obtaining first class indigenous timber within the working figure of cost, railway freight has hit the local trade and the cost of landing the timber at the factory site has in many

cases turned out to be excessive. In spite of these difficulties the industry still persists and the solution of the problem in Northern India is found to lie in the erection of portable or semi-portable splint machines in the vicinity of the spruce and silver fir forests and by exporting the prepared splints to central match factories in the plains.

Another promising industry is the antiseptic treatment of timber which has given good results but for its full development requires the establishment of the manufacture of coal tar creosote locally.

The following figures show the steady growth of the forest revenue in recent years.

Financial results of Forest Administration in British India from 1864-65 to 1913-14 (in lakhs of rupees) the latter being the latest date in the most recent quinquennial official review.

Quinquennial period.	Gross revenue (average per annum).	Expenditure (average per annum).	Surplus (average per annum).	Percentage of surplus to gross revenue.
	Lakhs	Lakhs	Lakhs	Lakhs.
1864-65 to 1868-69	37·4	23·8	13·6	36·4
1869-70 to 1873-74	56·3	39·3	17·0	30·2
1874-75 to 1878-79	66·6	45·8	20·8	31·2
1879-80 to 1883-84	88·2	56·1	32·1	36·4
1884-85 to 1888-89	116·7	74·3	42·4	36·3
1889-90 to 1893-94	159·5	86·0	73·5	46·1
1894-95 to 1898-99	177·2	98·0	79·2	44·7
1899-1900 to 1903-04	196·6	112·7	83·9	42·7
1904-05 to 1908-09	257·0	141·0	116·0	45·1
1909-10 to 1913-14	296·0	163·7	132·3	44·7

This statement exhibits the striking fact that the surplus increased nearly ten-fold during the fifty years, and that it averaged £ 882,000 sterling per annum during the last quinquennial period, without including the large sum represented by the value of forest produce given away free or removed by right holders, which at a rough estimate amounts to over £ 400,000. The in-

crease in the surplus is all the more satisfactory when it is considered that all capital expenditure has been met from revenue and that a considerable proportion of this expenditure is incurred on silvicultural and other operations which as a rule do not show any return for a long period of time.

AREA OF FOREST LANDS, OUTTURN OF PRODUCE, and REVENUE and EXPENDITURE OF FOREST DEPARTMENT.

Province.	Area of Province		Forest Area.		Total.	Per cent. of Forests to whole Area of Province	Outturn of Produce.		Revenue.	Expenditure.	Surplus.

* Includes Rs. 8,304, being the receipt from Imperial and Imperial Forest College and Research Institute.

† Includes Rs. 3,46,291 being the expenditure incurred on account of Imperial, Imperial Forest College and Research Institute and Forest Surveys.

‡ Includes deposit of Rs. 3,37,987 on account of Imperial, Imperial Forest College and Research Institute and Forest Surveys.

RUBBER CULTIVATION.

The most important rubber-yielding tree found growing naturally in the Forests of India is *Ficus elastica*, a very large tree of the outer Himalayas from Nepal eastwards, in Assam, the Khasia Hills and Upper Burma. It has also been cultivated in Assam in the Charduar plantation in the Tezpur Sub-Division, as also in the Kulsli plantation of the Gauhati Sub-Division in the Kamrup Division. There are also a number of other rubber-yielding trees found in the Indian and Burman forests from which rubber can be collected on terms quoted by Government. Attempts have been made to cultivate Para, Ceara and Castilloa in various parts of India and Burma. In India proper the chief attempts were made on the west coast, about 180 acres being planted from 1908 onward at Gersoppa. Similar attempts have been made in Madras: but at present Para rubber is being grown as a commercial product rather in Burma than the rest of India.

The production of rubber in India is confined to Assam, Burma, and the Madras Presidency:—

	Acres.	No. of trees.
Assam	4,681	137,430
Madras	12,022	1,636,476
Burma	29,544	4,911,399
Total	46,247	6,685,305

The yield of Assam plantations is relatively small, and the number of trees to the acre is much less than in Madras and Burma. The

output of Madras in 1913 was more than double that of Burma, where most of the trees being less than six years old are not yet productive. All planting is stump planting about 9 to 12 months old. The trees can be tapped in four years from the date of planting. The average yield in Burma from 4 to 6 years old trees is 1½ to 3 lbs. per tree per year. The capital invested is from £22 to £25 per acre. The average cost of production is about 1s. 6d. to 1s. 10½d. per lb.

There has been a steady development in the exports of rubber from India. The exports in 1917-18 amounted to 8,430,000 lbs., the highest on record, nearly eight times the annual average exports during the pre-war quinquennium. In 1918-19 the exports rose to 13,907,000 lbs. The question of annually collecting detailed statistics regarding rubber production is under the consideration of the Government of India. The report of the Industrial Commission points out that rubber manufacture has not been started in India. "This industry", it adds, "is one of those that are essential in the national interest and should be inaugurated, if necessary, by special measures."

Bibliography.—For fuller details see "Dictionary of the Economic Products of India" and the abridged edition of the same published in 1908 under the title "The Commercial products of India" by Sir George Watts; and the "Commercial Guide to the Forest Economic Products of India" by R. S. Pearson, published by the Government Press, Calcutta, 1912.

MATCH FACTORIES.

The total imports of matches into British India in 1917-18 were over 18 million gross, valued at approximately Rs. 2.34 lakhs. This figure fell in 1918-19 to 11 million gross (of which 97 per cent. came from Japan) valued at Rs. 88 lakhs. British matches have almost disappeared from the market. Japanese matches are ordinarily of very inferior quality, but they are cheap, and as the Indian is content with a poor quality at a low price, these matches are occupying the market to the exclusion of the more highly priced matches and even to the detriment of the cheap Swedish matches. The percentage shares of the United Kingdom, Japan, and Sweden in the pre-war year were 7.53, and 26 respectively, in 1916-17 the percentages were 4.83 and 13.

In normal years matches are also imported from Austria-Hungary, Germany and Belgium. In the opinion of the Forest experts at Dehra Dun there is an abundance of raw material in this country for match manufacture.

Indian timbers for matches.—In an article in the Indian match industry which appeared in the *Indian Agriculturist* the woods of the following species are said to be employed in Burma for match splints: *Bombax insignis*, *B. malabaricum* (simul), *Anthocephalus Caadamba* (kadam), *Sarcocephalus cordatus*, *Spondias mangifera* (amra), and *Engelhardtia spicata* (palash). These woods are not the best for the

purpose, but are those most easily procurable. There are other kinds of white wood, such as poplar, pine, willow, and alder, in abundant quantities, but they are difficult to extract and transport, and are therefore costly.

The attempts to manufacture matches in India have not hitherto been attended with great success, but recently two well-equipped factories have been started in Burma which give promise of good results. One of these is in Rangoon and is owned by Chinese; the other is at Mandalay, and is under European management. Further investigations are said to be necessary in order to settle the question as to the most suitable woods to employ, and when these have been brought to a satisfactory conclusion it is thought that Burma will be able to produce matches of first-class quality. It may be added that in 1912, the latest year for which complete statistics are available, there were six match factories in India.

The Law in India prohibiting the importation of the old sulphur matches as from July 1st, 1913, has not seriously affected the position of the Swedish manufacturers, as they were able to supply another "strike-anywhere" match to take the place of the kind then prohibited, but as the new kind is dearer to manufacture the prices have gone up, and are likely to rise still further.

PAPER MAKING.

This industry before the war did not make the headway in India that had been anticipated, there being only 11 mills at work now with an authorised capital of Rs. 49½ lakhs, from which the output in 1916-17 was 31,900 tons compared with 26,450 tons, the pre-war quinquennial average. Further increases in output are hampered by the inability to secure new machinery and the irregular arrivals of chemicals of which the cost continues steadily to rise.

In India the effects of the war were immediately felt in the rise in the price of wood-pulp, which is used in considerable quantities by mills. The high cost of imported woodpulp and the increasing price paid for raw materials such as baib grass, the cost of transporting the raw material to the mills, and the temporarily high cost of chemicals are the chief obstacles to the development of the local industry. The position may be greatly improved when the new sources of raw materials are exploited and the products made readily available. The total consumption of paper in India is at present estimated at about 80,000 tons per annum, of which over 30,000 tons are manufactured in India, and the balance (chiefly high class stationery) is imported. The war has been of great advantage to Indian paper mills as it has resulted in curtailing the competition from abroad, and Indian mills have accordingly been able, with the decreased supply for consumption, to raise their prices.

There are five large paper mills in the country working on up-to-date Western lines, viz., at Titagarh, Kankinara and Raniganj in Bengal, the Upper India Couper Mills at Lucknow and the Reay Mill at Poona. There are also two smaller mills at Bombay and Surat which make only country paper, and there are one or two other mills which recently were not working. The five large mills have a large Government connection, as the greater part of Government orders for paper is placed in India.

The existence of the local industry depends chiefly on the supply of Sabai grass which on account of unfavourable seasons sometimes yields short crops. It is of great importance, therefore, to look for materials affording a constant output, and various reports have been published on the available paper-making materials. Considerable attention has been devoted to **Bamboo**, since 1875 when it was found that this plant—of which there are four chief varieties in India—yielded a fibrous paper stock which made a quality of paper superior to esparto grass and at a considerably less cost. It was at that time estimated that one acre of bamboo would yield 10 tons of dried stems equivalent to 6 tons of merchantable cellulose. In 1905 Mr. R. W. Sindall was invited by Government to visit Burma with a view of enquiring into the possibility of manufacturing paper pulp. His report on the subject appeared in March 1906. He made numerous experiments with bamboo and woods of Burma and laid down lines along which further enquiry

should be made. Subsequently Mr. W. Raitt, a pulp expert, was engaged at the Forest Research Institute in conducting tests on the treatment of bamboos by the soda and sulphate processes, the treatment of bamboo before boiling, with remarks on the utilisation of nodes and internodes. His results were embodied in the "Report on the investigation of Bamboo or Production of Paper-pulp," published in 1911. Mr. R. S. Pearson of the Forest Service, Dehra Dun, as the outcome of enquiries made throughout India published in 1912 a note on the Utilization of Bamboo for the manufacture of Paper-pulp. The yield per acre from bamboo is larger than that of grasses usually used for paper. The cost of working into pulp has been estimated to yield a product cheaper than imported unbleached spruce sulphite and unbleached sabai grass pulp. In 1915 Mr. Dhruva Sumanas published a pamphlet, *Dendrocalamus Strictus* Bamboo of the Dangs, as the result of investigations carried on in Bansda State.

The leading Indian paper grass for the last thirty years has been the bhaib, bhabar, or sabai grass of Northern India. It is a perennial grass plentiful in drier tracts from Chota Nagpur and Rajmahal to Nepal and Garhwal. The Calcutta mills draw their supplies from Sahibganj, Chota Nagpur and the Nepal Terai. The quantity annually exported from Sahibganj is between three to four lakhs of maunds. The cutting in these districts is said to commence in October when the plants are six or seven feet high. Sabai grass yields from 36·6 to 45·5 per cent. of bleached cellulose. A report by Mr. R. S. Pearson, Forest Economist, Dehra Dun, on the use of **elephant grasses** in Assam was issued in 1919. The most important species of grass found in the areas in which investigation has been made are *Khagra* (*Saccharum spontaneum*) and *Batta* (*Saccharum narenga*), with patches of *Nal* (*Phragmites karka*) on the more swampy ground. Hand samples of the above grasses were sent to England to be tested on a laboratory scale, while several tons were sent to an Indian paper mill to be made into paper. The results were satisfactory and proved that a very fair quality of paper can be produced from these grasses at a relatively low price. Small samples of such paper can be obtained by persons interested in these grasses from the Forest Economist, Forest Research Institute, Dehra Dun, who can also supply further details.

Imported materials.—Paper-making materials, mostly woodpulp, are normally imported to a great extent from the United Kingdom, Austria-Hungary, Sweden, and Germany. Of chemicals the bleaching material, caustic soda, and sulphur or sulphuric acid are imported chiefly from the United Kingdom. Rosin is already being manufactured by the Forest Department in the United Provinces, from crude resin obtained by tapping pine trees in the Himalayan forests, and the product is taken by the paper mills in India.

Mines and Minerals.

(a) Export values.

The feature which stands out most prominently in a survey of the mineral industries of India is the fact that until recent years little has been done to develop those minerals which are essential to modern metallurgical and chemical industries, while most striking progress has been made in opening out deposits from which products are obtained suitable for export, or for consumption in the country by what may conveniently be called direct processes. In this respect India of to-day stands in contrast to the India of a century ago. The European chemist armed with cheap supplies of sulphuric acid and alkali, and aided by low sea freights and increased facilities for internal distribution by the spreading network of railways has been enabled to stamp out, in all but remote localities, the once flourishing native manufactures of alum, the various alkaline compounds, blue vitriol, copperas, copper, lead, steel and iron, and seriously to curtail the export trade in nitre and borax. The reaction against that invasion is of recent date. The high quality of the native-made iron, the early anticipation of the processes now employed in Europe for the manufacture of high-class steels, and the artistic products in copper and brass gave the country a prominent position in the ancient metallurgical world, while as a chief source of nitre India held a position of peculiar political importance until, less than forty years ago, the chemical manufacturer of Europe found among his by-products, cheaper and more effective compounds for the manufacture of explosives.

With the spread of railways, the development of manufactures connected with jute, cotton and paper, and the gradually extended use of electricity the demand for metallurgical and chemical products in India has steadily grown. Before long the stage must be reached at which the variety and quantity of products required, but now imported, will satisfy the conditions necessary for the local production of those which can be economically manufactured only for the supply of groups of industries.

Coal.

Most of the coal raised in India comes from the Bengal—Gondwana coal-fields. Outside Bengal the most important mines are those at Singareni in Hyderabad, but there are a number of smaller mines which have been worked at one time or another.

Provincial production of coal during the years 1917 and 1918.

Punjab	49,869	50,418
Rajputana	6,045	11,334
Total	18,212,918	20,721,543

Output in 1918.—There was a large increase in the output in 1917 which was 17,326,384 tons. This record rose in 1918 to 19,847,039 tons. This is an unprecedented increase of 2,520,655 tons, or 14·55 per cent. over the output in 1917. The opening stocks were 515,874 tons and the closing stocks were 1,785,732 tons. The despatches amounted to 15,920,804 tons and the colliery consumption 1,948,764 tons (9·82 per cent. of the output). The amount of coal delivered to coking was 707,613 tons from which 185,993 tons of hard coke and 240,269 tons of soft coke were made. As in 1917 this increase was general, the only decrease being in Assam. The output in Bengal increased by nearly two-thirds of a million tons. The chief increase, however, was in Bihar and Orissa, being very nearly one and three-quarters of a million tons.

War Conditions.—Of the total output 18,977,911 tons or 95·62 per cent. were raised in Bengal and Bihar and Orissa, the percentage of the previous five years being 95·87. The difficulty of drawing any comparison between the conditions in 1917 and pre-war conditions is obvious. In 1918, practically the whole of the trade was under the Coal Controller. One of the first steps taken was to restrict the output of collieries working the poorer class coals. Whether as a result of this or not, the 25 largest concerns, the great majority of whom in 1917 showed decreases, as compared with the previous year, showed, in the year under report, increases in 18 cases. The general opinion is that the result of the restrictions above mentioned was to induce labour to these larger collieries, although other causes contributed to a general increase of labour supply. All coal, except that of markedly inferior quality, was requisitioned, at prices fixed by the Controller on the basis of cost of production plus a certain profit, the result being that practically every consumer in India received his coal from that officer. There was a certain and very limited amount of free coal, of an inferior character, which naturally, under the circumstances, fetched abnormally higher prices, but, as stated, the amount was very limited, owing to the fact that these collieries were restricted in output and also owing to the fact that requisitioned coal had priority as regards wagons. In other provinces there was a decrease in Assam, 2·47 per cent. and increases in the Central Provinces 29·60 per cent., in the North-West Frontier Province (output negligible), 11·62 per cent., in the Punjab, 1·12 per cent. and in Baluchistan 5·74 per cent.

The Output per person employed during the year was (a) below ground 181 tons and (b) above and below ground 113 tons. The figures for the five years preceding were (a) 178 and (b) 114. Taking each group of coalfields separately, these figures were as follows:—Bengal and Bihar (a) 185 and 182, (b) 115 and 116; Assam (a) 150 and 159, (b) 96 and 106; Baluchistan (a) 76 and 70, (b) 43 and 45; the Central Provinces (a) 122 and 122, (b) 79 and 82, and the Punjab and North-West Frontier Province (a) 58 and 72, (b) 37 and 48. The output in England in 1916 was 323 tons per person employed below ground and 251 tons per person employed above

and below ground. This largely increased output would tend to show that Indian colliery owners did not suffer much from scarcity of machinery and plant from overseas. If, however, hostilities had not been suspended when they were and manufacturers in the United Kingdom had not been set free to execute orders from India, many of which were long overdue, the scarcity of materials, especially in the case of wire ropes, would soon have begun to affect the output. The output in Assam was affected to a certain extent towards the end of the year for want of wire ropes.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds no difficulty in obtaining sufficient supplies of ore from deposits that no European ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhumi and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron Steel Co., Ltd., secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Buru and Buda Buru respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Buru, a portion of Notu Buru, the deposit has been

opened up, and now feeds the Barakar ironworks. Pansira Buru rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high-grade micaceous hematite, often lateritised at the outcrop. Cross-cuts into the interior of the deposit show that the hematite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The **Tata Iron and Steel Company** at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hematite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other. These latter have been noted in the field as charnockites, the term being employed, rather loosely no doubt, but probably in the main correctly, to cover types of pretty widely varying acidity. In still more intimate association with the ores than either of the foregoing were found masses of dense quartz rocks, frequently banded, and banded quartz-iron-ore rocks. These last are of the types so commonly associated with Indian iron-ores, but are here not so prominent as is usually the case.

There was a considerable increase in the output of iron ore in 1918. The Tata Iron and Steel Company produced 198,064 tons of pig iron and 130,043 tons steel including rails, while the Bengal Iron and Steel Company produced 49,348 tons of pig iron, 12,114 tons of ferro-manganese and 21,776 tons of cast iron castings.

MANGANESE ORE.

This industry commenced some twenty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore

than the Vizagapatam mines. India now alternates with Russia as the first manganese-producing country in the world. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put

are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferromanganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing. In 1905 production reached 247,427 tons; the following year it was more than doubled (571,495 tons), and in 1907 the figures again rose to 902,291 tons. In 1909, on account of the fall in prices the output contracted to 642,675 tons, but it almost regained its former position in 1910 when the production rose to 800,907 tons. In 1911 it fell to 670,290 tons. In 1916 the output was 645,204 tons valued F.O.B. at Indian Ports at

£1,487,026. The ore raised in the Central Provinces is of a very high grade, ranging from 50 to 54 per cent. of the metal, and in consequence of its high quality is able to pay the heavy tax of freight over 500 miles of railway, besides the shipment charges to Europe and America, for the whole of the ore is exported to be used principally in steel manufacture in the United Kingdom, Germany and the United States.

Manganese was one of the minerals which were largely affected by the war, the exports being restricted almost entirely to consignments to the United Kingdom, with a comparatively small quantity to the United States; the quantity produced in 1918 amounted to 415,357 tons, as compared with 497,052 tons in the previous year. Owing to a rise in ocean freights, prices rose to the record figure of 44d. per unit.

GOLD.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910, the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed

down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,445 ounces in 1909, but fell to 5,972 ounces in 1910 increasing again to 6,390 ounces in 1911 and being in 1913, only 5,393 ounces. The gold craze, which was prevalent in Rangoon a few years ago, has disappeared as suddenly as it sprang up. The Burma Gold Dredging Company holds a right to dredge for gold in the bed of the Irrawaddy river and notwithstanding the obstacles encountered from time to time in the shape of floods, etc., the company has so far been fairly successful in its operations. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. The average earnings of the workers are very small, and the gold thus won is used locally for making jewellery.

PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java, and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil fields are found in the Irrawaddy valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and in 1886, prior to the annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yenangyat field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil fields of India. Petroleum was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million

gallons, and after a fall to 31½ million gallons in 1910 it rose to 56½ million gallons in 1912. Several of the islands off the Arakan coasts are known to contain oil deposits, but their value is uncertain. About 20,000 gallons were obtained from the eastern Barongo Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpyu district during 1911. Oil was struck at Minbu in 1910, the production for that year being 18,320 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makum in 1867. Nothing more, however, was done until 1883, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons.

On the west, oil springs have been known for many years to exist in the Rawalpindi and other districts in the Punjab. In Baluchistan geological conditions are adverse, and though some small oil springs have been discovered, attempts to develop them have not hitherto been successful.

Imports of kerosene decreased largely in 1918-19, being nearly 13 million gallons as compared with nearly 60 million gallons in 1916. 508,964 cwt. of paraffin wax, valued at £775,979, were exported.

Amber, Graphite and Mica.—Amber is found in very small quantities in Burma, the output for 1913 being only 2.9 cwt. valued at £87. Graphite is found in small quantities in various places but little progress has been made in mining except in Travancore. India has for many years been the leading producer of mica, turning out more than half of the world's supply. In 1914, owing to the war, the output was only 38,189 cwt. compared with 43,650 cwt. in 1913. Owing to necessary restrictions with regard to the export of mica, the output fell off considerably in the year 1915, but subsequent demand in the United Kingdom for the best grade of ruby mica led to a considerable increase in production during the following years. In 1918 the output was 51,572 cwt. as compared with 35,896 cwt. in 1917, the increase being almost entirely confined to the Bihar and Orissa field where lessees were urged to increase their output to the highest possible figure.

Tin, Copper, Silver and Lead.—The only persistent attempt to mine tin is in Burma. The output was for some time insignificant but rose in 1913 to 116 tons valued at £46,000 which fell to £38,000 in 1914. In 1918 Burma yielded 15,607 cwt. Copper is found in Southern India, in Rajputana, and at various places along the outer Himalayas, but the ore is smelted for the metal alone, no attempt being made to utilize the by-products. Only 3,619 tons were raised in 1918 compared with 20,103 tons in 1917; but the decrease is looked upon as temporary. The only Lead mine of any importance being worked in the Indian Empire is that of Bawdwin, where a very large body of high-grade lead-zinc-silver ore has now been blocked out. For many years the smelting operations of the Company were directed to recovering lead and silver from the slags left by the old Chinese miners. Those slags, however, are now practically exhausted, and the mine has reached a stage of development at which a steady output of ore is assured. In 1918 the total output was 19,074 tons, valued at Rs. 67,51,342 as against 16,962 tons in the preceding year.

Silver is obtained as a by-product in the smelting of the lead-zinc ores of Bawdwin. The output from that source during 1918 rose, from 1,580,557 oz. in 1917, to 1,970,614 oz. valued at Rs. 44,33,881.

Zinc.—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India, and no production was recorded until 1913. In 1914 the production was 8,553 tons, and although the output fell to 196 tons in 1915, there is a prospect of India becoming an important producer of zinc ore in the future. Important silver-lead-zinc deposits occur at Bawdwin, in Tawngpang State, one of the Northern Shan States in Upper Burma. The mines are connected with the Mandalay-Lashio Branch of the Burma railways by a narrow-gauge line 51 miles long, the lines meeting at Manhipwe, which is about 544 miles

from Rangoon. They were worked for many centuries by the Chinese for silver, and have long been known to contain zinc ore; until recently, however, no serious attempt appears to have been made to market the ore for its zinc values. In 1907 the present undertaking was started by the Burma Mines, Ltd., with the idea of recovering the lead from the old slag heaps left by the Chinese, estimated at 125,000 to 160,000 tons, and later to work the deposit. Smelting operations on these slags were first carried out at Mandalay, but later the works were transferred to Namtu, about 13 miles below the mines on the narrow-gauge railway. The deposits, which comprise an area of about 2,500 acres, have now been taken over by the Burma Corporation, Ltd., and one is being worked.

Gem Stones.—The only precious and semi-precious stones at present mined in India are the diamond, ruby, sapphire, spinel, tourmaline, garnet, rock-crystal, agate, cornelian, jadeite and amber. Amber has already been referred to; of the rest only the ruby, sapphire and jadeite attain any considerable value in production and the export of the latter has declined owing to the disturbances in China, which is the chief purchaser of Burmese jadeite. The output of diamonds is comparatively unimportant. The ruby-mining industry of Burma has lately undergone a favourable change. In 1915 the output of gems was 251,000 carats.

Wolfram.—A marked feature of the development of the mineral industries of India during recent years is the rapid rise of the wolfram industry in the districts of Mergui and Tavoy in Lower Burma. Although there was an output of 7 tons from Mergui in 1909, the industry dates practically from the following year, 1910. The output of wolfram in Burma rose from 1,888 tons in 1913 to 4,528 tons in 1917. The output in 1918 was 4,431 tons, valued at £726,321. According to an official note on the mineral production of Burma in 1917, about 80 per cent. of the Burma yield comes from the Tavoy district. Wolfram has lately been discovered on the border between the Yaméthin District and the Lailong State. Since the close of the year 1917 some 20 tons of wolfram have been extracted from a concession in this locality situated to the South of Byingyé peak and numerous other prospecting licenses are being issued in the neighbourhood. Features of the new field are the complete absence of tin and the large percentage of molybdenite which is found with the wolfram. In consequence of the need for wolfram for the manufacture of high-speed steel, special measures were taken by Government to encourage the output. Several of the larger firms in Rangoon were induced to take up wolfram concessions; the shortage in the supply of labour at the mines was met by the importation of Chinese and Indian labourers through Government agency; the Deputy Commissioner, Tavoy, was relieved of his other duties in order that he might give special attention to wolfram mining; and the services of two Geological Officers, a Government Mining Engineer and an Officer of the Chinese Protectorate in the Federated Malay States were lent to the Local Govern-

ment to assist in the control of mining methods and of the labour employed on the mines. On many of the smaller mines and on some of the larger ones, the methods of working still leave much to be desired, but with the introduction of a greater number of firms of standing and with the more efficient control which is now being exercised, there has been a marked improvement both in output and in methods of mining employed.

According to the Director of the Geological

Survey, the total production of the world is about 8,000 tons per annum of concentrates carrying from 60 to 70 per cent. of tungstic trioxide. Of this Burma produces one quarter. In Siam the mining of wolfram is a recent development. Wolfram is also produced in Australia and in the Malay Peninsula. Formerly, Germany used to take over 50 per cent. of the total exports from India, but this is one of the minerals of which the export was restricted owing to the war.

Quantity and Value of Tungsten-ore produced in India during 1917 and 1918:—

	1917:		1918.	
	Quantity.	Value.	Quantity.	Value.
	Tons.	Rs.	Tons.	Rs.
<i>Bihar and Orissa—</i>				
Singhbhum	20	20,000	2·5	7,465
<i>Burma—</i>				
Kyaukse	·1	250
Mergui	368	7,43,114	376·6	7,87,359
Southern Shan States	307	5,98,650	287	6,24,225
Tavoy	3,697·5	76,31,906	3,636·1	91,62,490
Thaton	107·5	2,30,492	91·5	2,04,945
<i>Rajputana—</i>				
Marwar	42	1,21,950	37·4	1,08,079
Total ..	4,542	93,46,112	4,431·2	1,08,94,813

Radio-active Minerals.—The General Report of the Director of the Geological Survey of India for 1913 includes a brief report by R. C. Burton on an occurrence of pitchblende at mica mines near Singar, Gaya district, Bengal. The pitchblende occurs as rounded nodules in a pegmatite that is intrusive in mica schists. Other minerals occurring in the pegmatite are mica, triplite, ilmenite, tourmaline, and uranium ochre; whitish columbite, zircon, and torbernite have also been recorded. Of these minerals triplite is stated to be the commonest.

The importance of the find of uranium oxide impregnating the triplite led to the discovery of weathered pitchblende, and as the pits were deepened the weathering became less and less until pure pitchblende was obtained. In the six months from July 1913 to February 1914, eight hundredweight of pitchblende was obtained from Abrakhi Hill together with six tons of uranium earth debris, five to six hundred tons of triplite and two tons of tantalite. These ores were raised under a prospecting license in respect of Abrakhi Hill alone and in March 1914, a mining lease for thirty years was obtained in respect of sixty square miles of the Singar estate. The first intention was to work only the five square miles round Abrakhi and a syndicate

was formed for this purpose, which on the outbreak of war, was refused a Trading License on account of the German element in it.

Labour in Mines.

The question of the labour supply presents difficulties which are not encountered in countries where mining is a special calling. The majority of the persons working at the Indian coal mines are agriculturists, and the supply of labour, as experience has recently shown, depends to a material extent on the condition of the agricultural industry. "The major portion of those employed," says a report by the Department of Statistics, "are the aboriginal Dravidians from the mountainous country of Chota Nagpur and the Central Provinces, but a large number of other castes is also employed, particularly in the outlying fields. The majority of the workmen follow the vocation of agriculture as well as mining and return to their homes during the period of sowing and reaping, the result being that at such times the output of many of the mines is greatly restricted. At the Makum collieries of the Assam Railway and Trading Company, where the labour question continues to be a very difficult one, nearly a third of the total labour force are Mekranis, Chinese, and Nepalese. The Chinese have, however, proved unsatis-

factory, and it is unlikely that they will in future be recruited." With the increase in the depth of working the need for a skilled mining class will become accentuated, and if the price of coal remains at a sufficiently high level, further development in the introduction of coal-cutting plants may take place. During the period of high prices some nine years ago cutting plants were introduced in order to augment the output. These worked successfully, but the cost proved to be high and as labour conditions improved the machines were discarded.

Inspection of Mines.

During the year 1918 the average number of persons working in and about the mines regulated by the Indian Mines Act was 237,738 of whom 150,064 worked underground and 87,674 on the surface. This is an increase of 25,857 workers or 12·12 per cent. One hundred and forty-seven thousand two hundred and nineteen were adult males, 82,492 were adult females, and 8,027 were children under 12 years of age. Those employed in coal mines numbered 176,269, which is an increase of 22,586 compared with those employed in 1917.

Accidents.—During the year 1918, at mines regulated by the Indian Mines Act, 1901, there were 200 fatal accidents, being an increase of 34 as compared with the number in 1917, and an increase of 56 as compared with the average number of the preceding five years. In one case 10 lives, in three cases 3 lives, and in twenty cases 2 lives were lost. These accidents involved the loss of 243 lives, which is an increase of 42 as compared with 1917.

Of these accidents the Chief Inspector of Mines regards (a) 102 as being due to misadventure, (b) 63 to the fault of deceased, (c) 17 to the fault of fellow-workmen, (d) 3 to the fault of subordinate officials, and (e) 24 to the fault of the management. Nearly half the increase was in falls of roof and sides. These numbered 110, being an increase of 18 over the previous year. Eighty-four of them occurred in the coalfields of Bengal and of Bihar and Orissa and of this total the Jharia coalfield contributed nearly two-thirds. This is a serious increase of 30 over the number in 1917 and of 52 over the number in 1916. This increase is very largely due to the fact that every year more collieries reach the second stage of working, which is winning the pillars. It is not many

years ago that the number of such collieries was infinitesimal, and work in India was almost entirely confined to the much safer first stage of gallery driving. Thirty-three of these cases were due to misadventure and thirty-eight to the fault of deceased, a fence being crossed, generally to rob pillars unlawfully, in 21 of them. The remaining 13 were however preventable. Eight out of 42 cases of "falls of side" occurred in the wolfram mines of Tavoy. There were 7 accidents from explosives, causing 9 deaths. There were 3 fatal explosions of fire damp. Two caused 1 death in each case, but by the third 10 lives were lost. The number of accidents in shafts and by haulage, the next most numerous of underground accidents, increased slightly. There was, however, a considerable increase in accidents on the surface. These numbered 30 as compared with 18 in 1917 and the Tavoy District was responsible for 13 of them. Electrocuting was the cause in three accidents, resulting in one death in each case. This is the same number as in the preceding year. Inefficient earthing was the cause of two of them. The installation of electricity in mines in India is increasing rapidly, and this increase is likely to be still more marked, now that there are more facilities for obtaining materials from overseas.

The **death-rate** per thousand persons employed was 1·02, while that of the preceding five years was 1·04. At coal mines only, these figures were 1·12 and 1·16, and at mines other than coal 0·75 and 0·70. At coal mines in England during the ten years ending with and including 1916, the death-rate per thousand persons employed varied from 1·08 (lowest) to 1·69 (highest). The death rate per million tons raised at coal mines only was 9·93, while that of the preceding five years was 10·18. At coal mines in England, during the ten years ending with and including 1916, the death-rate per million tons raised varied from 4·31 (lowest) to 6·37 (highest).

Chief Inspector of Mines in India, G. F. Adams, M. Inst. C. E.

Bibliography.—Report of the Chief Inspector of Mines in India, under the Indian Mines Act (VIII of 1901) for 1918, by G. F. Adams, Chief Inspector of Mines. Report on the Mineral Production of India during 1918. By H. H. Hayden, C.I.E., Director, Geological Survey of India.

CREMATION.

Cremation as a means of disposing of the dead is commonly adopted throughout India by the Hindus, but has been little adopted among the Europeans in India. A crematorium was started some years ago in Calcutta close to the Lower Circular Road Cemetery, at a cost of Rs. 40,000. But the return for this expenditure is disappointing. Only five or six cremations take place in Calcutta each year, in spite of the fact that the fee for cremation has been fixed by the Cremation Society of Bengal at the very low figure of Rs. 30,

subject to reductions in the case of poor families. The reason for this is thought to be that, when possible, Europeans go home to die, and the Native Christians and Eurasians are very largely Roman Catholics among whom a prejudice exists against this form of the disposal of the dead. In Bombay arrangements have recently been made for a small area in the Sewri Cemetery to be walled in, and for cremations to be carried on within it in the primitive style of the country, but in such a way as to preserve the ashes.

Industrial Arts.

The ancient industrial arts of India formed two distinct groups. The first included those allied to, and dependent upon, architecture; the second comprise those applied to articles devoted to religious ritual; military weapons and trappings, domestic accessories; and to personal adornment.

The articles of the first group were intended for some fixed and definite position, and the style of their design and the character of their workmanship were dictated by that of the building with which they were incorporated. Those of the second group were movable, and the range of their design was less constricted and their workmanship was more varied. Examples of work in both groups are so numerous, and the arts comprise such a diversity of application, that only a cursory survey can be attempted within the limits of a short review. Although the design and treatment differ in the two groups, the materials used were often the same. These materials cover a very wide range but space only permits of reference to work applied to the four materials upon which the Indian craftsman's skill has been most extensively displayed. These are stone, wood, metal and textiles.

Before dealing separately with each of these materials a few words upon the principal Indian styles are necessary. The two distinctive styles are Hindu and Mahomedan. The former may be termed indigenous, dating as it does from remote antiquity; the latter was a variation of the great Arabian style, which was brought into India in the fourteenth century, and has since developed features essentially Indian in character. The art of both Hindus and Mahomedans is based upon religion and the requirements of religious ritual. The obvious expression of this is shown in the different motifs used for their ornament. In Hindu art all natural forms are accepted and employed for decorative purposes; but in that of the Mahomedans, nearly all natural forms are rejected and forbidden. The basis of Mahomedan decoration is therefore mainly geometrical. In each of them, racial characteristics are strikingly exhibited. The keynote of Hindu work is exuberance, imagination and poetry; that of Mahomedan, reticence, intellect and good taste. The Hindus are lavish, and often indiscriminating, in their employment of ornament; the Mahomedans use more restraint. In fact the two styles may be compared, without straining the analogy, to the Gothic and classic styles in Europe. In both styles the fecundity of ideas and invention in design are marvellous, and the craftsmanship often reaches a very high standard. Hindu art had been subjected throughout the ages to many foreign influences, but the artistic instincts of the people have proved so conservative that, whether these alien ideas came from the east or the west, they have been absorbed, and are now stamped with a definite Indian character. Recognition of this fact alone should relieve the anxiety of those critics who fear that the penetration of Western art and culture into India at the present time will eventually rob Indian art of its national character.

Stone Work.—Carved stone work is the principal form of decoration employed in Hindu temples. In variety and scope it ranges from the massive figures in the Buddhist and Brahmical Cave Temples, and the detached sculpture of the temples of Southern India, to the delicately incised reliefs and elaborately fretted ornament of the Jain temples at Mount Abu. A curious fact in relation to Hindu work is that priority of date appears to have no relation to artistic development. It is not possible to trace, as in the case of Greek, Roman and Mediæval craftwork, the regular progressive steps from art in its primitive state to its culminating point and its subsequent decay. Styles in India seem to spring into existence fully developed; the earlier examples often exhibiting finer craftsmanship than those of a later date. There can be little doubt that stone carving in India was simply the application of the wood carvers' art to another material. The treatment of stone by the Hindu craftsmen, even in the constructive principles of their buildings, bears a closer resemblance to the practice of the wood-worker than to that of the stone mason. The earlier wooden examples from which the stone buildings and their decorations were derived have long since disappeared, but their influence is apparent. The keynote of Hindu design is rhythmic rather than symmetrical; that of their craftsmanship, vigour rather than refinement. In the carving of the human figure and of animals great power of expressing action is shown, and this spontaneous feeling is preserved despite the greatest elaboration and detail. The industry displayed is amazing, no amount of labour appears to have daunted the Hindu craftsmen in carrying out their huge and intricate schemes of decoration.

The stone carving on Mahomedan buildings except where Hindu carvers have been allowed a free hand, is much more restrained than that on Hindu temples. The fact that geometrical forms were almost exclusively used, dictated lower relief and greater refinement in the carving; while the innate good taste of the designers prompted them to concentrate the ornament upon certain prominent features, where its effect was heightened by the simplicity of the rest of the building. The invention displayed in working out geometrical patterns for work screens, inlay, and other ornamental details appears to be inexhaustible; while wonderful decorative use has been made of Arabic and Persian lettering in panels and their framing. To obtain a rich effect the Hindus relied upon the play of light and shade upon broken surfaces, the Mahomedans to attain the same end used precious materials; veneering the surfaces of their buildings with polished marble which they decorated with patterns of mosaic composed of jade, agate, onyx and other costly stones. Although the art of inlaying and working in hard stones was of Italian origin, it proved to be one eminently suited to the genius of the Indian craftsman; and many wonderful examples of their skill in the form of book rests, tables, thrones, footstools, vases and sword handles are extant to show the height of proficiency they attained. The treatment of precious stones by Indian jewellers may here be referred

to. Sir George Birdwood states that "the Indian jeweller thinks of producing the sumptuous, imposing effect of dazzling variety of rich and brilliant colours and nothing of the purity of his gems." This is true in a general sense and "full many a gem of purest ray serene" was utterly ruined by crude cutting and piercing. But although as early as the sixteenth and seventeenth centuries diamonds and precious stones from the Indian mines were taken to Europe to be cut, many of the finest jewels found their way back to the treasure houses of Indian princes.

Wood Work.—With a fine range of timbers suitable for the purpose, wood has played a great part in the construction and decoration of Indian buildings. Unfortunately, most of the ancient wood work has been destroyed by the action of the climate and the teeming insectivorous life of India; and that which escaped these enemies was wiped out by fire and the sword. It is therefore only possible to conjecture the height of artistic development these buildings and their decorations displayed by the copies in stone which have been preserved. Few if any examples of a date earlier than the sixteenth century are to be found. Many of these, and specimens of a later date to be seen in towns and cities throughout the country, are masterpieces of design and craftsmanship. The carved timber fronts and inner courtyards of houses in Ahmedabad, Nasik, and other parts of Western India are notable for their picturesqueness and beauty; the structural beams, the overhanging balconies, with their screens and supporting brackets, being carved in a manner which unites richness of effect with good taste and propriety. Of furniture, as the term is now understood, few examples were in use in India before Europeans introduced their own fashions. These were confined to small tables and stools, book rests, clothes chests and screens, the designs of which conformed somewhat closely to the architectural style of the period. Many of these were decorated with inlays of coloured woods, ivory and metal; while in some cases the wooden basis was entirely plated with copper, brass or silver. In Southern India, where close grained sandalwood is grown, jewel cases and boxes are enriched with carving executed with the attention to detail and the finish generally associated with the carving of ivory. Coloured lac was freely used to decorate many articles of furniture, especially those turned on the lathe; and rich colour effects were obtained in this, perhaps the most distinctive and typically Indian development of decoration as applied to woodwork.

Metal Work.—With the exception of weaving, the metal working industry employed and still employs the greatest number of artistic craftsmen in India. Copper and brass have always been the two metals most widely used for domestic purposes by Mahomedans and Hindus. The shapes of many of these humble vessels are among the most beautiful to be found in the country. They exhibit that sense of variety and touch of personality which are only given by the work of the human hand; and the shapes are those which grow naturally from the working of the material with the simplest

implements. In the technical treatment of brass and copper Indian craftsmen have shown a taste and skill unsurpassed by those of other nations, except in the department of fine casting. In this, and in the working of gold and silver, a higher standard of technical and constructive exactness has been reached by the metal workers of Europe and Japan. It may be taken as an axiom that the more beautiful the shape of an article is, and this especially applies to metal work, the less need exists for the decoration of its surface. It is equally true that the highest test of craftsmanship is the production of a perfect article without any decoration. The reason being that the slightest technical fault is apparent on a plain surface, but can be hidden or disguised on one which is covered with ornament. The goldsmiths and silversmiths of India were extremely skilful and industrious, but judged by this test their works often exhibit a lack of care and exactness in the structural portions and a completely satisfactory example of perfectly plain work from the hands of the gold and silversmiths of India is rarely to be met with. Much of the excessive and often inappropriate ornamentation of the articles that they produced owed its application as much to the necessity of hiding defective construction as it did to any purely decorative purpose. For many generations, ornaments of gold and silver were regarded in the light of portable wealth, a practice which naturally made for massiveness. These solid ornaments are most effective and picturesque; and, despite an enormous output of elaborate and delicate work from their hands, the most valuable contribution of the Indian metal workers to the sum total of man's artistic use of the precious metals will probably be found to lie in a certain barbaric note which distinguishes these pieces—a note not present in the craft work of other countries. In the design of Hindu gold and silver ornaments, religious symbols have been extensively used. The ornaments which bedeck the early sculptured figures, and those depicted in the paintings at the Cave Temples of Ajanta are precisely the same in design and use as similar articles made at the present time, thus affording a striking evidence of the inherent conservatism of the Hindu people and its effect upon an industrial art that makes a closer personal appeal than any other.

Textiles.—The textile industry is the widest in extent in India and is that in which her craftsmen have shown their highest achievements. Other countries, east and west of India have produced work equal, if not superior, in stone, wood, and metal; but none has ever matched that of her weavers in cotton and wool, or excelled them in the weaving of silken fabrics. Some of the products of the looms of Bengal are marvels of technical skill and perfect taste, while the plum bloom quality of the old Cashmere shawls is an artistic achievement which places them in a class by themselves. Weaving being essentially a process or repetition, was the first to which machinery was applied, and modern science has brought power loom weaving to such a state of perfection that filaments of a substance finer even than those of Dacca, which astonished our ancestors, are now produced in the mills of Lancashire. But

for beauty of surface and variety of texture, no machine-made fabrics have ever equalled the finest handwork of the ancient weavers of India. Many of the most beautiful varieties of Indian textile work have disappeared, killed by the competition of the power loom; and it is to be feared that under modern conditions they are never likely to be revived. In other branches of art as applied to textiles India does not hold so pre-eminent a position as in that of weaving. The printed silks and calicoes of the seventeenth and eighteenth centuries deservedly held a high place in the estimation of Western nations, whose craftsmen learnt many valuable lessons from the technical skill, and artistic taste they display. In embroidery and fine needlework the West and the Far East have more than held their own, while nothing approaching the tapestries made in Europe in the middle ages has been produced in India. The nearest approach to these are carpets and rugs. This art was introduced from Persia; but Indian craftsmen have never succeeded in equaling the finest work of their instructors either in colour or design.

Modern Conditions.—In the foregoing sketch of the ancient industrial art of India, as applied to the four principal materials employed, only a general indication of its more striking characteristics has been possible. A volume would be required to give a detailed description of any one of them, and would leave many other minor arts to be considered. All these branches of art came into existence, were developed and flourished in India when social and economic conditions were vastly different from those of the present day. Like similar artistic crafts carried on in Europe up to the end of the eighteenth century, they were executed by hand labour. The processes involved had not been discovered by scientific inquiry, such as is now understood by the phrase, but were the outcome of generations of slowly built up experience. We now come to the effect upon them of the changed conditions which have revolutionised industrial art in Europe during the last century.

The invention of the steam engine, and the application of mechanical power and scientific research to industry in Europe, mark the dividing line between ancient and modern industrial art. Not only on its technical side is this so, but the effect of these changes has been to alter the character of the work itself and the spirit which animated the craftsmen. In place of the ancient ideal of variety in design and treatment, which meant a limited output, the modern one of uniformity and unlimited output has been substituted. The capitalist has displaced the master craftsman; the organised factory, the small workshop; specialisation and division of labour have taken the place of general proficiency among the artisans; the function of the designer has been separated from that of the craftsman; local markets have been extended to serve the whole world; and the skilled handicraftsman has, in a great measure, become a machine-minder. It took about one hundred years of gradual change for the craftsmen of Europe fully to adjust themselves to these altered conditions; and during the greater portion of that period India-protected by the difficulties of transport, con-

tinued its immemorial practice. Fifty years ago this protective barrier was removed by the opening of the Suez Canal, and the handicraftsmen of India have since been struggling to avoid the same fate which overtook those of Europe half a century before. With less time to adapt themselves to the changed conditions the Indian craftsmen have had to meet the competition of European rivals already fully equipped with new and unknown weapons. Even before this period of intense competition, observers interested in Indian craftwork had noticed evidences of its deterioration. The falling off, both in design and workmanship, was attributed to the conservative practice of the craftsmen; to the gradual loss of foreign markets, and to the long period of internal disorder which had deprived them of both the patronage of the rulers of an earlier age and the stimulating contact with foreign craftsmen who had previously been attracted to the splendid courts at Delhi and Agra. During the same period, an even greater degradation in design had overtaken the craftwork of Europe. This was due to entirely different causes, namely to the introduction of machinery. Attention had been so concentrated upon speedy production, mechanical accuracy and commercial organisation that beauty of design had been almost entirely neglected. This was so forcibly demonstrated at the International Exhibition of 1851 that efforts were at once made to bring art and industry together once more. Schools of Art and Museums were founded throughout England and the same system was copied in a tentative and timid fashion in India. The function of these institutions was accurately estimated in England, where the artistic industries were already highly organised and were commercially successful, and whose products were to be found in every market of the world. Their business was to assist these industries by training a body of efficient designers capable of furnishing the factories with suitable designs, new or old, and in any style, to satisfy the requirements of customers in any country. It was never supposed for an instant that a School of Art could lead an industry. In India their function was as completely misunderstood as were the causes of the depression in Indian craftwork. The schools were not only expected to lead the industries which were living, but to revive those which were moribund, and resurrect those which were dead. Archaeologists ignoring the economic factor vainly conceived and propounded the idea that the salvation of the industrial arts was to be found in strict adherence to ancient methods of work and a repetition of the old patterns at a time when the home markets of the craftsmen were swamped with cheap machine-made goods printed in the old pattern which had been copied and adopted by European designers. In India, the cart was put before the horse, and, instead of first reorganising the artistic crafts, and placing them on a commercial basis that would have afforded them a decent chance of meeting Western competition, and then instituting art and craft schools in every industrial centre to assist them, an entirely inadequate number of art schools was founded and the crafts were left to shift for themselves. The Japanese have demonstrated the possibility of transforming a nation of

individual artistic craftsmen into one of co-operative industrial craftsmen; and however much one may regret the necessity, the only road to the economic revival of craftwork in India is that which has already been taken by Western nations and Japan. That work of the same quality, or even of a similar character to that which was done in the past, will be produced under the new system cannot be expected. Both in Europe and Japan the change has been followed by deterioration in design, and India cannot hope to escape where others have suffered. But the artistic instinct and a love of beautiful things are widespread and firmly rooted in the Indian character. The craftsmen possess powers of invention in design equal to that of any other people, but these have been suppressed for a century by the depressing conditions with which they have had to contend. If the artistic industries can be established upon a basis in conformity with, and not in antagonism to, modern economic conditions, the artistic instinct and technical skill of Indian craftsmen will revive and India

will regain the honourable place she once held in the world of art. In the report of the Indian Industrial Commission the need for some State-aided system of industrial and commercial organisation of the industrial arts with an expanded scheme of technical and artistic instruction for the craftsmen has been recognised; and valuable suggestions were made by experts who gave their evidence when the Commission visited the different Provinces. The success of the scheme recommended by the Commission will depend entirely upon the energy with which it is applied, and the practical knowledge and the assistance required by each of the different crafts on the part of those who control it. If, in addition, the same financial assistance and encouragement are given by the Imperial and Local Governments to the Indian craftsmen that have been bestowed by their own Government upon the art workers of Japan, industrial art in India will quickly emerge from the cloud of depression, which has hung over it for a century past, into the sunlight of prosperity.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing populations of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress; fishing and the fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste, and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse from amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of association with the low caste fishermen, and, except in the case of joint stock companies to engage in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras, which in 1905 initiated an investigation of the industry, both marine and fresh-water, appointing Sir F. A. Nicholson to supervise operations. Bengal followed suit in 1906, and from these beginnings have sprung the two local Fisheries Departments of Madras, and of Bengal, Behar and Orissa. Bombay, the remaining seaboard province, has comparatively small fresh-water interests compared with Madras and Bengal, and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of sea-fishermen in India, there was less urgent need for State help in the industry. Hence fisheries there are only now becoming the subject of Government solicitude, their care being apportioned to the newly created Department of Industries.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles; outside of a mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side, is the only possible sea-going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor, and the produce of their best efforts meagre compared with what it would be if better

and larger boats were available and possible. The West coast is more favoured. From September till April, weather conditions are good enough to permit even dugout canoes to fish daily. The people of this coast are fond of fish and, as no difficulty is found in beaching canoes and boats throughout this season, the fishing population is a large one. The 1911 Census gave 75,013 adults as subsisting on fishing industries in Malabar and S. Kanara, a small number after all, considering the immense wealth of these seas. The chief fishes are sardines, mackerel, catfishes and jewfishes (*kora* or *gol*); the two first overshadow all others. So greatly in excess of food requirements are the catches of sardines that every year large quantities are turned into oil and manure. Fishing outside the 5-fathom line is little in evidence, save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres; the material is largely cured for export.

Fish-curing is practised extensively everywhere on the Madras coasts; its present success is due primarily to Dr. Francis Day who, after an investigation from 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bonded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 140 of such yards are scattered along the coast and over 50,000 tons of wet fish are annually cured therein.

The **pearl** and **chank** fisheries in Palk Bay and the Gulf of Mannar are Government monopolies. The former are now of little value and no remedial measures seem possible; the latter have been brought to a high state of efficiency and bring in substantial returns: the net profit for 1918-19 was Rs. 67,580. Chanks or conche (*Turbinella pium*) are handsome porcelain white shells of great thickness and considerable size, much in demand in Bengal, particularly Dacca, where the industry centres, for manufacture into bangles.

The **inland fisheries** of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence inland fisheries are badly organized and few men devote themselves to fishing as their sole, or even main, occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water; only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year,

a glut for a few days, and often much waste in consequence. The chief fresh-water fishes of economic importance are the murrel, notable for its virtue of living for considerable period out of water, various carps, and catfishes, the hilsa (in East Coast rivers only), and the catla. In the Nilgiris, the Rainbow trout has been acclimatised and thrives well. The Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau.

The Madras Department of Fisheries.

As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere, this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organized and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. Nicholson, who from 1905 to 1918 had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities: in 1907, a permanent status was given by the creation of a Fisheries Bureau, and this in turn has developed into a separate Department of Government, now administered by Mr. James Hornell, F.L.S., as Director. Sir F. Nicholson continues to accord his valuable assistance as Honorary Superintendent of West Coast stations. The higher staff consists of a Marine Biologist charged primarily with the investigation of the life-histories of the principal food-fisheries of the coast; a Marine Assistant in charge of the departmental fisheries (pearling, chanks, beche-de-mer, etc.) and with experiments in the development of inshore and deep-sea fishing methods; an Assistant Director who supervises the co-operative and socio-economic side of the Department's operations, a Piscicultural Assistant exclusively employed upon inland pisciculture, and other officers who have charge respectively of sections dealing with education and industrial work, which include a Training Institute for village teachers, experimental and demonstration canneries, fish-curing yards, and oil and guano factories. The public fish-curing yards now under the control of the Salt and Abkari Department will eventually pass into the charge of the Fisheries Department; at present as a trial measure, 6 yards have been transferred and are now being operated directly under the latter Department, with a view to the introduction of better methods, and improved hygiene. Other newly opened yards are also being administered on model lines by the Department. Its activities are so varied and far reaching that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish-guano industry, the establishment of a fish cannery and the development of canned goods other than sardines, which alone had been canned previously in Malabar, and the opening of an oyster farm conducted under hygienic conditions. (For details see the Bulletins of the

Department, issued from the Government Press, Madras; eleven volumes have been issued to date). All this work has been carried on under serious handicap for want of suitable accommodation for the research staff; prior to the war proposals were elaborated for headquarters buildings in Madras comprising laboratories, experimental hatcheries, and a large public aquarium; postponed owing to war conditions these are again under discussion. In Madras the Department controls a small public aquarium, deservedly popular as the first and only one on the Asiatic mainland.

Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Government in order that they may be restocked periodically by the Department; the results so far have shown a profit on the operations. To breed the necessary fry, three fish farms are in operation, and the construction of two more is proposed. In these the chief fish bred are the Gourami, obtained from Java, and *Etrorlus suratensis*, which has the excellent attribute of thriving and breeding as well in brackish as in fresh water; both protect their eggs while developing, a useful habit and both are largely vegetarian in diet. A further activity is represented by the breeding of small fishes specially addicted to feed upon the aquatic larvæ of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price, for introduction into mosquito-haunted sheets of water. The educational work of the Department is becoming one of its most important branches whether it be in specially training teachers for schools in fishing villages, in training men in the technology of curing, canning, and oil manufacture; in co-operative propaganda and in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of zoology throughout India; there is now no need to obtain specimens from Europe.

The development of deep-sea fishing is engaging the attention of Government; splendid trawl grounds are indicated off Cape Comorin extending over an area of some 4,000 square miles; other promising areas are known elsewhere, but so far the limiting factors are the lack of cold storage accommodation at any port in the Presidency, and the want of a deep water harbour in the south, where steam-trawlers can discharge direct into store.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, and swamps, to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1.6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the

Presidency, Raj Shahi, and Dacca Divisions. 644,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh-water fisherman the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Clupea ilisha*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla, (*Catla catla*); prawns abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bekti (*Latescalcarifer*) and the mullets are the most esteemed; apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Poly-nemus*), pomfrets and soles. The Sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea-craft save catamarans of inferior design and construction.

For administrative fishery purposes Bengal, Behar and Orissa constitute a single region under one Department of Fisheries, whereof the Director is Mr. T. Southwell, A.R.C.S. Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more promising and there seems a prospect of one or more steam trawling companies being floated in the immediate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far sighted and comprehensive organization the danger run by the investing public will be considerable.

The Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the utilization of fish-by-products. The most profitable utilization of the energy of its officers would appear to lie in the uplift of the general fishing population

with a view to free them from the tyranny of the mahajans (fish contractors and middlemen) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but the Department has made a beginning and once a few societies can be made successful, the news of the benefits conferred on the members will constitute the best possible form of propaganda.

Scientific investigation has bulked largely in the output of work by the Department not always directly connected with fishery science. Among the more important contributions are papers on fish parasites and on the life histories and anatomy of the fresh-water mussels. The latter are used extensively at Dacca in the manufacture of cheap pearl buttons. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, though there is less necessity for a special department to develop marine industries, there is ample scope for most useful work in improving curing methods, in introducing canning, and in the development of minor marine industries particularly those connected with the utilization of by-products. With this end in view the recent Director of Industries, Mr. P. J. Meade, C.I.E., I.C.S., obtained the sanction of Government to include 'Fisheries' within his purview, and there are now two officers in the Department engaged upon fishery investigation and development.

The more important sea-fish are pomfrets, soles and sea-perches among which are included the valuable Jew-fishes (*Sciaen* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Bassein and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay-ducks), pomfrets and jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajpur make use of another and lighter

class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito, seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and rayfish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

In **Sind** considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, as shark, rays and jewfishes. The edible oyster trade of Karachi was once extensive, the creeks of the Indus producing a species of oyster superior to that found in Bombay and Madras backwaters and estuaries. Unrestricted exploitation of beds of limited extent inflicted great harm, and now, when various salutary restrictions are imposed the beds are slow to respond. Occasionally large deposits of the window-pane oyster (*Plicuncula plicenta*) are found in the Indus creeks and as these produce seed pearls in abundance, Government leased the beds to the highest bidder. The pearls are largely exported to China for use in medicine. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

In the Gulf of Kutch two pearl fisheries exist, one for the true pearl oyster, the other for the window-pane oyster. The former is carried on by His Highness, the Maharaja of Jamnagar, the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government who in 1905 obtained the services on deputation of the officer who is now Director of Fisheries in Madras, for the purpose of examining the marine potentialities of the Baroda territory in Kathiawar. One of the consequences was the discovery of large deposits of pearl-bearing window-pane oysters, until then unknown; of late years these beds have produced annually from Rs. 15,000 to Rs. 25,000 in revenue, perhaps the best example we have in India of the profitable nature of well-directed scientific enquiry into fishery problems. The Baroda Government, continuing their enlightened interest in the fishery development have had two officers trained in the Madras Fisheries Department and now employ them in development work on the Baroda coast.

Burma.

As with Bengal, the main fisheries of Burma are those in inland waters. From time immemorial the exclusive right of fishing in certain classes of inland waters has belonged to the Government, and this right has been perpetuated in various fishery enactments, the latest of which is the Burma Fisheries Act of 1905. Fishing is also carried on along the coast, but the sea fisheries absorb but a small portion of industry. Most of the fishermen labour in the streams and pools, which abound particularly in the Delta Districts. The right to work these fisheries, mentioned in the enactments alluded

to above, is usually sold at auction, and productive inland waters of this kind often fetch very considerable sums. River fishing is largely carried on by means of nets, and generally yields revenue in the shape of licence fees for each net or other fishing implement used. Here and there along the coast are turtle banks which yield a profit to Government. In the extreme south the waters of the Mergui Archipelago afford a rich harvest of fish and prawns, mother-of-pearl shells and their substitutes, green snails and trochans, shark-fins, fish-maws, and beche-de-mer. Pearling with diving apparatus was introduced by Australians with Filipino and Japanese divers in 1893. They worked mainly for the shell, it being impossible for them to keep an effective check on the divers as regards the pearls. After about five years, when the yield of shell had decreased, they all left. The industry was then carried on by the Burmese.

In 1918, the Burma Government deputed one of their civilians to study the methods of fishery development found successful in Madras. His report and recommendations are now before Government. From what is known of fishery conditions in Burma, the coastal fisheries appear more backward and undeveloped than anywhere else in India. This is due partly to the fact that the Burman is a poor sailor, and partly to the ease with which the population can earn a fair living by agriculture and other less hazardous and more profitable callings. The stress of population has not yet been felt in Burma.

The Punjab.

A Punjab Fisheries Department came into being as an experimental measure in 1912 and received the official sanction of Government as a regular department of the Punjab in April 1916. It operates under a Warden of Fisheries, under control of the Financial Commissioner. During the first three years the Department was almost entirely concerned with preliminary work, consisting largely of investigations and experiments in the Beas and Ravi Rivers.

These rivers were examined with a view to ascertain the indigenous species which inhabited them, their habits, spawning grounds and other data which would enable Government to frame regulations for their protection. The various fishing communities were interviewed and their views and statements carefully considered as to their rights in Government waters. Rules based upon the evidence when collated were subsequently drafted and approved by Government for the regulation of fishing in various districts, and are said to be working smoothly and satisfactorily. Those for each district take account of special local conditions, with a view both to conserve the fish supply and to secure a reasonable revenue to Government.

Trout culture flourishes in the hill streams, good sport being enjoyed by anglers in the Kulu Valley where operations were first initiated. The Kangra streams are now receiving attention, various consignments of ova having been sent there, successfully hatched out, and turned into suitable waters.

The Opium Trade.

Two descriptions of opium must be distinguished. *Bengal* opium which is manufactured from poppy grown in the United Provinces; and *Malwa* opium which is almost entirely produced in certain Native States in Central India and Rajputana.

Bengal Opium.—Cultivation of poppy is only permitted under license. The cultivator to whom advances are made by Government free of interest is required to sell the whole of his production to the Opium Factory at Ghazipur at a rate fixed by Government, now Rs. 7/8 per seer of 70° consistency. The area licensed for cultivation has in recent years been much reduced as a consequence of the agreement between the Government of India and the Chinese Government, and is now restricted to the United Provinces. The following are the figures of the area under cultivation and of production in 1917-18: Bighas cultivated, 331,216; Gross produce in Maunds, 32,321; number of chests manufactured, 25,146. At the Factory two classes of opium are manufactured:

(1) "Provision" opium intended for export to foreign countries. This opium is made up in balls or cakes, each weighing 3·5 lbs., 70 cakes weighing 140½ lbs. being packed in a chest.

(2) "Excise" opium intended for consumption in British India. This is made up in cubic packets, each weighing one seer, 60 packets being packed in one chest. It is of higher consistency than "provision" opium.

"Provision" opium is sold by public auction in Calcutta, the quantity to be sold being fixed by Government. This quantity has been reduced in recent years in accordance with the agreement with China, the figures being 15,440 chests in 1911 and 6,700 chests in 1912. Exports to China have been stopped altogether since 1913.

Malwa Opium.—The poppy from which Malwa opium is manufactured is grown chiefly in the Native States of Indore, Gwalior, Bhopal, Jaora, Dhar, Rutlam, Mewar and Kotah. The British Government has no concern with the cultivation of the poppy, or the manufacture of the opium; but it used to regulate, before exports to China were stopped, the import of Malwa opium into, and the transport through, its territories. As the chief market for Malwa opium was China, and as the States in which the drug is produced had no access to the sea, except through British territory, the British Government were able to impose a duty on the importation of the drug on its way to Bombay for exportation by sea.

No statistics of cultivation or production are available. The poppy is sown in November, the plants flower in February, and by the end of March the whole of the opium has been collected by the cultivators who sell the raw opium to the village bankers. It is then bought up by the large dealers who make it up into balls of about twelve ounces and store it until it is ready for export, usually in September or October. The opium is of 90° to 95° consistency and is packed in half chests: con-

siderable dryage took place in the case of new opium while transported to Bombay.

Sales of Malwa opium for export to China have ceased since January 1913 and the trade has become extinct since 17th December of that year when the last shipment was made. Practically the whole of the Malwa opium exported from Bombay went to China. There is no market for it in the Straits Settlements. A few chests annually are shipped to Zanzibar.

Revenue.—The revenue derived by the Government of India from opium in recent years is as follows:—

	£
1915-16	1,913,514
1916-17	3,160,005
1917-18	3,078,903
1918-19	3,229,000
1919-20 (Budget Estimate) ..	3,056,200

The estimated expenditure for the year 1919-20 is £ 1,046,100.

Agreement with China.—The fluctuations in the revenue derived from opium are directly attributable to the trade conditions arising out of the limitation of opium exports. In 1907 being satisfied of the genuineness of the efforts of the Chinese Government to suppress the habit of consuming opium in China, the Government of India agreed to co-operate by gradually restricting the amount of opium exported from India to China. In 1908 an arrangement was concluded by which the total quantity of opium exported from India was to be reduced annually by 5,100 chests from an assumed standard of 67,000 chests. Under a further agreement, signed in May 1911, the cessation of the trade was to be accelerated on evidence being shown of the suppression of the native production of opium in China, and in accordance with this agreement a further limitation was placed on exports to Chinese ports. The reduction of exports led to an increase in the price of the drug in China and a corresponding rise in the price obtained in India at the auction sales. For some considerable time, however, in 1912 the trade in China was paralysed by the imposition by Provincial Governors in defiance of instructions from the Central Government of restrictions on the importation and sale of Indian opium. Stocks accumulated rapidly at Shanghai and Hongkong and the position in December 1912 had become so acute that a strong and influential demand was made on the Government of India to relieve the situation by the suspension of sales. Sales were accordingly postponed both of Bengal and Malwa opium and in order to afford the Malwa trade the most complete relief, the Government of India undertook to purchase for its own use 11,253 chests of Malwa opium which remained to be exported in 1913. The present position is that the export trade to China has ceased since 1913. The exports of opium on private account amounted in 1917-18 to 12,000 cwts. valued at Rs. 240 lakhs. The importing countries, in order of importance, were Indo-China, Java, Siam, Japan, Hongkong and Straits Settlements.

GLASS AND GLASSWARE.

The total value of the glass and glassware imported into India in 1918-19 was Rs. 124 lakhs compared with the Rs. 162 in the preceding year and Rs. 161 lakhs the quinquennial average up to 1913-14. The imports of glassware in India were showing an upward increase, they being in 1913-14 over Rs. 190 lakhs in value, *i.e.*, over the quinquennial average. Austria-Hungary and Germany before the outbreak of the war exported bangles, beads, bottles, funnels, chimneys and globes, etc., to the values of Rs. 116 lakhs in 1913-14. The value of average imports from the enemy countries during the five pre-war years was Rs. 93 lakhs or about 57% of the trade. With their disappearance from the Indian market, imports from Japan have increased to 71% from 8%, the pre-war average. United Kingdom increased her shipments of sheet and plate glass, which before 1914 came largely from Belgium. Japan, however, could not meet the Indian demand, and hence renewed and pioneer efforts were made in India to partly satisfy the needs of the Indian consumer.

Manufacture of Glass in India.—Glass was manufactured in India in centuries before Christ and Pliny makes mention of "Indian Glass" as being of superior quality. As a result of recent archaeological explorations, a number of small crude glass vessels have been discovered indicative of the very primitive stage of the industry. But no further traces of ancient Indian Glass Industry as such survive; yet, it is certain that by the sixteenth century it was an established industry producing mainly bangles and small bottles. The quality of the material was inferior and the articles turned out were rough. Beyond this stage, the industry had not progressed until the nineties of the last century. Manufacture of glass in India on modern European lines dates from the nineties of the last Century, when some pioneer efforts were made in this line. Since then a number of concerns have been started, a number of them have failed, while some are still clinging to life owing to war conditions. They mainly devote themselves to the manufacture of bangles and lampware side by side with bottle-making on a small scale. This, therefore, is the criterion which determines the two well-defined classes of the industry in its present stage, (i) indigenous Cottage Industry and (ii) the modern Factory Industry.

(i) The indigenous Cottage Industry which is represented in all parts of the country, but has its chief centres in Firozabad District of U. P., and Belgaum District, in the South, is mainly concerned with the manufacture of cheap bangles made from "glass cakes or blocks" made in larger Factories. The industry is at present in a flourishing state and supplies nearly one-third of the Indian demand for bangles. The quality has been improved by the discovery of new glazing processes and for the present the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose "silky" bangles are ousting the old-type Indian ones.

(ii) The modern Factory type of organization of this industry is just in its infancy at present. The existing Factories either stop at producing glass cakes for bangle as in Firozabad or simple

kind of lampwares and bottles. With the existing state of knowledge and machinery in India they can neither produce sheet and plate glass, nor do they pretend to manufacture laboratory or table glass. Artistic glassware is out of question and the private capitalists who have to run their concerns mostly with commercial ends do not think worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased—of the imports of the lampware, etc., and in order to meet the Indian demand for them, new Factories were started and old revived, which produced only cheap and simple kind of lampware and bottles on small scale. The total production of these Indian Glass Works has not been exactly estimated, but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are at present 14 Factories engaged in the production of lampware, of which two or three only produce bottles and carboys also. The chief centres for the former kind are Bombay, Jubbulpore, Allahabad, and Bijholi and Ambala; while bottles are only manufactured at Naini and Lahore, and recently at Calcutta.

During the latter years of the war period, a number of Glass Works have been opened in the Bombay Presidency and adjoining districts, local manufacture having been stimulated by the cessation of imports of German, Austrian and Belgian glass.

Causes of failure.—Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventable causes, prominent among which were (1) Lack of enlightened management; (2) Lack of proper commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to. (3) Bad selection of site. An ideal site for a Glass Factory would be determined by the (a) nearness of quartz and fire-clay, (b) nearness of fuel, and (c) by the nearness of market. At least two must be present. In some concerns, two were absent. (4) Specialisation was lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lampware, bottles, and bangles etc. (5) Paucity of sufficient fluid capital for initial expenses for machinery or other improvements or even in some cases for running the concern in the beginning.

But beyond these there are certain real and special causes that contributed to the failure of some of these and hinder the progress of the rest. Chief among them are (1) The industry is in its infant stage and hence such failures are but incidental. (2) No expert guidance in this line, there is a lack of men and good literature. (3) Paucity of skilled labour of higher type. The present Indian workmen in this line and blowers are few in number and illiterate. They, therefore, master the situation and are unamenable to management. (4) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained, and consequently, in most cases, at a great distance from the coal-fields. (5) To a certain extent, competition from Japan and other European countries.

Alkali used is almost entirely of English manufacture being Carbonate of Soda 98-99% in a powdered form. This Alkali has almost completely taken place of the various Alkaline Earths formerly employed by the Glass Bangle manufactures as the latter cannot be used in the manufacture of glass which is to compete with the imported article. These points must be carefully noted for future guidance.

The Industry has developed considerably under war conditions; but in peace times, in this transition stage, immediate efforts must be made in the direction of what the Indian Industrial Commission say in their Report (Appendix E.), viz: "The Glass Industry, even in its sim-

plest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men, only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful."

BIBLIOGRAPHY.—Indian Industries Commission Report (Appendix); Indian Munitions Board, Industrial Handbook, etc.

WILD BIRDS' PLUMAGE.

The Bill for prohibiting the importation into England of wild birds' plumage, which was introduced into Parliament in 1913, was the occasion of a fierce controversy on the nature of the plumage traffic. But organised opposition to the Bill failed to convince the public that the plumage trade was not one of great cruelty. Among well-authenticated cases from India that prove its cruelty was one from Karachi, in 1913, in which two men were fined for sewing up the eyes of birds so that they should not fight in their cages. It was stated that this was a common practice of fishermen in Sind, who breed birds and export their feathers to England. This according to *The Times*, is not only another apparent example of the way in which the prohibition on the export of plumage from India is notoriously evaded by smuggling into the open market of England, but shows how easily abuses might arise under any system which gave a general sanction to feather-farming. All legitimate methods of breeding birds for their plumage can be safeguarded as definite exceptions under an Act prohibiting importation; and only the exclusion by law of all plumage not so specified can put England abreast of the United States and of her own daughter Dominions in the suppression of a barbarous industry.

Plumage birds.—The birds most killed on account of their plumage in India are paddy birds, kingfishers, bustards, junglefowl, egrets, pheasants, paroquets, peafowl, and hoopoes. Perhaps the most extensively killed in the past has been the Blue Jay (*Coracias Indica*). The smaller Egret is met with throughout India and Northern Burma. It is a pure white slim heron which develops during the breeding season a dorsal train of feathers, which elongates and becomes "decomposed" as it is expressed, that is to say, the barbs are separate and distinct from each other, thus forming the ornamental plume or aigrette for which these birds are much sought after and ruthlessly destroyed. Thirty years ago the exports were valued at over six lakhs in one year, but since 1895 the export trade has steadily diminished. But, though legitimate exports have been stopped, the trade is so lucrative as to lead to many attempts at smuggling. Within a recent period of 12 months the Bombay Preventive Department, for example, seized egret plumes worth Rs. 2,19,047 in India and £44,000 in London. The rupee value represents the sum which the exporters paid to those who took the feathers from the birds, so the loss to the trade was considerable. In addition,

penalties varying from Rs. 5,000 to Rs. 10,000 each and amounting altogether to Rs. 59,175 were inflicted on the ten merchants concerned in attempting to export the feathers. A case was reported from Rangoon in 1916 of a man being found in possession of 22 lbs. of egret feathers valued at Rs. 66,000.

Legislation.—Indian legislation on the subject will be studied with interest by those who have followed the course of legislation on this subject in other countries. Until 1887 no legislation was considered necessary in India. An Act of that year enabled local governments and municipal and cantonment authorities to make rules prohibiting under penalties the sale or possession of wild birds recently killed or taken during their breeding seasons, and the importation into any municipal or cantonment area of the plumage of any wild birds during those seasons; and local governments were empowered to apply these provisions to animals other than birds.

Afterwards, in 1902, action was taken under the Sea Customs Act to prohibit the exportation of the skins and feathers of birds, except feathers of ostriches and skins and feathers exported *bona fide* as specimens illustrative of natural history. Act VIII of 1912 goes much further than the previous law. It schedules a list of wild birds and animals to which the Act is to apply in the first instance, enables local governments to extend this list, empowers local governments to establish "close times," presumably during the breeding seasons, in the whole of their territories or in specified areas, for wild birds and animals to which the Act applies, and imposes penalties for the capture, sale, and purchase of birds and animals in contravention of the "close time" regulations, and for the sale, purchase and possession of plumage taken from birds during the close time. There is power to grant exemptions in the interests of scientific research, and there are savings for the capture or killing by any person of a wild animal in defence of himself or of any other person, and for the capture or killing of any wild bird or animal in *bona fide* defence of property.

One defect in the law may be noticed. When an exporter is discovered, the Customs Department can on a magistrate's warrant have his house searched and seize the feathers found there to produce as evidence that he is engaged in the trade. But they have to return the feathers and can only take possession of them if they are discovered presently in course of export.

BREWERIES.

Statistics compiled from official returns show that there were, in 1912, 22 breweries in British India, of which one did not work during the year. Fifteen of these are private property and seven are owned by six joint-stock companies with a nominal capital of Rs. 26,71,000, of which Rs. 22,26,260 was paid up at the end of 1912-13. Eight of the breweries are located at stations in the Himalayas from Murree to Darjeeling. The largest brewery is the one at Murree, the Bangalore, Solon, Rawalpindi, Kasauli, Poona, and Mandalay, breweries standing next in the order shown. In the pre-war year production was 3,654,000 gallons. This figure rose in 1918 to 8,214,000 gallons, an increase of 32 per cent, as compared with the

preceding year.

A substantial quantity of beer produced locally is consumed by the British troops in India. In 1907 the Army Commissariat purchased some 38 per cent. of the total production and the average purchases in the five years 1903-1907 amounted to 2,633,616 gallons yearly. From the 1st January, 1908, the contracts with Indian breweries for the supply of malt liquor to British troops have been discontinued, each British regiment being left free to make its own arrangements to obtain the necessary supply; as a result, the figures of Army consumption are no longer readily available.

GRAIN ELEVATORS.

The question of adopting elevators for the handling of Indian grain has attracted attention for some time and has assumed increased importance in the light of the railway congestion experienced in recent years and more particularly in the grain season. In the last three years great strides have been made by other countries in the adoption or perfecting of the elevator system, and a large mass of contemporary data on the subject has been brought together by the Commercial Intelligence Department. Since the subject is one that cannot receive adequate consideration in India till the facts are before the public, these have been embodied in a pamphlet entitled *Indian Wheat and Grain Elevators*, by the late Mr. F. Noel-Paton, Director General of Commercial Intelligence to the Government of India. The work gives full particulars regarding India's production of wheat, and shows that less than one-eighth of the crop is exported. It describes the conditions under which the grain is held and the risks that it runs. It is pointed

out that the cultivator has no adequate mean of preserving his wheat and that he is constrained to sell at harvest time: also that the prices then obtained by him are considerably lower than those usually current in later months. The constant nature of the European demand is explained and an attempt is made to gauge the probability that the enormously increased quantities of wheat to be expected when new irrigation tracts come into bearing would be accepted by Europe at one time and at a good price, or could be economically transported under a system in which a few months of congestion alternated with a longer period of stagnation. Figures are given which suggest that in practice the effect of equipping railways to do this is to intensify the evil and so to engage in a vicious circle. The author explains the structural nature of elevators and their functions as constituted in other countries. Particulars are given as to the laws that govern their operations in such countries.

TRADE MARKS.

The Indian Merchandise Marks Act (IV of 1889) was passed in 1889, but its operation in the earlier years was restricted, especially in Calcutta, in consequence of the lack of adequate Customs machinery for the examination of goods. In 1894, with the introduction of the present tariff, the Customs staff was strengthened for the examination of goods for assessment to duty, and this increase enabled examination to be made at the same time for the purposes of the Merchandise Marks Act. The Act was intended originally to prevent the fraudulent sale of goods bearing false trade marks or false trade descriptions (as of origin, quality, weight, or quantity). While the Act was before the Legislature a provision was added to require that piece-goods should be stamped with their length in yards. In this respect these goods are an exception, for the Act does not require that other descriptions of goods should be stamped or marked, though it requires that when goods are marked the marks must be a correct description. The number of deten-

tions under the Act during the twenty years ending 1912-13 has been:—

Average of the five years		
ending	1897-98 1,386
"	" " " " "	1902-03 1,411
"	" " " " "	1907-08 1,198
"	" " " " "	1912-13 1,960

Detention is but rarely followed by confiscation, and there have been only 109 such cases during the stated twenty years. Usually, detained goods are released with a fine, and this procedure was followed in 19,282 cases out of the 29,774 detentions ordered in the same period. In 10,364 cases the detained goods were released without the infliction of a fine. In this period of twenty years 42 per cent. of the detentions were on account of the application of false trade marks or false trade descriptions. In 36 per cent. of the cases detention was ordered because the country of origin was either not stated or was falsely stated, and in 21 per cent. because the provisions of the Act for the stamping of piece-goods had been infringed.

HIDES, SKINS AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. Previous to the outbreak of war, the trade in raw hides in this country was good; there was a large demand for hides, and prices ruled high. While in the continental markets stocks were high owing to overtrading in the previous year, the United States had a shortage which was estimated at approximately two million pieces. On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries, especially to the great emporium of Indian hides, Hamburg, were stopped, and exporters had to find new markets for the raw material. The raw hide business of India, it is well known, has hitherto been largely, if not quite entirely, in the hands of German firms or firms of German origin. Germany has had the largest share of India's raw hides. In the four months before the outbreak of war she took 39 per cent. of the total exports. In 1912-13 she took 32 per cent. and in 1913-14, 35 per cent. Raw hides were exported to Trieste in considerable quantities whence they were taken to Germany or Austria. In the four months before the outbreak of war 15 per cent. of India's exports passed through Trieste; in 1913-14 the percentage was 21.

Conditions of the Trade.—The trade in hides and skins and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and neglect: it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

No large industry has changed more rapidly and completely than that of leather. By the **chrome process**, for example, superior leather may be produced from the strongest buffalo hides in seven days, from cowhide in twenty-four hours, and from sheep and goat skins in six to eight hours; and these operations formerly took thirty days or as much as eighteen months. Of these changes the native tanners of India were slow to take advantage, but in spite of general backwardness the leather produced by some of the tanneries, especially those under European management, is in certain respects equal to the best imported articles. But since the outbreak of war progress has been more rapid and considerable quantities of special forms of chrome leather, for which Indian hides are particularly suitable, have found a ready market in London.

Protecting the industry.—The report of the Industrial Commission pointed out that

the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent on hides and skins with a rebate of 10 per cent on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries." Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries explained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire; and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate."

Indigenous methods.—India possesses a large selection of excellent tanning materials such as Acacia pods and bark, Indian sumach, the Tanner's cassia, Mangroves, and Myrabolans. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand. But the inferior quality of the leather so used by effect methods may be illustrated by the fact that the articles produced rarely fetch much more than one-fourth the value of the corresponding articles made of imported or Cawnpore (European factory) leather.

Trade of 1918-19.—The quantity of **raw hides** exported was 19,100 tons. Seventy-four per cent of these exports was raw cowhides which decreased to 14,200 tons, from 15,900 tons in 1917-18, and 37,200 tons in the pre-war year 1913-14. The decrease in exports is accounted for by the prohibition which existed on certain classes of raw hides until April, 1919 and partly by the great increase in the tanning of cowhides in India for army purposes, and partly by the great scarcity and cost of freight which limited the export of inferior quality of hides. The largest shipments were to the United Kingdom (8,600 tons) and to Italy (4,700 tons). The quantity of raw buffalo hides exported (3,900 tons) was 7 per cent. below that of 1917-18. The United Kingdom had the largest share of these exports, with 2,200 tons or 55 per cent. of the total, as against 1,400 tons or 34 per cent in the preceding year. The United States, the biggest buyer in previous years, came next after the United Kingdom with 1,300 tons.

The exports of **raw skins** were 25,000 tons, an increase of 12 per cent over the previous year. Nearly three-fourths of the total exports went to the United States. The shipments to the United Kingdom decreased by 24 per

cent, while those to France, Canada, and Japan increased. Eighty-five per cent of the total quantity of raw skins exported consisted of raw goat skins.

Tanned hides were exported to the extent of 25,500 tons, an increase of 39 per cent as against the preceding year, and of more than 180 per cent above the pre-war quinquennial average. Almost the entire quantity (99·6 per cent) was shipped to the United Kingdom. Tanned cowhides were 25,000 tons or 98 per cent. of the exports of tanned hides, as against 17,300 tons in 1917-18. The quantity shipped in the pre-war year 1913-14 was 7,900 tons only. Indian tanned hides are supplied to Cawnpore for Army Work in India and there has in this and similar ways been an increase in the local consumption of these hides.

Exports of **tanned skins** were 3,000 tons, an increase of 75 per cent. over the previous year. This was due to the fact that exports have been permitted under license since September, 1918. The quantity shipped to the United Kingdom was 2,300 tons as against 1,200 tons in 1917-18. The remainder was purchased mainly by the United States (460 tons) and Japan (150 tons).

INVENTIONS AND DESIGNS.

A handbook to the **Patent Office** in India, which was published in 1916 by the Government Press, Calcutta, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface Mr. H. G. Graves, Controller of Patents and Designs, explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The foundation of patent legislation throughout the world lies in the English "Statute of Monopolies" which was enacted in 1623, the 21st year of King James the First. In part this Act has been repealed but the extant portion of the more important section 6 is as follows:—"Provided also that any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of fourteen years or under, hereafter to be made of the sole working or making of any manner of new manufactures within this realm to the true and first inventor and inventors of such manufactures, which others at the time of making of such letters patent and grants shall not use, so as also they be not contrary to the law nor mischievous to the State by raising prices of commodities at home, or hurt of trade, or generally inconvenient; the said fourteen years to be accomplished from the date of the first letters patent or grants of such privilege hereafter to be made, but that the same shall be of such force as they should be if this Act had never been made, and of none other."

The existing Indian patent law is contained in the Indian Patents and Designs Act, 1911, supplemented by the Indian Patents

and Designs (Temporary Rules) Act, 1915, and by the Rules made under those Acts. The Patent Office does not deal with trade marks or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act III of 1914. There is, in fact, no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act (IV of 1889) which forms Chapter XVIII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matters of major interest. One main difference exists, however, as owing to the absence of provision of law for the **registration of trade marks**, India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fitfully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action, and, owing to some informalities the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patterns and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma but it does not embrace the Native

States. Of the latter three, *viz.*, (1) Hyderabad (Deccan), (2) Mysore, (3) Gwalior have ordinances of their own, for which particulars must be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. The object of the Act of 1911 was to provide a simpler, more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail. They gave further protection both to the inventor, by providing that his application should be kept secret until acceptance, and to the public, by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established, with power to dispose of many matters previously referred to the Governor-General in Council, and provision was made for the grant of a sealed "patent" instead of for the mere recognition of an "exclusive privilege." The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

The **annual report** of the Indian Patents' Office for the calendar year 1916 states that four hundred and forty-two applications for patents and 1,773 applications to register designs were made in 1916 as compared with 445 and 904 respectively in 1915. The income of the office increased from Rs. 69,760-3 in 1915 to Rs. 77,608-13 in 1916. Figures for previous years are published in the Report. Mr. Graves, the Comptroller, remarks that if the natural increase of pre-war conditions had been continued, there would have been about 800 applications for patents and an income of over Rs. 80,000. Apart from the falling-off in applications, the war does not appear to have made any material change in the nature of inventions in this country where the novel necessities of the moment are not apparent and cannot therefore be supplied by would-be patentees. Altogether 2,649 patents were in force on 31st December 1916. These include 1,814 patents out of 2,108 sealed on 2,858 applications under the Indian Patents and Designs Act, 1911, together with 65 of the 148 patents converted under section 81 of that Act. The balance 770 consists of exclusive privileges remaining under the Inventions and Designs Act, 1888.

Applications for **patent by enemy subject** are permitted, but as a rule are held in suspense and the sealing of patents on their applications is not affected for the present. Patents in existence are, however, renewable at the option of the holder even if he be an enemy as it is not considered desirable that the property therein should be destroyed.

It can, however, be alienated or utilised for the benefit of the public on application. Provision for these proceedings is made by a License Act, and rules introduced after the year. In their main lines the License Act and rules follow the practice in the United Kingdom. They enable the controller to deal with patents held by enemy subjects and remove the disabilities under which any person may suffer in respect of patents or designs owing to the present state of the war.

Printed Specification of applications for patents, which have been accepted (8 annas per copy), may be seen free of charge, together with other publications of the Patent Office at the following places:—

Coinage, Weights and Measures.

As the currency of India is based upon the rupee, statements with regard to money are generally expressed in rupees, nor has it been found possible in all cases to add a conversion into sterling. Down to about 1873 the gold value of the rupee (containing 165 grains of pure silver) was approximately equal to 2s., or one-tenth of a £, and for that period it is easy to convert rupees into sterling by striking off the final cipher (Rs. 1,000=£100). But after 1873, owing to the depreciation of silver as compared with gold throughout the world, there came a serious and progressive fall in the exchange, until at one time the gold value of the rupee dropped as low as 1s. In order to provide a remedy for the heavy loss caused to the Government of India in respect of its gold payments to be made in England, and also to relieve foreign trade and finance from the inconvenience due to constant and unforeseen fluctuations in exchange, it was resolved in 1893 to close the mints to the free coinage of silver, and thus force up the value of the rupee by restricting the circulation. The intention was to raise the exchange value of the rupee to 1s. 4d., and then introduce a gold standard at the rate of Rs. 15=£1. From 1899 onwards the value of the rupee has been maintained, with insignificant fluctuations, at the proposed rate of 1s. 4d., and consequently since that date three rupees have been equivalent to two rupees before 1873. For the intermediate period, between 1873 and 1899, it is manifestly impossible to adopt any fixed sterling value for a constantly changing rupee. But since 1899, if it is desired to convert rupees into sterling, not only must the final cipher be struck off (as before 1873), but also one-third must be subtracted from the result. Thus Rs. 1,000=£100— $\frac{1}{3}$ =(about) £67.

Notation.—Another matter in connection with the expression of money statements in terms of rupees requires to be explained. The method of numerical notation in India differs from that which prevails throughout Europe. Large numbers are not punctuated in hundreds of thousands and millions, but in lakhs and crores. A **lakh** is one hundred thousand (written out as 1,00,000), and a **crore** is one hundred lakh or ten millions (written out as 1,00,00,000). Consequently, according to the exchange value of the rupee, a lakh of rupees (Rs. 1,00,000) may be read as the equivalent of £10,000 before 1873, and as the equivalent of (about) £6,667 after 1899, while a crore of rupees (Rs. 1,00,00,000) may similarly be read as the equivalent of £1,000,000 before 1873, and as the equivalent of (about) £666,667 after 1899.

Coinage.—Finally, it should be mentioned that the rupee is divided into 16 annas, a fraction commonly used for many purposes by both Natives and Europeans. The anna was formerly reckoned as $1\frac{1}{4}$ d., it may now be considered as exactly corresponding to 1d. The anna is again sub-divided into 12 pies.

Weights.—The various systems of weights used in India combine uniformity of scale with immense variations in the weight of units. The scale used generally throughout Northern India, and less commonly in Madras

and Bombay, may be thus expressed one maund 40 seers, one seer=16 chittaks or 80 tolas. The actual weight of a seer varies greatly from District to District, and even from village to village, but in the standard system the tola is 180 grains Troy (the exact weight of the rupee), and the seer thus weighs 2·057 lb., and the maund 82·28 lb. The standard is used in official reports.

Retail.—For calculating retail prices, the universal custom in India is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down, which is at first sight perplexing to an English reader. It may, however, be mentioned that quantity prices are not altogether unknown in England, especially at small shops, where pennyworths of many groceries can be bought. Eggs, likewise, are commonly sold at a varying number for the shilling. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lb., and that the value of the rupee remains constant at 1s. 4d., 1 seer per rupee=(about) 3 lb. for 2s., 2 seers per rupee=(about) 6 lb. for 2s., and so on.

The name of the unit for square measurement in India generally is the *bigha*, which varies greatly in different parts of the country. But areas have been expressed in this work either in square miles or in acres.

Proposed reforms.—Indian weights and measures have never been settled upon an organised basis suitable for commerce and trade characteristic of the modern age. They vary from town to town and village to village in a way that could only work satisfactorily so long as the dealings of towns and villages were self-contained and before roads and railways opened up trade between one and the other. It is pointed out that in England a hogshead of wine contains 63 gallons and a hogshead of beer only 54 gallons; that a bushel of corn weighs 46 lbs. in Sunderland and 240 lbs. in Cornwall; that the English stone weight represents 14 lbs. in popular estimation, but only 5 lbs., if we are weighing glass, and eight for meat, but 6 lbs. for cheese. Similar instances are multiplied in India by at least as many times as India is bigger than England. If we take, for instance, the maund denomination of weight common all over India, we shall find that in a given city there are nearly as many maunds as there are articles to weigh. If we consider the maund as between district and district the state of affairs is worse. Thus in the United Provinces alone, the maund of sugar weighs 48½ seers in Cawnpore, 40 in Muttra, 72½ in Gorakhpur, 40 in Agra, 50 in Moradabad, 43½ in Saharanpur, 50 in Bareilly, 46 in Fyzabad, 48½ in Shahjehanpur, 51 in Goshangunge. The maund

varies throughout all India from the Bengal or railway maund of 82-2/7 lbs. to the Factory maund of 74 lbs. 10oz. 11drs., the Bombay maund of 28 lbs., which apparently answers to the Forest Department maund in use at the Fuel Depot, and the Madras maund, which some authorities estimate at 25 lbs. and others at 24 lbs. and so on.

Committees of Inquiry.—These are merely typical instances which are multiplied indefinitely. There are variations of every detail of weights and measures in every part of India. The losses to trade arising from the confusion and the trouble which this state of things causes are heavy. Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Supreme and Provincial Governments have made various attempts during 40 years past to solve the problem of universal units of weights and measures and commerce and trade have agitated about the question for the past century. The Indian railways and Government departments adopted a standard tola (180 grains), seer (80 tolas) and maund (40 seers) and it was hoped that this would act as a successful "lead" which would gradually be followed by trade throughout the empire, but the expectation has not been realised.

The Government of India considered the whole question in consultation with the provincial Governments in 1890-1894 and various special steps have at different times been taken in different parts of India. The Government of Bombay appointed a committee in 1911 to make proposals for reform for the Bombay Presidency. Their final report has not been published, but they presented in 1912 an *ad interim* report which has been issued for public discussion. In brief, it points out the practical impossibility of proceeding by compulsory measures affecting the whole of India. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be heartily welcome by the people. They thought that legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reform so successfully as a "lead" supplied by local legislation based on practical experience. The want of coherence, *savoir faire*, or the means of co-operation among the people at large pointed to this conclusion. The Committee pointed out that a good example of the results that will follow a good lead is apparent in the East Khandesh District of the Presidency, where the District Officer, Mr. Simcox, gradually, during the course of three years, induced the people to adopt throughout the district uniform weights and measures, the unit of weight in this case being a tola of 180 grains. But the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency, preferring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there.

Proposals from England.—Suggestions have been made by the British Weights and

Measures Association and the Decimal Association, respectively, at different times that British weights and measures and the decimal system should be introduced. Both proposals fail to meet the special requirements set forth by the Bombay Committee. Variations of them which have been put forward by different bodies in India in recent years are that the English pound weight and the English hundred-weight should be adopted as the unit of weight for all India. The argument in favour of the importation of an outside unit in this manner is that people in India will always associate with a given, familiar denomination of weight or measure the value they have been accustomed to consider in regard to it, but that if a new weight were introduced they would learn to use it in dealing with their neighbours, without the interference of anything resembling prejudice at what they might regard as an attempt to tamper with their old, traditional standards of dealing.

Committee of 1913.—The whole problem was again brought under special consideration by the Government of India in October, 1913, when the following committee was appointed to inquire into the entire subject anew:—

Mr. C. A. Silberrard (*President*).

Mr. A. Y. G. Campbell.

Mr. Rustomji Fardoonji.

This Committee reported, in August, 1915, in favour of a uniform system of weights to be adopted in India based on the 180 grain tola. The report says:—Of all such systems there is no doubt that the most widespread and best known is that known as the Bengal or Indian Railway weights. The introduction of this system involves a more or less considerable change of system in parts of the United Provinces (Gorakhpur, Bareilly and neighbouring areas), practically the whole of Madras, parts of the Punjab (rural portions of Amritsar and neighbouring districts), of Bombay (South Bombay, Bombay city and Gujarat), and the North West Frontier Province. Burma has at present a separate system of its own which the committee think it should be permitted to retain. The systems recommended are:—

FOR INDIA.

8 khashkas	= 1 chawal
8 chawals	= 1 rattī
8 rattis	= 1 masha
12 mashes or 4 tanks	= 1 tola
5 tolas	= 1 chatak
16 chataks	= 1 seer
40 seers	= 1 maund

FOR BURMA.

2 small ywes	= 1 large ywe
4 large ywes	= 1 pe
2 pes	= 1 mu
5 pes or 2½ mus	= 1 mat
1 mat	= 1 ngamu
2 ngamus	= 1 tikal
100 tikals	= 1 peiktha or viss.

The tola is the tola of 180 grains, equal to the rupee weight. The viss has recently been fixed at 3' 60 lbs. or 140 tolas.

The recommendations of the Commission met with general approval and have been referred to the Provincial Governments for their consideration.

Legislation and Inspection.

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881, as amended in 1891. The chief provisions of the amended Act were Local Governments were empowered to appoint inspectors of factories, and certifying surgeons to certify as to the age of children. A mid-day stoppage of work was prescribed in all factories, except those worked on an approved system of shifts, and Sunday labour was prohibited, subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half; their employment between 8 p.m. and 5 a.m. was prohibited, as a general rule, except in factories worked by shifts. The hours of work for children (defined as persons below the age of 14) were limited to seven, and their employment at night time was forbidden; children below the age of nine were not to be employed. Provision was made for the fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding, etc.

Act of 1911.

The decision to undertake further legislation was arrived at after comprehensive inquiries. An important factor in the case was the increasing use of electric light in the Bombay Mills, which radically changed the conditions prevailing when the Act of 1891 was passed and had abolished the security that operatives would not be employed for more than 12 hours a day on the average. The question of the hours of employment in textile factories was brought into prominence by the period of prosperity that the cotton industry began to enjoy in the cold weather of 1904-05, a large number of persons operatives being regularly worked for 15 hours a day or even longer.

Owing to complaints regarding the long hours worked in many mills, the Government of India in 1906 appointed a small Committee with Commander Sir H. P. Freer-Smith, R.N., late Superintending Inspector for Dangerous Trades in England, as chairman, to conduct a preliminary inquiry into the conditions of labour in textile factories. The Committee recommended that the working hours of adult males should be limited to 12 hours a day; that certificates of age and physical fitness should be required prior to half-time employment and prior to employment as an adult; that night work of women should be prohibited; and that whole-time Medical Inspectors should be appointed.

The conclusions of this Committee formed the basis of an investigation, extending to all factories in India, by a representative Commission. This report disclosed the existence of abuses, particularly in connection with the employment of children, and the excessive hours worked by operatives generally in textile factories. The majority of the Commission deprecated a statutory limitation of the working hours of male adults. But they recommended the formation of a class of "young persons" between 14 and 17 years of age, whose hours should be limited to 12, and con-

sidered that this would indirectly secure a 12 hours' day for male adults. They also recommended that the hours of work for children should be reduced from 7 to 6 hours and that the hours for women should be assimilated to those for "young persons," night work being prohibited for both classes. They recommended that children should be certified as to age and physical fitness.

Hours fixed.

The recommendations of the Committee and of the Commission having been considered by the Government of India and the Local Governments, a Bill was introduced in July 1908 to amend and consolidate the law relating to factories, and was finally passed into law as Act XII of 1911.

The new Act extended the definition of "factory" so as to include seasonal factories working for less than four months in the year; shortened the hours within which children (and, as a general rule, women) may be employed, and further restricted the employment of women by night by allowing it only in the case of cotton-ginning and pressing factories. It also contained a number of new provisions for securing the health and safety of the operatives, making inspection more effective, and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act for the first time applied a statutory restriction to the hours of employment of adult males by laying down that, subject to certain exceptions, "no person shall be employed in any textile factory for more than twelve hours in any one day." It is also provided in the case of textile factories that no child may be employed for more than six hours in any one day, and that (subject to certain exceptions, among which are factories worked in accordance with an approved system of shifts) no person may be employed before 5-30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children). Corresponding limitations are placed on the period for which mechanical or electrical power may be used.

Factory Inspection.

The inquiries of the Factory Commission showed that the then existing system of factory inspection had not sufficed to prevent widespread evasion of the provisions of the factory law. This result was attributed to the fact that the number of full-time factory inspectors was very small, the work of inspection being to a large extent in the hands of ex-officio inspectors (District Magistrates, Civil Surgeons, etc.), who, as the Commission reported, had neither the time nor the special knowledge necessary for the work. In Bombay Presidency, where there were three special inspectors, it was reported that the Act was on the whole, well enforced. Steps have been taken since to reorganise the staff of whole-time inspectors of factories in India and to

increase it to a strength sufficient to cope with the work of inspecting all the factories in India. The total strength of the staff is now 14, as compared with 6 at the time of the Factory Commission's report. Each of the larger provinces has at least one inspector, Bombay having five. Except that in a few cases these officers have duties also in connection with

boiler inspection, their whole time is given to factory inspection. The District Magistrate remains an inspector, ex-officio, under the new Act, and other officers may be appointed additional inspectors, but it is contemplated that inspection by ex-officio inspectors will be to a large extent discontinued, or limited to special cases.

Life Insurance.

There are no publications from which a complete statistical survey of the various branches of insurance work in India can be obtained, but the official "Abstracts of Accounts and Valuation Statements in respect of Life Assurance Companies doing business in British India," published by the Government of India, give much information in regard to the 74 Life Assurance Companies subject to all the provisions of the Indian Life Assurance Companies Act, 1912, and some of those which are partially exempt from the Indian Act on the ground that they carry on business in the United Kingdom and comply with the provisions of the British Assurance Companies Act of 1909. It should be noticed that the various pension funds connected with Government services are exempt from compliance with the Indian Act.

The oldest of the Indian Companies were established in Madras about 80 years ago: Bombay has none older than the Bombay Mutual, the Oriental and the Bombay Widows' Pension Fund which were established about 40 years ago. Life Assurance seems not to have been started in Bengal until much later, and it was not until 1906 that many Companies were established either in that Presidency or elsewhere in India. The year 1919 was marked by the formation of several new companies, more particularly in Bombay.

In his introductory note to the official publication already mentioned, Mr. H. G. W. Meikle, Actuary to the Government of India, dealing with the year 1918, says:—

The total sums falling due under claims by death were considerably greater than in the previous year; these amounted to 55 lakhs in 1918, as compared with 34½ lakhs in 1917. The increase has been ascribed by most of the companies to the virulent influenza epidemic which swept over India during the latter half of the last year.

Indian Life Assurance Companies were mainly affected by the War in a fall in new business, a depreciation of securities and an increased rate of interest obtainable under new investments. The extra mortality due to war scarcely affected them as very few policies were issued by them to combatant officers and men at the front.

As to the fall in new business, it was satisfactory to find in the returns for 1917 already a marked recovery. The other effects will probably last for some time and act beneficially in the case of the existing companies which have withstood the financial crisis brought about by the war.

The amount written off to **depreciation** or transferred to the Investment Reserve Fund for the purpose of meeting the decreased value of securities has since the outbreak of war been over 1½ crores, but notwithstanding this the total amount of the Life Assurance Funds shows an increase each year and is now nearly 40 per cent. greater than it was when the Indian Life Assurance Companies Act came into force in 1912. Although the decrease in the value of the securities may make it seem prudent in some cases not to pay any bonus or dividend, the fact that securities stand at a low price has the effect of forming a contingent reserve fund, and a company's financial position will be all the stronger in future years for any prudent action which may be taken now. The income in most cases exceeds the company's outgo and, consequently, there is seldom any question of the securities having to be realised at the present low prices. Moreover, in the case of Indian companies, they consist mainly of Indian Government securities; hence no question arises of any decrease in the interest income.

Income Tax—Life Assurance Companies in India are now assessed for income tax on the basis of their profits as ascertained by actuarial investigations; if the total tax deducted at the source from interest on investments exceeds the tax calculated on profits, a refund is admissible to them of the difference. In the United Kingdom, income-tax is payable on the interest income after deduction of the amount of the expenses—subject to the proviso that it shall not be less than that on profits. Life Assurance Companies in the United Kingdom, as well as elsewhere, have been contending for a long time that the only fair basis on which they ought to be taxed is their profits; Indian Life Assurance Companies should consider themselves fortunate that they have already got this generous treatment from Government.

Actuarial Valuations.—Up till now 37 of the Indian companies have submitted the results of actuarial valuations of their assets and liabilities. Eighteen of these valuations disclosed a surplus. In 11 of the remaining nineteen, the deficit was covered by the paid-up capital, thus proving solvency but precluding the payment of either bonus or dividend. In six cases solvency was restored by reduction of sums assured or by calling up further capital. In two cases the degree of insolvency necessitated the winding up of the concern. Many of the other companies which went into liquidation without an actuarial valuation being made, adopted this course as the unsoundness of their financial position could be clearly demonstrated without it.

Mutual Companies.—With two exceptions, all the Indian companies shown as established within the last 25 years are proprietary companies with a share capital; but of the older companies, the great majority are mutual companies. These mutual companies generally have very small funds and it is found that payment of the full deposit prescribed in section 4 of the Life Act sometimes presses unduly on their resources, and as payment of the full deposit also interferes with the formation of new mutual companies, Government will be prepared to consider any application from an Indian mutual company for permission to pay a smaller deposit.

Since the passing of the Life Act nineteen Indian Life Assurance Companies have gone into liquidation. This was rendered necessary in the majority of the cases by financial difficulties brought about by insurance business having been transacted on the dividing principle.

In the following list the names of the existing Indian Life Assurance Companies have been arranged according to their respective dates of establishment as also with reference to the Province in which the Head Office of each is now situated.

Year when established.	Madras Presidency.	Bombay Presidency.	Bengal.	Punjab.	United Provinces, Assam, Ajmer, Merwara and Civil and Military Station of Bangalore.
1829 ..	*Madras Equitable
1833 ..	*Madras Widows
1847	*Christian Mutual.
1849 ..	*Tinnevely Widows.
1871	* Bombay Mutual
1874	Oriental
1876	* Bombay Widows
1884 ..	*Indian Christian.
1885	* Goan Mutual
1886
1887

* Mutual Companies.

Under this system the sums assured is not fixed but depends each year on a division of a portion of the premium income amongst the policies which have become claims; usually the premium is the same for all ages at entry and there is no medical examination.

Business other than Life Assurance.— Since the Life Act was passed in 1912, there has been a considerable reduction in the number of Indian companies transacting other classes of business in addition to life assurance, the number having decreased from twenty-one to the nine noted below:—

1. All India United which transacts Fire and Marine Insurance.
2. Bharat which transacts Fidelity Guarantee Insurance.
3. Empire, which transacts Fidelity Guarantee Insurance.
4. National, which transacts Fidelity Guarantee Insurance.
5. National Indian which transacts Fidelity Guarantee Insurance.
6. Rechabites, which transacts Sickness Insurance.
7. Hindustan of Gujranwala, which transacts Marriage Insurance.
8. Sind Hindu Provident, which transacts Marriage Insurance.
9. Christian Mutual, which transacts Capital Redemption business.

Some of the recently formed Life Assurance Companies, are taking up Fire and Marine insurance.

1919	New Era; Bombay City.	Himalaya

* Mutual Companies.

Statistical information.—The new sums assured by Indian companies under ordinary life assurance policies during the year 1918 show a considerable increase, the total amount

being nearly 2½ crores as against 2¼ crores in the last year, and as against one crore and ninety lakhs in each of the two previous years.

Whole Life policies were issued last year for	20 lakhs, or	7·0 of the total.
Limited Payment policies	23	8·1
Endowment Assurance policies	233	81·7
Children's Endowments	6	2·1
Other classes of policies	3	1·1
Total	285	100

The total sums assured, including bonus additions under ordinary life assurance policies issued by Indian companies, have increased by over one crore during the year and amount to over 25 crores of rupees, or over 27 million pounds sterling at the present rate of exchange.

The average amount of sum assured under the policies issued by the more soundly established Indian Companies is only about Rs. 1,800. The average sum assured by the Non-Indian Companies doing business in this country is nearly twice as large. Under most of the Indian companies' policies, the premiums are payable by monthly instalments, while in the other companies a much larger proportion of the premiums are renewable yearly and half-yearly than monthly.

Neither the total sums assured remaining in force nor the total amount for which policies are issued each year in India by all companies can be stated, as, unfortunately, particulars of this nature are not required to be submitted by the British companies and by some of the other companies which transact business both in the United Kingdom and in India.

British Colonial and Foreign Companies.—There are at present 24 British Colonial and Foreign Life Offices which have a place of business in India. Of these, 17 are constituted in Britain, 2 in Canada, 1 in Australia, 1 in the Straits Settlements, 2 in Shanghai, 1 in the United States of America. Nearly all are partially exempt from the operation of the Indian Life Assurance Companies' Act of 1912, on the ground that, when it came into force, they were carrying on business in the United Kingdom in conformity with the provisions of the British Assurance Companies Act of 1909.

The average rate of annual premium payable under the policies issued by Indian companies is nearly 5½ per cent. of the sum assured. The corresponding rate deduced from the returns to the British Board of Trade is about 1 per cent. lower. This difference between these two rates is largely due to the fact that endowment assurances constitute nearly twice as large a proportion of the policies issued by Indian as by British companies.

All of these 24 companies grant annuities and in addition carry on the other classes of business shown in the following statement. This statement also indicates the proportion of each company's business which is transacted in the United Kingdom. Unfortunately no similar information can be given regarding their Indian business as none of the companies except the Great Eastern, the China and the Shanghai are required to give any particulars of this nature. These three companies transact about ten per cent. of their business in India.

The principal effects of the exemptions allowed to these British, Colonial and Foreign companies are that they are freed from the necessity either of making a deposit with the Controller of Currency or of stating the amount of business they do in India. Those granted exemptions are allowed to submit their accounts in the form required by the British Assurance Companies' Act of 1909. That Act is very similar to the Indian one.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1912, realising the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbhoj Currimbhoj Ibrahim, a leading millowner and public citizen of Bombay, which promises to lead to great improvement in strengthening Indian commercial organization. Sir Fazulbhoj's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to cooperate actively.

The Congress was attended by several hundred delegates from all parts of India. Mr. (now the Hon. Sir) D. E. Wacha, President of the Bombay Indian Merchants' Chamber, presided, as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoj Currimbhoj as the first President. The Congress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to

take the necessary steps to get the Association registered and to enrol members and carry on work as Committee of the Chamber until a new Committee should be appointed a year later. The Congress also approved of the draft constitution.

The following are the principal paragraphs of a Memorandum of Association of the new Associated Chamber as approved by the Congress:—

I. The name of the Chamber will be "THE ASSOCIATED INDIAN CHAMBER OF COMMERCE."

II. The Registered Office of the Chamber will be in Bombay.

III. The objects for which the Chamber is established are:—

- (a) To discuss and consider questions concerning and affecting trade, commerce, manufactures, and the shipping interests, at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial, manufacturing and shipping interests of the country.
- (b) To communicate the opinions of the Chambers of Commerce and other Commercial Associations or Bodies separately or unitedly, to the Government or to the various departments thereof, by letter, memorial, deputation or otherwise.
- (c) To petition Parliament or the Government of India or any Local Government or authority on any matter affecting trade, commerce, manufacture or shipping.
- (d) To prepare and promote in Parliament or in the Legislative Councils of India, both Imperial and Provincial, Bills in the interest of trade, commerce, manufactures, and shipping of the country and to oppose measures which, in the opinion of the Chamber, are likely to be injurious to those interests.
- (e) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity.
- (f) To have power to establish an office either in England or in any part of British India with an Agent there, in order to ensure to the various Chambers early and reliable information on matters affecting their interests and to facilitate communication between the Chamber or individual chambers and the Government or other public bodies, and generally to conduct and carry on the affairs of the Chamber.
- (g) To organise Chambers of Commerce, Commercial Associations or Bodies in different trade centres of the Country,

- (h) To convene when necessary the Indian Commercial Congress at such places and at such times as may be determined by a Resolution of the Chamber.
- (i) To do all such other things as may be incidental or conducive to the above objects.

The Articles of Association provide for the management of the Chamber by an Executive Council composed of a President, Vice-President, and ten other members elected at the annual meeting of the Associated Chamber, the Executive Council to present a report and statement of accounts at each annual meeting.

The Articles declare the number of members of the Associated Chamber not to exceed one hundred, and the Executive Council are given power to elect honorary members. "There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February," or at some other time, and "semi-annual or special meetings . . . may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary . . ."

The following are details of the principal Chambers of Commerce and kindred bodies in India at the present time :—

BENGAL.

The Bengal Chamber of Commerce was founded in 1834. Its head-quarters are in Calcutta. Other societies connected with the trade and commerce of the city are the Royal Exchange, the Bengal Bonded Warehouse Association, the Calcutta Trades Association, the Bengal National Chamber of Commerce and the Marwari Chamber of Commerce. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members, Permanent and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office bearers of the Chamber for the year 1919-20 :—

President.—Hon. Mr. W. E. Crum, O.B.E. (Graham & Co.).

Vice-President.—Hon. Mr. A. R. Murray, C.B.E. (Thos. Duff & Co., Ltd.).

Committee.—Messrs. J. A. Marshall (East Indian Railway), W. Mc A. Houstoun (Mackinnon, Mackenzie & Co.), W. O. Grazebrook (Gillanders Arbuthnot & Co.), C. Kennedy (National Bank of India, Ltd.), Hon. Mr. R. V. Mansell, O.B.E., (James Finlay & Co.), B. A. White (Bird & Co.) and Hon. Sir Frank Carter, C.I.E., C.B.E. (Turner, Morrison & Co.).

The Secretary of the Chamber is Mr. H. M. Hayward. Asst. Secys.—Mr. D. K. Cunnison and Mr. A. C. Daniel.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned for the current year :—

Viceroy's Legislative Council.—The Hon'ble Mr. W. E. Crum, O.B.E.

Bengal Legislative Council.—The Vice-President of the Chamber and the Hon. Sir Frank Carter, C.I.E., C.B.E.

Calcutta Port Commission.—Mr. S. G. L. Eustace (Kilburn & Co.), the Hon. Mr. W. E. Crum, O.B.E. (Graham & Co.), Mr. W. Mc A. Houstoun (Mackinnon, Mackenzie & Co.), Mr. C. F. Beadel (Becker, Gray & Co.), the Hon. Sir Frank Carter, C.I.E., C.B.E. (Turner Morrison & Co., Ltd.), and Mr. L. Edwards (Andrew Yule & Co.).

Calcutta Municipal Corporation.—Messrs. Norman R. Luke (Jas. Luke & Sons), Geo. Morgan (H. D. Cartwright & Co.), T. R. Pratt and W. R. Rae (Sun Insurance Office).

Bengal Boiler Commission.—Messrs. C. L. Thomson (Standard Jute Mills Co., Ltd.), Gen. George (Andrew Yule & Co.) and H. E. Skinner (Jessop & Co., Ltd.).

Board of Trustees of the Indian Museum.—Hon. Mr. R. M. Watson Smyth (Turner Morrison & Co., Ltd.).

Bengal Smoke Nuisances Commission.—Messrs. A. W. Dods (Burn & Co., Ltd.) and J. R. Murray (Clive Jute Mills).

Calcutta Improvement Trust.—Hon. Sir Frank Carter, C.I.E., C.B.E. (Turner Morrison & Co., Ltd.).

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors' Home, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce :—

Calcutta Wheat and Seed Trade Association, Indian Jute Mills Association, Indian Tea Association, Calcutta Tea Traders Association, Calcutta Fire Insurance Agents Association, Calcutta Import Trade Association, Calcutta Marine Insurance Agents Association, The Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers Association, Indian Engineering Association, Jute Fabric Shippers Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers Association, Baled Jute Shippers Association, Calcutta Jute Dealers Association, Calcutta Liners Conference, Calcutta Hides and Skins Shippers Association and Northern India Tanners' Federation.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burmah, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may, from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measurers Department controlled by a special committee. It includes a Superintendent (Mr. R. Ellis), Deputy Superintendent (Mr. A. H. Lugg) and six Assistant Superintendents and the staff at the time of the last official returns consisted of 167 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measurers' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current* and its Monthly Supplement and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

BOMBAY.

The object and duties of the Bombay Chamber, as set forth in their rules and regulations, are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency; to collect and classify information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general; to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals, on all subjects of general mercantile interests; and to arbitrate between parties willing to refer to, and abide by, the judgment of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. There is affiliated with the Chamber the Bombay Mill-owners' Association, which exists to carry out the same general objects as the Chamber in the special interests of "millowners and users of steam and water power." According to the latest returns, the number of members of the Chamber is 136. Of these 17 represent banking institutions, 5 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 4 insurance companies, 8 engineers and contractors, 96 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible to election to membership by ballot. The Chamber member's subscription is Rs. 20, and the Associate member's subscription is Rs. 15 per month and an additional charge of Rs. 240 per annum is made to firms as subscription to the trade returns published by the

Chamber. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the chairman and deputy-chairman and seven members. The committee must, as a rule, meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for a specific purpose.

The Chamber elects representatives as follows to various public bodies:—

Legislative Council of the Governor-General, one representative. The Chamber may elect anyone, but in practice they have hitherto returned their chairman.

Legislative Council of the Governor of Bombay, one representative, who may also be anyone, but is, in practice, always the deputy chairman.

Bombay Municipal Corporation, two members, elected for three years.

Board of Trustees for the Improvement of the City of Bombay, one member, elected for two years.

Board of Trustees of the Port of Bombay, five members, two and three being elected in alternate years.

Representatives on the Legislative Councils become ex-officio members of the committee of the Chamber, during their terms of office, if they are not already members.

The following are the officers of the Chamber for the year 1918-19 and their representatives on the various public bodies:—

Chairman.—The Hon'ble Mr. Nigel F. Paton (W. & A. Graham & Co.)

Deputy Chairman.—The Hon'ble Mr. R. H. Brooke (Bombay Coy., Ltd.)

Committee.—Sir Thomas Birkett, Kt. (Killick Nixon & Co.), Sir Lawless Hepper, Kt. (G. I. P. Railway), Messrs. T. W. Dowding, (Turner Morrison & Co., Ltd.), J. H. Fyfe (Mackinnon Mackenzie & Co.), Malcolm N. Hogg (Forbes, Forbes, Campbell & Co., Ltd.), D. M. Inglis (James Finlay & Co., Ltd.), Ralph Kidd (National Bank of India, Ltd.).

Secretary: Mr. R. E. Gregor-Pearse.

Representatives on—

Viceregal Legislative Council: The Chairman.

Bombay Legislative Council: The Deputy Chairman.

Bombay Improvement Trust: Mr. A. M. Tod.

Bombay Port Trust: The Hon'ble Mr. Nigel F. Paton, Mr. Malcolm N. Hogg, Mr. Meyer Nissim, Mr. A. H. Froom and Sir Thomas Birkett, Kt.

Bombay Municipality: Messrs. H. G. Cocke (A. F. Ferguson & Co.) and A. M. Tod (Eagle, Star and British Dominions Insurance Co., Ltd.).

Advisory Board of Sydnham College of Commerce and Economics: Messrs. W. A. Haig Brown and C. H. Wilson, J.L.E.)

Bombay Smoke Nuisances Commission: Mr. F. C. Annesley.

St. George's Hospital Advisory Committee: Sir Stanley Reed, Kt., LL.D.

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of eleven Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work.

The Bombay Chamber publish a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Three statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosine oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third statement is headed, "Movements of Piece Goods and Yarn by Rail," and show the despatches of imported and local manufactured piece-goods and yarn from Bombay to other centres of trade served by the railways.

The "Weekly Return" issued by the Chamber shows clearances of a large number of important descriptions of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The annual reports of the Chamber are substantial tomes in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Measurement Department with a staff of 17, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late. The certificates granted show the following details:—

- (a) the date, hour and place of measurement;
- (b) the name of the shipper;
- (c) the name of the vessel;
- (d) the port of destination;
- (e) the number and description of packages;
- (f) the marks;
- (g) the measurement; and, in the case of goods shipped by boats,
- (h) the registered number of the boat;
- (i) the name of the tindal.

Bombay Millowners' Association.

The Bombay Millowners' Association was established in 1875 and its objects are as follows:—

- (a) The protection of the interests of millowners and users of steam, water and/or electric power in India;

- (b) The promotion of good relations between the persons and bodies using such power;
- (c) The doing of all those acts and things by which these objects may be furthered.

Any individual partnership or company, owning one or more mill or mills or one or more press or presses or one or more ginning or other factory or factories actuated by steam, water, electric and/or other power is eligible for membership, members being elected by ballot. Every member is entitled to one vote for every complete sum of Rs. 50 paid by him as annual subscription.

The membership of the Association in 1919 numbered 102.

The following is the Committee for 1919:—

Mr. N. G. Hunt (*Chairman*), Mr. Rahimtoola Currimbhoy Ebrahim (*Deputy Chairman*), The Hon. Sir Dinshaw M. Petit, Bart., Sir Sassoon David, Bart., The Hon. Sir Fazulbhoy Currimbhoy, Kt., C.B.E., The Hon. Sir Dinshaw E. Wacha, Kt., The Hon. Mr. C. V. Mehta, The Hon. Mr. Munmohandass Ramji, Messrs. A. Geddis, Mathradas Goculdas, Narottam M. Goculdas, Cowasjee Jehangir (*Jun.*), O.B.E., J. A. Kay, Meyer Nissim, Jehangir B. Petit, A. J. Raymond, N. B. Saklatwalla, Madhowjee D. Thackersey and C. N. Wadia, C.I.E.

Mr. R. E. Gregor-Pearse, *Secretary*.

The following are the Association's Representatives on public bodies:—

Legislative Council of H. E. the Governor of Bombay: The Hon'ble Sir Dinshaw M. Petit, Bart.

Bombay Port Trust: Sir Vithaldas D. Thackersey, Kt.

City of Bombay Improvement Trust: Sir Sassoon David, Bart.

Victoria Jubilee Technical Institute: Mr. Jehangir Bomanjee Petit.

Bombay Smoke Nuisances Commission: Messrs. C. N. Wadia, C.I.E., and W. A. Sutherland.

Advisory Board of Sydenham College of Commerce and Economics: Mr. N. G. Hunt.

Indian Merchants' Chamber.

The Bombay Indian Merchants' Chamber and Bureau was established in 1907 with the following objects:—"To encourage a friendly feeling and unanimity among the commercial men on all subjects involving their common good; to promote and protect the trade, commerce and manufactures of India and in particular to promote the general commercial interests of the Presidency of Bombay; to consider and deliberate on all questions affecting the rights of Indian Merchants, to represent to the Government their grievances, if any, and to obtain by constitutional methods the removal of such grievances; to collect and compile and distribute in such manner as may be the most expedient for purposes of disseminating commercial and

economic knowledge, all statistics and other information relating to trade, commerce and finance, specially India: as well as to form and maintain library, and generally to do all such matters as may promote the above objects in view; to arbitrate between parties willing to refer and abide by the judgment of the Chamber; to receive and decide references of matters of usage and custom in dispute, recording such decisions of future guidance and assisting by this and such other means, as the committee for the time being may think fit; to form a code of practice so as to simplify and facilitate the transaction of business."

The Chamber has not yet taken up the work of arbitration, measurements, etc.

The following bodies are connected directly and indirectly with the Chamber, though no public body is directly affiliated to it:—

The Bombay Native Piece-goods Association (which sends a large number of representatives);

The Grain Merchants' Association (which is a member);

The Hindustani Native Merchants' Association (which is a member);

The Bombay Rice Merchants' Association;

The Bombay Fancy Piece-goods Association;

The Bombay Yarn, Copper and Brass Native Merchants' Association.

The Chamber elects a representative jointly with the Bombay Native Piece-goods Merchants' Association to the Bombay Legislative Council and a representative to the Board of Trustees for the Port of Bombay, whenever it is notified by the Government (*vide Act No. 1 of 1909*). The Chamber also has the right to elect a representative on the Board of the Sydenham College of Commerce and Economics, Bombay.

Any person engaged in mercantile pursuits or interested in trade and commerce desirous of joining the Chamber is eligible for membership, there being two classes of members, *viz.*, Ordinary and Honorary. Ordinary members shall be (1) Resident members who pay Rs. 30 annual fee, except that if an Association joins as a member it shall have to pay an annual fee of Rs. 100, and (2) Mofussil members who pay Rs. 5 as annual fee. An ordinary member also pays an entrance fee of Rs. 50 on being elected.

Gentlemen distinguished for public services or eminent in commerce and manufactures or otherwise interested in the aims and objects of the Chamber may be elected as Honorary members by a General Meeting of the Chamber on the recommendation of the Committee and as such are exempted from paying subscriptions. They are not entitled to vote at any meeting of the Chamber nor they are eligible to serve on the Committee. They are, however, supplied all the publications of the Chamber free of charge.

The following are the office-bearers of the Chamber for the year 1919-20:—

Chairman.—Mr. Jehangir Bamonji Petit.

Vice-Chairman.—Mr. Sorabji Edulji Warden.

Committee.—Hon'ble Mr. Purshottamdas Thakoredas, C.I.E., Hon'ble Sir Fazalbhoy Currimbhoy Ibrahim, Hon. Mr. Chunilal V. Mehta, Hon. Mr. Lallubhai Samaldas, C.I.E., Hon. Mr. Manmohandas Ramji, Mr. Hansraj Pragji Thackersey, Mr. Surajmal Lallubhai, Mr. Lakhmidas Ravji Tersey, Mr. Vallabdas Chaturbhuj Shivji, Mr. Motilal Vallabhji, Mr. Vithaldas Damodar Govindji, Sir Vithaldas Damodar Thackersey, Mr. Motilal Kanji, Mr. Gulabchand Devchand, Mr. Manu Subedar, Mr. Devidas Madhavji Thackersey, Mr. Phiroz J. Billimoria, Mr. Jethamal Narandas, Mr. Fazal Ibrahim Rahimtulla, Mr. Girjashankar B. Trivedi, Mr. Mansukhlal Atmaram Master, Mr. Mavji Govindji, Mr. Lalji Govindji, Mr. Naranji Haribhai, Mr. Lakhmichand Maneekhand Khokhani, Mr. Mathurdas Kanji Matani, Mr. D. F. Madon, and Mr. N. M. Mazumdar.

Secretary.—Mr. J. K. Mehta, M. A.

The following are the Chambers' representatives on various public bodies:—

Bombay Legislative Council.—The Hon. Mr. Mumohandass Ramji.

Bombay Port Trust.—Mr. Manu Subedar, B.A., B. SC., (Econ.) F.S.S., Barrister-at-Law.

Advisory Board of the Sydenham College of Commerce.—The Hon. Sir D. E. Wacha.

The staff of the Chamber include:—

Secretary.—Mr. J. K. Mehta, M. A.

Assistant Secretary.—Mr. S. M. Muzumdar, M.A., L.L.B.

Honorary Auditor.—Mr. Devidas Vithaldas.

Chamber's Solicitors.—Messrs. Edgelow, Gulabchand, Wadia & Co.

The Chamber publishes every month a journal in Gujarati giving information on commercial and industrial subjects and publishing all statistics considered important relating to trade and commerce of India.

Cotton Trade Association.

The Bombay Cotton Trade Association, Limited, was founded in 1876. The objects for which it was established were, *inter alia*, "to adjust disputes between persons engaged in the cotton trade, to establish just and equitable principles in the trade, to maintain uniformity to rules, regulations and usages in the trade, to adopt standards of classification in the trade, to acquire, preserve and disseminate useful information connected with the cotton interests throughout all markets and generally to promote the cotton trade of the City of Bombay and India and augment the facilities with which it may be conducted." In 1892 the Association was incorporated under the Indian Companies Act, 1882, with a Capital of Rs. 50,000, in 50 shares of Rs. 1,000 each. In 1917 the share capital was increased to Rs. 60,000. In addition to the shareholders (Members), the Association had in 1918 126 Associate Members. The affairs of the Company are managed by a Board of Directors not less than nine or more

than twenty in number. The present Directorate is constituted as follows:—

Chairman.—Mr. T. D. Moore (New Mofussil Co., Ltd.).

Deputy Chairman.—James P. Chrystal (P. Chrystal & Co.)

Messrs. J. L. Ainsworth (Gill & Co.), Anandilal Ishwardas (Anandilal Ishwardas & Co.), G. Boyagis (Ralli Brothers), C. W. de Breul (Breul & Co.), K. Futamura (Gosho Kabushike Kaisha), The Hon'ble Mr. Purshottamdas Thakoredas (Narandas Rajaram & Co.), C. H. Roberts (Prier de Saone & Co.), Ramnarain Harnandrai (Harnandrai Ramnarain), N. B. Saklatwala (Tata Sons & Co.), Vassonjee Jeewandas (Khimjee Visram), C. N. Wadia (The Century Spinning and Weaving Co., Ltd.), C. H. Goodal (The Bombay Co., Ltd.), R. Cedraschi (Volkart Brothers), K. Tankada (Mitsui Bussan Kaisha, Ltd.), T. Ohta (Japan Cotton Trading Co., Ltd.).

Secretary.—Mr. E. S. W. Miles.

Bombay Native Piece-Goods Merchants' Association.

The objects of the Association are as follows:—

(a) To promote by creating friendly feelings and unity amongst the Merchants, the business of the piece-goods trade in general at Bombay, and to protect the interest thereof; (b) to remove, as far as it will be within the powers of the Association to do so, all the trade difficulties of the piece-goods business and to frame such line of conduct as will facilitate the trade; (c) to collect and assort statistics relating to piece-goods and to correspond with public bodies on matters affecting trade, and which may be deemed advisable for the protection and advancement of objects of the Association or any of them; and (d) to hear and decide disputes that may be referred to for arbitration.

The following are the office-bearers for the current year:—

Chairman.—The Hon. Mr. Manmohandas Ramji.

Deputy Chairman.—Mr. Devidas Madhavji Thackersey, J.P.

Hon. Joint Secretaries.—Messrs. Lalji Govindji and Goculdas Jivraj Dayal.

Hony. Treasurer.—Mr. Mathuradas Haridas.

Grain Merchants' Association.

The object of this body is "to promote the interests of the merchants and to put the grain and seeds trade on a sound footing." It is an influential body of large membership. The office holders for the current year are as follows:—

Chairman.—Mr. Velji Lakhamsi, B.A., L.L.B.

Vice-Chairman.—Mr. Dharsi Khetsi (Messrs. Talockchand Mauraj).

Hony. Secretary.—Mr. Pragji Mohonji Kothari.

Secretary.—Mr. Lalshanker Harprasad.

KARACHI.

The objects and duties of the Karachi Chamber are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary membership is conferred upon "any gentlemen interested in the affairs and objects of the Chamber", subject to election by the majority of the votes of members. All new members joining the Chamber pay Rs. 100 entrance fee and the monthly subscriptions is Rs. 6 for any member contributing Rs. 600 to the Chamber Fund, in addition to entrance fee, and Rs. 12 without such contribution. The subscription for the Chamber's periodical returns is Rs. 5 per month. The affairs of the Chamber are managed by a committee of ten members, consisting of a Chairman, Vice-Chairman and eight members, elected at the annual meeting of the Chamber in January or immediately after. The Chamber elects a representative on the Bombay Legislative Council and three representatives on the Karachi Port Trust. There were last year 56 members of the Chamber, and 7 Honorary Members.

The following are the officers of the Chamber for the current year:—

Chairman.—Mr. H. G. Houghton (Messrs. Donald Graham & Co.).

Vice-Chairman.—The Hon'ble Mr. F. Clayton (Messrs. Fleming, Shaw & Co.).

Managing Committee.—Messrs. N. D. Calder (North Western Railway), C. C. Demetriadi (Messrs. Ralli Brothers), Geo. Gordon (Chartered Bank of India, Australia and China), E. Miller (Ewart Ryrie & Co.), A.

W. Oliver (Bombay Company Ltd.), E. A. Pearson (Forbes, Forbes, Campbell & Co., Ltd.), H. C. Whitehouse (Sanday, Patrick & Co.), and W. D. Young (Couper and Young).

Representative on the Bombay Legislative Council.—The Hon'ble Mr. F. Clayton.

Representatives on the Karachi Port Trust.—Mr. A. O. Brown, Mr. E. A. Pearson and Mr. H. G. Houghton.

Secretary.—Mr. E. L. Rogers.

Public Measurer.—Captain S. Mylcris.

The following are the principal ways in which the Chamber gives a special assistance to members. The Committee take into consideration and give an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate European surveyors for the settlements of disputes "as to the quality or condition of merchandise as to the quality in which both parties desire the Chamber to do so." When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool, hemp, hides and other merchandise in Karachi.

MADRAS.

The Madras Chamber of Commerce was founded in 1886. All merchants and other persons engaged or interested in the general trade, commerce and manufactures of Madras are eligible for membership. Any assistant signing a firm or signing *per pro* for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers-of-attorney, as honorary members, subject to ballot. Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership as by ballot at a general meeting, a majority of two-thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in ten years each. The subscription shall not exceed Rs. 160 per annum, payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chamber's finances. Absentees in Europe pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks. One of the rules for the last named is "that no trade mark on ticket shall be registered on behalf of an Indian firm trading under a European name."

The following publications are issued by the Chamber:—Madras Price Current and Market Report, Tonnage Schedule and Madras Landing Charges and Harbour Dues Schedule.

There are 40 members and five honorary members of the Chamber in the current year and the officers and committee for the year are as follows:—

Chairman.—The Hon'ble Sir Gordon Fraser.

Vice-Chairman.—Mr. J. F. Simpson.

Committee.—Messrs. A. A. Biggs, A. J. Leech, N. M. Murray, H. P. M. Rae and F. E. L. Worke.

The following are bodies to which the Chamber are entitled to elect representatives, and the representatives elected for the year:—

Madras Legislative Council.—The Hon'ble Sir Gordon Fraser.

Madras Port Trust.—The Hon'ble Sir Gordon Fraser (Best & Co., Ltd.), Mr. H. P. M. Rae (The Bombay Co., Ltd.), Mr. J. F. Simpson (Gordon Woodroffe & Co.), Mr. W. A. Turner (Binny & Co., Ltd.).

Madras Municipal Corporation.—Mr. A. J. Leech (T. A. Taylor & Co.)

British Imperial Council of Commerce, London.—Mr. A. D. Jackson (Europe).

Indian Tea Cess Committee.—Mr. C. E. Wood (Parry & Co.).

Southern India Chamber.

The Southern India Chamber of Commerce has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be:—

“To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

“To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others.”

There are two classes of members, permanent and honorary. The usual conditions as to eligibility for election prevail.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1915. Members of the Chamber hold seats in the Madras Legislative Council but the Chamber does not enjoy the right of electing representatives to that body. Under the Madras City Municipal Act, 1919, the Chamber has the right of electing two Councillors to the Madras Corporation.

President—Rao Bahadur P. Theagaroya Chettiar, B.A.

Vice-Presidents—Khan Bahadur M. A. Kuddus Badsha Sahib and Dewan Bahadur Govindoss Chathurbhoojaddoss.

Honorary Secretaries.—The Hon'ble Rao Sahib M. C. T. Mithia Chetty and Moulana Abdus Subban Sahib.

Asst. Secretary—C. Duraiswami Aiyangar, B.A.

UPPER INDIA CHAMBER.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm company or association having its place of business in Cawnpore, Rs. 200 a year; an individual member, resident or carrying on business in Cawnpore, Rs. 100; firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees, of from four to seven members each, at trade centres where membership is sufficiently numerous to justify the step. Such Local

Committees have power to communicate only with the Central Committee.

The Chamber appoints arbitration Tribunals for the settlement and adjustment of disputes when invited to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 69 members, three honorary members and seven affiliated members.

The following are the officers:—

President—The Hon. Mr. Thomas Smith (Muir Mills Co., Ltd.)

Vice-President—Mr. T. D. Eidelston (Begg Sutherland & Co.).

Members.—Mr. A. W. Lilley (Cawnpore Woollen Mills Co., Ltd.), Mr. S. H. Taylor (Elgin Mills Co., Ltd.), Mr. C. T. Allen (Cooper, Allen & Co., Ltd.), Mr. B. R. Briscoe (Cawnpore Cotton Mills Co., Ltd.), Mr. E. L. Watson (D. Waldie & Co., Ltd.), Mr. A. E. Tyden-Pattenson (G. I. P. Railway), Mr. K. M. Balfour (Allahabad Bank, Ltd.), Mr. E. M. Soutor (Ford and Macdonald, Ltd.).

Secretary.—Mr. J. G. Ryan.

Head Clerk.—Mr. B. N. Ghosal.

PUNJAB.

The Punjab Chamber of Commerce has its headquarters at Delhi and exists for the care of mercantile interests on the usual lines in the Punjab, the North-West Frontier Province and Kashmir. There are affiliated branches of the Chamber at Lahore and Amritsar. Members are elected by ballot, the only necessary qualification being interest in mercantile pursuits. There is no entrance fee. The rate of subscription is Rs. 10 per month. The

Chamber returns one member to a seat on the Punjab Legislative Council and one on the Municipal Corporation, Delhi and Amritsar.

The following are the Officers, Committee and Representatives on public bodies as at the end of November 1918:—

President.—Mr. R. E. Grant Govan (The Delhi Flour Mills Co., Ltd.).

Vice-President.—Lala Girdhari Lal (Amritsar Flour and General Mills Co., Ltd.)

Committee.—Mr. R. E. Grant Govan (The Delhi Flour Mills Co., Ltd.), Mr. P. Mukerjee (P. Mukerjee & Co.), Mr. D. N. Bhanja (Messrs. Kerr Tarruck & Co.), Mr. Abdul Satta (L. M. Fasal Ellahie), Sardar Jaideo Singh (E. B. Boota Singh & Sons), Sardar Sobha Singh (Khalsa Spinning and Weaving Mills), Mr. W. R. Macpherson (Spedding & Co.), Mr. P. B. Christo (Messrs. Christo & Co.), Lala Motiram Mehra (Messrs. Motiram Mehra & Co.), Lala L. D. Lachmi Narain.

Representative on Punjab Legislative Council.—The Hon'ble Mr. F. C. Walle.

Representative on the Delhi Municipal Committee.—Mr. R. E. Grant Govan (The Delhi Flour Mills Co., Ltd.)

Honorary Secretary.—Mr. P. Mukerjee.

The Chamber is affiliated with the British Imperial Council of Commerce, London, and is represented in England by Sir James Walker, C. I. E., Alliance Bank of Simla, and Mr. H. C. Chalmers, National Bank of India, Ltd., London.

UNITED PROVINCES.

The number of members on register is 113 (70 Local and 43 motussil). All the important commercial and industrial interests of the provinces of Agra and Oudh are represented.

Committee.—

Presidents.—Rai Bahadur Lala Bishambhar Nath (Proprietor, Sri Krishna Ginning Factory, Director, Punjab National Bank, Ltd., and Ramchandra Gursahaimal Cotton Mills Co., Ltd.)

Vice-Presidents.—The Hon'ble Mr. C. Y. Chintamani, Allahabad, Raja Sambhu Dyal, Morawan; and Lala Hazari Mal (Hazari Mal Tulsi Ram, Cawnpore).

Secretary.—Babu Vikramajit Singh.

Joint Secretary.—Lala Jairam Das (Proprietor, Lyalpur Sugar Co.).

Members.—Seth Ram Gopal (Kanehyalal Ram Gopal), Lala Ram Kumar (Ram Kumar Rameshwar Das), Lala Pancham Lal (Bhojraj Babulal), Lala Chunni Lal (Munalal & Co.), Lala Punna Lal (Gulabrai Mahadeo Pershad), Babu Gur Pershad (Bastiram Matadin), Mr. B. N. Sen (Sen & Co.), Lala Ghanshamdas (Hira Lal Ghanshamdas), Babu Dwarka Pershad Singh, The Hon'ble Raja Moti Chand, C.I.E., Benares, and the Hon'ble Pandit Gokaran Nath Misra, Lucknow.

BURMA.

The Burma Chamber of Commerce, with headquarters at Rangoon, exists to encourage friendly feeling and unanimity among commercial men on all subjects involving their common good, to promote and protect trade, commerce and manufactures and, in particular, the general mercantile interests of the province, to communicate with public authorities, associations and individuals on all matters, directly or indirectly affecting these interests, and to provide for arbitration between parties willing to refer to, and abide by, the judgment of arbitrators appointed by the Chamber. The following are affiliated bodies:—

Burma Fire Insurance Association.

Burma Marine Insurance Agents' Association.

Rangoon Import Association.

Tavoy Chamber of Mines.

The Chamber elects representatives to the following Public Bodies:—

Burma Legislative Council.

Rangoon Port Trust Board.

Rangoon Municipal Committee.

Victoria Memorial Park Trustees.

Pasteur Institute Committee.

Burma Boiler Commission.

All British corporations, companies, firms or persons engaged or interested in mercantile pursuits, such as merchants, bankers, ship-owners and brokers or who are connected with agriculture, mining, manufactures, insurance,

railways, commerce, art, science or literature shall be eligible to become Chamber Members. Every non-British concern or person, similarly engaged or interested as indicated above, other than a subject of a State with which the British Empire was at War on September 19th, 1918, shall be eligible for election as an Associate Member. The annual subscription of each Chamber Member shall be Rs. 300 per annum and of each Associate Member Rs. 225 per annum. Officials and others indirectly connected with the trade of the province, or who may have rendered distinguished service to the interests represented by the Chamber, may be elected by the Committee, either on their own motion or on the suggestion of two Members as Honorary Members of the Chamber. Honorary Members are not required to subscribe to the funds of the Chamber.

The Chamber undertakes arbitrations in addition to its ordinary work. It does not publish any statistical returns.

The following are the Officers, Committee and Representatives on public bodies for the current year:—

Chairman.—The Hon. Mr. E. J. Holberton, C.B.E., (The Bombay Burma Trading Corporation, Ltd.).

Vice-Chairman.—J. A. Swan, Esq. (Steel Bros. & Co., Ltd.).

Committee.—Messrs. D. A. Dalziel (Chartered Bank of India, Australia and China), A. R. Finlay (J. A. Begbie & Co.), J. Hogg (Harperink, Smith & Co.), J. R. D. Glascott (Burma Railways Co., Ltd.).

A. B. Ritchie (Burma Oil Co., Ltd.), P. B. Sime (Bulloch Brothers & Co., Ltd.), R. Sinclair (The Irrawaddy Flotilla Co., Ltd.), and G. W. Wilson (J. and F. Graham & Co.).

Secretary.—Mr. C. A. Cuttriss, M.B.E., F.R.S.A.

Representative on the Burma Legislative Council.—The Hon'ble Mr. E. J. Holberton, C.B.E.

Representatives on the Rangoon Port Trust

Board.—Messrs. The Hon'ble Mr. E. J. Holberton, C. B. E., Messrs. J. Hogg, A. B. Ritchie and J. A. Swan.

Representative on the Rangoon Municipal Committee.—Mr. G. W. Wilson.

Victoria Memorial Park Trustee.—The Hon'ble Mr. E. J. Holberton, C.B.E.

Pasteur Institute Committee.—The Hon'ble Mr. E. J. Holberton, C.B.E.

Burma Boiler Commission.—Mr. C. A. Cuttriss, M.B.E., F.R.S.A.

COCANADA.

The Cocanada Chamber of Commerce was established on 29th October, 1868.

The following are the office-holders of the Cocanada Chamber of Commerce, which has its headquarters at Cocanada, the chief port on the Coromandel Coast, north of Madras:—

Messrs. B. Eddington (Coromandel Co., Ltd.), *Chairman*; E. H. D'Cruz (Wilson & Co.), A. E. Todd (Simson Bros.), M. R. Ry. Rao Bahadur K. Suryanarayanamurty Naidu Garu and G. M. Lake (Innes & Co.), G. W. Thompson (Shaw Wallace & Co.), R. J. Hunter (Ripley and Co.), A. Steiner (Volkart Bros.), and G. K. Gillan (Gordon Woodroffe & Co.).

Secretary.—Mr. J. A. Muller.

The rules of the Chamber provide "that by the term 'member' be understood a mercantile firm or establishment, or the permanent agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada, or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly electing according to the Rules of the Chamber, and that all such be eligible, but only members resident in Cocanada can hold office."

Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In the former case a fee of Rs. 16 and in the latter a fee of Rs. 32 must accompany the reference.

The Committee consist of 3 members, including the Chairman, and the Committee are elected by ballot, the Chairman at the general meeting of January in each year, for a term of 12 months. The entrance fee for each member whose place of business is in Cocanada is Rs. 50 and for each member whose place of business is elsewhere be Rs. 25. The subscription for each member whose place of business is in Cocanada is Rs. 120 per annum, and for each member whose place of business is elsewhere be Rs. 60 per annum, payable quarterly in advance. Committee meetings are held on the 1st Tuesday in the month and general meetings on the 2nd Tuesday.

A weekly slip of current rates of produce freights, and exchange is drawn up by the Committee.

CEYLON.

The Ceylon Chamber of Commerce was established on the 25th March 1839 and was incorporated in 1895, with its headquarters at Colombo. All firms and persons engaged in the general trade of Ceylon are admissible as members and every person or firm desirous of joining the Chamber must be proposed by one member, seconded by another and balloted for by the whole Chamber. The affairs of the Chamber are conducted by a Board of

Directors consisting of Chairman and Vice-Chairman and from 5 to 10 members.

The following is the membership of this Board at the present time:—

Mr. F. E. Mackwood (*Chairman*); Mr. S. P. Hayley (*Vice-Chairman*); Mr. B. W. Leefe, Mr. F. N. Mackie, Mr. W. Philips, Mr. A. D. Skrine, Mr. E. R. Waldoek, Mr. F. H. Yeats.

Secretary.—Mr. A. Duncum.

THE INDIAN INDUSTRIAL CONFERENCE.

The credit of conceiving the idea of organizing an Indian Industrial Conference under the auspices of the Industrial Association of Western India belongs to the late Mr. M. G. Ranade. Discussion of questions relating to agriculture, finance, commerce and industry of the whole country by inviting experts in different branches, the formation of well informed public opinion on economical problems were the objects kept by Mr. Ranade

in view in convening this meeting. The first session of the Conference was held at Poona in August 1891, under the Presidency of Captain Beauclerk of Hyderabad and was attended by distinguished European and Indian gentlemen. Two more sessions of the Conference were held in 1892 and 1893. But owing to the elevation of Mr. M. G. Ranade to the High Court and his transfer to Bombay, this movement came virtually to a standstill,

until it was revived in 1905. The National Congress almost since its inception has given prominent attention to some of the principal economic questions and the famines of 1896-97 and 1899-1900 contributed not a little to push the economical problem to the forefront and resulted in the organization of three or four Industrial and Agricultural exhibitions between 1900 and 1905 under the auspices of the National Congress, which gave the people an opportunity to take stock of their gains and losses in the field of arts and industries and opened their eyes to their industrial backwardness. Small committees were appointed at these exhibitions to devise means for the revival of existing industries and also for the starting of new ones.

In the year 1905 the exhibition Committee of Benares took the important step of reviving the Industrial Conference organization. The first session was accordingly held under the distinguished presidency of the late Mr. R. C. Dutta. During the last fourteen years of its existence, this conference has been fortunate in securing very able and influential gentlemen to occupy the Presidential Chair.

CONSTITUTION—The objects of the Conference as laid down in its revised constitution are as follows :—

AIMS & OBJECTS.—The Indian Industrial Conference shall attempt to promote, protect and develop agriculture, commerce, manufactures and trade of India, on sound lines and to introduce new industries wherever possible.

(a) By holding Conferences and meetings to deliberate upon and discuss the economic, agricultural and industrial needs and problems affecting the whole country.

(b) By collecting correct statistics and other information on the above subjects.

(c) By disseminating the information so collected through the medium of books, pamphlets or leaflets.

(d) By organising, wherever possible, temporary or permanent exhibitions, demonstrations, museums, or laboratories for conducting experiments.

(e) By encouraging the study of commerce, technology and economics.

(f) By making representations to the various departments of British Government, to the Railway Companies, the Rulers of Indian States and Industrial and Commercial bodies or Associations on all matters pertaining to or bearing on agriculture, manufactures, trade and commerce of the country.

(g) By the formation of industrial and commercial Associations in the various parts of the country, where they are non-existent.

In pursuance of these objects, 14 sessions of the Conference have been held along with the annual Congress meetings. The Report of each session contains the proceedings and the papers submitted to each Conference and covers over 500 pages of closely printed matter. The office also has compiled the following books :—The Directory of Indian Goods and Industries (6th Edition) containing the names and addresses of manufacturers of and

dealers in the Indian made goods, Indian Banks, etc. The Directory of Technical Institutions in India (2nd edition) gives the fees charged and other particulars relating to Agricultural, Commercial and Technical schools and colleges in India. The Guide to Modern Machinery gives the addresses of makers of machinery for starting three hundred different industries.

In addition to the educative work, the office fulfils the functions of a **Bureau of Economic Intelligence**. Inquiries of the following nature are received in the office. Small capitalists and gentlemen of limited means seek the advice of the Central Office for starting small cottage industries, which do not require a large outlay of money or the use of expensive or intricate machinery. Persons wishing to start soap or candle works, varnish making and similar chemical industries, ask for an estimate of the cost of machinery and plant for these different concerns, as well as rates for the chemicals required by them and the names of the firms from whom they can obtain the supplies. Advice is sometimes sought by Indian States and private individuals anxious to start plantations of Ramie, and other fibre producing plants and the cultivation of Rubber and other economic products. Parents and guardians of students have addressed the Office for information in connection with institutions both in India and in foreign countries, where the young men can get training suited to them in Electrical Engineering and other technical courses. Information is also supplied regarding Indian experts in various branches. Small concerns which have already commenced to place their goods in the market, expect the Office of the Industrial Conference to help them in pushing forward the sale of their goods by prevailing upon well-known merchants, to help them by guaranteeing the purchase of their goods up to a certain quantity every year.

The Conference wishes to take in hand the following projects :—

(1) To compile a list of Indian as well as of foreign experts, who by their training either here or in foreign countries and practical experience in different Industrial and Manufacturing branches are capable of rendering assistance to the capitalists and others intent on starting any new industry, or reviving old or existing concerns requiring expert aid.

(2) To organize a Commercial Museum at Bombay to display samples of indigenous and foreign industrial products, models of machinery, raw materials and artware.

The fees for different classes of Memberships will be as shown below commencing with the year 1919 :—

	Rs.

Ordinary Joint Secretaries.—

Rao Bahadur R. N. Mudholkar, C. I. E., Mr.

Ambalal Sarabhai, Mr. J. K. Mehta, M. A.

Assistant Secretary—Mr. M. B. Sant.

Office—23, Church Gate Street, Fort, Bombay.

* The Peoples of India.

It is essential to bear in mind, when dealing with the people of India, that it is a continent rather than a country. Nowhere is the complex character of Indians more clearly exemplified than in the physical type of its inhabitants. No one would confuse the main types, such as Gurkhas, Pathans, Sikhs, Rajputs, Burmans, Nagas, Tamils, etc., nor does it take long to carry the differentiation much farther. The typical inhabitants of India—the Dravidians—differ altogether from those of Northern Asia, and more nearly resemble the tribes of Malaya, Sumatra and Madagascar. Whatever may be their origin, it is certain that they have settled in the country for countless ages and that their present physical characteristics have been evolved locally. They have been displaced in the North-West by successive hordes of invaders, including Aryans, Scythians, Pathans and Moghals, and in the North-East by Mongoloid tribes allied to those of Burma, which is India only in a modern political sense. Between these foreign elements and the pure Dravidians is borderland where the contiguous races have intermingled.

The people of the Indian Empire are divided by Sir Henry Risley (Caste, Tribe and Race, Indian Census Report, 1901; the Gazetteer of India, Ethnology and Caste, Volume I, Chapter 6) into seven main physical types. There would be eight if the Andamese were included, but this tiny group of Negritos may be disregarded.

The Turko-Iranian, represented by the Baloch, Brahui and Afghans of Baluchistan and the North-West Frontier Province. Probably formed by a fusion of Turki and Persian elements, in which the former predominate. Stature above mean; complexion fair; eyes mostly dark but occasionally grey; hair on face plentiful; head broad, nose moderately narrow, prominent, and very long. The feature in these people that strikes one most prominently is the portentous length of their noses, and it is probably this peculiarity that has given rise to the tradition of the Jewish origin of the Afghans.

The Indo-Aryan occupying the Punjab, Rajputana, and Kashmir, and having as its characteristics members the Rajputs, Khatris, and Jats. This type, which is readily distinguishable from the Turko-Iranian, approaches most closely to that ascribed to the traditional Aryan colonists of India. The stature is mostly tall; complexion fair; eyes dark; hair on face plentiful, head long; nose narrow, and prominent, but not specially long.

The Scytho-Dravidian, comprising the Maratha Brahmans, the Kunbis, and the Coorgs of Western India. Probably formed by a mixture of Scythian and Dravidian elements. This type is clearly distinguished from the Turko-Iranian by a lower stature, a greater length of head, a higher nasal index, a shorter nose, and a lower orbito-nasal index. All of these characters, except perhaps the last, may be due to a varying degree of intermixture with the Dravidians. In the higher groups the amount of crossing seems to have been slight; in the lower the Dravidian elements are more pronounced.

The Aryo-Dravidian or Hindustani, found in the United Provinces, in parts of Raj-

putana, and in Bihar and represented in its upper strata by the Hindustani Brahman and in its lower by the Chamar. Probably the result of the intermixture, in varying proportions, of the Indo-Aryan and Dravidian types. The head-form is long with a tendency to medium; the complexion varies from lightish brown to black; the nose ranges from medium to broad, being always broader than among the Indo-Aryans; the stature is lower than in the latter group, and usually below the average according to the scale. The higher representatives of this type approach the Indo-Aryans, while the lower members are in many respects not very far removed from the Dravidians. The type is essentially a mixed one, yet its characteristics are readily definable, and no one would take even an upper class Hindustani for a pure Indo-Aryan or a Chamar for a genuine Dravidian. The distinctive feature of the type, the character which gives the real clue to its origin and stamps the Aryo-Dravidian as racially different from the Indo-Aryan is to be found in the proportions of the nose.

The Mongolo-Dravidian, or Bengali type of Upper Bengal and Orissa, comprising the Bengal Brahmans and Kayasthas, the Mahomedans of Eastern Bengal, and other groups peculiar to this part of India. Probably a blend of Dravidian and Mongoloid elements, with a strain of Indo-Aryan blood in the higher groups. The head is broad; complexion dark; hair on face usually plentiful; stature medium; nose medium, with a tendency to broad. This is one of the most distinctive types in India, and its members may be recognised at a glance throughout the wide area where their remarkable aptitude for clerical pursuits has procured them employment. Within its own habitat the type extends to the Himalayas on the north and to Assam on the east, and probably includes the bulk of the population of Orissa; the western limit coincides approximately with the hilly country of Chota Nagpur and Western Bengal.

The Mongoloid, type of the Himalayas, Nepal, Assam, and Burma, represented by the Kanets of Lahul and Kulu; the Lepchas of Darjeeling and Sikkim; the Limbus, Murmis and Gurungs of Nepal; the Bodo of Assam; and the Burmese. The head is broad; complexion dark, with a yellow tinge; hair on face scanty; stature short or below average; nose fine to broad; face characteristically flat; eyelids often oblique.

The Dravidian type extending from Ceylon to the valley of the Ganges, and pervading Madras, Hyderabad, the Central Provinces, most of Central India and Chota Nagpur. Its most characteristics representatives are the Paniyans of Malabar and the Santals of Chota Nagpur. Probably the original type of the population of India, now modified to a varying extent by the admixture of Aryan, Scythian, and Mongoloid elements. In typical specimens the stature is short or below mean; the complexion very dark, approaching black; hair plentiful, with an occasional tendency to curl; eyes dark; head long; nose very broad, sometimes depressed at the root, but not so as to make the face appear

* The material in this section is almost entirely taken from the Report on the Census of India, 1911, by Mr. E. A. Gait, C.S.I., C.I.E., I.C.S., Fellow of the Royal Statistical Society.

Oudh	12,558,004	12,833,168	12,650,924	11,387,832	11,221,043

flat. This race, the most primitive of the Indian types, occupies the oldest geological formation in India, the medley of forest-clad ranges, terraced plateau, and undulating plains which stretches roughly speaking, from the Vindhya to Cape Comorin. On the east and the west of the peninsular area the domain of the Dravidian is continuous with the Ghats, while further north it reaches on one side to the Aravallis, and on the other to the Rajmahal Hills. Where the original characteristics have been unchanged by contact with Indo-Aryan or Mongoloid people, the type is remarkably uniform and distinctive. Labour is the birthright of the pure Dravidian whether hoeing tea in Assam, the Duars, or Ceylon, cutting rice in the swamps of Eastern Bengal or doing scavenger's work in the streets of Calcutta, Rangoon and Singapore, he is recognizable at a glance by his black skin, his squat figure, and the negro-like proportions of his nose. In the upper strata of the vast social deposit which is here treated as Dravidian these typical characteristics tend to thin and disappear, but even among them traces of the original stock survive in varying degrees.

It must, however, be clearly understood that the areas occupied by these various types do not admit of being defined as sharply as they must be shown on an ethnographic map. They melt into each other insensibly; and, although at the close of a day's journey from one ethnic tract to another, an observer whose attention had been directed to the subject would realise

MAIN STATISTICS OF THE INDIAN EMPIRE.

According to the revised areas adopted in the Census of 1911, the Indian Empire contains 1,802,657 square miles, or some 36,000 more than in 1901. About 23,000 square miles have been added owing to the enumeration for the first time of the Agency tracts attached to the North-West Frontier Province. A further 6,500 represent the area of the Sunderbans, or swampy littoral of the Ganges delta, which was left out of account at previous enumerations. Finally the Frontier State of Manipur has been found to contain about 5,000 square miles more than the estimate made in 1901.

Population Divisions.—The provinces under British administration comprise 1,093,074 square miles, or 60·6 per cent of the total. The remainder is included in the Native States. The total population is 315,156,396, of which British territory contains 244,267,542, or 77·5 per cent. and the Native States 70,888,854 or 22·5 per cent.

Comparisons with Europe.—These stupendous figures can be grasped only by contrast. The Indian Empire is equal to the whole of Europe, except Russia. Burma is about the same size as Austria-Hungary; Bombay is comparable in point of area with Spain; Madras, the Punjab, Baluchistan, the Central Provinces and Berar and Rajputana are all larger than the British Islands; the United Provinces and Bihar and Orissa than Italy; and Hyderabad and Kashmir than Great Britain excluding Yorkshire.

The population of India exceeds that of Europe without Russia, and is considerably more than three times that of the United States of America. The United Provinces and Bengal, with the States attached to them, both have as many inhabitants as the British Islands, Bihar and

clearly enough that the physical characteristics of the people had undergone an appreciable change, he would certainly be unable to say at what particular stage in his progress the transformation had taken place.

Contrasts.—The linguistic survey has distinguished in India about a hundred and thirty indigenous dialects belonging to six distinct families of speech. In the domain of religion, though the bulk of the people call themselves Hindus, there are millions of Mahomedans, Animists, Buddhists, Jains, Sikhs, and Christians. So also in respect of social customs. In the north near relatives are forbidden to marry; but in the south cousin marriage is prescribed and even closer alliances are sometimes permitted. As a rule, female chastity is highly valued, but some communities set little store by it, at any rate prior to marriage, and others make it a rule to dedicate one daughter to a life of religious prostitution. In some parts the women move about freely; in others they are kept secluded. In some parts they wear skirts; in others trousers. In some parts again wheat is the staple food; in others rice, and in others millets of various kinds. All stages of civilisation are found in India. At one extreme are the land-holding and professional classes, many of whom are highly educated and refined; at the other various primitive aboriginal tribes such as the head-hunting Nagas of Assam and the leaf-clad savages of the southern hills who subsist on vermin and jungle products.

Orissa as France, Bombay as Austria, and the Punjab as Spain and Portugal combined. The population of the Central Provinces and Berar approaches that of Brazil; Hyderabad and Burma have as many inhabitants as Egypt; Central India and Rajputana as Scotland and Ireland combined; and Assam as Belgium.

Density.—In the whole Empire there are on the average 175 persons to the square mile, or much the same as Europe outside Russia. In British territory the number to the square mile is 223 and in the Native States 100; the former figure exceeds by 34 the density ratio in France and the latter is identical with that in Spain.

There are great local variations in density. In nearly two-thirds of the districts, and States, the number of persons to the square mile is less than 200, and in about a quarter it ranges from 200 to 500. The units with less than 100 persons to the square mile covers two-fifths of the total area, but contains only one-eleventh of the population.

Causes of Density.—The productiveness of the soil is the main factor in determining the density of the Indian people. The most thickly peopled tracts are the level plains where practically every inch of the land is fit for tillage. This is notably the case in Bengal and Bihar and the United Provinces East. The next most densely peopled tracts are the low-lying plains along the sea coast in the southern part of the peninsula. In the United Provinces West and the Punjab East the configuration of the surface is equally favourable; the rainfall is more scanty and less

regular; but it is supplemented in many parts by water from the canals. The natural divisions which contain the coast districts of Orissa and north Madras, with a rainfall of 50 inches, has a relatively low mean density, but this is because it includes on the west a considerable hilly area, while on the east near the sea the ground is swampy and impregnated with salt. In the intermediate strip, between the littoral and the hills, the density is as great as in parts of the lower Gangetic Plain. Want of water is the main explanation of the comparatively sparse

population in several more or less level tracts such as Gujarat, Rajputana East and Central India West, and the North-West dry-area. In Assam there are extensive tracts of hill and jungle and sandy stretches in the strath of the Brahmaputra River, where permanent cultivation is out of question. The agricultural returns show that three-quarters of the whole area is cultivable but this simply means that crops of some kind can occasionally be grown. The proportion of the area fit for permanent cultivation must be less than half that shown in the returns.

TOWNS AND VILLAGES.

The definition of a town in the Indian census statistics includes every municipality; all Civil Lines not included within municipal limits; every cantonment; every other continuous collections of houses inhabited by not less than 5,000 persons, which may be treated as a town for census purposes. Only 9·5 per cent. of the population of India are found in towns as defined above, compared with 78·1 per cent. in England and Wales and 45·6 per cent. in Germany. Rather more than half the urban population of India is found in towns containing upwards of 20,000 inhabitants, about one-fifth in towns with from ten to twenty thousand, and the same proportion in those with from five to ten thousand; the remainder, about one-fifteenth, live in towns with less than five thousand. The tendency to urban aggregation is most marked in the west of India and least so in the north-east. The proportion of the urban to the total population in the main provinces ranges from 18 per cent. in Bombay to only 3 per cent. in Assam. The urban population of Upper India is much larger than it otherwise would be, because of the numerous old capitals which are found there. In the future the main factors will be the expansion of trade and industrial development.

Sex in Towns.—In respect of the distribution by sex, the urban population in India presents a striking contrast to that of European countries. In Europe the proportion of females is larger in towns than in the general population, but in India it is considerably smaller, and the number of females per thousand males is only 847, compared with 953 in the population as a whole. The reason is that in this country the great majority of the domestic servants, shop hands and factory employes are males. The disproportion is most marked in large trading and industrial centres where the number of immigrants is large. In Calcutta, for example, the foreign-born population contains only 357 females per thousand males.

Religion in Towns.—Of the Parsis no fewer than six out of every seven are resident in towns; of the Jains, the proportion is nearly one-third; and of the Christians more than one-fifth. There is a marked contrast between these proportions and those for Hindus and Mahomedans who form the bulk of the population. Of the Mahomedans less than one-eighth, and of the Hindus less than one-eleventh, reside in towns. In the case of the former the proportion rises to one-sixth if we exclude the figures for Bengal, where the majority of the Mahomedans are the descendants of local converts. Amongst the Hindus the higher castes have hitherto shown a greater predilection

for town-life than the lower, but the disproportion is gradually disappearing; modern industrial developments are attracting the lower castes to towns in ever-increasing numbers.

Urban and Rural.—The proportion of the urban to the total population has fallen during the decade from 9·9 to 9·5 per cent. The main explanation of this is undoubtedly the fact that plague has been far more prevalent in town than in rural areas. This scourge has now spread to all parts of the Empire except the east and south. At the time of the census an epidemic was raging in many towns, especially in those of the United Provinces, Central India and the Central Provinces and Berar, and a large number of the regular inhabitants had gone away. In addition, however, to driving people away, plague has been responsible in many towns for a terribly heavy mortality. It is impossible to make any estimate of the direct and indirect effects of plague on the growth of towns, but it is quite certain that they have been enormous.

Urban Tendencies.—We cannot draw any conclusions as to the tendency to urban aggregation from a comparison of the statistics of the present census with those of the previous one, when plague was still a new and more or less local visitation, but there can be no doubt that there is a growing tendency for people to congregate in towns of a certain kind. The introduction of machinery is rapidly causing the old cottage industries to be replaced by mills and factories; and these are necessarily located at those places where there are the best facilities for collecting the raw material and distributing the manufactured article. The jute industry is practically confined to the banks of the Hooghly near the port of Calcutta. Cotton mills are found chiefly in Western India and woollen and leather factories at Cawnpore and Delhi. The increasing trade of the country and the improvements in railway communications also encourage the growth of towns. Not only are the great seaports attracting an ever-growing population, but various inland towns are benefiting from the same cause. The extent to which modern conditions of trade and industry are causing the growth of towns is obscured not only by plague, which is generally far more prevalent in towns than in rural areas, but also by the decay of old centres of population, which owed their importance to past political and economic conditions. Throughout India there are many former capitals of defunct dynasties whose population is steadily dwindling. During the last ten years, Mandalay, the last capital of the kings of Ava, has lost a quarter of its population.

CITIES.

The general practice of statisticians is to treat as cities only those places which have a population of more than 100,000. According to this standard there are in India only 30 cities, with a population of 7,075,782, or 2.2 per cent. of the population. Here there is an extraordinary difference between the Indian conditions and those of Western countries. In England the cities contain 45 per cent. of the total population, in Germany 21, and in France 14 per cent. But even in these countries the growth of cities is comparatively recent. In 1871 England had only 27 cities with 9.5 million inhabitants and Germany only 8 with 2 millions. There are signs that in India the growth will be more rapid in the future than it has been. The population of cities has risen since 1872 by 64 per cent. and the net increase, comparing like with like, is 43 per cent. The most rapid growth during this period is shown by Rangoon which has trebled its population. Next comes Karachi with an increase of 163 per cent. and then Madura and Howrah with 158 and 113 per cent. respectively. Since 1901, two new places, Jubbulpore and Dacca, have entered the list of cities, while Baroda has disappeared from it. Eighteen cities have gained, and twelve have lost, population. Of the latter, a few like Mandalay are really decadent, but in most, such as Nagpur and Cawnpore, the loss was due wholly to the temporary influence of plague. The progressive cities are differentiated from those which are decadent by their large immigrant population. In Bombay, Calcutta and Howrah this exceeds 70 per cent. of the total and in Rangoon and Karachi it is close on 60 per cent. In Patna, Mandalay and Bareilly, on the other hand, it is barely 10 per cent.

Calcutta.—In speaking of Calcutta we may mean Calcutta proper, or the area administered by the Calcutta Municipal Corporation with the port, fort and canals, the population of which is 896,067, or this area plus the suburban municipalities of Cossipur-Chitpore, Manicktola and Garden Reach with 1,04,3307 inhabitants, or lastly Greater Calcutta, which also includes Howrah, with an aggregate population of 1,222,313. The suburban municipalities differ from Calcutta only in respect of their Municipal Government. From a structural point of view they cannot be distinguished. The buildings are continuous throughout, and there is nothing to show where one municipality begins and the other ends. A striking feature of the statistics is the large number of immigrants. Less than 29 per cent. of the inhabitants of Calcutta proper claim it as their birthplace. The vast majority are immigrants, of whom 204,000 come from Bihar and Orissa and 90,000 from the United Provinces. Of the Bengal districts, the largest contributions are those from the 24 Parganas (88,000), Hooghly (48,000) and Midnapur (29,000). The volume of immigration is equally great in the suburbs and Howrah.

The first regular census of Calcutta proper taken in 1872 showed a population of 633,009. In 1881 there was practically no change, but in 1891 a gain of 11.4 per cent. was recorded. In 1901 there was a further increase of 24.3 per cent., but part of this was due to improved enumeration. At the present census the rate of increase in Calcutta proper has dropped to 5.7

per cent. The falling off is due largely to the growing tendency of the inhabitants to make their home in the suburbs or even further afield. The suburban municipalities have grown during the decade by 45.3 per cent.

Bombay—which has now a population of 979,445 was a petty town with about ten thousand inhabitants when it passed into the possession of the British in 1661. The population was estimated to be 100,000 in 1780, 180,000 in 1814 and 236,000 in 1836. At the first regular census in 1872 it had risen to 644,405, and nineteen years later, in 1891, it was 821,764. In the next decade plague, which first appeared in September 1896, caused a serious set back; and it is estimated that by 1901 this disease had already been responsible for 114,000 deaths. The census of that year showed a decrease of about 6 per cent., but this was not wholly due to deaths. At the time when the census was taken, a virulent epidemic was in progress, and large numbers of the permanent residents had sought safety in flight. A fresh enumeration taken in 1906 by the Health Department of the Municipality gave a population of 959,537. The number now returned exceeds that of 1901 by 26 per cent. but it is only 2 per cent. more than it was at the time of the local enumeration of 1906. It is said that the census of 1911 was taken at a time when many of the immigrants from neighbouring districts had gone to their permanent homes for the Holi holidays, and that many of the cotton mills had closed down temporarily owing to the prohibitive price of the raw material. Like other large trading and industrial centres, Bombay is peopled mainly by immigrants; and more than 80 per cent. of its inhabitants were born elsewhere. Most of them come from the neighbouring districts; more than one-fourth of the total number are from Ratnagiri, while four other districts together supply more than a third. There are 30,000 Goanese, most of whom are in domestic service. Of the immigrants from outside the province, some 50,000, chiefly mill hands, are from the United Provinces, and 12,000 mainly shopkeepers, from Rajputana. Of the immigrants from outside India the largest number (6,000) come from the United Kingdom.

Madras.—Unlike Calcutta and Bombay, Madras, which is handicapped by its distance from the coal-fields, has but few large industries. The indigenous handicrafts are decaying and their place is not being taken by factories of the modern type. Apart from its being the headquarters of the Local Government, Madras owes whatever importance it possesses to its position as a distributing centre. Of its total population (518,660), only one-third are immigrants, and of these only 12 per cent. have come from places beyond the limits of the Madras Presidency. The great majority are natives of the four districts in the immediate vicinity of the city.

The population grew fairly rapidly during the twenty years prior to 1901, but since then it has been almost stationary. There has been an increase of about one per cent. in the number of persons born in the city, but fewer of them

have been enumerated within the city limits. As compared with 1901 the net gain due to migration is less than 9,000. It is possible that the great demand for labour in Burma, where wages are very high, has attracted many of the labouring classes who would otherwise have sought their living in Madras.

HOUSES AND FAMILIES.

Generally speaking it may be said that the labouring classes in India live in one, or at the most two, single room huts. The home of a well-to-do peasant consists of a public sitting room and a cook room and several apartments which are arranged round and open on to a courtyard. In spite of the joint family system the number of houses corresponds very closely to the number of families in the European sense. The total number of houses is 63·7 million, and there are 64·6 million married females aged 15 and over. Except amongst the higher castes who

Hyderabad.—Next to the three Presidency towns, the largest city in India is Hyderabad, the capital of the Nizam's Dominions. Its population is shown in the local Census Report as 500,623. Hyderabad has hitherto made very little industrial progress, and less than a quarter of its population is drawn from outside.

form but a small fraction of the total population the joint family system is not nearly so common as is frequently supposed. Where it is in vogue, there is often a strong disruptive tendency. In the towns and cities, owing to the high rents, the unit for all below the middle class is the room, not the house.

Average population per house

1881	5·8
1891	5·4
1901	5·2
1911	4·9

MOVEMENT OF THE POPULATION.

According to the census returns, the total population of India has increased by 7·1 per cent. during the last decade, and by 52·9 per cent. since 1872, but the real gain since the latter date is very much less than this. Large tracts of country, including the Central India and Rajputana Agencies, Hyderabad and the Punjab States, which were omitted from the census returns of 1872, were included in those of 1881. In 1891 the greater part of Upper Burma and Kashmir and several smaller units were enumerated for the first time. In 1901 the most important additions were a portion of Upper Burma and the greater part of Baluchistan. In 1911 the Agencies and tribal areas in the North-West Frontier Province, together with a few smaller areas, were included within the scope of the enumeration. The real increase in the population in the last 39 years is estimated at about 50 millions, or 19 per cent. This is less than half the increase which has taken place in the same period amongst the Teutonic nations of Europe, but it considerably exceeds that of the Latin nations. In France the population has grown by less than 7 per cent. since 1870, but this is because of its exceptionally low birth-rate. In India the birth-rate is far higher than in any European country; and it is the heavy mortality especially amongst infants, which checks the rate of increase.

Famine and Disease.—In addition to the causes which ordinarily govern the movement of the population, India is subject to two special factors—famine and epidemic disease. The decade preceding the census of 1911 was free from widespread famines such as those of the preceding ten years. In 1907 there was a partial failure of the monsoon which was felt over a wide area, extending from Bihar to the Punjab and Bombay, and causing actual famine in the United Provinces and in a few districts elsewhere. Prices ruled high in most years and there was an extension of special crops, such as jute and cotton, which are more profitable to the cultivator than food grains. It was on the whole a period of moderate agricultural prosperity. From the point of view of public health, the census period would have been an average one, but for the ravages of plague. Breaking out in

Bombay in 1896, it has by March 1901 caused a recorded mortality of half a million. Since then it has continued its ravages, especially in Bombay and Upper India. The mortality from it rose from about a quarter of a million in 1901 to 1·3 millions in 1907. It fell below a quarter of a million in each of the next two years, but in 1910 it exceeded half a million. The total number of deaths from plague during the decade was nearly 6·5 millions of which over one-third occurred in the Punjab and two-fifths in the United Provinces and Bombay, taken together. The disease fortunately has failed to establish itself in Bengal, Assam, and on the East Coast and in the extreme south of the Peninsula. This however is only the recorded mortality; in time of epidemic the reporting agency breaks down and large numbers of deaths escape registration. Plague attacks women more than men, and people in the prime of life more than the young and old. If plague is omitted, and it is assumed that the mortality of the decade would otherwise have remained normal, the population of the census of 1911 would have been greater than it was by at least 6·5 millions. In other words, the population would have increased by 9·3 instead of 7·1 per cent.

General Conclusions.—The most noticeable feature is the continuous rapid growth in Burma. Lower Burma has grown by 135 per cent. since 1872 and the whole Province including Upper Burma, which was annexed in 1886, by 37 per cent. since 1891. In Assam including Manipur the increase since 1872 amounts to 70 and in the Central Provinces and Berar to 47 per cent. In the other main provinces the rate of growth has been much slower. In some provinces, such as Burma, Assam and Bengal there has been continuous progress but others, at some time or another, have sustained a set-back. In the larger provinces at least, the internal variations are also frequently considerable. In Bengal one district has at the present time a smaller population than it had in 1872, while four others have more than doubled their population since that date.

In British territory there has been a gain of 9·1 percent. over about nine-tenths of the area,

* The above figures for Calcutta exclude the population of Cossipore-Chitpur, Manicktola and Garden Reach. These places have a separate Municipal administration, but for all practical purposes they form an integral part of Calcutta. So also does Howrah except that it lies on the opposite bank of the Hoogly. If the first-mentioned Municipalities be added, the population of Calcutta rises to 1,043,307. If Howrah also be included, it comes to 1,222,313.

† Bangalore City and Bangalore Civil and Military Station are structurally a single unit, but for the purpose of the census they have been treated as separate places.

with three quarters of the total population, and a loss of 5·3 per cent. in the remaining one-tenth of the area and one-fourth of the population. The contrast in different parts of the Native States is still more striking. The net increase of 10·3 per cent. is the outcome of a gain of 14·3 per cent. in four-fifths of the total area and population, coupled with a loss of 6·2 per cent. elsewhere. The relatively greater net increase in the Native States as compared with British territory is explained by the fact that many of the States suffered severely from famine in the previous decade when they sustained a net loss of 5 per cent., while British territory gained 4·7

per cent. Apart from this, in ordinary circumstances a comparatively high rate of increase is to be expected in the Native States, as they are, on the whole, more undeveloped than British territory, and contain a much larger proportion of cultivable waste land. The net increase in India as a whole during the last decade is the resultant of a gain of 10·3 per cent. in an area of 1,517,000 square miles, with a population of 245 millions and a present density of 162 to the square mile, and a loss of 5·5 per cent. in an area of 218,000 square miles with a population of 68 millions and a density of 312 to the square mile.

MIGRATION.

In India there are two currents of migration—minor and major. The chief of the minor movements is the custom, almost universal amongst Hindus, whereby parents seek wives for their sons in a different village from their own. Of the 26·5 million natives of India who were enumerated in a district other than that in which they were born, 16·5 millions, or 62 per cent. were born in a district adjoining that in which they were enumerated. The major currents of migration are governed by economic conditions. The most noticeable movements are the large streams of emigration from Bihar and Orissa, Madras, the United Provinces and Rajputana, and of immigration into Bengal, Assam and Burma. Owing to its fertile soil, Bengal is able to support practically the whole of its dense indigenous population by agriculture. It is necessary therefore to man the jute mills by imported labour, as also the tea gardens of Darjiling and Jalpaiguri and to draw the general labour supply from outside. In Bengal the net excess of immigrants over emigrants is close on 1,400,000. Of these about 236,000 are Natives of a district in Bihar and Orissa, or Assam, contiguous to the Bengal district in which they were enumerated. Assam and Burma are sparsely populated and the land available for cultivation being ample, very few of the indigenous inhabitants find it necessary to work for hire. The tea gardens of Assam and the rice mills and oil wells of Burma have to obtain their coolies elsewhere. In Assam 12·5 per cent. and in Burma 5 per cent. of the population are immigrants. On an average 51,000 labourers and dependants go each year to the tea gardens of Assam. In Burma, Madras supplies labourers for the rice-milling, oil and other industries, whilst many coolies flock into the province from Chittagong, chiefly for the rice harvest. The net loss to Bihar and Orissa on account of migration is about 1·5 millions. The United Provinces sustain a net loss of about 800,000 from migration, chiefly in the direction of Bengal. Madras being very backward from an industrial point of view, there is no great local demand for labour. At the same time there is an exceptionally large population of the "untouchable" castes, who have no scruples about seeking their livelihood oversea. It provides Ceylon with labour for its plantations, Burma with labour for its industries, and the Federated Malay States with labour for their rubber plantations. The enterprising Marwari traders of Rajputana have penetrated to all parts of India and are to be found in very important bazars throughout Bengal and even in Assam. Bombay is industrially more advanced than Bengal, but as its soil is less productive

there is a large local supply of labourers, chiefly from the southern coast strip called the Konkan. The United Provinces give more than four times as many labourers to Bengal as to Bombay. As for the migration between British India and Native territory, it involves a loss of 135,000 to the Native States.

Asiatic Immigration.—Of the 504,000 persons born in other Asiatic countries who were resident in India at the time of the census, more than half were natives of Nepal. Of the 92,000 immigrants from Afghanistan all but 11,000 were enumerated in Northern India. The rest were cold weather visitors who travel about the country peddling piece-goods and other articles of clothing. These Cabuli pedlars cause great trouble in Bengal by their truculence. The number of Chinese is 80,000. Most of these are found in Burma, but the Chinaman is making his way into Bengal, where he is appreciated as a shoemaker and carpenter. From Arabia come 23,000 immigrants, chiefly to Bombay.

Non-Asiatic Immigration.—The total number of immigrants from countries outside Asia is 146,265. Of these 131,968 come from Europe. The United Kingdom sends 122,919; Germany comes next with only 1,860 and then France with 1,478. As compared with 1901 there is an increase of about 26,000 in the number of immigrants from the United Kingdom. Of the British-born 77,626 were serving in the army as compared with 60,965 at the time of the previous census, when a strong contingent had been sent from India to reinforce the British garrison in South Africa. The rest of the increase is accounted for by the industrial development which has taken place, the extension of railways, and the growing extent to which Englishmen in India marry. The number of females born in the British Islands and enumerated in India has risen during the decade from 14,663 to 19,494. The figures for other European countries do not call for any special comment.

Emigration from India.—The Indian census statistics naturally tell us nothing of the emigration from India to other countries. This emigration is of two kinds, the movement across the border which separates India from contiguous countries, such as China, Nepal, Afghanistan and Persia, much of which is of the casual type, and emigration to distant countries. No statistics are available regarding the emigration from India to the countries on its borders. There is probably very little movement from Burma into China

but, on the other hand, it is believed that the emigration into the somewhat sparsely peopled Nepal terai from some of the adjacent British districts, where the population is much congested, exceeds the countervailing immigration. Very few people go from British territory to settle permanently in Afghanistan or Persia but at the time when the last census was taken owing to drought in Baluchistan, a considerable number of Nomad Brahmins from Chagai, and of Baloch from Mekran had passed over temporarily into Afghanistan and Persia. At a rough guess the number of emigrants across the Indian Frontier may be taken to be about a fifth of a million.

Emigration to Distant Countries.—Of the emigrants to distant countries a certain number find their way to French or Dutch Colonies, such as Surinam, Martinique and Guadeloupe. But the majority go to other parts of the British Empire. The total number of emigrants from India to other parts of the British Empire slightly exceeds a million, of whom about two-thirds are males; more than four-fifths of the aggregate are Hindus and only one-tenth are Mahomedans. Of the total number, about 474,000 were enumerated in Ceylon, 231,000 in the Straits Settlements and the Malay States, 88,000 in British Guiana, 73,000 in Natal, 51,000 in Trinidad, 35,000 in Mauritius, 29,000 in Fiji and 8,000 each in Jamaica and Zanzibar. About one-fifth of these emigrants failed to specify their province of birth; of the remainder no less than 693,000 or 85 per cent. were from Madras, 32,000 from Bengal, about 20,000 each from the United Provinces and Bombay, 16,000 from Bihar and Orissa, 13,000 from the Punjab and 8,000 from the Mysore State. The number who emigrated from other parts of India was inconsiderable. Most of these emigrants to the colonies went as ordinary labourers in sugar, tea, coffee, rubber and other plantations, but a large number of those from Bombay and Bengal are lascars on ships, while many of the natives of the Punjab are employed in the army or military police.

Ceylon.—The movement to Ceylon is of long-standing. Owing to the rapid expansion of tea cultivation, the number of natives of

India enumerated in that Island increased by 65 per cent. in the decade ending in 1901. Since then there has been a further increase of nearly 10 per cent. chiefly on account of the new rubber plantations. The great majority of these emigrants are from the southern districts of Madras. Mysore sends about 8,000, Travancore 7,000 and Cochin and Bombay 3,000 each. Most of them are temporary emigrants, who return after a time to their homes in Southern India. The total number of Tamils enumerated in Ceylon exceeds a million, but about half of them have been domiciled in the Island for many centuries and barely 100,000 are the offspring of recent settlers.

Malaya.—The emigration to the Straits Settlements and the Malay States is of quite recent growth, and is due almost entirely to the demand for labour on the rubber plantations. Most of the emigrants are temporary settlers, who return to their homes when they have saved a little money; and the total number of Indians enumerated there exceeds by only 12 per cent. the number who returned to India as their birth-place. Almost four-fifths of the total number are males. Here also Madras is the principal source of supply, the Punjab (8,754) being the only other province which sends an appreciable number.

South Africa.—In Natal, there has been a great deal of permanent settlement; and of the total number of Indians enumerated there, nearly half were born in the colony. Many of these have forgotten their native language and now talk only English. But it is in Mauritius that the process of colonisation has made most headway. The introduction of Indian coolies to work the sugar plantations dates from the emancipation of the slaves, three quarters of a century ago; and from that time onwards many of the coolies who have gone there have made the island their permanent home. Though it now contains only 35,000 persons who were born in India, the total number of Indians is 258,000, or about 70 per cent. of the whole population. A large part of the island is now owned by Indians, and they are dominant in commercial, agricultural and domestic callings.

RELIGIONS.

India is a land of many religions. All the great religious faiths of mankind are represented in its population by communities, whose origin carries us back to the early history of their respective creeds. Hinduism and its offshoots, Buddhism and Jainism, are autochthonous. The Jews of Cochin have traditions which carry back their arrival on the coast to the time of their escape from servitude under Cyrus in the sixth century B. C. The Syrian Christians of Malabar ascribe the introduction of Christianity and the establishment of their original Church to the Apostle St. Thomas, in the year 52 A. D. Nearly two centuries before the followers of Mahomed obtained a footing in India as conquerors, a peaceful trading colony of Arabs had settled on the Malabar coast. The Parsi settlement in Gujrat dates from about the same period. These facts are recalled here because not only Europeans, but even educated Indians, speak as if the first foreign settlement in India

was that which followed the Mahomedan conquest, and that Christianity was first brought to the country by the Portuguese. They also dispose of another erroneous idea that up to the time of the Mahomedan conquest, Hinduism absorbed all the foreign elements which found their way into the country. No doubt Greeks, Bactrians and Scythians were so absorbed into the structure of Hinduism, but the fact that the Jews, the Syrian Christians and the Parsis have remained distinct from Hinduism, shows that this was not the case universally. If we may hazard a conjecture, it would seem that the ancient Hindu policy towards immigrants who came by land differed from that observed in the case of immigrants by sea. The Indo-Aryan himself entered the country through the mountain passes in the North-West, and knew something of the land which lay beyond. But the sea was always something of a mystery and a terror to him, and those

who came from beyond the sea were looked upon as beings of a different clay. They were treated hospitably, and in course of time they assimilated much of the influences of their Hindu environment. But they remained all the same separate communities, and no attempt was made to incorporate them in the great mass of Hinduism. The prohibition of sea voyage to members of the higher castes is another proof of the peculiar prejudice which ancient Indians cherished against inhabitants of countries divided from India by intervening seas.

Origin of Hinduism.—We have spoken alone of Hinduism as being autochthonous. The opinion generally held is that the ancestors of the Vedic Indians were immigrants from Central Asia. An Indian scholar of some repute has recently endeavoured to show that the received opinion is not borne out by the evidence available in the ancient literatures of India. Whatever may be the value attaching to his contention that the Vedic Indians were not immigrants or descendants of immigrants, but only a section of the indigenous population addicted to the cult of fire-worship, it is true, as he says, that there is no expression in the Vedas of a longing, lingering remembrance of a foreign homeland, such as one might expect to find in the literature of an immigrant race. This is all the more remarkable as an intense attachment to the land they lived in is manifest in all their compositions. A Sanskrit couplet in which the names of the seven great rivers of India, the Ganges, the Jumna, the Godavari, the Saraswati, the Nerbudda, the Indus and the Cauvery, are strung together in pious praise, is recited daily by millions of Hindus at their daily devotions, and helps to keep them in mind of the sanctity of the Indian Continent in Hindu eyes. If the ancient Hindus were immigrants, they not only took exceptional care to blot out all memories of the land from which they came from their own minds, but they also strove by every means in their power to bind the reverence and love of their posterity to India as the land *par excellence* of religion and morality, so much so that the name Hindu, in the orthodox acceptance of the term, is not applicable to anyone who is not born in India. If the ancestors of the Hindus were foreigners in India, they must have set themselves, as a matter of deliberate policy, to intertwine the deepest affections and the highest aspirations of their race with the land in which they had settled, to the entire exclusion of the land whence they had come.

Evolution of Hinduism.—Following from the theory that the ancestors of the Hindus were immigrants from Central Asia, is the explanation generally given of the varieties of religious beliefs and social practices to be found within the pale of Hinduism. Hinduism, it is the common idea, was originally a pure and simple creed which has had to compromise with the Animism of the population, amongst whom it spread, by accepting several of its godlings and superstitions. The greatest obstacle in the way of this explanation is that there is no evidence whatsoever of any organised missionary activity among the Hindus at any time. The immense distances and the absence of means of communication, would

of themselves have made such activity difficult. Moreover, a compromise implies selection and rejection and the existence of some agency entrusted with the duty of selection. As a fact, however, we find that Hinduism has exercised very little selection, and that it covers practically all the beliefs and customs which prevail amongst the tribes who are included within its pale. Such a state of things is more consonant with the view that the purer forms of Hinduism are highly evolved stages of the cruder forms which are still observed by the less educated and prosperous sections of the community. This view, namely, that the higher forms of Hinduism are evolved from lower ones, rather than that the latter are corruptions of the former, gains support from what is now generally accepted as being the true explanation of the origin of certain social customs. Twenty years ago, it was generally held that the custom of child marriages, for instance, was of sacerdotal origin and was most largely prevalent amongst the higher castes from whom it spread to the lower. Recently, however, it has been proved that child marriages are prevalent far more largely and in a far grosser form amongst the lowest castes than amongst the higher castes, and that amongst the latter, it is a survival from the times when the caste system was less rigid and intermarriages, that is to say, the taking of wives by the higher castes from the lower, were common. It may be added that the two most characteristic beliefs of Hinduism, namely, that in the transmigration of souls and in the law of *Karma* or retribution, are held with, if anything, more tenacity by the lower than by the higher castes.

Scope of Hinduism.—From this point of view, the varying beliefs and customs which go under the name of Hinduism not only offer no difficulties, but furnish the right clue to the understanding of this unique socio-religious system. They explain why the term "religion" as applied to Hinduism does not adequately express its scope and method. Hinduism has no settled creeds which are obligatory on every Hindu. It enforces no fixed and uniform moral standards on the innumerable sects and castes which bear its name. It extends its suffrages to monogamous, polygamous and even polyandrous unions between the sexes and, in the case of the so-called *devadasis*, countenances a life of open irregularity. An Indian newspaper recently instituted an interesting discussion on the question "Who is a Hindu." An eminent Hindu lawyer, who subsequently rose to be a judge of one of the Indian High Courts, laid down that a Hindu was one to whom the Indian Courts would apply the Hindu law. The learned lawyer, however, forgot that there are Mahomedan castes which follow the Hindu law in regard to the inheritance of and succession to property.

And yet, though Hinduism refuses to conform to almost every one of the ideas which we usually associate with the term "religion," it is impossible to deny that it occupies a unique and highly important place amongst the religious systems of the world. The reason why it does not fit into our definition of religion is that it represents a fundamentally different line of evolution in the history of religious

thought. In other races the line of evolution was from polytheism to monotheism, but in India it was from polytheism to the higher pantheism. Contrasting the development of the Judaic idea of God with that of the Hindus, Dr. Harold Haffding observes "With the Hindus there was no God who claimed sole sway; they went back to the power which makes all gods what they are, to the inner aspirations and needs which find vent for themselves in prayer and sacrifice. Following an extremely remarkable line of thought that which drives men to worship gods was itself regarded as the true divine power. Brahma meant originally the magical, creative word of prayer, but it afterwards came to denote the principle of existence itself, so that we have a transition from the idea of motion towards to that of its goal, from prayer to the object addressed in prayer." The Indian philosopher saw the whole universe transfused and overspread with Deity. He perceived how evil was being perpetually transformed to good in the cosmic process spreading out before the poet and the philosopher, endless and timeless, to whom the evil and the good seemed but different stages in a great common process of which the secret was known only to the Supreme Being. No European writer has caught the innermost essence of the Hindu philosopher's idea of the Supreme, so faithfully, and expressed it so felicitously as Sir Edwin Arnold in his "Light of Asia."

Before beginning, and without an end,
As space eternal and as surety sure,
Is fixed a Power divine which moves to
good,

Only its laws endure.
It is not marred nor stayed in any use,
All liketh it; the sweet white milk it brings
To mothers' breasts, it brings the white
drops too,

Wherewith the young snake stings.
It slayeth and it saveth, nowise moved
Except unto the working out of doom;
Its threads are Love and Life; Death and
Pain

The shuttles of its loom.
It maketh and unmaketh, mending all;
What it hath wrought is better than had
been;

Slow grows the splendid pattern that it
plans

Its wistful hands between.

The ethical values of Hinduism are not different from those of other great religions. Like them it attaches little importance to the qualities which make for worldly success, and most importance to self-sacrifice, humility and kindness to all. Only its methods differ. On the whole, however, the Hindu socio-religious scheme, owing to its tendency to make the individual human being a passive instrument in the hands of a Higher Power instead of an active co-operator with it, has favoured stability at the expense of progress.

Hindu sects.—Hinduism is made up of many sects and cults. It is usual to speak of Hinduism as it was before Buddhism, as a single creed, but this is because the literature that has come down to us is the literature of the sect that came to supersede all others.

But even in it, we can, by reading between the lines, discover the existence of rival sects. Even the Vedas themselves are the literature probably of one of several sects which happened to be gifted with a talent for letters. The rapid multiplication of sects, however, was undoubtedly encouraged by the introduction of idol worship in imitation of the practice of decadent Buddhism. Hindu religious philosophers recognised three ways of salvation, namely, the way of knowledge, the way of faith and the way of service. Every sect of Hinduism recognises the value of all these three ways, but it differs as to the relative importance to be attached to each. The sect of the great philosopher, Sankaracharya, who maintained that the Supreme Being was the only Reality and that all the phenomenal universe was Maya or illusion, and that salvation came from the realisation of this fact, did not discard faith and service altogether, but only gave these a subordinate position in his scheme of religion. Ramanuja, Madhva and Vallabacharya who followed him and, in more or less degree, refuted his doctrine of the non-reality of the phenomenal universe, laid more stress on faith and service than on knowledge, but they did not discard the path of knowledge altogether. It should be mentioned here that it has been the great misfortune of Hinduism that the path of service has come to mean the path not of altruistic service to mankind but the path of service conceived in a ceremonial sense to priests, religious recluses and mendicants and to idols. It is the great aim of the modern religious reform movements such as the Arya Samaj and the Brahma Samaj to rescue the path of service from this spurious interpretation and to make altruistic social service an integral part of religion. The question of sect, however, does not play a very important part in Hinduism. Except in Southern and to a much smaller extent, in Western India, the great mass of the Hindus are not sectaries. In Southern India, the Vaishnavas and Madhvas will, on no account, worship Shiva or visit a temple dedicated to him. The Lingayaths are a Shiva sect found in the Karnatak districts of the Bombay and Madras Presidencies, and in Mysore, and they have an invincible repugnance to the worship of Vishnu. But these are exceptional instances. But so far as the bulk of the Hindus are concerned, they resort to the nearest shrine whether it be dedicated to Shiva or Vishnu. The attitude of Hinduism to other religions is that they are each of them the most suitable path to salvation for the people who are born in them—that they are all several roads which lead to Heaven. For this reason Hinduism has never been a proselytising religion. This has proved a disadvantage to it face with such religions as Mahomedanism and Christianity which not only admit converts, but are actively engaged in seeking them. The proportion of Hindus to the total population has steadily diminished during the last forty years, partly owing to conversions to other religions particularly from amongst the lower classes. Conversions from among members of the higher and literate classes have practically ceased.

Hinduism.—The Hindus number 217,586,892 or 69.4 per cent. of the total population of

India. Buddhists and Jains together number 11,969,635. Thus 229,556,527 or about 73 per cent. of the Indian people depend for their spiritual sustenance on Hinduism and its offshoots.

The Buddhist population is mostly Burmese, Buddhism having ceased a thousand years ago to count as a leading religion in the land of its birth. Several reasons are usually given to account for the hostility of Hinduism to Buddhism, such as that Buddha denied the authority of the Vedas and the existence of God and of the human soul. Jainism did all this, and yet Jains to-day occupy a recognised position in the Hindu social system. The real reason for the Hindu hostility to Buddhism was that it influenced and was in its turn influenced by in the later years of its prevalence in India, the alien Mongolian consciousness. Hinduism has always been extremely tolerant of indigenous heresies, but it is jealous of outside influence. Indian Buddhism, too, had become extremely corrupt and superstitious long before Hinduism re-established itself as the religion pre-eminently of the Indian people.

Other Indigenous Religions.—Buddhism and Jainism were originally only sects of Hinduism. Jainism even now is not so sharply divided from the latter religion as Buddhism is. Jains are everywhere a recognised section of Hindu Society, and in some parts of the country there has been an increasing tendency on their part to return themselves at the Census as Hindus. The outstanding feature of Jainism is the extreme sanctity in which all forms of life are held. The Jains are generally bankers and traders. Their number at the last Census was 1,248,182, the apparent decline being due to the tendency noted above for Jains to return themselves as Hindus. Buddhism is professed but by few persons in India. The Buddhist population of the Indian Empire is mainly Burmese. Their number is 10,721,453. The founders of Buddhism and Jainism are believed to have been contemporaries, whose date is assigned somewhere in the 5th Century B.C. Sikhism, which is the next important indigenous religion, had its origin many centuries later. The founder of Sikhism,

Guru Nanak, flourished in the latter half of the 15th Century of the Christian era. Nanak's teaching amounted to nothing more than pure Theism. He taught that there is only one true God, he condemned idolatry, proclaimed the futility of pilgrimages and rites and ceremonies, and declared that the path to salvation lies through good deeds combined with devotion to the Supreme Being. He preached the brotherhood of men. Sikhism continued to exist as a pacific cult till about the end of the seventeenth century, when the persecutions of Aurangzeb had the effect of converting it into a militant creed. This momentous change was accomplished under the direction of Guru Govind, the tenth and last of the Gurus: "I shall send a sparrow," he once exclaimed and "lo! the imperial falcons will fly before it." On his death-bed, he exhorted his followers to regard the Granth, the sacred book of the Sikhs, as their Guru, to look upon it as the person of the living Guru. After his death, Sikhism passed through a period of deepest gloom, but it soon recovered and in 1758 the Sikhs entered Lahore in triumph. The teachings of Guru Nanak have profoundly affected Hindu thought and life in the Punjab, though the number of persons professing the Sikh religion is only 3,014,466 according to the 1911 Census. This represents an increase of over 40 per cent. since 1901. Two other religious movements, offshoots of Hinduism, remain to be mentioned, namely, the Brahma-Samaj and the Arya-Samaj. Both of them are less than one hundred years old. The founder of the former was Raja Ram Mohan Roy, and of the latter, Swami Dayanand Saraswati. The Brahma-Samaj does not believe in an infallible scripture, while the Arya-Samaj accepts the Vedas as Divinely revealed. Both the movements are opposed to idolatry and favour social reform. The Brahma movement, appealing as it does to the cultured intellect, has not been making as much progress as the Arya-Samaj. The number of persons professing each of these creeds is 5,504 and 243,445 respectively. The stronghold of the Arya-Samaj is the Punjab, that of the Brahma-Samaj, Bengal.

Non-Indian Religions.

Mahomedanism.—Of non-Indian religions, that is, of religions which had their origin outside India the religion which has the largest number of followers in this country is Mahomedanism. One hundred years before the Musulmans obtained a foothold in Sind by right of conquest, they were settled in Cochin as traders and missionaries. The author of Cochin Tribes and Castes refers to a tradition that in the 7th Century, a Mahomedan merchant named Malak Medina, accompanied by some priests, had settled in or near Mangalore. The Kollam era of Malabar dates, according to popular tradition, from the departure of Cheruman Perumal, the last of the Perumal Kings, to Arabia, on his conversion to Islam. The date of the commencement of the era is the 25th August 825 A.D. For about twelve Centuries, Islam has existed in India side by side with Hinduism. During that period it has been greatly influenced by Hindu ideas and institutions. Moreover, the Indian converts to Mahomedanism have to a large extent retained

the customs and beliefs of Hinduism. The writer of the article on religions of India in the new edition of the *Imperial Gazetteer* observes of Islam in India: "If it has gained some converts from Hinduism it has borrowed from it many of those practices which distinguish it from the original faith of Arabia. By degrees the fervid enthusiasm of the early raiders was softened down; the two religions learned to live side by side; and if the Mahomedan of the later days could never conceal his contempt for the faith of his 'pagan' neighbours, he came to understand that it could not be destroyed by persecution. From the Hindus Islam derived much of its demonology, the belief in witchcraft, and the veneration of departed Pirs or Saints. The village Musulman of the present day employs the Hindu astrologer to fix a lucky day for a marriage, or will pray to the village god to grant a son to his wife. This is the more natural, because conversion to Islam, whenever it does occur, is largely from the lower castes." Mahomedanism has

two main and several minor sects. The major sects are the Shiah and the Sunni. The great majority of Indian Mussulmans are of the latter sect. The Punjab and Sind in the North-West and East Bengal in the North-East are the strongholds of Islam in India. The Mussulman population of India, according to the Census of 1911, is 66,647,299. Of this number no less than 24 millions are in Bengal, about 12 millions in the Punjab, and about 5 millions in the United Provinces. Amongst Native States, Kashmere has the largest Mussulman population, about 2½ millions.

Christianity.—Indian Christianity has an even longer history than Indian Mahomedanism. According to the tradition prevailing among the Syrian Christians in Malabar, the introduction of Christianity and the establishment of the Original Church in Malabar in the year 52 A.D. are ascribed to the Apostle St. Thomas, who landed at Cranganore or Musiris, converted many Brahmins and others, ordained two Presbyters, and also founded seven churches, six in Travancore and Cochin, and the seventh in South Malabar (Cochin Castes and Tribes, Vol. II. Chapter XVI, p. 435). The history of Roman Catholicism in India dates from the beginning of the sixteenth Century. The first Protestant mission was established two centuries later by the Lutherans who started their work in Tranquebar in South India under Danish protection. The Christian population, according to the last Census, numbers 3,876,203. Nearly 2½ millions are inhabitants of the Madras Presidency and the Native States connected with it. Bihar and Bombay have each over 200,000 Christians.

Zoroastrianism.—This religion was brought or fleeing back to India in 717 A.D. by Parsis who, fleeing from persecution at the hands of the Mussulman conquerors of their native land, arrived at the little port of Sanjan, sixty miles north of Bombay in that year. According to the Indian antiquarian scholar, the late Rajendralal Mitra, the ancestors of the Hindus and Parsis dwelt together in the Punjab, when a religious schism led to the latter retracing their steps to Persia. This theory derives probability from the names of the beneficent and malefic deities referred to in the Hindu and Parsi sacred books: "What is most striking in the

relations of the two faiths, is," writes Mr. Crooke in his article on the Religions of India in the *Imperial Gazetteer*: "that in the Avesta the evil spirits are known as *Daeva* (modern Persian *Div*), a term which the Indo-Aryans applied, in the form *Deva*, to the spirits of light. By a similar inversion, *Asura*, the name of the gods in the Rig Veda, suffered degradation and at a latter date was applied to evil spirits; but in Iran, *Ahura* was consistently applied in the higher sense to the deity, especially as *Ahura Mazda*, the wise, to the Supreme God." The Parsis have two sects. The principal difference between them appears to be that the holy days of the one precede those of the other by about a month. The number of Parsis, according to the last Census, is 100,096. The majority of the Parsis live in Bombay.

Jews.—The Beni-Israel at Kolaba, in Bombay and the Jews at Cochin are descendants of ancient Colonies. The Kolaba Colony dates back to the sixth century, and the Cochin colony to the second century A.D. Both Jewish colonies recognize a white and black section, the latter being those who have more completely coalesced with the native population. The Jews numbered 20,980 at the Census of 1911.

Animists.—Since the Census of 1891, an attempt has been made to enumerate the "Animists" separately from the Hindus. 10,295,168 persons are classed as Animists, according to the last Census. The difference between Animism and Anthropomorphism has been stated by Professor Westermarck, to be that, while the animist worships inanimate objects as gods, Anthropomorphism consists in the worship of such objects as representatives and reflection of the Deity. As a subtle distinction of this kind is not within the grasp of the average enumerator, the category of Animists in the Census Schedules is largely conjectural. Mr. Crooke in the *Imperial Gazetteer* observes "Such a classification is of no practical value, simply because it ignores the fact that the fundamental religion of the majority of the people—Hindu, Buddhist, or even Mussulman is mainly Animistic. The peasant may nominally worship the greater gods; but where trouble comes in the shape of disease, drought, or famine, it is from the older gods that he seeks relief."

SOCIAL INSTITUTIONS.

Uniformity of Indian Social Life.—Though India is a land of many religions and though each religious community has, as a rule, lived apart from the other communities for centuries, still there is a considerable uniformity in the arrangements and institutions of their social life. The social system of the Hindus is the type to which all other communities domiciled in the country have hitherto tended to conform. To a large extent, this uniformity of social arrangements is clearly due to the fact that, amongst the Mahomedans and Indian Christians, for instance, the converts from Hinduism continued to retain their old ideas in regard to social conduct. To a smaller extent, the motive which influenced them to conform to Hindu social ideal has been the convenience thereby caused in business intercourse with their Hindu neighbours.

Thus, we find, there is scarcely any community in India which has not been more or less infected by the caste spirit. The Jews, the Parsis, the Christians, and even the Mahomedans have been influenced by it. Other Hindu social institutions and customs which have exerted a similar influence are the joint family system, the custom of child marriages, and of enforced widowhood, and the feeling that contact with persons engaged in certain occupations is polluting. In view of this general similarity of the social institutions of the several Indian communities, a description of the Hindu social system which is the great prototype of them all, will give a general idea of the social life of the Indian population as a whole. It should, however, be mentioned here that, in recent years, as the result of a growing communal consciousness, efforts have been

made by many of the Indian communities to discard whatever is in disaccord with the original simplicity of their respective faiths. But this movement has as yet touched no more than the highly educated fringe, and even among the latter, there are thoughtful men who distrust "revivals" as substitutes for reform.

Caste.—The most conspicuous social institution of India is Caste. Caste is based on birth. The effect of caste is to divide society into a number of vertical sections, and not as in modern countries, into horizontal sections. The economic and cultural differences among the members of each caste are great. The millionaire and the pauper, the scholar and the illiterate of one caste, form a social unit. The rich man of one caste must seek a husband for his daughter among the poor of his caste, if he cannot find one of a corresponding position in life. He can on no account think of marrying her to a young man of another caste, though as regards culture and social position, he may be a most desirable match. Thus, each caste is, within itself, a democracy in which the poor and the lowly have always the upper hand over the rich and the high-placed. In this way, the system of caste has, in the past, served as a substitute for State relief of the poor by means of special laws and institutions. To some extent, this is the case even now, but the economic pressure of these days, and the influence of Western education, are profoundly modifying the conception of caste. The growth of the English-educated class on the one hand, and of the modern industrial and commercial class of Indians, on the other with common aspirations and interests, is a factor calculated to undermine the importance of caste. Although for purely social purposes, it will, no doubt, linger for many years longer, it is bound ultimately to collapse before the intellectual and economic influences which are moulding modern India. The question how caste originated has been discussed by several learned Orientalists, but the latest and most authoritative opinion is that its rise and growth were due to several causes, the principal of them being differences of race and occupation. The four original castes of the Hindus have multiplied to nearly two thousand, owing to the fissiparous tendencies of Hindu social life. Some large castes consist of many thousands of families, while others, notably in Gujarat, comprise scarcely a hundred houses. Among Indian Mahomedans, there are several communities which are virtually castes, though they are not so rigidly closed as Hindu castes. Indian Christian converts, in some parts of the country, insist on maintaining the distinctions of their original castes, and in a recent case, one caste of Indian Christians contested, in a Court of Law, a ruling of their Bishop disallowing the exclusive use of a part of their church to members of that caste. The Parsis are practically a caste in themselves. The observations regarding caste apply more or less to the institution of the joint family of which really the former is an extension. This institution is rapidly breaking-up, though the rigidity of the Hindu law of succession operates wholly in its favour.

The Social Reform Movement.—The social reform movement among the Hindus

to which reference is made in the foregoing paragraph, had its origin in efforts made by the Government of India, with the co-operation and support of enlightened Hindus in the early part of the last century to put down the practice of *sati*, that is, burning the widow along with her dead husband. This cruel practice, which prevailed particularly among the high caste Hindus in Bengal, was eventually suppressed by legislation. But the discussions which ensued in connection with *sati* question led to the exposure of the hard lot of Hindu widows as a class. Remarriage was prohibited and as child marriages were common, several young girls were condemned to lead a life of celibacy on the death of their husbands. This led to immorality and infanticide by young widows, who were anxious to hide their shame was not inrequent. Led by the Pandit Ishwar Chandra Vidyasagara, a very learned Sanskrit scholar, a movement began which had for its object the removal of the ban on the remarriage of Hindu widows. The Pandit was able to prove from the Hindu religious books that the remarriage of widows had the sanction of antiquity. But it was necessary in order to establish the validity of the remarriage of Hindu widows beyond doubt, to have a law passed by the Legislative Council of the Governor-General of India. The Pandit and his followers memorialised Government. There was strong opposition from the orthodox masses, but the Government of the day were convinced that justice was on the side of the reformers, and the Hindu Widow Remarriage Act was passed. The controversy on the question of the remarriage of widows led to other consequences. It was felt that the age at which girls were married was absurdly low, and that child marriages were at the root of many social evils. It was also realised that the general illiteracy of Indian women was the greatest obstacle in the way of reforming social customs, and that education of women should be the first plank in the social reform platform. The earliest social reformers in India were the Brahma Samajists who discarded idolatry and caste. Other reformers since then have endeavoured to propagate ideas of social reform entirely on a secular basis. The Indian National Social Conference is their principal organisation, and it is supported by Provincial and District Conferences and Associations. Social reform ideas have made considerable headway during the last twenty-five years. Widow marriages are of weekly occurrence in some provinces. The restrictions of caste as to inter-dining and sea-voyage have lost much of their force. The age at which girls are married is steadily, if slowly, rising. The education of girls is making rapid progress. An increasing number of them go to high Schools and Colleges every year. But the most significant testimony to the spread of social reform ideas in the country is the remarkable diminution in the volume and weight of the opposition to them. The number of journals devoted to the social reform cause is increasing, and some of the newspapers which had made themselves conspicuous by their virulent opposition to social reform twenty years ago, now recognise its utility and importance.

SEX.

In India as a whole the proportion of females per thousand males rose steadily from 954 in 1881 to 963 in 1901. It has now fallen again to exactly the same figure as in 1881. The important aspect of these figures is the great contrast they show between India and Europe, where the number of females per thousand males varies from 1,093 in Portugal, and 1,068 in England and Wales, to 1,013 in Belgium, and 1,003 in Ireland. In drawing attention to this disparity the Chief Census Officer argued that the relatively high mortality amongst females was sufficient to account for the difference stated. Then in summarising the causes of this relatively higher mortality he said: "In Europe, boys and girls are equally well cared for. Consequently, as boys are constitutionally more delicate than girls, by the time adolescence is reached, a higher death-rate has already obliterated the excess of males and produced a numerical equality between the two sexes. Later on in life, the mortality amongst males remains relatively high, owing to the risks to which they are exposed in their daily avocations; hard work, exposure in all weathers and accidents of various kinds combine to make their mean duration of life less than that of women, who are for the most part engaged in domestic duties or occupations of a lighter nature. Hence the proportion of females steadily rises. In India, the conditions are altogether different. Sons are earnestly longed for, while daughters are not wanted. This feeling exists everywhere, but it

varies greatly in intensity. It is strongest amongst communities such as the higher Rajput clans, where large sums have to be paid to obtain a husband of suitable status and the cost of the marriage ceremony is excessive and those like the Pathans who despise women and hold in derision the father of daughters. Sometimes the prejudice against daughters is so strong that abortion is resorted to when the midwife predicts the birth of a girl. Formerly, female infants were frequently killed as soon as they were born, and even now they are very commonly neglected to a greater or less extent. The advantage which nature gives to girls is thus neutralised by the treatment accorded to them by their parents. To make matters worse, they are given in marriage at a very early age, and cohabitation begins long before they are physically fit for it. To the evils of early child-bearing must be added unskillful midwifery; and the combined result is an excessive mortality amongst young mothers. In India almost every woman has to face these dangers. Lastly, amongst the lower classes, who form the bulk of the population, the women often have to work as hard as, and sometimes harder than, the men, and they are thus less favourably situated in respect of their occupations than their sisters in Europe." It is but fair to say that this conclusion has been challenged by many Indian writers, who attribute far greater importance than the Chief Census Officer to the omission of females at the enumeration.

MARRIAGE.

Although recognised in some backward parts, polyandry is now rare in India. With orthodox Hindu marriage is a religious sacrament which cannot be revoked. The Mahomedans allow a man to divorce his wife without any special reason, but he then becomes liable to pay her dower. The permission is seldom acted upon. The Buddhists of Burma regard marriage merely as a civil contract, and either side can annul it. The Hindu law places no restriction on the number of wives a man may have; but most castes object to their members having more than one wife, except for special reasons. A Mahomedan may have four wives, but he also in practice is generally monogamous.

Marriage Statistics.—In the population of ages and religions, about half the males and one-third of the females are unmarried; 46 per cent. of the males and 48 of the females are married, and 5 and 17 per cent. respectively are widowed. A reference to the age statistics shows that the great majority of the unmarried of both sexes are very young children, three-quarters of the bachelors being under 15 years of age, while a somewhat larger proportion of the spinsters are under 10; only one bachelor in 24 is over 30, and only one spinster in 14 is over 15. At the higher ages practically no one is left unmarried, except persons suffering from some infirmity or disfigurement, beggars, prostitutes, concubines, religious devotees and mendicants and a few members of certain hypergamous groups who have been unable to effect alliances of the kind which alone are permitted to them by the rules of their community. It is the persons of the above clas-

ses who contribute the 4 per cent. of the males over 40, and the 1 per cent. of the females over 30 who are not, and never have been, married.

Marriage Universal.—This universality of marriage constitutes one of the most striking differences between the social practices of India and those of Western Europe. It has often been explained on the ground that, with the Hindus, marriage is a religious necessity. Every man must marry in order to beget a son who will perform his funeral rites and rescue his soul from hell. In the case of a girl it is incumbent on the parents to give her in marriage before she reaches the age of puberty. Failure to do so is punished with social ostracism in this world and hell fire in the next. But it is not only with the Hindus that marriage is practically universal; it is almost equally so with the Mahomedans, Animists and Buddhists.

Early Marriage.—Another striking feature of the Indian statistics as compared with those of Western Europe is the early age at which marriage takes place. According to M. Sundbarg's table showing the average distribution by age and civil condition of the people of Western Europe according to the censuses taken about the year 1880, of the population below the age of 20, only one male in 2,147 is married and one female in 142. In India on the other hand, 10 per cent. of the male, and 27 per cent. of the female, population below that age are married. The number of males below the age of 5 who are married is small, but of those aged 5 to 10, 4 per cent. are married, and of those aged 10 to

15, 13 per cent. At '15-20' the proportion rises to 32, and '20-30' to 69 per cent. Of the females under 5, one in 72 is married, of those between 5 and 10, one in ten, between 10 and 15, more than two in five, and between 15 and 20, four in five. In the whole of India there are 2½ million wives under 10, and 9 million under 15 years of age. The Hindu law books inculcate marriage at a very early age, while many of the aboriginal tribes do not give their girls in wedlock until after they have attained puberty.

Widowhood.—It is only when we come to a consideration of the widowed that we find a state of things peculiarly Indian and one that seems to be derived from the prescriptions of the Hindu law-givers. The proportion of widowers (5 per cent. of the total male population) does not differ greatly from that in other countries, but that of the widows is extraordinarily large, being no less than 17 per cent. of the total number of females, against only 9 per cent. in Western Europe. When we consider their distribution by age, the difference becomes more still striking, for while in western Europe only 7 per cent. of the widows are less than 40 years old, in India 28 per cent. are below this age, and 1·3 per cent. (the actual number exceeds a third of a million) are under 15, an age at which in Europe no one is even married.

The large number of widows in India is due partly to the early age at which girls are given in marriage, and partly to the disparity which often exists between the ages of husband and wife, but most of all to the prejudice against the re-marriage of widows. Many castes, especially the higher ones, forbid it altogether, and even where it is not absolutely prohibited, it is often unpopular. Although widow marriage is permitted by their religion, and the Prophet himself married a widow, the Mahomedans of India share the prejudice to some extent. How the re-marriage of widows first came to be objected to, it is impossible to say, but it seems highly probable that the interdiction originated amongst the Aryan Hindus, that it was confined at first to the higher castes, and that it has spread from them downwards.

Infant Marriage.—It is difficult to draw from the statistics any definite conclusion as to whether infant marriage is becoming more or less common, but so far as they go, they point to a slight diminution of the practice. The figures for 1901 were abnormal owing to the famines of 1897 and 1900, and it is safer to take the year 1891 as the basis of comparison. There are now 18 Hindu girls per mille who are married at the age of '0-5' as compared with only 16 at that time, but at the age '5-10' the proportion has fallen from 146 to 132 and at '10-15' from 542 to 488. Amongst Mahomedans the proportion at the first mentioned age-period has fallen from 7 to 5, at the second from 83 to 65 and at the third from 474 to 393.

The practice has been denounced by many social reformers, since Mr. Malabari opened the campaign a quarter of a century ago; and the Social Conference which holds its meetings annually in connection with the National Congress has made the abolition of child marriage one of the leading planks in its platform. It is, as we have seen, strongly discouraged by the Brahmos in Bengal and the Aryans in Northern India. The more enlightened members of the higher castes who do not allow widows to re-marry are beginning to realise how wrong it is to expose their daughters to the risk of lifelong widowhood, and a feeling against infant marriage is thus springing up amongst them.

In two Native States action has been taken. In Mysore an Act has been passed forbidding the marriage of girls under eight altogether, and that of girls under fourteen, with men over fifty years of age. The object of the latter provision is to prevent those unequal marriages of elderly widowers with very young girls which are popularly believed to be so disastrous to the health of the latter, and which in any case must result in a large proportion of them leading a long life of enforced widowhood. The Gaekwar of Baroda, the pioneer of so much advanced legislation, has gone further. He passed for his State in 1904, in the face of a good deal of popular opposition, an "Infant Marriage Prevention Act", which forbids absolutely the marriage of all girls below the age of nine and allows that of girls below the age of twelve and of boys below the age of sixteen, only if the parents first obtain the consent of a tribunal consisting of the local Sub-Judge and three assessors of the petitioner's caste. Consent is not supposed to be given except on special grounds, which are specified in the Act.

Widow re-marriage.—The prohibition of widow marriage is a badge of respectability. Castes do not allow it rank higher on that account in social estimation. There is a strong tendency amongst the lower Hindu castes to prohibit, or at least, to discountenance, the marriage of widows. At the other end of the social structure there is a movement in the opposite direction. Many social reformers have inveighed against the condemnation of virgin widows to perpetual widowhood, and have pointed out that the custom is a modern innovation which was unknown in Vedic times. In many provinces recently there have been cases in which such widows have been given in marriage a second time, not only amongst Brahmos and Aryans, who naturally lead the way, but also amongst orthodox Hindus. A number of such marriages have taken place amongst the Bhatias of the Bombay Presidency. It is said that in the United Provinces considerably more than a hundred widows have been re-married in the last ten years. The actual results no doubt are small so far, but the first step has been taken and the most violent of the opposition has perhaps been overcome.

EDUCATION.

The general education policy of the Government of India, and its results, are discussed in a special article on Education (*q. v.*) But we may conveniently here indicate some of the education tendencies revealed in the census returns.

Of the total population of India, only 59 persons

per mille are literate in the sense of being able to write a letter to a friend and to read his reply. The number who can decipher the pages of a printed book with more or less difficulty is no doubt much larger. Throughout India there are many Hindus who though unable to write can

drone out at least the more familiar parts of the Mahabharata or Ramayana to their neighbours, who feel that it is meritorious to listen to the recital of the sacred texts, even though they, and possibly the reader also, may not always fully understand the meaning. Similarly there are many Mahomedans, especially in Northern India, who can read the Koran, though they cannot write a word. Of this minor form of literacy the census takes no count. The number of persons who are literate in the sense in which the term was used at the present census is divided very unequally between the two sexes; of the total male population, 106 per mille are able to read and write, and of the female only 10. In other words there is only one literate female to every eleven males. If we leave out of account children under 15 years of age, the number of literate males per mille is 149, and that of literate females 13.

Education by Provinces.—Thanks to the free instruction imparted in the monasteries and the absence of the *pardah* system which hampers the education of females in other parts of India. Burma easily holds the first place in respect of literacy. In the whole population 222 persons per mille are literate and the proportion rises to 314 amongst persons over 15 years of age. In every thousand persons of each sex, 376 males and 61 females are able to read and write. Of the other main British provinces, Bengal and Madras come next with 77 and 75 literate persons per mille respectively. Bombay follows closely on their heels. Then after a long interval, come Assam, Bihar and Orissa and the Punjab. At the bottom of the list are the United Provinces and the Central Provinces and Berar, with 34 and 33 literate persons per mille respectively. Differences similar to those noticed above sometimes have their counterpart within provincial boundaries. Thus in Bihar and Orissa, the Orissa natural division has 64 literate persons per mille and the Chota Nagpur plateau only 28. In the Central Provinces and Berar, the proportion ranges from only 6 per mille in the Chota Nagpur States to 54 in the Nerbudda Valley.

Native States.—Education is more widely diffused in British provinces than in the Native States, which, taken as a whole, have only 79 males and 8 females per mille who are literate, as compared with 113 and 11 in British territory. The three Native States of Cochin, Travancore and Baroda, however, take rank above all British provinces except Burma, while in respect of female education Cochin divides with Burma the honours of first place. The Kashmir State where only 21 persons per mille can read and write, is in this respect the most backward part of India.

By Religion.—Of the different religious communities excluding the Brahmans and Aryas whose numbers are insignificant, the Parsis easily bear the palm in respect of education. Of their total number 711 per mille are literate, and the proportion rises to 831, if persons under 15 years of age are left out of account. Of the males nearly four-fifths are literate, and of the females nearly two-thirds. Amongst those over 15 years of age only 8 per cent. of the males and 26 per cent. of the females are unable to read and write. The Jains, who are mostly traders, come next, but they have only two literate persons to every five amongst the Parsis. Half the

males are able to read and write, but only 4 per cent. of the females. It is noticeable, however, that whereas the proportion of literate males is only slightly greater than it was at the commencement of the decade, that of literate females has doubled. The Buddhists follow closely on the Jains, with one person in four able to read and write. Here also we see the phenomenon of a practically unchanged proportion of literate males (40 per cent.) coupled with a large increase in that of literate females, which is now 6 per cent. compared with 4 per cent. in 1901. The Christians (22 per cent. literate) are almost on a par with the Buddhists, but in their case the inequality between the position of the two sexes, is much smaller, the proportion of literate females being nearly half that of males. In order to ascertain how far the high position of Christians is due to the inclusion of Europeans and Anglo-Indians, the figures for Indian Christians have been worked out separately. The result is somewhat surprising; for although the Indian converts to Christianity are recruited mainly from the aboriginal tribes and the lowest Hindu castes, who are almost wholly illiterate, they have, in proportion to their numbers, three times as many literate persons as the Hindus and more than four times as many as the Mahomedans. One Indian Christian in six is able to read and write; for males the proportion is one in four; and for females one in ten. The influence of Christianity on education is strikingly illustrated by the figures for the province of Bihar and Orissa, where the proportion of Indian Christians who are literate is 76 per mille, compared with only 5 per mille amongst their animistic congeners. It has to be remembered, moreover, that many of the Indian Christians had already passed the school-going age at the time of their conversion; the proportion who are able to read and write must be far higher amongst those who were brought up as Christians.

The Sikhs come next in order of merit, with one literate person in every fifteen; for males the ratio is one in ten and for females one in seventy. Here again, while the proportion for males shows only a slight improvement, that for females has doubled during the decade. The Hindus have almost as large a proportion of literate males per mille (101) as the Sikhs, but fewer literate females (8). The Mahomedans with only 69 and 4 per mille respectively, stand at the bottom of the list, except for the Animistic tribes of whom only 11 males and 1 female in a thousand of each sex are able to read and write. The low position of the Mahomedans is due largely to the fact that they are found chiefly in the north-west of India, where all classes are backward in respect of education, and in Eastern Bengal where they consist mainly of local converts from a depressed class. In the United Provinces, Madras and the Central Provinces and Berar they stand above or on an equality with the Hindus and the same is the case in Bombay excluding Sind. In Sind the Mahomedan population is exceptionally illiterate, but in the rest of the Presidency it consists largely of traders, and education is much more widely diffused amongst them than amongst Hindus. The figures for Hindus again are a general average for all castes, high and low. It will be seen further on that some of the higher Hindu castes

are better educated than the Buddhists while others are even less so than the Animists.

Increase of Literacy.—The total number of literate persons has risen during the decade from 15.7 to 18.6 millions or by 18 per cent. The number of literate males has increased by 15 and that of literate females by 61 per cent. The proportion who are literate per thousand males has risen from 98 to 106 and the corresponding proportion for females from 7 to 10. If persons under 15 years of age be excluded, the proportions are 138 and 149 for male and 8 and 13 for females. The great improvement in the proportion of literate females is most encouraging. It is true that too much stress should not be laid on this when the actual number is still so small, but, on the other hand, it must be remembered that the rate of increase was equally great in the previous decade, so that it has now been continuous for twenty years. The total number of females over 15 years of age who can read and write is now a million and a quarter compared with less than half a million twenty years ago.

Progress.—Before leaving these statistics of schools and scholars we may glance briefly at the progress which they show is being made. The total number of scholars in all kinds of educational institutions in 1891 was only 3.7 millions. In 1901 it had risen to 4.4, and in 1911 to 6.3 millions. 17.7 per cent. of the population of school-going age were at school in 1912 as

compared with 14.8 per cent. in 1907. Between 1891 and 1911 the number of students in secondary schools and Arts Colleges has doubled, and the number in primary schools has increased by 67 per cent., the proportion ranging from 39 per cent. in Bombay to 204 per cent. in the United Provinces. Excluding Madras, where a school final examination has recently taken the place of the Matriculation, or Entrance examination of the University, the number of persons passing that examination has risen from 4,079 in 1891 to 10,512 in 1911. Including Madras the number who passed the Intermediate examination in Arts or Science has risen during the same period from 2,055 to 5,141, and that of those who obtained a degree in Arts, Science, Medicine or Law from 1,437 to 5,373. The general conclusion appears to be that, while the general rate of progress is far greater than would appear from a comparison of the census returns of 1901 and 1911, it is most marked in respect of secondary education.

There was a continuous fall, both in the number and the proportion of persons afflicted from 1881 to 1901; and this has now been followed by a move in the other direction. Though the proportion is smaller the number of the insane and the deaf-mutes is now about the same as it was thirty years ago. The number of lepers and blind however is less by about a sixth than it then was.

Infirmities.

The total number of persons suffering from each infirmity at each of the last four censuses is shown in the following table:—

Infirmity.	Number afflicted.			
	1911	1901	1891	1881
Insane	81,006 26	66,205 23	74,279 27	81,132 35
Deaf-mutes	199,891 84	153,168 52	196,861 75	197,215 86
Blind	443,653 142	354,104 121	458,868 167	526,748 229
Lepers	109,094 35	97,340 33	126,244 46	134,968 57
Total ..	833,644 267	670,817 229	856,252 315	937,063 407

NOTE.—The figures in heavier type represent the proportion per 100,000 of the population.

Insanity.—In respect of the prevalence of insanity, India compares very favourably with European countries. According to the latest returns, the proportion of persons thus afflicted in England and Wales is 364 per hundred thousand of the population, or fourteen times the proportion in India. This may be due partly to the fact that the English statistics include the weak-minded as well as those who are actively insane, and to the greater completeness of the return in a country where the majority of the mentally afflicted are confined in asylums; but the main reason no doubt is to be found in the comparatively tranquil life of the native of India. It is well known that insanity increases with the spread of civilisation, owing to the greater

wear and tear of nerve tissues involved in the struggle for existence.

The total number of insane persons exceeds by 9 per cent. that returned in 1891, but their proportion per hundred thousand of the population has fallen from 27 to 26. The decline is fairly general, the chief exceptions being the United Provinces, the North-West Frontier Province and four Native States in the peninsular area. In the United Provinces the number of the insane per hundred thousand of the population has risen from 12 to 18. No satisfactory explanation of this large increase is forthcoming.

Deaf-Mutes.—By deaf-mutism is meant the congenital want of the sense of hearing which, in the absence of special schools, such as are on'y

just beginning to appear in India, necessarily prevents the sufferer from learning to talk. Clear instructions were given to the enumerators to enter only persons who were congenitally afflicted. Some few, perhaps, may have been included in the return who had lost the power of speech or hearing after birth, but the total number of such mistakes is now very small. In India as a whole 74 males and 53 females per hundred thousand are deaf and dumb from birth. These proportions are much the same as those obtaining in European countries.

Blindness.—In India as a whole fourteen persons in every ten thousand of the population are blind, as compared with from eight to nine in most European countries and in the United States of America. It is a matter of common observation that blindness is ordinarily far more common in tropical countries than in those with a temperate climate. It is, however, less common in India than in parts of Eastern Europe; in Russia, for instance, nineteen persons in every ten thousand are blind.

Lepers.—In India as a whole 51 males and 18 females per hundred thousand persons of each sex are lepers. Of the different provinces, Assam suffers most, then Burma, and then in order Bihar and Orissa, the Central Provinces and Berar, Madras, Bengal, Bombay, the United Provinces, the Punjab and the North-West Frontier Province. In the two last-mentioned provinces there are only 17 male and 8 female lepers per hundred thousand of each sex. The occurrence of leprosy is very local and its prevalence varies enormously within provincial boundaries.

The number of lepers has fallen since 1891 from 126 to 109 thousand, a drop of more than 13 per cent. When it is remembered that the number of persons suffering from the other three infirmities taken together has remained almost stationary, it may be concluded that the decrease in the reported number of lepers is genuine and indicates a real diminution in the prevalence of

the disease. It is possible that this is partly the result of the improved material condition of the lower castes, amongst whom leprosy is most common, and of a higher standard of cleanliness. The greater efforts which have been made in recent years to house the lepers in asylums may also have helped to prevent the disease from spreading. The total number of asylums in India is now 73, and they contain some five thousand inmates, or about 4.7 per cent. of the total number of lepers. This may not seem much, but it has to be remembered that the movement is still in its infancy and that progress has been very rapid in recent years. Complete statistics for 1901 are not readily available, but it is known that in the two provinces of Bengal and Bihar and Orissa, the number of lepers in asylums was then only about half what it is now. The greater part of the credit for the provision of asylums for these unfortunate persons belongs to the Mission for Lepers in India and the East, which receives liberal help from Government. Its latest report shows that there are 3,537 lepers in the forty asylums maintained by the Society.

The belief is growing that leprosy is communicated from one human being to another by some insect, and two South African doctors have recently published papers implicating the bed bug (*acanthia lectularia*). If this theory be correct it is obvious that the segregation of lepers in asylums must reduce the number of foci of the disease, and to that extent prevent it from spreading. It is worthy of note that in many of the districts where the disease was most prevalent in 1891, there has since been a remarkable improvement. Chamba which in 1891 had 34 lepers in every ten thousand of its population, now has only 15; in Birbhum the corresponding proportion has fallen from 35 to 16, in Bankura from 36 to 23, in Simla 29 to 18, in Dehra Dun from 20 to 11, in Garhwal from 17 to 10, in Burdwan from 22 to 14 and in North Arakan from 28 to 20.

OCCUPATIONS.

Nowhere are the many points of difference in the local conditions of India, as compared with those of western countries, more marked than in respect of the functional distribution of the people. In England, according to the returns for 1901, of every hundred actual workers, 58 are engaged in industrial pursuits, 14 in domestic service, 13 in trade and only 8 in agriculture, whereas in India 71 per cent. are engaged in pasture and agriculture and only 29 per cent. in all other occupations combined. The preparation and supply of material substances afford a means of livelihood to 19 per cent. of the population (actual workers) of whom 12 per cent. are employed in industries, 2 in transport and 5 in trade. The extraction of minerals supports only 2 persons per mille; the civil and military services support 14, the professions and liberal arts 15, and domestic service 18 persons per mille. The difference is due to the extraordinary expansion of trade and industry which has taken place in Western Europe during the last century in consequence of the discovery of the steam engine, and to the great improvement in means of transport and the use of mechanical power in factories of all kinds which have resulted therefrom. In Germany, sixty years ago, the agricultural population was

very little less than it is at the present time in India. There are, as we shall see further on, indications that in the latter country also great changes are impending; and it is not unlikely that, as time goes on, the functional distribution of the people will become less dissimilar from that now existing in Europe.

The village.—Until the recent introduction of western commodities, such as machine-made cloth, kerosine oil, umbrellas and the like, each village was provided with a complete equipment of artisans and menials, and was thus almost wholly self-supporting and independent. Its chamars skinned the dead cattle, cured their hides, and made the villagers' sandals and thongs. Local carpenters made their ploughs, local blacksmiths their shares, local potters their utensils for cooking and carrying water, and local weavers their cotton clothing. Each village had its own oil-pressers, its own washermen, and its own barbers and scavengers. Where this system was fully developed, the duties and remuneration of each group of artisans were fixed by custom and the caste rules strictly prohibited a man from entering into competition with another of the same caste. The barber, the washerman, the blacksmith, etc.,

all had their own definite circle within which they worked, and they received a regular yearly payment for their services, which often took the form of a prescriptive share of the harvest, apportioned to them when the crop had been reaped and brought to the threshing floor.

Village sufficiency declining.—Even in India proper the village is no longer the self-contained industrial unit which it formerly was, and many disintegrating influences are at work to break down the solidarity of village life. The rising spirit of individualism, which is the result of modern education and western influences, is impelling the classes who perform the humbler functions in the economy of village life to aspire to higher and more dignified pursuits. There is also a tendency to replace the prescriptive yearly remuneration by payment for actual work done. In many parts for instance, the village Chamar is no longer allowed the hides of dead cattle as his perquisite, but receives instead a payment for removing the cattle and for skinning them; and the hides are then sold to a dealer by the owner of the animal. Improved means of communication have greatly stimulated migration and the consequent disruption of the village community, and by facilitating and lowering the cost of transport of commodities, have created a tendency for industries to become localised. The extensive importation of cheap European piecegoods and utensils, and the establishment in India itself of numerous factories of the western type, have more or less destroyed many village industries. The high prices of agricultural produce have also led many village artisans to abandon their hereditary craft in favour of agriculture. The extent to which this disintegration of the old village organisation is proceeding varies considerably in different parts. The change is most noticeable in the more advanced provinces, whereas in comparatively backward tracts, like Central India and Rajputana, the old organisation remains almost intact.

Agriculture.—India is pre-eminently an agricultural country. Of its total population 72 per cent. are engaged in pasture and agriculture, *viz.*, 69 per cent. in ordinary cultivation and 3 per cent. in market gardening, the growing of special products, forestry and the raising of farm stock and small animals. The 217 million persons supported by ordinary cultivation comprise nearly 8 million landlords, 167 million cultivators of their own or rented land, over 41 million farm servants and field labourers and less than a million estate agents and managers and their employes.

On the average, in the whole of India, every hundred cultivators employ 25 labourers, but the number varies in the main provinces from 2 in Assam, 10 in the Punjab, 12 in Bengal and 16 in the United Provinces to 27 in Burma, 33 in Bihar and Orissa, 40 in Madras, 41 in Bombay and 59 in the Central Provinces and Berar. These local variations appear to be independent alike of the fertility of the soil and of the density of population. The conclusion seems to be that the differences are due to social, rather than economic, conditions, and that those provinces have most field labourers which contain the largest proportion of the depressed castes who are hereditary agrestic serfs.

Of the two million persons supported by the growing of special products rather more than half were returned in tea, coffee, cinchona, indigo, etc., plantations and the remainder in fruit, vegetable, betel, vine, arecanut, etc., growers. Of those in the former group, nearly nine-tenths were enumerated in the tea-gardens of Assam (675,000) and Bengal (248,000) and most of the remainder in the coffee, tea, rubber and other plantations of Southern India.

Of the 16 persons per mille who were classed under Raising of farm stock, nearly four-fifths were herdsmen, shepherds, and goatherds, rather more than one-seventh were cattle and buffalo-breeders, and keepers and one-eleventh sheep, goat and pig breeders.

Fishing and Hunting.—In the whole of India about 2 million persons, or 6 per mille subsist by fishing and hunting. Of these, all but a small fraction are fishermen. About half the total number are found in the two provinces of Bengal (644,000) and Madras (313,000). The number who live by this occupation is exceptionally small in the United Provinces (38,000) and Punjab (10,000). The Punjab Superintendent says that, owing to the destruction of immature fish and fry and the obstruction of the free passage of fish to their spawning grounds, the five thousand odd miles of large rivers and major canals in his Province probably produce less food than an equal volume of water in any other part of the world. The sea fisheries of India, though now known to be very valuable, are at present but little exploited.

Mines.—In the whole of India only 530,000 persons or 17 in every ten thousand are supported by the extraction of minerals. Coal mines and petroleum wells account for about half the total number (277,000). The coal fields of Bihar and Orissa support 127,000 persons and those of Bengal 115,000. In the Manbhūm district, which contains the Jherria, and part of the Raniganj coal field, 111,000 persons or 7 per cent. of the inhabitants are supported by work in the collieries. Though the Raniganj coal field was discovered as far back as 1774 many years elapsed before much use was made of the discovery. In 1840 the total quantity of coal sent to Calcutta was only 36,000 tons. It rose to 220,000 tons in 1853 and to six million tons in 1901. Since then the growth has been very rapid. The output in 1911 from the coal mines of Bengal and Bihar and Orissa exceeded eleven million tons. In the same year the total yield for all India was twelve million tons. Of the latter quantity nearly one million tons were exported, and four million were used by the railways. The total output however is still trivial compared with that of the United Kingdom, which amounted in 1911 to 272 million tons. Most of the persons employed in the mines of Bengal and Bihar and Orissa are aboriginal or quasi-aboriginal; about half are Bauris and Santals, and many of the remainder belong to the Bhuiya, Chamar or Mochi, Kora, Rajwar, Dosadh and Musahar castes. The great majority are recruited locally. The coal mines of Hyderabad, Assam, the Central Provinces and Berar, and the Punjab support between them only about 27,000 persons.

Metals.—Of the 98,000 persons supported by mining for metals, more than half were returned

in the Mysore State, and of these the great majority were employed in the gold mines of Kolar, where for some years past the value of the gold produced has been about £2,000,000 per annum. The mines in the Central Provinces and Berar, which support 21,000 persons, are principally for the extraction of manganese. The mining of this ore was greatly fostered by the Japanese War, which caused Russia to discontinue her exports of it for the time. There has since been a period of depression, which seems now to have come to an end. Manganese is extracted elsewhere also, *e.g.*, in Mysore and Madras. In Burma tin and lead are extracted as well as silver and wolfram in small quantities. Iron ore is worked in various places, but chiefly in Mayurbhanj which supplies the raw material for Messrs. Tata and Company's ironworks at Sakchi.

Of the 75,000 persons supported by work in quarries and mines for non-metallic minerals, other than coal and salt, two-fifths were enumerated in Bombay, where the quarrying of stone and limestone is an important business chiefly in the neighbourhood of Bombay city. In Bihar and Orissa and Madras mica mining is of some importance.

The extraction of salt and saltpetre supports 78,000 persons. Nearly a third of the total number are found in Bihar and Orissa where the Nuniyas are still largely employed in digging out and refining saltpetre. This industry is carried on also in the Punjab. Rock salt is mined in the same province and in Rajputana.

The total number of persons employed in the extraction of minerals has risen during the decade from 235 to 517 thousand. The most noticeable increase is in coal mines and petroleum wells which embrace nearly three times as many persons as in 1901. The bulk of the increase has occurred in Bengal and Bihar and Orissa, but it is to be noted that Hyderabad and the Central Provinces and Berar which now contribute about 12,000 persons to this group gave practically none ten years previously. Miners for metals are 2½ times as numerous as they were in 1901.

Industries.—Of the 35·3 million persons dependent on industrial occupations, nearly one-fourth, or 2·6 per cent. of the total population, are supported by textile industries. Of these, the most important, from a numerical point of view, are industries connected with cotton. The number of persons supported by cotton spinning, sizing and weaving is close on 6 millions, and another half million are employed in ginning, cleaning and pressing the raw material. The proportion of the population supported by cotton spinning, sizing and weaving is 37 per mille in the Punjab, 29 in Bombay and Rajputana, 27 in Madras, 22 in the Central Provinces and Berars and 18 in the United Provinces. In Burma, Bihar and Orissa, Bengal and Assam it is much smaller, ranging only from 8 to 11 per mille. Nearly two-fifths of a million persons are supported by rope, twine and string making, and more than a third of a million by jute spinning, pressing and weaving. Other important textile industries are wool spinning and weaving, silk spinning and weaving, and dyeing and printing, *etc.*, each of which supports from a quarter to a third of a million persons. It is clear there-

fore that so far as India is concerned, in spite of the growing number of cotton mills in the Bombay Presidency and elsewhere, the hand industry still, to a great extent, holds its own. Only 13,000 persons are employed in silk spinning and weaving factories, 7,000 in woollen factories including those for the making of carpets and even smaller numbers in other factories of this class. Some of these textile industries are very local. Those connected with jute are practically confined to Bengal, in which province nine-tenths of the persons supported by them were enumerated. More than half the persons dependent on rope, twine and string making and on working in 'other fibres' chiefly coir, and palmyra fibre were enumerated in Madras and its Native States and a quarter of those supported by wool industries in Hyderabad. Half the silk spinners and weavers are found in two provinces, Bengal and Madras. The dyeing, bleaching and printing of textiles and lace, crape and similar industries are almost unknown in Assam, Bengal, Burma and the Central Provinces and Berar.

Growth of Industry.—As compared with 1901 there has been a decrease of 6·1 per cent. in the number of persons supported by textile industries. This is due mainly to the almost complete extinction of cotton spinning by hand. Weaving by hand has also suffered severely from the competition of goods made by machinery both in Europe and in this country. There has been a large increase in the number of Indian cotton mills, but as the output per head in factories is far greater than that from hand-loom, the addition of a given number of factory hands involves the displacement of a far larger number of hand workers.

Hides.—As compared with 1901, a large decline in the number returned as general workers in hides is partly compensated for by an increase in shoe, boot and sandal makers. In the two heads taken together there has been a drop of about 6 per cent. During the same period the number of hide dealers has more than doubled. Owing to the growing demand for hides in Europe and America and the resulting high prices, the export trade in hides has been greatly stimulated. The local cobbler, on the other hand, having to pay more for his raw material and feeling the increasing competition of machine-made goods has been tempted to abandon his hereditary craft for some other means of livelihood, such as agriculture or work in factories of various kinds.

Woodworkers.—Wood cutting and working and basket making support 2·5 and 1·3 million persons, respectively, or 3·8 million in all. The number of factories devoted to these industries is still inconsiderable. Saw mills and timber yards each employ some 12,000 persons and carpentry works about 5,000. There is only one cane factory with 46 employees.

Metal workers.—The workers in metals are only about half as numerous as those in wood and cane. About three-quarters of the persons in this order are general workers in iron, and one-seventh are workers in brass, copper and bell-metal.

The total number of persons dependent on metal industries shows a decline of 6·6 per cent. as compared with 1901.

Earthenware.—The manufacture of glass, bricks, and earthenware supports in all 2·2 milli-

on persons. Seven-eighths of these are the ordinary village potters who make the various earthenware articles for cooking and storing water which are required by the poorer classes, as well as tiles, rings for wells and the like. In most parts of India the potter, like the carpenter, oil-presses, blacksmith and cobbler, is found in practically every village.

Chemicals.—In a country like India, whose economic development is still backward, it is not to be expected that a large number of persons should be engaged in industries connected with chemical products. The total number returned as supported by these industries exceeds a million but it shrinks to less than 100,000 if we exclude manufacture and refining of vegetable and mineral oils. The 1·1 million persons included in this group are almost entirely village artisans who extract oil from mustard, linseed, etc., grown by their fellow villagers.

Food Industries.—Of the 3·7 million persons supported by food industries the great majority follow occupations of a very primitive type. Rice pounders and huskers and flour grinders number 1·6 million, grain parchers, etc., 0·6 million, and toddy drawers about the same. There are 352,000 butchers, 281,000 sweetmeat makers, etc., and 97,000 bakers and biscuit makers. The other five heads of the scheme contain between them only 227,000 persons. The principal factories in connection with food industries are flour and rice mills, which employ 42,000 persons, sugar factories 8,000, opium, ganja and tobacco factories 7,000 and breweries 5,000.

Dress.—In all 7·8 million persons are supported by industries of dress and the toilet. Of these 1·3 millions are grouped under the head tailors, milliners, dressmakers, etc., and 2·1 million under each of the heads (a) shoe, boot and sandal makers, (b) washermen, cleaners and dyers, and (c) barbers, hair-dressers and wig-makers.

Transport.—Transport supports about five million persons, or 16 per mille of the population, viz., transport by water one million, transport by road 2·8 million, transport by rail one million, and the post, telegraph and telephone services 0·2 million. Transport by water, about three-fifths are owners of country boats and their boatmen; nearly one-sixth are employed on inland steamers and ocean-going vessels of all kinds, one-sixth are engaged in the construction and maintenance of canals, and one-twentieth in the management and upkeep of harbours. Transport by road includes one million carters and cart-owners, more than half a million porters and messengers and considerably less than that number of owners and drivers of pack animals. Palki owners and bearers number 202,000 and persons engaged on road construction and maintenance 563,000.

Trade.—The number of persons dependent on trade for their livelihood is 17·8 millions, or 6 per cent. of the population. Of these, more than half are supported by trade in food stuffs, including 2·9 million grocers and sellers of vegetable oil, salt and other condiments, who are for the most part the petty village shop-keepers, commonly known as salt and oil sellers; 2·2 million grain and pulse dealers; 1·6 million betel leaf, vegetables and fruit sellers, and nearly a million fish vendors. Trade in textiles is the

next most important item, supporting 4 per mille of the population. In connection with these figures, it is necessary to draw attention to the great difference which exists between the economic conditions of India and those of Europe. In Europe the seller is almost invariably a middleman, whereas in India he is usually the maker of the article, and is thus classified under the industrial and not the commercial head.

Professions.—The public administration and the liberal arts support 10·9 million persons or 35 per mille, namely, public force 2·4 million, public administration 2·7 million, the professions and liberal arts 5·3 million, and persons of independent means about half a million. The head Public force includes the Army (0·7 million), the Navy (less than 5,000) and the Police (1·6 million). India has practically no navy and her army is exceptionally small, as compared with those of European countries. The number of persons actually employed in it is only 384,000 or 1 per mille of the population, as compared with 4 per mille in England and 10 in Germany. The figures for Police include village watchmen and their families. The real number in this group is greater than that shown in the census tables; many of these village officials have other means of subsistence, and the latter were sometimes shown as their principal occupation. Under the head Public administration are classed only those persons who are directly engaged in the Executive and Judicial administration and their establishments, whether employed directly under Government or under a municipality or other local body. Employees of Government and local bodies who have a specific occupation of their own, such as doctors, printers, school-masters, land surveyors, etc., are shown under the special heads provided for these occupations. Of the 5·3 million persons supported by the professions and liberal arts, Religion accounts for rather more than half, Letters and the arts and sciences for more than a sixth, Instruction and Medicine for one-eighth, and Law for one-eighteenth. The main head Religion contains 1·6 million priests, ministers, etc., 0·7 million religious mendicants, 0·4 million pilgrim conductors, circumciser and persons engaged in temples, burial or burning ground service, and 0·06 million catechists and other persons in church and mission service. Of Law, more than half are lawyers, law agents and mukhtiaris and the remainder lawyers' clerks and petition writers. More than two-thirds of the persons under the Medical head are medical practitioners of various kinds, including dentists: the remainder are midwives, vaccinators, compounders, nurses, etc. The real number of persons who act as midwives must exceed considerably that shown in the return. This service is usually performed by the wife of the village scavenger or other person of low caste; and she must often have been returned under her husband's occupation. Nearly three-fourths of the persons classed under Letters and the arts and sciences are found in Music composers and masters, players on musical instruments, singers, actors and dancers. The bulk of these are village drummers, whose services are invariably requisitioned on the occasion of marriages and religious festivals.

Factories.—There are in the whole of India 7,113 factories employing 2·1 million persons or 7 per mille of the population. Of these per-

sons, 810,000, or two-fifths of the total number are employed in the growing of special products, 558,000 in textile industries, 224,000 in mines, 125,000 in transport, 74,000 in food industries, 71,000 in metal industries, 49,000 in glass and earthenware industries, the same number in industries connected with chemical products and 45,000 in industries of luxury. Of the special products, tea (703,000 employees) is by far the most important. The number of tea gardens is not much more than double that of coffee plantations, but twelve times as many persons are employed on them. The coffee plantations are four times as numerous as indigo concerns and employ twice as many labourers. Of the labourers on tea gardens, 70 per cent. are returned by Assam and 27 per cent. by Bengal. Madras, Mysore and Coorg contain between them practically all the coffee plantations, and Bihar and Orissa all the indigo factories. Of the persons working in mines, 143,000, or 64 per cent. are found in collieries, eight-ninths of them being in the two provinces of Bihar and Orissa and Bengal. The number of persons engaged in gold mines is about one-fifth of the number in the coal mines: nine-tenths of them were returned from Mysore. Of the 558,000 workers, in textile industries, cotton mills contribute 308,000 and jute, hemp, etc., 222,000. About two-thirds of the persons employed in cotton mills are found in the Bombay Presidency, from 8 to 9 per cent. in the Central Provinces and Berar and Madras, and about half this proportion in the United Provinces and Bengal. Jute mills are a monopoly of Bengal. Of the industries connected with transport, railway workshops are by far the most important, and afford employment to 99,000 persons, or 79 per cent. of the total number of persons engaged in these industries: about one-fourth of them are found in Bengal and one-sixth in Bombay. Of the factories connected with food industries, the most prominent are rice and flour mills. These employ 42,000 persons, of whom nearly three-fourths are engaged in the rice mills of Rangoon and other places in Burma.

Indians and Europeans.—The proportion of Indians to Europeans varies considerably in different classes of factories. The great majority of the larger concerns are financed by European capital, and in such cases management or direction is generally European, and the Indians shown under this head are engaged for the most part on supervision and clerical work. In Assam where 549 tea gardens are owned by Europeans and 60 by Indians, there are 536 European and 73 Indian managers. In the coffee plantations of Madras and Mysore the same principle is apparent. The jute mills of Bengal are financed by European capital and the managers are all Europeans; while in

Bombay where Indians own 110 of the cotton spinning and weaving mills, and share 25 with Europeans, and the latter own exclusively only 12, all but 43 of the managers are Indians. Sometimes the proportion of Europeans employed in supervision, etc., varies with the character of the work. In the gold mines where the planning and control of the deep underground workings require a high degree of skill, Europeans outnumber Indians in the ratio of nearly 4 to 1, whereas in the collieries Indians are twelve times as numerous as Europeans.

Anglo-Indians.—Anglo-Indian is used at the census as the designation of the mixed race, descended usually from European fathers and Indian mothers, which was formerly known as Eurasian. The total number of persons returned under this head, excluding Feringis, is now 100,451 or 15 per cent. more than in 1901. Anglo-Indians are most numerous in Madras (26,000) and Bengal (20,000). In the United Provinces, Bombay and Burma the number ranges from 8 to 11 thousand, and in Bihar and Orissa, the Central Provinces and Berar and the Punjab it is about 3,500. In the States and Agencies Anglo-Indians aggregate only 14,000, more than half being found in Mysore and Hyderabad. The increase in their number as compared with 1901 may be due partly to some Anglo-Indians having returned themselves under their new designation who would have claimed to be Europeans if Eurasian had been the only alternative and it is also perhaps due in part to a growing tendency amongst certain classes of Indian Christians to pass themselves off as Anglo-Indians. The Punjab Superintendent accounts in this way for the greater part of the increase of 42 per cent. in the number returned as Anglo-Indians in his province. The proportional increase is also large in the United Provinces, Bombay, Burma, the Central Provinces and Berar and the Cochin State. Although Madras still has the largest number of Anglo-Indians, the total is slightly less now than it was twenty years ago. Possibly this is because more careful enumeration has reduced the number of Indian Christians who thus returned themselves. The number of Anglo-Indians in Burma is remarkably large in view of the comparatively short time that has elapsed since it became a British possession and the strength of its European population. In this community there are 984 females per thousand males, or slightly more than the corresponding proportions in the general population of India. More than half of the persons returned as Anglo-Indians are Roman Catholics, and one-third are Anglicans; the number of Presbyterians, Baptists, and Methodists ranges from 2 to 2½ per cent.

Domestic Servants.

The relationship of master to servant in India is a subject to which attention is frequently directed in the Press by complaints about the alleged deterioration of domestic servants and the hardships to which employers are subjected by the boycotting action of discharged servants. The remedy most commonly propounded for misbehaviour on the part of servants is registration with a view to checking the use of false testimonials, or "chits," and to enabling masters to obtain certain information as to the character of the persons they employ. This mode of procedure is of German origin, for the old Prussian Servants' Ordinances (*Gesindeordnung*) were supplemented in 1854 by a law, applying only to agricultural labourers and domestic servants, which punishes breach of contract, and since then various State laws dealing with domestic servants have been passed in Germany. The conditions are not, however, analogous for the servant keeping class in India is proportionately larger than in Europe, as also is the number of servants kept by each individual.

The first attempt in the East to deal with the problem by legislation was made in Ceylon. The act dealing with the registration of domestic servants in that Colony is comprised in Ordinance No. 28 of 1871. It extends to all classes of domestic servants, hired by the month or receiving monthly wages, and the word 'servant' means and includes head and under-servants, female servants, cooks, coachman, horsekeepers and house and garden coolies. The Act came into operation in 1871 and empowered the Governor to appoint for the whole of the Island or for any town or district, to which the Ordinance is made applicable, a registrar of domestic servants, who is to be under the general supervision and control of the Inspector-General of Police. A registry is kept by the registrar of all domestic servants employed within his town or district, and he has to enter therein the names of all the servants, the capacities in which they are employed at the time of such registration, the dates of their several engagements and such memorandum of their previous services or antecedents as they may desire to have recorded in the register. But the registrar must, previous to his entering all these details, satisfy himself as to the credibility of the statements made to him. Any person, who may not have been a domestic servant before, but who is desirous of entering domestic service, has to submit an application to the registrar, and if the registrar is satisfied that there are reasonable grounds to believe that the applicant is a fit and proper person to enter domestic service he shall enter his name in the register, recording what he has been able to learn respecting the person's antecedents together with the names of any persons who are willing to certify as to his respectability. If the applicant is unable to produce satisfactory or sufficient evidence as to his fitness for domestic service the registrar may grant him "provisional" registration, to be thereafter converted into "confirmed" registration according to the result of his subsequent service. If the registrar is satisfied that the applicant is not a fit and proper person he should withhold registration altogether but in such a case he must report his refusal to register to the Inspector-General of Police.

Every person whose name has been registered in the general registry is given a pocket register containing the full particulars of the record made in the general registry. No person can engage a servant who fails to produce his pocket register or whose pocket register does not record the termination of his last previous service, if any. On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant. Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing. If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registrar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry. Every servant whose name is registered shall, if he subsequently enters service in any place not under the operation of the Ordinance, attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered.

Various penalties of fine as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs. 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs. 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information he is liable to a fine not exceeding Rs. 50 or to imprisonment, with or without hard labour, not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration, or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the Straits Settlements, where its operation has been limited to such local areas as may be declared by the Governor in Council, and its application within such areas has been restricted to the class of householders who are expected to desire the benefit of the provisions,

Education.

Indian education is unintelligible except through its history. Seen thus, it affords the spectacle of a growth which, while to one it will appear as a blunder based on an initial error easily avoided, to another it stands out as a symbol of sincerity and honest endeavour on the part of a far-sighted race of rulers whose aim has been to guide a people alien in sentiments and prejudices into the channels of thought and attitude best calculated to fit them for the needs of modern life and western ideals. There is to-day no subject in the whole area of administrative activity in India which presents greater complexities and differences of opinion than education. The Indian, stung to the quick by the illiteracy around him, demands a very rapid expansion of educational facilities, with perhaps an insufficient regard for the formulation of a policy to regulate such an expansion; the official, overweighted by his responsibility for the maintenance of law and order, is apt to look with disfavour upon the activities of private enterprise in the field of education and, in his efforts to improve the quality, to disregard the quantity of training to be provided in the schools and colleges; and the teacher, harassed by annoying restrictions on his freedom and disheartened by his poverty, is disinclined for changes lest they make his lot even more intolerable than before.

The Introduction of Western Learning

—In the early days of its dominion in India, the East India Company had little inclination for the doubtful experiment of introducing western learning into India. Warren Hastings, the dominating figure of the time, was a genuine admirer of the laws and literature of the East. His policy was to enable the ancient learning to revive and flourish under the protection of a stable government, and to interfere as little as possible with the habits and customs of the people. Even the Act of 1813 which set apart a lakh of rupees for the introduction and promotion of a knowledge of the sciences was interpreted as a scheme for the encouragement of Sanskrit and Arabic. In the following year the Court of Directors instructed the Governor-General to leave the Hindus "to the practice of usage, long established among them, of giving instruction in their own homes, and to encourage them in the exercise and cultivation of their talents by the stimulus of honorary marks of distinction and in some cases by grants of pecuniary assistance."

It was from sources other than Government that the desire for western knowledge arose in India. In 1816, David Hare, an English watchmaker in Calcutta, joined hands with the enlightened Brahmin, Mohan Roy, to institute the Hindu College for the promotion of western secular learning. The new institution was distrusted both by Christian missionaries and by orthodox Hindus, but its influence grew apace. Fifteen years later, the Commit-

tee of Public Instruction in Bengal reported that a taste for English had been widely disseminated and that independent schools, conducted by young men reared in the Hindu College, were springing up in every direction. In Bombay, the Elphinstone Institution was founded in memory of the great ruler who left India in 1827. In Madras, the Presidency College was founded in 1841. A still more remarkable innovation was made in 1835 by the establishment of the Calcutta Medical College, whose object was to teach "the principles and practice of medical science in strict accordance with the mode adopted in Europe." Many pronounced the failure of the undertaking to be inevitable; for, under the Hindu custom the higher castes were forbidden to touch the dead. This obstacle was surmounted by Madhusudan Gupta who, with a few courageous pupils, began the dissection of a human body. From that time onward Indians of the highest castes have devoted themselves with enthusiasm and with success to the study of medicine in all its branches.

Another impetus to the introduction of western learning was the devotion of **Christian missionaries**. The humanitarian spirit, which had been kindled in England by Wesley, Burke and Wilberforce, influenced action also in India. Carey, Marshman and Ward opened the first missionary College at Serampore in 1818; and twelve years later, Alexander Duff reversed the whole trend of missionary policy in India by his insistence on teaching rather than on preaching, and by the foundation of his school and College in Calcutta. In Madras, the missionaries had been still earlier in the field; for as early as 1787 a small group of missionary schools were being directed by Mr. Schwarz. The Madras Christian College was opened in 1837. In Bombay, the Wilson School (afterwards College) was founded in 1834.

Macanlay's famous minute of 1835 marks the somewhat tardy acceptance by Government of the new policy. Government then determined, while observing a neutrality in religious matters to devote its available funds to the maintenance of secondary schools and colleges of western learning to be taught through the medium of English. But this decision did not entail that Oriental learning should be neglected; still less that the development of the vernaculars should be discouraged. Other changes powerfully contributed to the success of the new system. The freedom of the press was established in 1835: English was substituted for Persian as the language of the Courts in 1837 and in 1844 Lord Hardinge ordained that preference in Government appointments should be given to those who had received a western education. In the following decade the new learning took firm root in India; and, though the Muhammadans still held aloof, the demand for English schools outstripped the means of Government for providing them.

GROWTH AND ORGANISATION OF ENGLISH EDUCATION.

An epoch in Indian educational history is marked by Sir Charles Wood's despatch in 1854. Perhaps its most notable feature was the emphasis which it laid on the importance of primary education. The old idea that the education imparted to the higher classes of society would filter down to the lower classes was discarded. The new policy was boldly "to combat the ignorance of the people which may be considered the greatest curse of the country." For this purpose Departments of Public Instructions were created on lines which do not differ very materially from the Departments of the present day. The despatch also broke away from the practice followed since 1835 whereby most of the available public funds had been expended upon a few Government schools and colleges, and instituted a policy of grants-in-aid to private institutions. "Such a system as this, placed in all its degrees under efficient inspection, beginning from the humblest elementary institution and ending with the university test of a liberal education would impart life and energy to education in India, and lead to a gradual but steady extension of its benefits to all classes of people." Another feature of the despatch was an outline of a university system which resulted in the foundation of the Universities of Calcutta, Madras and Bombay three years later. The affiliating type of university then became the pivot of the Indian education system. It has undoubtedly been of value in several ways. It enabled Government to select recruits for its service on an impartial basis; it did much, through the agency of its Colleges to develop backward places; it accelerated the conversion of Hindus to a zeal for western education; and it cost little at a time when money was scarce. On the other hand, the new universities were not corporations of scholars, but corporations of administrators; they did not deal directly with the training of men, but with the examination of candidates; they were not concerned with learning, except in so far as learning can be tested by examination. The colleges were fettered by examination requirements and by uniform courses; their teachers were denied that freedom which teachers should enjoy; and their students were encouraged not to value training for its own sake but as a means for obtaining marketable qualifications. In certain important respects the recommendations in the despatch were not followed. The Directors did not intend that university tests, as such, should become the sole tests qualifying for public posts; they also recommend the institution of civil service examinations. They did not desire the universities to be deprived of all teaching functions; they recommend the establishment of university chairs for advanced study. They were aware of the dangers of a too literary course of instruction; they hoped that the system of education would rouse the people of India to develop "the vast resources of their country.....and gradually, but certainly, confer upon them all the advantages which accompany the healthy increase of wealth and commerce. The

encouragement of the grant-in-aid system was advocated to an even greater extent by the Education Commission of 1882, which favoured the policy of withdrawing higher education from the control of Government within certain limits and of stimulating private effort. In theory the decision was correct, but in practice it was irretrievably wrong. In its fatal desire to save money, Government deliberately accepted the mistaken belief that schools and colleges could be maintained on the low fees which the Indian parent could be expected to pay. And, in the course of time, an unworkable system of dual control grew up, whereby the Universities with no funds at their disposal were entrusted with the duty of granting recognition to schools and the Departments of Public Instructions were encouraged to cast a blind eye on the private institutions and to be content with the development of a few favoured Government institutions. There can be little wonder that, under such a system of neglect and short-sightedness, evils crept in which can now only be removed by drastic changes and by lavish expenditure.

The Reforms of 1902-4.

In 1902, the Universities Commission was appointed by Lord Curzon's Government, and its investigation was followed by the Universities Act of 1904. The main object of the Act was to tighten up control, on the part of Government over the universities, and on the part of the universities over the schools and colleges. The Chancellors of the Universities were empowered to nominate 80 per cent. of the ordinary members of the Senates and to approve the election of the remainder; the Government retained the power of cancelling any appointment, and all university resolutions and proposals for the affiliation or disaffiliation of colleges were to be subject to Government sanction. The universities were given the responsibility of granting recognition to schools and of inspecting all schools and colleges, the inspection of schools being ordinarily conducted by the officers of the Department of Public Instruction. Permission was also given to the universities to undertake direct teaching functions and to make appointments, subject to Government sanction, for these objects: but their scope was in practice limited to post-graduate work and research. The territorial limits of each university were defined, so that universities were precluded from any connexion with institutions lying outside those boundaries. Neither the Commission nor the Government discussed the fundamental problems of university organisation, but dealt only with the immediate difficulties of the Indian system. They did not inquire whether the affiliating system could be replaced by any other mode of organisation, nor whether all schools might be placed under some public authority which would be representative of the universities and of the departments. They assumed the permanent validity of the existing system, in its main features, and set themselves only to improve and to strengthen it.

Recent Developments.

Since the passing of the Universities Act of 1904, there has been a considerable expansion of the educational system. The two tables given below afford useful comparisons with previous years and serve to illustrate the growth and expansion of education in India.

(a) STUDENTS.

Year.	Public Institutions.			All Institutions (Public & Private).		
	Males.	Girls.	Total.	Males.	Girls.	Total.
1886-87	*2,764,751	*206,108	2,970,859	*3,115,808	*277,736	3,343,544

* No information,

In 1917-18 the total expenditure on education amounted to Rs. 11,82,09,000, of which Rs 6,48,02,000 came from public funds. In spite of this marked advance, there is much leeway to make up, as in the last census report the literate population of India was only 59 per thousand (males 186 and females 10 per thousand).

Primary Education.—The primary schools are mainly under the direction of the local boards and municipalities. In 1911, the late Mr. G. K. Gokhale pleaded in the Imperial Legislative Council for a modified system of compulsory primary education, but Government was unable to accept the proposal. In recent years, legislation has been approved by certain of the provincial legislative councils (notably Bombay) whereby municipalities are empowered to impose a system of compulsory primary education within their areas. In the Bombay Presidency, a few municipalities have already taken advantage of the Act, with the assistance of the Bombay Government. The same Government has agreed to contribute nine lakhs annually to the Municipality of Bombay for these purposes.

Secondary and High School Education.—The policy of Government is to maintain a small number of high schools (roughly one for each revenue district) which are to be regarded as models for private enterprise, and to aid private institutions. In 1911-12 there were 1,219 high schools for boys in India and in 1917-18 the number had risen to 1,659, the number of scholars in the former year being 390,881, and in the latter year 563,731. Some attempts have been made to give a greater bias towards a more practical form of instruction in these schools. The Commission of 1882 suggested that there should be two sides in secondary schools, "one leading to the entrance examination of the universities, the other of a more practical character, intended to fit youths for commercial and other non-literary pursuits." Some years later, what were called B and C classes were started in some schools in Bengal, but, as they did not lead to a university course, they have not been successful. In more recent years, the Government of India has advocated the institution of a school final examination in which the more practical subjects may be included. Efforts have also been made to improve the conduct of the matriculation and to emphasise the importance of oral tests and of school records. In Madras, this examination which was placed under the direction of a Board representative of the University and of Government, has proved somewhat cumbersome and certain modifications are being made. In the United Provinces, only the better schools are privileged to prepare for the School Final Examination so that better results have been achieved. In the Punjab and in Bombay, the school leaving examination is conducted by Boards. But the main difficulty has not yet been touched. The University which recognises the schools has no money wherewith to improve them; and the Department of Public Instruction, which allots the Government grants, has no responsibility for the recognition of schools, and no connexion whatever with the private unaided schools. This dual authority and this division of responsibility

have had unhappy effects. The standard of the schools also is very low so that the matriculates are often unable to benefit by the college courses. In Mysore, the standard of the schools has been raised by withdrawing from the University the first year's classes and by placing them in a number of the better schools in the State.

There are schools for Europeans and Eurasians which are placed under the control of special inspectors for European Schools. The education of the domiciled community has proved to be a perplexing problem, and in 1912 a conference was summoned at Simla to consider the matter. The difficulty is that European Schools are very remote from the general system of education in India.

The Arts Colleges.—Affiliated to the universities are colleges which the University concerned has the power under the Act of 1904 to inspect and to regulate. In 1918, there were 126 arts colleges in British India; and there were in these 49,527 male, and 914 female, students. The increase in the number of students during the quinquennium (1912-1917) was 58.9 per cent. The universities are empowered to make regulations for the residence of students, but, owing to the limited provision of hostels, it is difficult for the colleges to comply with these regulations. With the assistance of Imperial grants many new hostels have been built in Calcutta. The main weakness of these arts colleges is that they vary much in efficiency with the result that the standard and scope of their work tends to be regulated by the weaker colleges. In many cases the pay and conditions of service of the teachers are very unsatisfactory. Each college again forms a water-tight compartment, there being very little co-operation among the colleges.

Professional and Technical Education.—There are eight medical colleges (in addition to a number of medical schools) with 2,511 students; twenty-one law colleges with 5,479 students; a number of agricultural colleges of which two only (Poona and Lyallpur) are affiliated to a university. A research institute in agriculture, was started by Lord Curzon at Pusa in Bihar, which has done valuable work. Conferences have recently been held at Pusa, Simla and Poona, with the object of providing a suitable training in agriculture. There are training colleges for secondary teachers in various parts of India, and normal schools for the training of vernacular teachers. In 1917, the Government of India made a recurring grant of 30 lakhs for the improvement of training facilities and for increased pay to teachers. Very little has been done to provide suitable instruction in commerce. The Sydenham College of Commerce in Bombay has recently been instituted for this purpose. Industrial institutions are dotted about India, some maintained by Government others by municipalities or local boards, and others by private bodies. One of the most important is the Victoria Jubilee Technical Institute in Bombay. The tendency in recent years has been to place these institutions under the control of the Departments of Industries. In this connexion should be mentioned the Indian Institute of Science at Bangalore, the product of generous donations by

the Tata family. In addition to a number of engineering schools, there are engineering colleges at Roorkee, Sibpur, Poona and Madras, each of which is affiliated to a university. There are schools of art in the larger towns, where not only architecture and the fine arts are studied, but also practical crafts like pottery and iron-

work. There is also a school of forestry at Dehra Dun. Many inquiries have been made in the matter of technical education, by Colonel Atkinson, and Mr. Dawson, by the Public Works Committee and by the Industrial Commission, but as yet little progress has been made.

Universities.

Constitution.—There are eight Universities in India with the following territorial limits.—

University.	Territorial Limits.	
	Provinces (including any Native States under their political control and any foreign possession included within their boundaries).	Native States or British Colony.
Calcutta	Bengal, Burma and Assam
Madras	Madras and Coorg	Hyderabad and Ceylon.
Bombay	Bombay and Sind	Baroda.
Allahabad	United Provinces of Agra and Oudh, the Central Provinces (including Berar) and Ajmer-Merwara.	The States included in the Rajputana and Central India Agencies.
Punjab	Punjab, North-West Frontier Province, British Baluchistan and Delhi.	Kashmir and Baluchistan,
Mysore	Mysore.
Patna	Bihar and Orissa

The Governor General is the Chancellor of the University of Calcutta, and the head of the provincial government is the Chancellor of each of the other universities. The Vice-Chancellor is nominated by the Government concerned. The executive body is the Syndicate which is now organised so as to include a larger educational element. Over this body the Vice-Chancellor presides, all other members being elected by the Faculties, except the Director of Public Instruction who is a member *ex-officio*. The secretarial work is under the direction of the Registrar. The legislative body is the Senate which consists of from 75 to 100 members, 80 per cent. of whom are nominated by the Chancellor, the rest being elected by the Senate, or by its Faculties, or by the body of registered graduates. The Senate is divided into Faculties, which are in most cases those of arts, science, law, medicine, and engineering. There is an oriental faculty in the Punjab University alone. There are also Boards of Studies, whose duties are to recommend text-books or books which represent the standard of knowledge required in the various examinations.

Apart from the general tightening up of university control over its colleges, the chief fea-

ture of university development since the passing of the Act of 1904 has been the participation, by the universities in post-graduate teaching and research. In Madras and Allahabad a small number of university professors have been appointed; in the Punjab the services of a certain number of temporary professors from overseas have been engaged during the cold weather. In Bombay a certain number of college professors and others have delivered lectures to post-graduate students under the auspices of the University. But the most notable advance has been made in Calcutta, owing to the energy of Sir Asutosh Mookerjee and to the liberality of Sir Tarak Nath Palit and of Sir Rash Behari Gosh. In 1916, a committee was appointed to investigate the matter. In accordance with its report, new regulations have been passed by the Senate, whereby all post-graduate teaching and research in arts and science in Calcutta is now conducted directly by the University, though many of the college teachers have been invited to take part in the work. Post-graduate councils in arts and science have also been constituted, which comprise all the teachers engaged in the work and a very small number of additional numbers appointed by the Senate.

Patna University.—Much thought has also been given to the evolution of a new type of university which will run abreast of the old. Patna University, which was constituted in 1917, is in most of its features a university of the old type, but certain innovations have been made. The Chancellor, who is the Lieutenant Governor of the province, may annul any proceeding of the University which is not in conformity with the Act and the Regulations. In the Senate the application of the elective principle has been extended, by increasing both the proportion of the elected Fellows and the categories of electing bodies; and the Senate includes representatives of the teaching staff and of the graduate teachers of recognised schools. Further, all colleges are given statutory representation on the Senate in the persons of their principals. The Syndicate is the ultimate authority in academic matters, subject to the proviso that any six of its members have the power to refer such matters to the Senate for review. The Vice-Chancellor is a paid officer and is appointed by the local Government. In addition to other duties, he has the power to inspect all colleges of the University. The colleges affiliated to the University are of two kinds; colleges of the University, whose buildings are situated within a specified area, and external colleges, whose buildings are situated in one of the four following towns: Muzaffarpur, Bhagalpur, Cuttack and Hazaribagh.

Mysore University.—Was constituted under Regulation V of 1916, for the better encouragement and organisation of education in the State. His Highness the Maharaja is the Chancellor. The University is very similar in its constitution to the older Indian universities, having a Senate of not less than fifty and not more than sixty members; but, unlike the older Universities, it gives seats on the Senate to the university professors *ex-officio*. It departs from existing practice by centralising university instruction in Mysore and Bangalore, and by conducting the work of the first year of the old colleges course in a few specially selected high schools.

Hindu University, Benares.—The creation of the Hindu University, Benares, forms a landmark in the history of the Indian university system. The university is not designed to meet the needs of one province alone but to draw students from all parts of India. The Chancellor (H. H. the Maharaja of Mysore) and the Vice-Chancellor (Sir P. S. Sivaswamy Aiyar) come from South India; and its teachers and students are by no means confined to the citizens of the United Provinces.

It has no monopoly, no privilege. Its energies are not diffused by the necessity of supervising distant colleges nor is its vitality impaired by the embarrassment of administrative duties other than those of organising its own teaching. It is therefore the first Indian university which is primarily a seat of learning and not an administrative organisation. Its constitution is therefore very different from those of the other Indian universities. A dividing line is made between administrative matters, entrusted to a large body called the Court, with an executive committee called the Council, and academic matters, entrusted primarily to a Senate, with

an executive body called the Syndicate. The Court which is the supreme governing body besides its administrative powers, has the right to review the acts of the Senate, except where the Senate has acted in accordance with the Act, statutes and regulations. The Senate has the entire charge of the organisation of instruction in the University and the colleges, the courses of study, and the examination and discipline of students, and the conferment of ordinary and honorary degrees.

The proposed University of Dacca.—With the modification of the Partition of Bengal in 1911, Dacca ceased to be the capital of the Separate province of Eastern Bengal and Assam. Shortly afterwards, the Government of India conveyed their decision to establish a university of Dacca in their letter to the Government of Bengal, dated the 4th April 1912, and the latter Government appointed a committee to frame a scheme for the new University. The committee was instructed that the University should be of the teaching and residential and not of the federal type, and that it should be a self-contained organism unconnected with any colleges outside the limits of the city of Dacca. The Committee, which was presided over by Mr. R. Natham, presented its report later in the year. The report is of great value and in it certain new principles are enunciated. Great emphasis was attached to physical training and education and also to the tutorial guidance of the students. The University was to be very largely a State institution, and practically all its teachers and those of its colleges were to be Government servants. Though the colleges were to be separate units, each with its separate staff and buildings, they were to be linked together and with the University by a close form of co-operation. The executive body, to be called the Council, was to have very considerable powers, subject to the sanction of Government. The Council, which was to be a large and representative body, was to be the legislative authority, subject to the control of Government, and in other respects an advisory authority. The total cost of the full scheme was estimated at 53 lakhs, but deducting certain sums which were available from other sources the net cost was put down at nearly 40 lakhs, exclusive of recurring charges. These were expected to involve a net total of about 6½ lakhs annually. Before the scheme thus elaborated (which had received the Secretary of State's sanction) could be taken in hand, the war broke out. A Bill constituting the University is now under consideration.

The proposed Muhammadan University.—It was the aim of Sir Syed Ahmed Khan years ago to place the benefits of a liberal education within the reach of the Muhammadan community; and in 1875 a school was opened which three years later was converted into the Aligarh College. The movement in favour of transforming this college into a teaching and residential university started as early as the end of last century. In 1911, during the visit of His Majesty the King Emperor to India, His Highness the Aga Khan made an appeal which resulted in the collection of some thirty lakhs of rupees. A draft constitution was drawn up and a consultative committee was formed.

* No comparison is possible with previous years, as 1912-13 is the first year of the newly constituted Presidency of Bengal.

But the draft constitution was not approved by the Secretary of State, and on the question of the right of affiliating colleges outside Allgarh in particular, there was a sharp difference of opinion. Government laid down, as in the case of the proposed Hindu University, that the new university should not have the power of affiliating Moslem institutions in other parts of India.

On October 15th, 1915, a meeting of the Moslem University association was held at Allgarh, under the presidency of the Raja of Mahmudabad, when it was proposed that the meeting recommends the Moslem University Foundation Committee the acceptance of the Moslem University on the lines of the Hindu University. It was evident at the meeting that a large number of Indian Moslems are not prepared to accept a constitution for their university similar to that of the Hindu University.

Alteration of Plans.—In April, 1917, at a meeting of the Foundation Committee the following resolution was passed:—

“ That this meeting of the Moslem University Foundation Committee hereby resolves with reference to the letter of the Government of India, Education Department, dated Delhi 17th February 1917, D. O. No. 66, that the Committee is prepared to accept the best University on the lines of the Hindu University. It further authorises the Regulation Committee appointed at its Lucknow meeting, with the President and Honorary Secretary of the Moslem University Association as its ex-officio members, to take necessary steps in consultation with the Hon. the Education Member for the introduction of the Moslem University Bill in the Imperial Legislative Council.”

The proposed Universities of Rangoon and Nagpur.—Plans for a university in Burma have been under consideration for some years. After his arrival in Burma as Lieutenant Governor, Sir Harcourt Butler thought that, on general grounds and with some reference to the needs of the province, the Rangoon University might usefully be of a more practical type than any yet attempted in India with courses in arts and science, pure and applied, technology, medicine, engineering, agriculture, law forestry, veterinary, science and training, commerce and architecture. It might perhaps combine with university instruction practical studies at the Chief Court, the Pasteur Institute and the hospitals; and also at the Museum which the local Government was committed to build as soon as funds were available. It is possible in Burma to a greater extent than in any of the older and more advanced provinces in India to concentrate the intellectual energies of the province in one immediate neighbourhood and to develop a really many-sided university. A committee is now engaged in making plans in accordance with these suggestions. The Government of the Central Provinces has also appointed a committee to report on the constitution of a university of Nagpur. The report is still under consideration.

Education of Women and Girls.—Hitherto little attention has been paid to this important branch of education, as in many

places social restrictions are still strong. In Madras and Calcutta there are two colleges each for girls: and there are in India a number of schools for girls maintained by Government or by private agency. In 1918, there were only 914 female students in arts colleges and 27,222 in high schools. Arts colleges, medical colleges, and the like admit students of both sexes, and a few girls attend them. The Lady Hardinge Medical College for Women at Delhi, which has just been started, gives a full medical course for medical students.

Administration.—The educational services are divided into (a) the Indian Educational Service, (b) the Provincial Educational Service, (c) the Subordinate Educational Service.

(a) **The Indian Educational Service.**—Comprises officers in three branches, inspectors principals and professors of colleges, headmasters of high schools, all of whom are appointed by the Secretary of State. All, with a few exceptions, start at the pay of Rs. 500 *per mensem*, with an annual increment of Rs. 50 *per mensem*, and go up to Rs. 1,000 *per mensem*, directors of public instruction receiving from Rs. 1,500 to Rs. 2,500 according to the province in which they serve. A small number of personal allowances was arranged in 1896, when the service was reorganised and received its title. There is no short service pension, but officers of 30 years' service or of 55 years of age or over receive a pension of about £400 a year.

(b) **The Provincial Educational Service.**—In this service also are found principals and professors of colleges, headmasters and inspectors of schools. This service is composed of Indians and is recruited in India, the pay scheme being on a much lower scale than that of the Indian service. The maximum pay is Rs. 700 and the minimum Rs. 200.

(c) **The Subordinate Educational Service.**—In this service are found a few headmasters, college professors, assistant inspectors and assistant masters in schools. In Bengal a number of poorly paid teachers have been converted into a lower subordinate service. The pay and prospects of this service are very poor.

The service system and the pay and prospects of the educational services have been subjected to much criticism in recent years, and were considered by the Public Services Commission. The disparity in pay and prospects between the Indian and Provincial Services has, somewhat naturally, evoked considerable discontent among the members of the Provincial Service. The pay and prospects of all three services are very inadequate.

In 1910 a **Department of Education** was established in the Government of India with an office of its own and a Member to represent it in the Executive Council. The first Member was Sir Harcourt Butler; and the present Member is Khan Bahadur Mian Muhamad Shaif. Owing to the importance of the work carried on in this Department, there are Assistants instead of Under Secretaries. At the same time a Bureau of Education was established and placed under the charge of an officer styled the Educational Commissioner (Mr. H. Sharp.) The Educational Commissioner is not an executive officer of the Department. But he is kept in touch with all

its proceedings; he gives advice: and he collects and correlates information in regard to the progress of education in India and elsewhere.

Calcutta University Commission.—In 1917, a Commission was appointed to inquire into the conditions and prospects of the University of Calcutta and to consider the question of a constructive policy in relation to the questions which it presents. The President of the Commission was Dr. M. E. Sadler, Vice-Chancellor of the University of Leeds. The other members were Sir Asutosh Mookerjee of the Calcutta High Court; Mr. P. J. Hartog, Academic Registrar of the University of London; Mr. W. W. Hornell, Director of Public Instruction, Bengal; Dr. J. W. Gregory, Professor of Geology, Glasgow University; Mr. Ramsay Muir, Professor of History, Manchester University; and Dr. Zia-ud-din Ahmad of the M. A. O. College, Aligarh. Mr. G. Anderson, Assistant Secretary to the Government of India, was the Secretary. The Commission sat for 17 months and made an exhaustive inquiry; and their report was published in 1919. The Commissioners recommended drastic changes in the educational system, both in its organisation and in its methods of teaching. They were convinced that the reform of university and secondary education is a matter which does not safely admit of delay.
